3. From the appropriations in relation to Treasury notes, being the amount of payments on account of the principal and interest thereof, as per statement C, above recited,		9,148,237 40
Making the amount paid upon warrants, as before stated,		$21,596,783 68
Have been accounted for, as far as respects the redemption of the funded debt, under the act passed the 3d March, 1817, and as exhibited in statement I, annexed, and which is rendered as a part of this report,		415,993 87
The residuary balance of		21,180,789 81
		$21,596,783 68

Will be accounted for in the next annual report, in conformity to the accounts which shall have been rendered to this Department.

In the mean time, the manner in which the said balance has been applied is estimated as follows:

There is estimated to have been applied to the payment of the deficiencies of the provisions, at the end of the year 1817, as above stated, the sum of - - -			$693,058 45
In the reimbursement of the old and deferred 6 per cent. stocks in 1818, -		$1,191,805 42	
Towards the redemption of the Louisiana 6 per cent. stock, (*a*) - -		4,750,598 12	
In the payment of the principal of Treasury notes, - - -		8,426,769 00	
In payment of certain parts of the domestic debt, - - -		792 36	
		14,369,964 90	
In the payment of interest on the funded debt and Treasury notes, as per estimate F, - - - - - -		5,996,360 93	
		20,366,325 83	
In the next annual statement the repayments in 1818 will be exhibited as a deduction from the total amount of warrants issued for public debt for the year, and of which they form a part, to the amount of - - -		300,477 64	
And there is estimated, as remaining unapplied in the hands of the agents in Europe, and in protested bills, on the 1st January, 1819, as per estimate G, the sum of - - - - - -		240,840 81	
		20,907,644 28	
From which deduct so much included, as above stated, for the payment of principal and interest of the public debt, not covered by warrants on the Treasurer, viz:			
For so much, being Louisiana stock purchased by the agents in London, more than the amount remitted for that object, -	$110,498 63		
For so much, being the estimated amount of warrants short issued to the banks, for the payment of dividends, to 31st December, 1818, - - - -	71,711 29		
And this sum, short provided, on account of unclaimed dividends, payable, but not demanded at the Treasury, -	237,703 00	419,912 92	
			20,487,731 36
			$21,180,789 81
(*a*) Amount of Louisiana stock originally issued, - - - -			11,250,000 00
Whereof there was purchased by the Commissioners of the Sinking Fund, prior to the 21st October, 1818, - - - -		1,294,100 00	
One moiety of the residue ($9,955,900) directed by the Board of Commissioners to be paid on the 21st October, 1818, amounted to - - - -	$4,977,950 00		
Whereof there has been applied for and paid, as above, -	4,750,598 12		
Leaving to be applied for, - - -	227,351 88		
		4,977,950 00	
Residue to be provided for, - - - -		4,977,950 00	
		$11,250,000 00	
The statement G, accompanying this report, exhibits a sum provided abroad, to be applied to the payment of the interest on the Louisiana 6 per cent. stock at London and Amsterdam, to the amount of - - - - - - -			$136,903 07
The amount of protested bills returned for non-payment, and which remain to be covered, as per list herewith included in statement G, - - - - -			103,937 74
			$240,840 81

That funds remain unexpended for the redemption of outstanding Treasury notes.

That, in compliance with the sixth section of the act of the 3d March, 1817, for the redemption of the public debt, certificates of the public debt, which, by payment or purchase, have become the property of the United States, are regularly cancelled.

A statement marked H is annexed, which exhibits the amount of the debt of the United States on the 1st January, 1819.

All which is respectfully submitted.

WM. H. CRAWFORD, *Secretary of the Treasury.*

A.

Statement of the application, during the year 1817, *of the funds provided for the payment of the principal and interest of the public debt.*

I. *Payments on account of the principal of the public debt:*			
Annual reimbursements of the old six per cent. stock,		$1,231,533 75	
Annual reimbursement of the deferred stock,		467,896 91	
Reimbursement of the domestic debt,		14,951,842 28	
Reimbursement of temporary loans,		550,000 00	
Payment of the principal of Treasury notes,		3,057,234 00	
			$20,258,506 94
II. *On account of the interest and charges of the domestic debt:*			
Interest for the year 1817 on the several species of funded debt settled at the Treasury,		5,404,193 38	
Interest for the year 1817 on Louisiana stock, domesticated,		159,682 49	
		5,563,875 87	
Interest on temporary loans,		18,106 16	
Interest on Treasury notes,		161,959 35	
		5,743,941 38	
Commissions to agents purchasing stock,		3,892 97	
Interest on Louisiana stock, payable at Amsterdam, from July 1, 1816, to January 1, 1818, 1,125,000 guilders, at 40 cents,	$450,000 00	5,747,834 35	
At London, from July 1, 1816, to July 1, 1817, £40,136 17*s.*, at 4*s.* 6*d.*,	178,386 00		
Commission and charges, viz:			
At Amsterdam, 5,981*g.* 10*st.*, $2,392 60

	631,670 51		
Commissions to agents in America purchasing bills of exchange,	1,704 99		
		633,375 50	
			6,381,209 81
			$26,639,716 75

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 3, 1819.

JOSEPH NOURSE, *Register.*

B.

Statement of the provision made before the 1*st of January*, 1818, *for the payment of the principal and interest of the public debt falling due after that day.*

I. *On account of the domestic debt.*			
The demands to be satisfied on the 1st January, 1818, were as follows:			
1. Dividends payable by the commissioners of loans, including the dividend due on that day, and exclusive of dividends no longer demandable at their offices,		$2,064,970 06	
2. Unclaimed dividends from the loan offices, payable at the Treasury, beyond the amount advanced for their payment,		177,703 65	
		2,242,673 71	
The funds provided for their demands were as follows:			
1. Cash due from commissioners of loans deceased or out of office,	$5,778 97		
2. Cash in the hands of the commissioners in office, and applicable to dividends,	893,023 58		
3. Cash advanced for Treasury dividends over the amount payable,	19,854 35		
4. Cash heretofore advanced to a commissioner of loans no longer in office, for the reimbursement of exchanged stock, and remaining unapplied,	3,821 61		
		922,478 51	
Short provided on account of the domestic debt,			$1,320,195 20
II. *On account of the foreign debt.*			
1. Cash in the hands of the agents at Amsterdam, on Dec. 31, 1817, 779,559*g.* 6*st.*, at 40 cents,		311,823 72	
Cash in the hands of agents at London, £40,554 2*s.* 1*d.*, at 4*s.* 6*d.*,		180,240 51	
		492,064 23	
2. Amount of payments made at the Treasury before the 1st of January, 1818, for bills which have been protested for non-payment, and which on that day had not been repaid into the Treasury, as particularized in note to statement G, accompanying last report,		135,072 52	
			627,136 75
Short provided, January 1, 1818,			$693,058 45

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 3, 1819.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 3, 1819.

JOSEPH NOURSE, *Register.*

15th CONGRESS.] No. 553. [2d SESSION.

WILLIAM JONES, LATE PRESIDENT OF THE BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 8, 1819.

To the honorable House of Representatives of the United States: The memorial of William Jones, late president of the Bank of the United States, respectfully showeth:

That your memorialist has, for some time past, been afflicted with a severe disease, which, until the present moment, has precluded the preparation of the papers which he has now the honor to submit, in explanation of the testimony touching his private concerns, which was delivered to the committee appointed by your honorable House, to investigate the proceedings of the Bank of the United States; that your memorialist, solicitous to exhibit these transactions in their true light, and to submit his public conduct to the candid scrutiny of your honorable body, begs leave to refer to the statement of his private transactions, in the stock of the bank, which he delivered to your committee, and to the statement of facts, and the documents thereto annexed, herewith submitted, which he trusts will establish the lawfulness and innocence of these transactions; that the only stock which your memorialist sold to a profit was the two contracts mentioned in his statement to your committee, which contracts were sold to a director of the bank, who was not likely to become the dupe of artificial measures to enhance the value of the stock; that the shares which your memorialist subsequently disposed of, in order to meet his engagements, were sold at a great loss; that the whole amount of stock which he now actually holds, as stated to your committee, cost him one hundred and fifty-three dollars per share, and, if valued at the reduced prices, the result of his entire

stock transactions will exhibit a very heavy loss; that in this amount are included 1,070 shares, now pledged in London, (the sale of which is to this day restricted to thirty-four pounds sterling per share,) for the payment of a loan, which he negotiated in order to avoid borrowing of the Bank of the United States, of which he has no loan whatever; nor is he indebted or responsible to that institution, either on his own account, or for any other person, directly or indirectly, for a cent; that he has held the stock which he now holds during the progressive decline in the price, while he has been earnestly engaged, in his official capacity, in promoting all those measures of precaution, and of expense incurred by the importation of specie, which were indispensable to the safety of the institution, but which it was clearly foreseen would diminish the profits and dividends of the bank, and greatly depress, at least for a time, the price of its stock. Your memorialist further declares that his dealings in the stock of the bank were founded upon his confidence in the prosperity and productiveness of the institution; in the many important advantages which, if fairly enjoyed, he believed it to possess over many other institutions, the market value of whose stock approximated to the highest rates which that of the Bank of the United States had attained; and in the recollection of the fact, that towards the close of the charter of the old bank, the Government of the United States sold to Mr. Baring the whole of the public shares, at the rate of five hundred and eighty dollars per share; that in regard to his public conduct as a director of the Bank of the United States, your memorialist does most solemnly assure your honorable House, that he has been actuated by the purest motives; and with perfect fidelity, diligence, and zeal, has employed his best faculties and judgment in promoting such measures as he believed at the time were best calculated to advance the interest of the public and of the institution; that the private transactions which have attracted the animadversions of your committee, have in nowise influenced his judgment or decision upon the important measures in which, as a director, he has participated, and that the reasons and motives assigned, in his written answers to the questions put to him by your committee, touching the proceedings of the bank, and those which are recorded in the minutes and correspondence of the board of directors, are the true and only motives by which he has been governed in his official conduct; that in advocating the loans on the pledge of stock, he was influenced by the additional consideration, that the original constitution of the capital stock of the bank comprehended twenty-eight millions in funded debt, and seven millions in money, whereas by the rise of funded debt to and above its par value, so large an amount of the latter was substituted for the former by the subscribers to the bank, and so large a sum redeemed by the Government and sold by the bank to procure specie, as to create an aggregate of upwards of twenty millions of dollars in money, substituted for so much of the funded debt part of the capital; hence your memorialist, considering the extreme facility which bank accommodation had given to overtrading, and its consequent effect upon mercantile credit, believed that at least ten millions of dollars loaned on the pledge of stocks would best fulfil the original design of the institution, and leave as large an amount of moneyed capital as could be safely loaned on personal security; and this belief has not been impaired by the result of his observation in regard to the existing loans of the bank, which, according to the documents before your honorable House, are in the proportion of about twenty-seven millions on bills and notes, resting upon personal security alone, to nine millions on notes of hand, secured by a pledge of stock.

With this brief exposition of the views and motives which have regulated his official conduct, your memorialist, with profound respect, submits his case to your wisdom and justice, in full confidence that his reputation will not be subjected to obloquy, by inferences alike repugnant to his principles, and to the whole tenor of his private and public life; a life, the first perils and privations of which are identified with those of his country, in the darkest period of her revolutionary struggle, as his late faithful services in a highly responsible trust are with her recent and not less momentous contest. Your memorialist, moreover, reposes with conscious rectitude and tranquillity in the belief that when truth shall have penetrated through the mist of prejudice which has obscured the services and merits of the institution in which he had the honor to preside, public sentiment will award to those who have managed its critical concerns that justice which is now withheld.

W. JONES.

PHILADELPHIA, *February* 5, 1819.

The facts and circumstances attending the contract, (of which the annexed is a copy, marked A,) executed by Charles Pleasants and John Lysle, Esqrs., directors and agents of the Commercial Bank of Pennsylvania, and the assignment thereon to me, by George Williams, Esq., of his right in the said contract, whenever I should indemnify him for his responsibility, by substituting other satisfactory security in lieu of his note, or provide the means of paying the said note at maturity, are strictly as follows:

Mr. Williams made the said contract in his name, but in my behalf, and for my use, as declared in his assignment. The execution of the contract was made known to me some short time after the date thereof; the particular time I do not now recollect, but it was a considerable time prior to the date of the assignment of Mr. Williams's right to me, which was delayed by his absence from Philadelphia.

The annexed paper (B) is a copy of a letter of Mr. Williams to Messrs. Pleasants and Lysle, which was not delivered, because, upon my assuring him that I would sell the contract, and substitute satisfactory paper other than my own, or, according to the alternative, provide the means to pay his note at maturity, he suffered it to remain, holding the original contract in his name and possession, as security liable to be disposed of at any time, had he apprehended a decline in price, upon my failure to complete his indemnity when required.

On the 26th day of August, 1817, I made an actual sale of my right in the said contract to Dennis A. Smith for $26,000, including the two dividends, which, by the terms of the sale, he was entitled to, and did receive by his assignee on the completion of the contract; and I received of him his note for that sum, payable on the 2d of January following, according to my receipt, of which a copy (marked C) is hereto annexed, by which D. A. Smith was bound to fulfil the conditions of the assignment of the said contract by George Williams to myself, a copy of which is also annexed.

This note was lodged by me in the Bank of the United States for collection; paid at maturity by James W. McCulloch, to whom D. A. Smith had assigned his right on the back of my receipt, and returned to me by Mr. McCulloch.

Mr. Williams has stated to me, that on his examination before the committee, absent from his books and papers, he stated the contract price of the stock, from recollection, at 125 or 126 dollars per share; but that he referred to the nett price, deducting the amount which, at the time of the contract, the two dividends were estimated at; whereas, in my statement to the committee, I mentioned the actual price per share, as expressed in the contract.

Whatever Messrs. G. Williams, J. W. McCulloch, and Dennis A. Smith may have said in regard to my transactions in the stock of the bank, they do not, I am sure, refer to any other than the contract herein described, as having, either jointly or individually, any agency or concern, directly or indirectly, in the purchase or procurement thereof, for my account.

Mr. D. A. Smith is represented to have stated to the committee, "that he was one of the persons who made one of these contracts a present to Mr. Jones; that the stock never was transferred; and that the profit, amounting

to $15,000, was paid to Mr. Jones in money." If Mr. Smith has been rightly understood, the extent and diversity of his stock transactions must have impaired his recollection upon this particular question; and as he undoubtedly refers to the contract I have described, the conditions of my receipt for his note, with his assignment thereon, show that he has mistaken the fact. That the stock never was transferred, either to Mr. Williams or myself, is true. The terms of the contract precluded the transfer until the 2d of January; and I sold my right therein on the 26th August preceding. The stock never was in the possession of those who, according to the alleged testimony of Mr. D. A. Smith, presented it to me; nor was any money paid to or for me on account thereof, but that which I received in payment of D. A. Smith's note, described in my receipt as the fair and actual consideration for the sale and transfer of my right in said contract. The real character of the transaction is, that Mr. Williams, as an act of personal friendship and accommodation, lent me the use of his name in the said contract, and held the original as his security, upon a rising market.

I do most solemnly, sincerely, and truly declare and affirm, that the foregoing declaration of facts and circumstances is, in all things, just and true.

W. JONES.

Be it known, that on this 30th day of January, A. D. 1819, before me, Clement C. Biddle, Esq., notary public for the Commonwealth of Pennsylvania, residing in the city of Philadelphia, personally appeared William Jones, of said city, esquire, and made affirmation in due form of law to the facts and circumstances set forth in the foregoing declaration; and I, the said notary, do also hereby certify, that the several documents hereunto annexed, marked A, B, and C, and referred to in the said affirmation, are just and true copies of the several instruments of writing of which they purport to be copies, carefully compared by me with their said originals; and that the signature "Geo. Williams," at the foot of the assignment on the back of the paper writing, of which the copy is hereunto annexed, marked A, is well known to me as the proper handwriting of George Williams, Esq., of Baltimore; that the signature "George Williams," at the foot of the letter, of which the copy is hereunto annexed, marked B, is also well known to me as the proper handwriting of the said George Williams; and that the signature "D. A. Smith," at the foot of the assignment, at the bottom of the receipt, of which the copy is hereunto annexed, marked C, is well known to me as the proper handwriting of Dennis A. Smith, Esq., of Baltimore; and that the said assignment, to wit, "I hereby assign my right to the within to James Wm. McCulloch," is written in the handwriting of the said James W. McCulloch, Esq., of Baltimore.

In testimony whereof, I have hereunto set my hand and affixed my notarial seal of office, the day and year aforesaid. [L. S.]

CLEMENT C. BIDDLE, *Notary Public.*

A.

Whereas we have sold to George Williams, Esq., one thousand shares of the stock of the Bank of the United States, at the rate of one hundred and thirty-two dollars for each share, payable on the 2d day of January, 1818, for which we have received his note of hand for one hundred and thirty-two thousand dollars, drawn in our favor, we do hereby engage that, in case said note is paid at maturity, we will forthwith transfer to the said George, on his order, one thousand shares of the said stock, and will pay over to him at said time whatever dividends we may receive on said stock; it being understood that, in case the said note is not paid at maturity, we shall have the right of selling, at the market price, the said shares, and of claiming and receiving from the said George the difference between the proceeds of the sale, deducting expenses, and the said sum of one hundred and thirty-two thousand dollars.

As witness our hands, this 10th day of May, 1817.

CHARLES PLEASANTS,
JOHN LYSLE.

It is understood that said shares are to be completed prior to delivery, by the payment of the last instalment.

JOHN LYSLE.

MAY 10, 1817.

PHILADELPHIA, *July* 12, 1817.

The within is a copy of an original contract made for the sole benefit and use of William Jones, to whom I hereby assign all my right, title, and interest therein, and engage to deliver over to him, or his assigns, the original contract, with my assignment thereon, in due form, whenever he shall substitute other satisfactory security in lieu of my note, or provide the means to pay the said note at maturity.

GEO. WILLIAMS.

B.

GENTLEMEN: PHILADELPHIA, *July* 12, 1817.

Having disposed of the 1,000 shares of United States Bank stock, which I purchased of you some time since, to William Jones, Esq., I am desirous of substituting his note for mine, which I hope will be acceptable to you.

Respectfully, I am your obedient servant,

GEO. WILLIAMS.

CHARLES PLEASANTS and JOHN LYSLE, Esquires.

C.

Received, Philadelphia, August 26th, 1817, of Dennis A. Smith, Esq., his note of hand, dated Philadelphia, August 26th, 1817, payable to my order, on the 2d January next, for twenty-six thousand dollars; upon the payment of which note I engage to assign and transfer to the said D. A. Smith, and to his assigns, all my right, title, and interest in a certain contract for the sale and delivery of one thousand shares of the stock of the Bank of the United States, entered into on the 10th day of May last, between John Lysle and Charles Pleasants, of the first part, and George Williams, of the second part; he, the said Dennis A. Smith, agreeing to be bound by the conditions expressed in an assignment of the said contract by the said George Williams to myself, written and executed on a copy of the said contract in my possession.

W. JONES.

I hereby assign my right to the within to Jas. Wm. McCulloch.

D. A. SMITH.

15th Congress.] No. 554. [2d Session.

ALTERATIONS IN THE TARIFF OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 8, 1819.

SIR: TREASURY DEPARTMENT, *February* 8, 1819.

In obedience to a resolution of the House of Representatives of the 20th of April, 1818, directing the Secretary of the Treasury "to report to Congress at their next session what further improvement it may be practicable to make in the tariff of duties upon imported goods, wares, and merchandise, by charging specific duties upon articles which are now charged with duties ad valorem," I have the honor to submit the enclosed list of articles, exhibiting the original cost, the freight, insurance, and commissions, where it has been practicable; the present ad valorem duty, reduced to a specific form; and the specific duty which it is conceived may be imposed upon them, respectively, consistent with the public interest.

It is probable that this list may be considerably extended, should the subject receive no final disposition during the present session.

I have the honor to be your most obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

A list of articles paying ad valorem duties, which may be subjected to specific duties.

Articles.	Original cost.	Rate of freight, insurance, and commission.	Present ad valorem duty.	Rate of present duty in a specific form.	Proposed specific duty.	Remarks.
		Per cent.	*Per cent.*			
Aqua fortis,	$ 26 per pound,	-	7½	$ 2.14 per pound,	$ 2¼ per pound,	This article is imported solely from England.
Assafœtida,	17	-	15	2.50 per pound,	50 per pound.	
Bandanas,	3 00 piece of 7 hks.	11	15	54 per piece,	10 per hkf.	Not exceeding one yard square.
Beads, (glass,)	30 per pound,		20	6.60 per pound,	7 per pound,	Glass beads cost from 20 to 30 cents per pound. The duty is here stated on the highest.
Bergamot,	3 00 per pound,	-	30	99.75 per pound,	1 10 per pound,	This article is imported in copper vessels, of the value of 10 per cent. of the article. It is therefore proposed to make the duty $1 10 per pound.
Binding, (quality,)	87 gro. 4 pieces,	5½	25	23.92 gro. 4 pie's.	48 gro. of 4 pieces,	Quality and shoe binding formerly measured 36 yards per piece, and 4 pieces made a gross of 12 dozen yards, at which rate they are bought and sold. The quantity has been gradually curtailed, and they now contain but 24 yards. The duty proposed is on the old measure; 4 pieces to be considered as a gross, not exceeding 144 yards, as formerly.
Binding, (shoe,)	83 gro. 4 pieces,	5½	25	14.57 gro. 4 pie's.	28 not exceeding 12 dozen yards.	
Borax,	14 00 per 100 lbs.	-	15	2 52 per 100 lbs.	2½ per pound.	
Brass kettles, and all other vessels of brass,	50 per pound,	-	20	11 per pound,	12 per pound.	
Braziers' rods,	3 33 per cwt.	-	-	- -	2 50 per cwt.	This rate of duty has been collected on these articles, under the head of rod iron.
Bunting, (or cloth for flags,) 18 inches,	20 per yard,	-	25	4.40 per yard,	5 per yard,	Over 10 inches and not exceeding 20 inches in width.
Bunting, (or cloth for flags,) 9 inches,	10 per yard,	-	25	2.20 per yard,	2½ per yard,	For 10 inches, and under.
Butter,	17 per pound,	7	15	2.80 per pound,	6 per pound.	
Brick, (fire,)	26 00 p. thousand,	-	20	6 00 p. thousand	10 00 per thousand.	
Brick, (other,)	3 00 p. thousand,	-	20	66 p. thousand	1 50 per thousand.	
Camlet,	18 00 per piece,	-	15	3 24 per piece,	3 50 per piece,	18 yards long and 80-100 wide.
Cantharides,	75 per pound,	-	15	12.37 per pound,	12½ per pound.	
Carpeting, (Brussels,)	1 56 per yard,	-	25	42.90 per yard,	45 per yard,	Not to exceed 3-4 of a yard in width.
(Venetian,)	1 12 per yard,	-	25	30.75 per yard,	30 per yard,	Do. 4-4 do.
(Kidderminster,)	1 00 per yard,	-	25	27.50 per yard,	30 per yard,	Do. 4-4 do.
(Brussels stair, 4-4,)	2 07 per yard,	-	25	56.75 per yard,	60 per yard,	Do. 4-4 do.
(Kidderminster stair, 1-2,)	56 per yard,	-	25	15.40 per yard,	15 per yard,	Do. 1-2 do.
(Venetian stair, 5-8,)	70 per yard,	-	25	19.25 per yard,	19 per yard,	Do. 5-8 do.
(Venetian stair, 3-4,)	83 per yard,	-	25	22.82 per yard,	23 per yard,	Do. 3-4 do.
Castor oil,	10 per pound,	-	15	1.65 per pound,	2 per pound,	This article is imported from the western coast of Africa, Calcutta, and West Indies. It costs from 13 to 19 rupees per maund.
Cement, Roman,	3 00 per 100 lbs.	-	15	49.50 p. 100 lbs.	50 per pound.	
Chamblee,	19 50 per piece,	11	15	3 51 per piece,	3 60 per piece,	30 yards long and 45-100 wide.
Choppa romals, and all other flag silk handkerchiefs 4-4,	3 50 p. piece 7 hks.	11	15	63 per piece,	10 per hkf.	Not exceeding one yard square.
Cochineal,	3 50 per pound,	-	7½	28.87 per pound,	29 per pound.	
Cocoa nuts,	2 50 per 100,	-	15	41 per 100,	1 50 per 100.	
Concan, (30 yards,)	9 00 per piece,	11	15	1 62 per piece,	2 00 per piece,	30 yards long and 45-100 wide.

Copper kettles and all vessels of copper,	50 per pound,	-	25	15.67 per pound,	16 per pound.	
Corks,	3 73 per 1,000,	-	15	61.54 per 1,000,	60 per 1,000.	
Crapes, (Canton) 18 yards,	6 64 per piece,	11	15	1 19.52 per piece,	1 25 per piece,	18 yards long and 50-100 wide.
Crapes, (Nankin) 21 yards,	13 00 per piece,	11	15	2 34 per piece,	2 50 per piece,	21 yards long and 50-100 wide.
Crape shawls, 7-4	4 33 each,	11	15	77.94 each,	1 00 each,	7-4 of a yard square.
Crape shawls, 8-4	7 00 each,	11	15	1 26 each,	1 50 each.	8-4 of a yard square.
Cremor tartar,	12½ per pound,	-	7½	1.30 per pound,	1½ per pound.	
Crash,	66 00 p. 1,000 archines,		15	10 89 p.1,000 ar.	11 00 per 1,000 ar.	
Dates,	8 00 per 100 lbs.	-	15	1 44 per 100 lbs.	1 50 per pound.	
Demijohns,	45½ each,	-	20	10 each,	12 each.	
Down, (eider,)	2 50 per pound,	-	15	41.25 per pound,	50 per pound.	
Down, (common,)	40 per pound,	-	15	6.60 per pound,	10 per pound.	
Drap de soie, or serge of Rome,	1 14 per ell,	-	15	18.81 per ell,	20 per ell.	
Essence of lemon,	3 00 per pound,	-	30	99 per pound,	1 00 per pound.	
Filberts, and all other nuts except almonds,	75 per 100 lbs.	-	15	12.37 per 100 lbs.	1 per pound,	Nuts of every description are articles of pure luxury, and can easily pay this duty; raisins of the first quality and almonds pay three cents per pound, and are retailed at twenty-five cents, which is the usual price for filberts and walnuts.
Feathers for beds,	20 per pound,	-	15	3.30 per pound,	5 per pound.	
Fruit, (preserved,)	25 per pound,	-	15	4.12 per pound,	10 per pound,	Preserved fruits of all kinds, not enumerated, to pay this duty; they are articles of luxury, and can well afford it.
Gin cases,	92 each,	-	15	15.18 each,	20 each.	
Ginger,	4 50 per 100 lbs.	-	15	82 per 100 lbs.	3 per pound.	
Gloves, (silk,)	6 00 per dozen,	-	15	99 per dozen,	1 00 per dozen,	The medium cost of these articles is taken in reference to the average quantity imported.
Gloves, (men's silk,)						
Gloves, (ladies' habit,)						
Glass, (plain,)	24 per pound,	-	20	5.28 per pound,	6 per pound,	This article costs, by the average quantity imported, twenty-four cents per pound, at which rate the duty is computed.
Grindstones,	7 50 per ton,	-	15	1 20 per ton,	12 per 100 lbs.	
Gum, of all kinds except manna,	15 00 per 100 lbs.	-	15	2 70 per 100 lbs.	3 per pound,	Gum Senegal is a tender on the coast of Africa, at six pounds per dollar.
Gunny bags,	3 50 per 100 bags	-	15	63 per 100 bags	1 each.	
Hats, (men's,)	4 67 each,	-	30	1 54.11 each,	1 55 each,	Hats composed wholly or in part of fur to pay $1 55 each.
Hats, (youths',)	2 00 each,	-	30	66 each,	70 each,	
Herrings, (Digby & all other kinds)	60 per box,	-	15	9.90 per box,	15 per box.	
Honey,	50 per gallon,	-	15	8 per gallon,	15 per gallon.	
Horns,	37 00 per 1,000,	-	15	6 10.50 per 1,000,	5 00 per 1,000,	Horns are used in large quantities in the manufactures of the country, and a less duty is therefore proposed.
Ipecacuanha,	1 50 per pound,	-	15	24.75 per pound,	25 per pound.	
Isinglass, (animal,)	1 00 per pound,	-	15	16.50 per pound,	18 per pound.	
Ivory, (prime,)	60 per pound,	-	15	9.90 per pound,	10 per pound,	Ivory is a tender at Senegal, and other places on the coast of Africa, at $1 per pound. As there is but little specie there, it can be purchased at sixty cents a pound. And, as all that is imported is consumed, ten cents is considered the highest duty it ought to pay.
Ivory, screvelloes, or small teeth under 16 pounds,	30 per pound,	-	15	4.95 per pound,	5 per pound,	Screvelloes, half price.
Ivory black,	2 00 per 100 lbs.	-	15	33 per 100 lbs,	½ per pound.	
Lamp black,	7 00 per 100 lbs.	7	15	1 13 per 100 lbs.	1½ per pound.	
Lard,	17 per pound,	-	15	2.80 per pound,	6 per pound.	
Linseed oil,	1 00 per gallon,	-	15	16 per gallon,	25 per gallon.	
Lime juice and shrub,	50 per gallon,	-	15	8 per gallon,	20 per gallon.	
Limes,	3 00 per bbl.	-	15	50 per barrel,	1 00 per barrel.	

LIST—Continued.

Articles.	Original cost.	Rate of freight, insurance, and commission.	Present ad valorem duty.	Rate of present duty in a specific form.	Proposed specific duty.	Remarks.
		per cent.	*per cent.*			
Lemons,	$4 50 per box,	-	15	$ 75 per box,	$1 50 per box.	
Magnesia,	56 per pound,	-	15	9.20 per pound,	10 per pound.	
Manna,	24 per pound,	-	15	3.96 per pound,	4 per pound.	
Mustard,	27 per pound,	-	30	8.91 per pound,	10 per pound.	
Nankeens, (short yellow,)	46 per piece,	14	25	13.80 per piece,	15 per piece,	Not exceeding 5 yards long and 34-100 wide.
Nankeens, (company,)	90 per piece,	14	25	27 per piece,	28 per piece,	Not exceeding 7 yards long and 40-100 wide.
Nankeens, (blue,)	1 00 per piece,	14	25	30 per piece,	35 per piece,	Not exceeding 10 yards long and 36-100 wide.
Needles,	1 50 per 1,000,	-	20	33 per 1000,	35 per 1000.	
Noyeau,	60 per bottle,	-	15	9.90 per bottle,	18 per bottle,	Not exceeding 1½ pint.
Opium,	4 00 per pound,	-	15	66 per pound,	1 00 per pound.	
Oranges,	3 00 per barrel,	-	15	50 per barrel,	1 00 per barrel.	
Oil cloths, (common painted,)	2 50 per piece,	-	15	41.25 per piece,	50 per piece,	Dutch oil cloths, containing 9 or 10 yards, cost from $2 30 to $2 50.
Palm oil,	25 per gallon,	-	15	4 per gallon,	10 per gallon.	
Parasols,	2 82 each,	-	30	93.06 each,	1 00 each.	
Pins assorted in pounds,	48 per pound,	-	20	10.56 per pound,	12 per pound,	Pins are imported in papers containing one pound of mixed sizes, and in bundles of one size, numbered according to quality. The difference per pound is the labor of papering, which is about 20 per cent. It is proposed that they shall pay by weight including the paper.
Pins in papers, or bundle pins,	58 per pound,	-	20	12.76 per pound,	15 per pound,	
Paper, (letter,)	-	-	30	- -	15 per pound,	The proposed duty is nearly the same as that now paid on paper imported from Great Britain, except printing paper, of which but little is imported. Paper imported from the Mediterranean, being thin and light, has been sold so low as to injure the American manufactories, which are quite competent to our own supply. This evil will be remedied by the proposed duty.
Paper, (common writing,)	-	-	30	- -	12 per pound,	
Paper, (printing,)	-	-	30	- -	8 per pound,	
Paper, (wrapping,)	-	-	30	- -	4 per pound,	
Paper, (colored wrapping,)	-	-	30	- -	4 per pound,	
Paper, (sugar loaf,)	-	-	30	- -	4	Seldom imported; worth here from $5 to $6 per cwt.
Paper, (bookbinders,')	-	-	30	- -	4	Seldom imported; worth here about $5 per cwt.
Paper, (bandbox and sheathing,)	-	-	30	- -	4	Seldom imported; worth here about $3 per cwt.
Plain Virginias,	1 00 per ell,	-	30	16.50 per ell,	25 per ell.	
Prunello and all cloth shoes,	55 per pair,	-	-	- -	25 per pair,	It is proposed that shoes, not paying specific duties, shall pay 25 cents per pair.
Pine apples,	75 per dozen,	-	15	12 per dozen,	50 per dozen.	
Quicksilver,	36 per pound,	-	15	6 per pound,	12 per pound.	
Quills, Russian and Dutch,	4 00 per thousand,	-	15	66 per thousand,	66 per thousand,	Russia quills cost from $1 50 to $1 70; Dutch quills from $3 to $4 50—the duty is estimated on $4, and it is believed that they can well pay that sum.
Rice,	1 50 per 100 lbs.	-	15	27 per 100 lbs.	½ per pound.	
Saddle irons,	5 00 per 100 lbs.	-	20	1 00 per 100 lbs.	2 per pound.	
Saffron,	15 00 per pound,	-	15	2 47.30 per pound,	2 50 per pound,	Saffron varies in price, according to the quality, from $11 to $15 per pound. The duty is estimated on the best, as that is most generally imported.
Saltpetre, (from India,)	10 per pound,	-	7½	1.33 per pound,	2 per pound.	
Saltpetre, (from other places,)	20 per pound,	-	-	2.66 per pound,	3 per pound.	
Sal ammoniac,	14 50 per 100 lbs.	-	15	2 61 per 100 lbs.	3 per pound.	
Senna,	3 50 per 100 lbs.	5	15	57.75 per 100 lbs.	1 50 per 100 lbs.	The first quality garble leaf senna from Calcutta costs $8 75 per 100 pounds, and the duty proposed is on the best quality.
Silk, sewing,	5 00 per pound,	4½	15	82.50 per pound,	1 00 per pound.	
Silk, raw,	2 75 per pound,	-	15	45.37 per pound,	45 per pound.	
Silks, Florentine and Levantine, of Great Britain,	2 67 per yard,	-	15	44.50 per yard,	50 per yard,	Not exceeding one yard in width.

Silks, sarsnet, India, 30 yards, -	15 00 per piece,	11	15	2 70 per piece,	3 00 per piece,	Not exceeding 30 yards long and 80 100 wide.
Silks, sarsnet, India, 18 yards, -	12 00 per piece,	11	15	2 60 per piece,	2 50 per piece,	Not exceeding 18 yards long and 80-100 wide.
Silks, singhaws, India, 30 yards, -	15 00 per piece,	11	15	2 76 per piece,	3 00 per piece,	Not exceeding 30 yards long and 80-100 wide.
Silks, satins, India, 30 yards, -	15 50 per piece,	11	15	2 79 per piece,	3 00 per piece,	Not exceeding 30 yards long and 80-100 wide.
Silks, satins, India, 18 yards, -	13 50 per piece,	11	15	2 43 per piece,	2 60 per piece,	Not exceeding 18 yards long and 80-100 wide.
Silks, satins, Florentine, 15 yards,	11 25 per piece,	11	15	2 02.50 per piece,	2 50 per piece,	Not exceeding 15 yards long and 52-100 wide.
Silks, Levantines, India, 30 yards,	12 00 per piece,	11	15	2 16 per piece,	2 50 per piece,	Not exceeding 30 yards long and 79-100 wide.
Silks, Pongees, India, 30 to 37 yds.	5 00 per piece,	11	15	90 per piece,	1 00 per piece,	Not exceeding 37 yards long and 50-100 wide.
Silks, Florence, India, 30 yards,	13 50 per piece,	11	15	2 43 per piece,	2 50 per piece,	Not exceeding 30 yards long and 68-100 wide.
Silks, Florence, India, 18 yards,	9 00 per piece,	11	15	1 62 per piece,	2 00 per piece,	Not exceeding 18 yards long and 68-100 wide.
Silks, damask, flowered, - -	23 00 per piece,	-	15	4 14 per piece,	4 50 per piece.	
Silks, Florence, of Lyons, -	66 per ell,					
Silks, Florence, of Avignon, -	80 per ell,	-	15	12.37 per ell,	14 per ell,	Original cost—average 75 cents per ell.
Silks, Florence, - - -	57 per ell,					
Silks, Levantine, of France, -	88 per ell,					
Silks, double Levantine, France,	1 10 per ell,	-	15	16.50 per ell,	18 per ell,	Original cost—average $1 per ell.
Silks, satin, of France, - -	1 20 per ell,	-	15	19.80 per ell,	22 per ell.	
Silk handkerchiefs, India, 7-8, -	6 29 for 20 hdkfs.	11	15	1 13.22 for 20,	1 25 for 20,	Not exceeding 7-8ths of a yard square.
Silk handkerchiefs, India, 4-4, -	6 94 for 20 hdkfs.	11	15	1 24.92 for 20,	1 35 for 20,	Not exceeding 4-4ths of a yard square.
Saws, (mill,) - - -	6 75 each,	-	20	1 48.50 each,	1 50 each,	Not exceeding 7 feet long.

Umbrella frames, - - -	50 each,	5	30	16.50 each,	17 each,	
Vinegar, - - - -	20 per gallon,	-	15	3 per gallon,	6 per gallon.	

15th Congress.] No. 555. [2d Session.

GEORGE WILLIAMS, A DIRECTOR OF THE BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 15, 1819.

To the honorable the House of Representatives of the United States: The memorial of George Williams respectfully sets forth:

That having this day obtained a copy of the documents reported by the committee of your House, appointed to examine into the proceedings of the Bank of the United States, he deems it proper to submit to the House of Representatives some explanations relative to his conduct as a Government director, which has been the subject of animadversion in the report of the committee.

The imputations charged against your memorialist are threefold: *First*, That he subscribed eleven hundred and seventy-two shares of stock, in as many names, as their attorney, for the purpose of unduly influencing the election of directors. *Second*, That he was concerned in the purchase of one thousand shares for the account of Mr. Jones, on which a considerable profit was realized by that gentleman, in which the committee seem to suppose there was some unfairness; and *third*, That your memorialist, while a Government director, had been deeply concerned in the purchase of stock, and in the making and purchase of contracts for the delivery of stock. With regard to the *first* allegation, he obtained names and subscribed one share each on them, for the sole object of securing a considerable amount of this stock, entertaining a very favorable opinion of the institution; but in so doing he had not the remotest view to influence the election, not being even a candidate for the office of director himself. He procured, also, eight hundred shares to be subscribed for him in different names, in ten and twenty shares each, in Lexington and Cincinnati, with the same object. The whole of the eleven hundred and seventy-two shares were voted singly at the first election, the transfer books not being at that time opened, and every share taken in single names was then voted, whether held by the real proprietor or by proxy. The shares above referred to were subsequently consolidated, and were never, after the first election, voted as if held in single names. They were voted, not by the memorialist, but by the agents of the Baltimore stockholders, in common with other shares held there; and, although these stockholders held one-fourth of the votes, while those of New York held only one-twelfth thereof, it is decisive evidence that no undue influence was attempted to be exercised in behalf of the Baltimore interest, since only two directors were elected into the first board from Baltimore, and a like number from New York. In noticing the *second* charge, your memorialist avers that there is not the slightest foundation for imputing, either to himself or to Mr. Jones, the late president, any unfair or improper motives in that transaction. But he forbears to go into a statement of its particular circumstances, inasmuch as that gentleman has presented documents in his justification to your House, establishing, as he trusts, conclusively, its innocent and honorable character.

In reference to the *third* allegation, your memorialist acknowledges that, having believed that the Bank of the United States, being chartered by Congress, would receive the countenance and be invigorated by the fostering protection of the Government; that it possessed great advantages, which, in its progress, would be continually developing, and be coming daily more evident; and that it would be prosperous and productive, beyond any other moneyed institution in the country, he early made large investments in its stock, both by original subscription and by purchase; that almost all he ever obtained he continues now to hold; that in so doing he had not the most distant idea he was acting inconsistently with his duty as a public director, or that he transgressed the bounds which his obligations in that situation imposed upon his conduct. Nor did he imagine that, in proportion as he increased his interest in the institution, he thereby diminished his fidelity to it, or became the less qualified to act as a director of its concerns. He did not understand that his appointment implied any restraint on his accustomed commercial dealings, or that in clothing himself with the office of a director, he thereby abandoned his profession, or lost the character of a merchant. His purchases were made openly in the market, and his engagements relative to them fairly entered into, and honorably fulfilled.

Your committee have appeared to suppose that sundry measures were adopted by the board of directors, which having had the effect to raise the price of the stock, were entered into for the purpose of giving an artificial and temporary enhancement to those prices. The measures alluded to are principally the resolutions to pay dividends in England; to loan to subscribers, to enable them to pay the second instalment; to loan on stock at par; and, subsequently, to loan on stock at one hundred and twenty-five dollars per share, with requiring an additional name. Your memorialist was not a director at the time the first two of these resolutions were passed, and not residing at Philadelphia, and consequently seldom being present at the sittings of the board, he was absent when the last two of those measures were adopted, so that he had no individual participation in any of those proceedings. Nor does he recollect ever to have advised or assented to the payment of the dividends on delinquent stock. He will, however, take this occasion to observe, that he entertains a thorough conviction that all those measures were entered into in perfect good faith, and with no sinister or interested views on the part of the board of directors; and he does not doubt, that if he had had a vote on all or any of those resolutions, they would have received his full approbation, whatever may now be thought of their wisdom or policy.

In conclusion, your memorialist begs leave briefly to notice the remarks made by the committee upon his examination before them. He stated to the committee his perfect readiness to answer all inquiries which regarded his conduct as a public director, and even to disclose to them the particulars of all his contracts and concerns of every nature, relative to his purchase of stock, for their satisfaction; but, understanding that the statements furnished, and the results obtained in their inquiries, would be printed and published, he declined exhibiting for public inspection his private transactions, they having not the least connexion with his proceedings or character as a director of the bank. And your memorialist acknowledges that he made no explanations before the committee, in extenuation or vindication of his conduct, as it appears by the report he had the opportunity given him to do, both because he did not then understand, to the best of his present recollection, that he was expected or invited to make explanations for such an object, and moreover because he did not conceive, nor does he now conceive, that his conduct required either apology, extenuation, or vindication. During the two years that he served his Government as a director, he endeavored to fulfil the duties of his honorable appointment to the best of his judgment and abilities. He arrogates in his behalf no praise for manifesting either; but he claims confidently the merit of having, at all times and on all occasions, discharged those duties with perfect integrity and uprightness.

Your memorialist, forbearing to invoke in his favor that share of reputation which his fellow-citizens have heretofore accorded to him, and which has been hitherto unimpeached, relies with entire confidence on the justice and impartiality of your honorable House to acquit him, in his character of a public director, (in which character alone he has any right to ask to be heard,) of all unworthy or dishonorable imputations, where no evidence appears to condemn him; and to believe his motives to be correct and pure, where his actions cannot be shown to be either criminal or even blameable.

GEO. WILLIAMS.

Baltimore, *February* 10, 1819.

15th Congress.] No. 556. [2d Session.

THE MINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 25, 1819.

SIR: TREASURY DEPARTMENT, *February* 24, 1819.

I have the honor to transmit, herewith, a letter from the Comptroller of the Treasury, accompanied with sundry statements, which have been prepared in obedience to the act entitled "An act establishing a Mint and regulating the coins of the United States," passed the 2d of April, 1792.

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *February* 23, 1819.

The statements herewith, marked A, B, and C, have been prepared pursuant to the seventh section of an act of Congress, passed the 2d of April, 1792, entitled "An act establishing a Mint, and regulating the coins of the United States." They contain all the information relative to the Mint which the settlements made at the Treasury enable me to afford.

I have the honor to be, with great respect, your obedient servant,

JOS. ANDERSON.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

A.

Statement exhibiting the balance of the gold and silver bullion remaining in the hands of the officers of the Mint on the 31st December, 1817; the amount deposited from 1st January to 31st December, 1818; the different species of coins made and paid on account of deposites; allowance for wastage; and the balance remaining in the hands of the officers of the Mint on the 31st December, 1818, to be accounted for on a future settlement, viz:

	Oz.	dwt.	grs.	Dolls.	cts.	m.
Balance of gold bullion, &c. remaining in the hands of the officers of the Mint on the 31st December, 1817,	3,269	5	22	58,118	42	5

15th CONGRESS.] **No. 557.** [2d SESSION.

REMISSION OF DUTY.

COMMUNICATED TO THE SENATE, FEBRUARY 26, 1819.

Mr. EPPES, from the Committee on Finance, to whom has been referred the memorial of the select and common councils of Philadelphia, reported:

That the petitioners pray to be allowed to import, free from duty, cast-iron pipes, for the purpose of conveying water through the streets of the city. Your committee consider it as a general principle, which ought not to be departed from, that the revenue laws should be uniform in their operation and application to individuals and corporate bodies; and while they feel pleasure in expressing an opinion as to the importance of the object for which these iron pipes are to be employed, they consider that every relaxation in the application of the revenue system is a departure from that equal and exact justice which the citizens of a free country have a right to demand. How far a removal of duties on all iron pipes might affect the public interest, they are not at present prepared to decide. When, however, it is considered that one of the objects of the present tariff is the encouragement of domestic manufactures, of which iron castings constitute an important article, they consider it would be a departure from the principles of our present system to make the exception general. The following resolution is therefore submitted:

Resolved, That the prayer of the petition of the select and common councils of the city of Philadelphia ought not to be granted.

16th CONGRESS.] **No. 558.** [1st SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE SENATE, DECEMBER 13, 1819.

In obedience to the directions of the act supplementary to the "Act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report:

1. OF THE REVENUE.

The nett revenue arising from duties upon imports and tonnage, internal duties, direct tax, public lands, postage, and other incidental receipts, during the year 1815, amounted to - - $49,555,642 76

viz:

Customs, (see statement A,)	$36,306,022 51	
Internal duties,	5,963,225 88	
Direct tax,	5,723,152 25	
Public lands,	1,287,959 28	
Postage, and other incidental receipts,	275,282 84	
That which accrued from the same sources in the year 1816 amounted to		$36,652,904 72

viz:

Customs, (see statement A,)	$27,484,100 36	
Internal duties,	4,396,133 25	
Direct tax,	2,785,343 20	
Public lands,	1,754,487 38	
Postage, and other incidental receipts,	237,840 53	
That which accrued from the same sources during 1817 amounted to		24,365,227 34

viz:

Customs, (see statement A,)	$17,524,775 15	
Internal duties,	2,676,882 77	
Direct tax,	1,833,737 04	
Public lands, (exclusive of Mississippi stock,)	2,015,977 00	
Postage, and other incidental receipts,	313,855 38	
And that which accrued from the same sources during the year 1818 amounted to		26,095,200 65

viz:

Customs, (see statement A,)	$21,828,451 48	
Arrears of internal duties, (see statement B,)	947,946 33	
Arrears of direct tax, (see statement B,)	263,926 01	
Public lands, (exclusive of Mississippi stock.—See statement C,)	2,464,527 90	
Postage, dividends on bank stock, and other incidental receipts, (see stat. B,)	590,348 93	

It is ascertained that the gross amount of duties on merchandise and tonnage which has accrued during the first three quarters of the present year exceeds $18,000,000; and the sales of the public lands during the same period have exceeded $8,700,000.

The payments into the Treasury during the first three quarters of the year are estimated to amount to (exclusive of $169,594 07 in Treasury notes)		$19,550,607 17

viz:

Customs,	$15,604,081 58	
Public lands, (exclusive of Mississippi stock,)	2,858,556 61	
Arrears of internal duties,	195,531 02	
First instalment payable by United States Bank,	500,000 00	
Arrears of direct tax,	72,880 24	
Fourth dividend on the United States' shares in the United States Bank,	175,000 00	
Incidental receipts,	29,095 92	
Repayments,	85,462 29	
And the payments into the Treasury during the fourth quarter of the year, from the same sources, are estimated at		5,000,000 00
Making the total amount estimated to be received into the Treasury during the year 1819 (exclusive of $169,594 07 in Treasury notes)		$24,381,013 10
Which, added to the balance in the Treasury on the 1st day of January last, (exclusive of $32,155 51 in Treasury notes,) amounting to		1,446,371 23
Makes the aggregate amount of		$25,827,384 33

The application of this sum for the year 1819 is estimated as follows, viz:

To the 30th September the payments (exclusive of $81,161 79 in Treasury notes, which have been drawn from the Treasury and cancelled) have amounted to		$18,192,387 43

viz:

Civil, diplomatic, and miscellaneous expenses,	$2,544,612 98	
Military service, (including arrearages,)	7,665,961 72	
Naval service, (including the permanent appropriation for the gradual increase of the navy,)	3,527,640 42	
Public debt, (exclusive of $81,161 79 in Treasury notes, above mentioned,)	4,454,172 31	
During the fourth quarter it is estimated that the payments (exclusive of $120,587 79 in Treasury notes, which will be drawn from the Treasury and cancelled) will amount to		7,300,000 00

viz:		
Civil, diplomatic, and miscellaneous expenses, - - -	$500,000 00	
Military service, - - - - - -	1,530,000 00	
Naval service, - - - - - -	300,000 00	
Public debt, to the 1st of January, 1820, (exclusive of $120,587 79 in Treasury notes above mentioned,) - - - -	4,970,000 00	
Making the aggregate amount (exclusive of $201,749 58 in Treasury notes drawn drawn from the Treasury and cancelled) of - - - - -		$25,492,387 43
And leaving, on the 1st of January, 1820, a balance in the Treasury estimated at -		$334,996 90

2. OF THE PUBLIC DEBT.

The funded debt which was contracted before the year 1812, and which was unredeemed on the 1st day of October, 1818, (as appears by statement No. 1,) amounted to - -		$29,681,280 07
And that contracted subsequently to the 1st day of January, 1812, and unredeemed on the 1st of October, 1818, (as appears by the same statement,) amounted to - - -		68,146,039 84
Making the aggregate amount of - - - - - -		$97,827,319 91

Which sum agrees with the amount stated in the last annual report as unredeemed on the 1st October, 1818, excepting the sum of $1,885 13, which was then short estimated, and which has since been corrected by actual settlement.

On the 1st day of January, there was added to the above amount for Treasury notes brought into the Treasury and cancelled, and for which the following stock was issued:		
In six per cent. stock, - - - - -	$49,024 71	
In seven per cent. stock, - - - -	2,646 00	
		51,670 71
Making - - - - - - - -		$97,878,990 62
From which deduct:		
Louisiana six per cent. stock, reimbursed on the 21st October, 1818,	$4,977,950 00	
And deferred stock reimbursed between the 1st of October, 1818, and 1st January, 1819, - - - - -	252,863 27	
		$5,230,813 27
Making the public debt which was unredeemed on the 1st January, 1819, (as appears by statement No. 2,) amount to - - - - - -		92,648,177 35
From the 1st of January to the 30th September, inclusive, there was, by funding Treasury notes, and issuing three per cent. stock for interest on old registered debt, added to the public debt (as appears by statement No. 3) the amount of - - - - -		36,135 59
		$92,684,312 94
From which deduct the amount of stock purchased during that period, (as appears by statement No. 4,) - - - -	$711,957 55	
And the estimated reimbursement of deferred stock, - - -	243,827 88	
		955,785 43
Making, on the 1st of October, 1819, (as appears by statement No. 3,) the sum of - -		$91,728,527 51
Since the 30th of September, there has been redeemed, or provision made for the redemption of, 54 per cent. of the Louisiana stock unpaid on the 1st of October, 1819, amounting to - - - -	$2,601,817 15	
And there will be reimbursed of the principal of the deferred six per cent. stock, on the 1st January, 1820, - - - -	241,506 70	
		2,843,323 85
Leaving of the public debt unredeemed on the 1st January, 1820, by estimate, - -		$88,885,203 66
The Treasury notes in circulation are estimated (as appears by statement No. 5) at - -		$181,821 00
The whole of the awards made by the commissioners appointed under the several acts of Congress for indemnifying certain claimants of public lands (as appears by statement No. 6) amounts to -		$4,282,151 12
Of which there has been received at the office of the Commissioner of the General Land Office (as appears by statement C,) the sum of - - - - -		2,372,574 31
Leaving outstanding, at the dates of the several returns from the land districts, - -		$1,909,576 81

3. *Of the estimates of the public revenue and expenditures for the year* 1820.

In presenting the estimates for the year 1820, it may be proper to observe, that, when the internal duties were repealed on the 31st of December, 1817, the permanent revenue, including those duties, was estimated at $24,525,000; whilst the annual authorized expenditure was ascertained to be less than $22,000,000. The repeal of the internal duties reduced the former to $22,025,000; whilst the payments from the Treasury, during the year 1818, exceeded $26,000,000; and those of the present year will probably fall but little short of $25,500,000.

In the annual report of the Treasury of the 21st of November, 1818, the receipts for the present year were estimated at $24,220,000. Although this estimate will be realized in its general result, deficiencies have been ascertained in the customs, the internal duties and direct tax, the bank dividends, and the postage of letters. The deficiency which has occurred in the customs, internal duties and direct taxes, will probably augment, in nearly

the same degree, the receipts from those sources in the year 1820, by the payment of the revenue bonds, and of that portion of the internal duties and direct taxes which, if the accustomed punctuality had been observed, would have been received during the present year. But it is probable that the receipts of that year will be diminished, by the non-payment of bank dividends, and by the application of a portion of the proceeds of the public lands to the redemption of the outstanding Mississippi stock. The receipts for the year 1820, applicable to the ordinary and current demands upon the Treasury, may therefore be estimated at - - $22,000,000 00

Viz: Customs, - - - - -	$19,000,000	
Public lands, - - - - -	2,000,000	
Arrears of internal duties and direct tax, - - -	450,000	
Second instalment due by United States Bank, - -	500,000	
Incidental receipts, - - - -	50,000	
Which, with the sum estimated to be in the Treasury on the 1st of January, 1820,		$334,996 90
Make the aggregate amount of - - - -		$22,334,996 90

The estimates of the expenditure for the year 1820 are not yet complete; but it is ascertained, from those which have already been received, that a sum not less than $27,000,000 will be required for the service of that year. This deficit of nearly $5,000,000, resulting from the excess of expenditure beyond the receipts, cannot be supplied by any application of the ordinary revenue. After paying the interest and reimbursement of the public debt, and redeeming the remainder of the Louisiana stock, about $2,500,000 of the sinking fund will remain without application, if the price of the public stocks should continue above the prices at which the Commissioners of the Sinking Fund are authorized to purchase. During the years 1821, 1822, and 1823, the average sum of $5,000,000 of the sinking fund will also remain without application, if the price of the public stocks should prevent its purchase. Any application of that portion of the sinking fund, which, on account of the price of the public stock, may remain unemployed in the hands of the Commissioners of the Sinking Fund, to other branches of the public service, if allowable under the provisions of the act making the appropriation, would only postpone the period at which additional impositions would be required to meet the public expenditure. Such an application would also have the effect of ultimately retarding the redemption of the public debt.

It may be proper to add, that, although some of the items in the estimate for the ensuing year may be considered in their nature temporary, yet it is probable that the estimate for succeeding years will exceed rather than fall below it.

Under all the circumstances, it is respectfully submitted that the public interest requires that the revenue be augmented, or that the expenditure be diminished.

Should an increase of the revenue be deemed expedient, a portion of the deficit may be supplied by an addition to the duties now imposed upon various articles of foreign merchandise, and by a reasonable duty upon sales at public auction; but it is not probable that any modification of the existing tariff can supersede the necessity of resorting to internal taxation, if the expenditure is not diminished. Should Congress deem it expedient to modify the present rate of duties, with a view to afford that protection to our cotton, woollen, and iron manufactures, which is necessary to secure to them the domestic market, the necessity of resorting to a system of internal taxation will be augmented. It is believed that the present is a favorable moment for affording efficient protection to that increasing and important interest, if it can be done consistently with the general interest of the nation. The situation of the countries from whence our foreign manufactures have been principally drawn authorizes the expectation that, in the event of a monopoly of the home market being secured to our cotton and woollen manufactures, a considerable portion of the manufacturing skill and capital of those countries will be promptly transferred to the United States, and incorporated into the domestic capital of the Union. Should this expectation be realized, the disadvantages resulting from such a monopoly would quickly disappear. In the mean time, it is believed that a system of internal taxation would be severely felt by the great mass of our citizens.

Whether the revenue be augmented, or the expenditure be diminished, a loan to some extent will be necessary. The augmentation of the one, or the diminution of the other, cannot be effected in sufficient time to prevent this necessity. As the six per cent. stock of the United States is considerably above par, the sum required to be raised by loan can be conveniently and advantageously obtained by the sale of stock of that description; or it may be obtained by the issue of Treasury notes. If the revenue and expenditure shall be equalized, the issue of Treasury notes not bearing interest is recommended in preference to the creation or sale of stock, as the loan, in that event, will be small in amount and temporary in its nature.

All which is respectfully submitted.

W. H. CRAWFORD.

TREASURY DEPARTMENT, *December* 10, 1819.

A.

Statement showing the amount of duties which accrued on merchandise, tonnage, passports, and clearances, of debentures issued on the exportation of foreign merchandise, of payments for bounties and allowances, and of expenses of collection during the years 1815, 1816, 1817, *and* 1818.

Years.	Duties on			Debentures issued.	Bounties and allowances.	Gross revenue.	Expenses of collection.	Nett revenue.
	Merchandise.	Tonnage, &c.	Passp'rts, &c.					
	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.
1815	37,847,751 46	614,025 59	16,006	1,704,933 22	1,811 74	36,771,038 09	465,015 58	36,306,022 51
1816	32,743,568 38	460,302 54	12,234	4,830,311 20	85,319 86	28,300,473 86	816,373 50	27,484,100 36
1817	21,995,642 12	323,005 45	12,608	3,937,323 35	124,346 41	18,269,585 81	744,810 66	17,524,775 15
1818	25,798,490 79	260,878 81	14,030	3,343,938 08	154,587 89	22,574,873 63	746,422 15	21,828,451 48

It will be perceived, on a reference to the annual reports upon the state of the finances for the years 1815, 1816, and 1817, that there is a variation from the above, which arose from corrections after those annual statements were rendered. The above statement is deemed correct.

A statement showing the amount of American and foreign tonnage employed in foreign trade during the years 1815, 1816, 1817, *and* 1818, *as taken from the records of the Treasury.*

Years.	American tonnage in foreign trade.	Foreign tonnage in foreign trade.	Total.	Proportion of foreign tonnage to the whole amount of tonnage employed in the foreign trade of the U. States.
	Tons.	Tons.	Tons.	Tons.
1815	700,500	216,727	917,227	23.6 to 100
1816	877,462	259,142	1,136,604	22.8 to 100
1817	780,136	212,420	992,556	24.4 to 100
1818	755,101	161,413	916,514	17.6 to 100

Aa.

A statement exhibiting the value and quantities, respectively, of merchandise on which duties accrued during the year 1818, (*consisting of the difference between articles paying duty imported and those entitled to drawback re-exported;*) *and, also, of the nett revenue which accrued that year from duties on merchandise, tonnage, passports, and clearances.*

Merchandise paying duties ad valorem.		Dollars.	Dollars.
$2,387,693 at 7½ per cent.,		179,076 97

16th Congress.] No. 559. [1st Session.

DIRECT TAX AND INTERNAL DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 17, 1819.

Sir: Treasury Department, *December* 16, 1819.

I have the honor to transmit statements relative to the internal duties and direct tax required by the thirty-third section of the act of Congress of the 22d July, 1813, to be laid annually before Congress in the month of December; which statements are particularly described in a letter of the Commissioner of the Revenue, of which a copy is herewith transmitted.

I have the honor to be, with great respect, sir, your most obedient servant,

WM. H. CRAWFORD.

The Hon. the Speaker *of the House of Representatives.*

Sir: Treasury Department, Revenue Office, *November* 29, 1819

I have the honor to communicate to you, to be laid before Congress, agreeably to law, in December ensuing, the following statements in duplicate, viz:

No. 1. Statement exhibiting the amounts which have accrued during the year 1818 from the several internal duties, as well as those received in each collection district, with the expenses of collection.

No. 2. Statement of the amounts of direct tax received during the year 1818 in each collection district, with the expenses of collection.

No. 3. General view of the balances of the respective direct taxes imposed for the years 1814, 1815, and 1816, remaining to be accounted for.

No. 4. Abstract of the official emoluments and expenditures of the collectors of internal duties and direct tax during the year 1818.

I am, very respectfully, your obedient servant,

SAML. H. SMITH, *Commissioner of the Revenue.*

Hon. Secretary of the Treasury.

No. 1.

NOTES.

1. This statement being formed from the accounts of the collectors as transmitted to this office, uncorrected by the revision of the accounting officers of the Treasury, the several items of which it consists may not precisely balance or correspond with the results of the accounts as finally settled.

2. The whole sum allowed by the President for the collection of the direct tax and internal duties for the year 1818 amounts to $21,244 45; there having been received from the direct tax $232,888 45, and from the duties $1,019,794 32. In the foregoing general view a proportionate part of the whole allowance is charged to the duties, viz: $17,294 86; the residue being properly chargeable to the collection of the direct tax.

The following exhibits a view of the outstanding internal duties on the 20th of November, 1819, *which is necessarily, in part, the result of computation.*

Amount uncollected, being due by individuals,	$600,000 00
Amount collected, being in the hands of collectors and their deputies, for which suits have, in several cases, been instituted,	280,000 00
	$880,000 00

Revenue Office, *November* 20, 1819.

16th Congress.] No. 560. [1st Session.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 20, 1819.

To the honorable the Senate and House of Representatives of the United States, in Congress assembled: The memorial of a convention of the friends of national industry, assembled in the city of New York, to take into consideration the prostrate situation of our manufacturers, and to petition Congress for their relief and protection, composed of delegates from Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and Ohio, respectfully showeth:

That your memorialists appeal to your honorable body, under a firm and solemn conviction that a crisis has arrived in the progress of our nation, which imperiously demands the serious attention and prompt exertion of the collected wisdom of its councils, and on which its future destinies must essentially depend.

That the United States, possessing every advantage of soil, climate, and native productions, and with a population industrious, intelligent, and enterprising, to a degree never probably exceeded by any nation, and after

enjoying for twenty years the benefit of an over-proportion of the trade of the world, find themselves in a state of great embarrassment and difficulty, involving almost every description of our citizens: our commerce is greatly prostrated; our shipping has sunk in value to one-half of its original cost; real estate is depreciated, in most parts of the country, in an equal degree; numbers of our merchants, manufacturers, and farmers are reduced to bankruptcy, and the circumstances of many of those who have escaped this calamitous situation are daily impairing; a great portion of our mechanics and artists are unemployed; and all the fruits of their labors, which might have been daily adding to the prosperity of the nation, are wholly lost. In fine, our great staples are so far reduced in price as most seriously to affect the interests of the agriculturists, and to diminish the means of paying for our importations. That we are deeply indebted to foreign nations, notwithstanding we have transmitted to them as much of our surplus productions as they furnished a market for, and likewise a large amount of our Government and bank stock, which subjects us to an oppressive annual tax, for interest, probably equal to the amount of the civil expenses of our Government, which adds to the impoverishing drain of our specie. That, while so many of our manufacturers are thus ruined, our working people destitute of employment and of the means to support their families, our manufacturing establishments falling to ruins, and our water powers, with which we are pre-eminently blessed, unemployed, our cities and towns are filled with the manufactured productions of other nations, by which we have been, and are, ruinously drained of our wealth. That those complicated evils which oppress us, and which have taken place during a season of profound peace, of nearly five years duration, after a war closed with honor, and which left us in a state of high prosperity, evince that there is something unsound in our policy, which requires a radical remedy, in the power of the National Legislature alone to apply. That wisdom dictates to the United States to profit by the experience of other nations; to shun those systems which have operated on them perniciously, and scrupulously to adopt those that have advanced their wealth, power, and resources. Being the youngest nation in the world, they cannot, without a sacrifice of their happiness, pursue the paths that have led some to decay and ruin; nor deviate from those that have exalted others to a high degree of prosperity. We, therefore, respectfully submit to your serious consideration a slight sketch of the policy of some of the nations of Europe, with its consequences.

At the close of the seventeenth century, Portugal possessed a most flourishing and extensive woollen manufactory, raised to maturity by prohibitions of all rival articles from other nations. The basis of this manufacture was her own raw material, and that of Spain. It employed a large proportion of her population advantageously, and greatly enriched the nation. She was induced to remove the prohibition, and trusted to a protecting duty of twenty-three per cent. In three or four years the manufacture was destroyed; the manufacturers ruined; the workmen devoted to idleness and beggary; the raw material sold at low rates to foreigners, who employed their workmen on it, and returned it at an advance of three to four hundred per cent., whereby she was drained of her wealth, as we have been by similar means; in a word, gradually impoverished and ruined, she holds out a most impressive lesson to the statesmen of all other nations.

The example of Spain is equally striking. She has, for centuries, with those boundless treasures which are lavished on her in vain, nourished the industry of other nations, and often, with those treasures, squandered for their manufactures, fed the armies that have covered her fields with desolation, and shed disgrace on her arms.

The mass of her subjects, unprotected in their industry, are in a state of abject distress and misery; although, under a wise Government, some centuries since, Spain was the most manufacturing and prosperous nation in the world. And even at the present time, two or three of her provinces, under a different regime from the rest of the nation, where industry is protected, are as prosperous and industrious as any part of Europe.

Russia and Austria protect the industry of their subjects, and, in consequence, enjoy a high degree of prosperity and happiness. The former nation prohibits about two hundred articles specifically, among which are all the important manufactures of her allies, France and England. Austria, throughout the wide extent of her dominions, prohibits all cotton, woollen, silk, and other manufactures.

England has protected the industry of her subjects with more care, and has, accordingly, amassed more wealth, and attained a higher degree of power and influence, than any other nation of ancient or modern times, in proportion to her population. The use she has made of her wealth, whatever it may have been, is no impeachment of the merit of the system by which it has been acquired. The case of France, however, is more striking and impressive than that of any other nation. For twenty years she waged wars, bloody and destructive almost beyond example, with two-thirds of Europe, and had in pay, during a large part of that time, armies of nearly a million of men. After those wars were concluded, she was crushed by foreign armies of two or three hundred thousand men, and had enormous contributions and exactions levied on her, to the amount of probably one hundred millions of dollars. Yet she has, in a few years, recovered from all these calamities, by protecting the industry of her subjects, and enjoys at present a greater degree of prosperity, it is stated, on the highest authority, than she has done at any former period.

The late war with Great Britain, and the events which immediately preceded it, produced in many of our reflecting fellow-citizens a due sense of their best and most lasting interests.

With a rapidity unexampled in the history of any other people, a large portion of their capital was transferred from commercial to manufacturing pursuits. The value of goods manufactured in the United States, as taken from the marshals' returns, amounted, as early as 1810, to upwards of one hundred and seventy-two millions of dollars, which value was very greatly increased during the late war.

The peace of Europe was attended with ruinous consequences to us: our infant manufactures were blighted in the bud; the spirit of speculation spread through our country, seducing her votaries from the paths of quiet and laborious industry, by promises of sudden wealth. But it was soon found that the commerce of 1815 and 1816 was not the commerce of 1806 and 1807: the nations by whose calamities we had flourished, whose impoverishment had been our gain, were now at peace with each other, and returning with eager activity to the employments of social life; our vessels were no longer wanted to convey their products, nor to supply them with ours. Cherishing and depending on their own resources, they have furnished us a useful and honorable lesson in the encouragement, support, and extension of domestic, and salutary restrictions on the importation of foreign, manufactures. An imitation of their policy, in this respect, your memorialists believe to be indispensable to the prosperity and independence of our country.

With this belief, and a confident reliance in the disposition of Congress to promote these primary objects by every necessary means, your memorialists would respectfully recommend to your consideration three measures, the adoption of which, we feel persuaded, would remove the embarrassments of our country, and restore life and vigor to our almost expiring manufactures.

These measures are—

First. To abolish credits on import duties.

Secondly. To impose a restrictive duty on sales at auction.

Thirdly. To alter and increase the amount of duties on imported goods.

At the time when credits on duties were first established, the state of our country was very different from what it has since become. Slowly recovering from a long and desolating war, almost destitute of money and commercial connexions, our situation required that every aid and encouragement should be afforded to the first efforts of enterprise. This measure was, therefore, wise and salutary, and dictated by the necessities of the times. The weakness of our internal resources produced a dependence on imposts for the support of Government.

But how striking a contrast have we since presented! How great the change! From a population of three, to ten millions; from an annihilated commerce, to one that spreads its canvass on every sea; from a state of agriculture very little exceeding our own daily wants, to a surplus production exceeding eighty millions per annum; from an almost total want of manufactures, to an actual invested manufacturing capital of cotton and woollen goods alone exceeding fifty millions of dollars! Our commerce was at first carried on by resident merchants, whose prudence and experience restrained importations within due bounds; credits on the duties afforded them, according to the intention of Congress, facilities which their situation required. But, for some years past, and especially since the universal peace in Europe, and the conclusion of the late war, those regular traders have found themselves supplanted by foreign merchants and manufacturers, or desperate speculators, whom the credit on duties has enabled and induced to inundate our markets with foreign goods, producing the most pernicious effects on our mercantile stability and the prosperity of our manufactories.

It may also be here remarked, that the operation of this credit on imposts is to create a capital for new importations; for, let us suppose that four importations, to the amount of $100,000 each, be made in one year, at the average of 25 per cent. duty, the sum of about $100,000 is left to trade with in the hands of the importer, with the ultimate risk to Government of the loss of the whole.

The American merchant is regulated and directed in his importations by his experience of the want and consumption of the country, and the prospect of fair and reasonable profits. The foreign merchant or manufacturer, on the other hand, is often impelled by his necessities to seek a market for his goods without regard to these considerations. It is well known, and we presume cannot have escaped the knowledge of Congress, that, at all times, under all circumstances, and at every hazard of expense, the Government, merchants, and manufacturers of Great Britain have their views steadily directed to the extirpation of every germ of manufactures among us. A credit of eight, ten, and twelve months increases their facilities for carrying into execution their hostile purposes.

These consequences, injurious as they are, are exceeded in extent by those which arise from the trade to China and the East Indies; a trade, in the opinion of your memorialists, (encouraged and unrestricted as it is at present,) of the most exhausting and pernicious effects to the country. The long credit of from one to two years allowed by law on duties in this trade, we are sincerely persuaded produces the ruinous effect of draining us of our specie; and, in the case of the greater part of East India goods, overwhelming our markets with inferior and worthless fabrics, which, from their apparent cheapness, meet a ready sale, while the much superior products of our own industry and skill must be sacrificed at a ruinous loss, or remain unsold in the hands of the manufacturer.

When to the foregoing considerations, important as they are to the regular merchant and to the infant manufactures of our country, is added that of the losses to which Government is necessarily subjected by failure in the payment of the duties, your memorialists humbly apprehend that the abolition of all credits for duties on imported goods will, at the same time, protect the manufactures, commerce, and the revenue of the United States.

Your memorialists would next call the attention of Congress to the second evil complained of—unrestrained sales at auction.

Sales at auction, we believe, were originally authorized by law for special purposes, such as the disposal of damaged goods, the effects of bankrupts, or property under execution, or sold by the direction of courts of law and equity. We believe it will be found, on examination, that such sales were not, until within a few years past, considered by any commercial country in Europe as forming a part of the regular course of trade, but rather as authorized for purposes necessary, indeed, but not at all commercial.

In the greatest commercial and manufacturing nation (Great Britain) they are, even at this day, extremely limited; sometimes used to feel the pulse of the market on the raw materials imported for their manufactures, and occasionally used for the sale of colonial produce and the effects of the East India Company. In no other country have they assumed the same importance as among us. In the extent to which they have now arrived here, they are greatly injurious, not only to the fair and regular trader, but to the community at large.

Large quantities of silk, woollen, cotton, and other goods, are manufactured in Europe and the East Indies expressly for sale at auction in the United States. These goods are of less than the usual length, deficient in breadth, of a flimsy texture—in short, in every respect inferior to the goods they are intended to represent; yet so well dressed, and in other respects so highly finished to the eye, that they generally escape detection till they reach the consumer, who too late discovers their inferiority. For such base fabrics have the people of these States, for years past, been exorbitantly taxed, to the great injury of our own hard-struggling manufacturers.

To give an example of the enormous extent of this business, which affords such facilities to the foreign manufacturer for practising imposition on our citizens, we will instance the amount of sales of foreign goods at auction, in the single city of New York, in one year.

From the best evidence the case affords, (that is, the returns of the auctioneers themselves,) they amounted, in the year 1818, to the prodigious sum of fourteen millions of dollars. Judging from this specimen, it will not be unreasonable to conclude, that, in the United States, collectively, foreign merchandise to the amount of at least thirty millions of dollars is annually sold in this pernicious mode; a most alarming proof that a very serious portion of the trade of the nation flows in this channel. And your memorialists are satisfied, from past experience, that the sales at auction of domestic goods are as deleterious in their consequences as those of foreign merchandise; inasmuch as they tend to encourage the manufacture of inferior fabrics, and thereby injure the reputation of American fabrics, generally; and, also, that the sales of imitations, made in foreign countries, with an intent to dispose of them at auction, produce the same injurious effects. Your memorialists are fully convinced of the necessity of imposing some restraint on this tremendous engine of commercial monopoly. For this purpose, they respectfully propose that a duty of ten per cent. be imposed on all foreign and domestic goods sold at auction, except household furniture, farming stock and utensils, the effects of bankrupts, or goods sold under execution, or otherwise, by direction of courts of law or equity. This, they hope, will, in a great degree, diminish, if not altogether cure, this great and growing evil, by destroying, or at least greatly lessening, the temptation of profit.

Your memorialists, lastly, submit to the consideration of Congress the necessity of a further modification and increase of the present duties, and respectfully suggest the following alterations in the existing tariff:

That, in lieu of the present duties, a duty of 10 cents per square yard be laid on all cotton and linen goods, plain or unstained, having less than seventy threads to the square inch, including warp and filling; 14 cents per square yard on all having above seventy and under one hundred threads to the square inch, including warp and filling; of 18 cents per square yard on all having above one hundred and less than one hundred and thirty threads

to the square inch, including warp and filling; and so on in the same ratio upwards; and that twenty per cent. be added to the above duties on all printed, stained, dyed, colored, or worked cotton and linen goods.

That a duty of thirty-five per cent. ad valorem, be laid on all goods made wholly or in part of wool.

That the duty on every kind of silk goods, or of goods made wholly or in part of silk, (sewing silk excepted,) be raised to fifty per cent.

That all kinds of fabrics, not otherwise enumerated, and of less value than fifty cents per square yard, made wholly or in part of silk, cotton, wool, hemp, flax, or any other material, be estimated, and pay the same duty as if of the value of fifty cents.

That an extra duty be collected on all wares and merchandises, on which a bounty has been allowed by any foreign nation, equal in amount to the value of said bounty.

That foreign cotton, and every description of goods made wholly or in part of foreign cotton, be prohibited.

That a duty be laid on iron, in bars or bolts, manufactured without rolling, of one dollar and twenty-five cents per cwt.; on iron, in bars and bolts, when manufactured by rolling, two dollars per cwt.; on iron, in sheets, rods, or hoops, four dollars per cwt.; on iron, in pigs, seventy-five cents per cwt.; and on iron castings, two dollars per cwt.

Declining to enter into a detail of the alterations in the tariff, requisite for the protection of other branches now languishing, we beg leave to recommend to your particular attention, among others, the following:

Glass, copperas, corks, soap, paints and colors, paper, gunpowder, jewelry, cutlery, plated ware of all kinds, coach and harness furniture, prunello shoes, hats, caps, bonnets, buttons, fire and side arms, china and earthenware, printed books, oil of vitriol, blue vitriol, and chemical preparations generally, gilt and japanned wares, paper hangings of every description, painted or oiled cloths, umbrellas, manufactures of copper and brass, springs, screws, cotton stockings, and steel.

Independent of every consideration in favor of the policy of affording adequate protection to domestic industry, as herein recommended, deducible from its promotion of the general welfare of the country, and the protection due to the manufacturers, in common with all other classes of society, as a return for their allegiance to the Government, we are convinced that the farmers and planters would largely participate in the benefits of the system we advocate. The planter would have a steady market for his raw material, not subject to those destructive fluctuations which have produced such extensive ruin within the present year; and the farmer would have an equally steady and increasing demand for the productions of his farm, many of which, particularly in the interior of the country, and in the Western States, will not bear the expense of transportation to market. This advantage is so palpable, that we shall only refer, in illustration of it, to various towns and villages throughout the United States, in the neighborhood of which lands and their productions rose one or two hundred per cent. in value, in consequence of the extensive establishment of manufactures, and, by their decay, have fallen below their original value.

In support of our recommendations, we submit to your consideration a comparative view of the American and British tariff, in a few articles:

	Am. tariff.	*Br. tariff.*
	Per cent.	Ad valorem.
Manufactures of brass,	20	59½
cotton,	25	85½
copper,	25	59⅓
glass,	20 & 30	114
linen,	15	142½
silk,	15	prohibited.
China and earthern wares,	20	79
Hats, caps, and bonnets,	30	85½
Woollen hats,	30	150
Stockings, cotton and woollen,	20	85½
Watches, &c.,	7½	59⅓
Goods, wares, and merchandise, not enumerated,	15	59⅓
Oil of vitriol,	7½	100
Ale, beer, and porter, per gallon, cents,	10	41½
Woollen and worsted goods, per square yard, cents,	25	755

Your memorialists will only add, that they rely with full confidence on your patriotism and wisdom for the adoption of such measures as will promote the best interests of our common country.

W. FEW, *President.*

Attest: MATHEW CAREY, *Secretary.*

16th CONGRESS.] **No. 561.** [1st SESSION.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE SENATE, DECEMBER 27, 1819.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The memorial of the American Society of the city of New York for the encouragement of domestic manufactures, respectfully represents:

That your memorialists conceive it to be a prevalent opinion among all those who are concerned for the present and future welfare of the nation, that some legislative measures are imperiously necessary to check the evils which have so deeply afflicted every part of the country, devastated its commercial, agricultural, and manufacturing interests, and laid waste the pecuniary affairs of the people.

That notwithstanding the degree of embarrassment, depression, and distress which is so universally felt, and the gloominess of the present prospects of every form of honest industry and enterprise, your memorialists are persuaded that such measures may be adopted by your honorable body as will afford a material and permanent relief.

Your memorialists apprehend that there is as little difference of opinion in respect to the causes which have, for many years, been operating to produce the present crisis, as in respect to the nature of the evils, the existence of which they deplore; and that the time has come, when those differences of sentiment which once prevailed between those concerned respectively in the affairs of commerce, agriculture, and manufactures, are lost in the apprehension of ruin to them all.

It is felt by every one to be beyond the power of legislation to restore that part of our commerce which was destroyed by the pacification of Europe, or to create foreign markets for that surplus produce of our soil of which a superabundance is furnished by every other country. But every eye is turned to the supreme council of the nation as competent to restrain the excessive influx of foreign products, by which we have been made so dependent upon transatlantic markets; have incurred an enormous balance of trade against us; have been drained of our specie, deranged in our finances, exhausted, and brought to the near prospect of general impoverishment.

The deplorable effects of this excessive importation of foreign merchandise are so palpable and so deeply felt, that your memorialists forbear to dwell upon them; and proceed to ask the attention of your honorable body to those methods of restraint which they deem most eligible, and which they believe will countervail the principal incentives and temptations to the evil so much complained of. And they are persuaded that the credit allowed upon bonds at the custom-house, by facilitating the operations, and affording capital to speculators and alien traders and manufacturers, to the injury and ruin of the regular American merchant; and the practice of sales at auction, by enabling such speculators, traders, and manufacturers not only to force their goods upon the market immediately after their arrival in the country, but to vend goods manufactured for that purpose, and of such inferior quality, that no regular private sale of them could be effected, are two of the principal causes of the excessive influx of foreign manufactures. Nor is there reason to hope that the evils, of which these causes are so prolific, will cure themselves. The state of Europe being such as to occasion a vast surplus of manufactures, it is inevitable that greater loss must accrue upon that surplus if detained at home, than is hazarded by the exportation of it to our markets. It can be sent hither upon foreign account, with the following advantages:

1st. With the certainty of an immediate sale by auction, upon condition of immediate remittances; whereas sale at home would have been impracticable, and the want of the proceeds would probably have been ruinous.

2d. The benefit of the credit upon the duties, realized in the form of interest, or of active capital.

3d. The very trifling expenses incurred by the transaction of business in this manner, compared with those which are unavoidable to a regular mercantile establishment.

4th. The animating prospect of utterly annihilating all attempts at manufacturing in this country.

These circumstances, even should every regular American importer abandon his business, are sufficient to cause the country, for years to come, to be inundated and overwhelmed with the products of foreign industry.

In confirmation of this statement, your memorialists beg leave to add, that, in the year 1818, goods to the amount of fourteen millions of dollars were sold by public auction in this city; and they believe that the whole amonu of such sales in the United States was not less than thirty millions of dollars; and that the amount due to the Government upon bonds, which was held by importers as capital for their ruinous operations, was not, and is not at this moment, less than twenty millions of dollars. But for this credit upon duties, and the facility of these sales by auction, it can scarcely be doubted but that importations would be restricted within reasonable bounds, and would be governed by the fair demands of regular business. The evils flowing from these two causes are common to the trade with Europe, and that with India and China. A vast amount of the surplus products of the two latter countries is annually shipped by natives and others, and sold by public auction in our markets, and the proceeds returned in our precious metals. The incitements to this trade, so confessedly ruinous to this country, are precisely the same as those which operate upon the trade with Europe. The existence of a vast surplus of manufactures, the bounty given on importations by the credit upon imports here, the certainty of immediate sales and returns, are temptations which it is vain to hope will be resisted or diminished, until the Legislature shall interpose its authority.

And your memorialists are convinced that any measures which should go to remove these causes of evil would not only preserve the nation from further and more hopeless embarrassment, but would afford material relief to the commercial, agricultural, and manufacturing interests of the country; nor can they imagine any alleviation of the present distress, which shall not extend to these several branches of industry and enterprise. They therefore respectfully pray your honorable body,

1st. To abolish credits on the duties accruing on imports.

2d. To impose a duty of ten per cent. upon all foreign and domestic goods sold by auction, with the exception of farming stock and utensils, goods sold under execution or otherwise, by direction of courts of law or equity.

And in consideration of the great importance of protecting the cultivation of cotton, the principal staple of the country, by securing to it a preference in foreign markets, and shielding it from the ruinous fluctuations incident to a competition with the overwhelming quantities and inferior qualities of India and other parts of the world; as also in consideration of the great importance of affording security and permanency to the interests of the manufactories of cotton, and especially of the coarser fabrics, already established in this country, your memorialists further pray that Congress would restrict the importation of cotton goods to such, and such only, as have been manufactured wholly from the raw material grown in the United States, and to increase the duties on all cottons of foreign growth.

Your memorialists forbear to enter into any detail, or to advance any further arguments in support of what they deem to be the only sound policy of the Government of the United States; but they respectfully beg reference to two important documents emanating from the Government on this subject, viz:

1st. The report of Alexander Hamilton, Secretary of the Treasury, of January, 1790.

2d. The report of the Committee on Commerce and Manufactures, of the 13th of January and the 6th of March, 1816; which they trust will place this subject in its proper point of view.

And your memorialists further respectfully pray that such alterations, amendments, and increase of the tariff may be made, as Congress in their wisdom may judge best calculated to encourage the industry of the people, and secure to the nation the advantages of their enterprise and labor.

W. FEW, *Vice President.*

PETER H. SCHENCK, JOHN E. HYDE, *Secretaries.*

DECEMBER 16, 1819.

16th Congress.] No. 562. [1st Session.

THE MINT.

COMMUNICATED TO THE SENATE, DECEMBER 29, 1819.

Sir: Treasury Department, *December* 27, 1819.

In obedience to an act entitled "An act regulating the currency, within the United States, of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France and five-franc pieces;" passed the 29th of April, 1816, I have the honor to transmit, herewith, a report of the director of the Mint, giving the result of sundry assays made in pursuance of instructions from this Department.

I have the honor to be, with great respect, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the President of the Senate.

Sir: Mint of the United States, *December* 22, 1819.

Agreeably to the general directions contained in your letter of the 31st of December, 1816, I have had assays made of sundry species of foreign coins therein mentioned, namely: "the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France, and five-franc pieces." The assays of the foreign gold coins might, perhaps, have been omitted, as they have now ceased to be a legal currency; they have, however, for the present, been included in the assayer's report, viz:

	Car.	Grs.
3 pieces of British sovereigns, - - - -	22	0
3 pieces Portuguese coins, - - - -	21	$3\frac{15}{16}$
3 pieces French (20 francs,) - - - -	21	$2\frac{1}{2}$
3 pieces Spanish, (doubloons) - - - -	20	$3\frac{1}{4}$

	Oz.	Dwts.	Grs.
3 French crowns, - - - -	10	18	18
3 French five-franc pieces, - - -	10	16	0

From the above report, it appears:

1st. That the gold coins of Great Britain being of the same quality with those of the United States, their intrinsic value will be at the rate of 100 cents for 27 grains.

2d. That the gold coins of Portugal being $\frac{1}{16}$ of a carat grain inferior in quality to those of the United States, their intrinsic value will be at the rate of 100 cents for $27\frac{9}{469}$ grains.

3d. That the gold coins of France will be at the rate of 100 cents for $27\frac{81}{173}$ grains.

4th. That the gold coins of Spain will be at the rate of 100 cents for $28\frac{60}{111}$ grains.

5th. That the silver French crowns will be at the rate of 117.8 cents per ounce.

6th. That the silver five-franc pieces will be at the rate of 116.3 cents per ounce.

I have, &c.,

ROBERT PATTERSON.

The Hon. William H. Crawford, *Secretary of the Treasury.*

16th Congress.] No. 563. [1st Session.

DUTIES AND DRAWBACKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 31, 1819.

Sir: Treasury Department, *December* 29, 1819.

In obedience to a resolution of the House of Representatives, of the 3d March, 1797, I have the honor to transmit, herewith, a statement exhibiting the duties accruing, and drawback payable on merchandise exported from the United States, during the years ending on the 31st of December, 1816, 1817, and 1818.

I have the honor to be, with great respect, your obedient servant,

WM. H. CRAWFORD.

The Hon. Henry Clay, *Speaker of the House of Representatives.*

A statement exhibiting the amount of drawback payable on merchandise exported from the United States during the years ending on the 31st day of December, 1816, 1817, and 1818, compared with the amount of duties collected on the same, respectively.

JOSEPH NOURSE, *Register.*

16th CONGRESS.] No. 564. [1st SESSION.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 3, 1820.

To the Congress of the United States: The remonstrance of the Virginia Agricultural Society of Fredericksburg against the attempts now making, by our domestic manufacturers and their friends, to increase the duties upon foreign goods, wares, and merchandise, respectfully represents:

That it is the indisputable right of every free people to petition and remonstrate, either individually or collectively, not only against grievances actually inflicted, but against such also as are either seriously threatened or meditated.

That hostility, resulting from true republican principles, to partial taxation, exclusive privileges, and monopolies created by law, was the primary cause of our glorious and ever-memorable revolution.

That, although most of us are only the descendants of those patriots who achieved that revolution, by the lavish expenditure of their treasure and their blood, yet that we inherit enough of their spirit to feel equal aversion to similar oppressions; at the same time, we confidently trust that neither we, nor our sons after us, will ever be found backward or reluctant in offering up at the shrine of national good and national happiness any sacrifices, however great, which *their* promotion and preservation may obviously and necessarily require. But we have been taught to believe that a parental Government—a Government founded upon the immutable and sacred principles of truth, justice, and liberty—if she required sacrifices at all from those whom she is so solemnly bound to protect, would make them such as should operate equally upon every member of the community.

That we view with great concern, both nationally and individually, certain late attempts, on the part of various descriptions of domestic manufacturers, to induce your honorable body to increase the duties upon imports, already so high as to amount, upon many articles, nearly to a prohibition. The increased cost upon some of

these may truly be designated a tax upon knowledge, if not a bounty to ignorance; such, for example, as the duty upon books in foreign languages, and upon philosophical, mathematical, surgical, and chemical instruments.

That, although these attempts are sustained under the plausible pretext of "promoting national industry," they are calculated (we will not say in *design*, but certainly in *effect*) to produce a tax highly impolitic in its nature, partial in its operation, and oppressive in its effects: a tax, in fact, to be levied principally on the great body of agriculturists, who constitute a large majority of the whole American people, and who are the chief consumers of all foreign imports.

That such a tax would be a flagrant violation of the soundest and most important principles of political economy, amongst which we deem the following to be incontrovertibly true: that, as the interests of dealers and consumers necessarily conflict with each other, the first always aiming to *narrow*, whilst the latter, who form the majority of every nation, as constantly endeavor to *enlarge* competition; by which enlargement alone extravagant prices and exorbitant profits are prevented, it is the duty of every wise and just Government to secure the consumers against both exorbitant profits and extravagant prices, by leaving competition as free and open as possible.

That in this way alone can the benefits of good government be equalized among the various orders and classes of society, the prosperity and happiness of which depend not upon immunities, privileges, and monopolies granted to one class or order at the expense of another, but upon the unfettered exercise of talent, skill, and industry, directed and employed in whatever manner, and upon whatsoever objects of pursuit, each individual may select for himself; provided, always, that such objects be not incompatible with the public good: for so to use your own rights as not to injure the rights of others, is not less the dictate of common sense and common honesty than it is a cardinal maxim of all legitimate government.

That national industry is best promoted by leaving every member of society free to apply his labor and his knowledge according to his own choice, exempt from all restraints but such as the public good requires, and burdened with no tax but such as shall be both impartial, and as moderate as the exigencies of the State will permit.

That, according to the natural progress of society in every country favorably situated for agriculture, the class of manufacturers is the last to spring up; but that it will necessarily do so, as soon as either the natural or artificial wants of the people create a demand for their labors.

That any legislative interference to force either this or any other class into existence by the strong arm of power, exercised in levying taxes to support the forced class, contrary to the wishes and interests of the other members of the community, is not only bad policy, but oppression; because taxes of any kind, to be rightfully levied, should be equal, and should be imposed, not for the emolument of any one portion of society at the expense of the rest, but for the support of Government alone.

That either to exclude foreign manufactures, or to tax them very heavily, under a notion of improving those of domestic fabric, lessens the profits of agriculture; diminishes the public revenue, either by augmenting the number of smugglers, or by enabling the domestic manufacturer to pocket that sum which otherwise would go into the public treasury, under the form of an import duty; and at the same time secures to him the power of practising upon the community the double imposition of deteriorating his goods, and selling them at a higher price; because that competition which constitutes the only security for skill, industry, and moderate prices, is either entirely removed, or so limited as not to be felt.

"That all free trade, of whatever description, must be a mutual benefit to the parties engaged in it," notwithstanding the profits arising therefrom may be somewhat unequally divided; because by free trade alone can supply and demand (the two circumstances upon which trade of every kind depends) be kept nearly equal to each other.

"That instead of struggling against the dictates of reason and nature, and madly attempting to produce every thing at home, countries should study to direct their labors to those departments of industry for which their situation and circumstances are best adapted."

"That the use of capital should be left, as much as possible, to the care of those to whom it belongs; because *they* will be most likely to discover in what line it can be employed to the greatest advantage."

And that the best regulated and happiest communities are those wherein all the various trades, professions, and callings enjoy equal rights, and contribute equally to the necessary support of their common Government; but that if any one should be thought to have superior claims to the fostering care of the National Legislature, it should be "the tillers of the earth—the fountain-head of all wealth, of all power, and of all prosperity."

The sagacious and patriotic Franklin has said, (and we believe he never uttered a better or wiser remark,) "that most of the statutes or acts, edicts, arrets, and placards, of parliaments, princes, and states, for regulating, directing, or restraining trade, have, we think, been either political blunders, or jobs obtained by artful men for private advantage, under pretence of public good."

Your petitioners have thus freely, but respectfully, endeavored to represent to your honorable body *their views* of a policy which you are so importunately urged to adopt, but upon which we should have said nothing, having due confidence both in your willingness and ability to protect the great landed interests of our country, had we not been apprehensive that silence might possibly be construed into consent, if all who are attached to those interests had forborne to speak, when so clamorously and powerfully assailed. To guard against the possibility of misapprehension, we take this occasion to say, that we are incapable of feeling any thing like enmity towards either manufacturers or any other useful description of our fellow-citizens, but heartily wish them all the success to which their skill and industry may entitle them, in whatsoever way applied; provided, always, that such application be not made at *our* risk, and continued at *our* cost. We will go farther, and pledge ourselves to prefer whatever they may manufacture, at any time that they will make the *price* and the *quality* the same with the quality and price of simila articles of foreign fabric. To give more for any article simply because it is made at home may suit the feeling of political enthusiasm, but it can never promote the interests either of individuals or of nations. To buy as cheap as you can, no matter where, and to sell as dear, is the maxim which should regulate the commerce of both; for if competition be left free, neither can be exorbitant in their demands. *We* ask no tax upon manufacturers for our benefit; neither do we desire any thing of Government to enable us to cultivate the soil as profitably as we could wish, but to leave us free, so far as it depends on them, to carry our products to the best market we can find, and to purchase what we want in return, on the best terms that we can, either at home or abroad. We will ever support the Government of our choice in all just and rightful undertakings, both with our fortunes and our lives; but we will never voluntarily contribute to maintain either manufacturers, or any other class of citizens, by the payment of unequal and partial taxes, by awarding to them exclusive privileges, or by sustaining them in the enjoyment of oppressive monopolies, which are ultimately to grind both us and our children after us "into dust and ashes."

All which is respectfully submitted.

Signed by order of the meeting:

JAMES M. GARNETT, *President.*

WILLIAM F. GRAY, *Secretary.*

16th CONGRESS.] No. 565. [1st SESSION.

PAYMENT OF DUTIES IN CASH.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 5, 1820.

To the honorable the Senate and the House of Representatives of the United States of America in Congress assembled: The memorial and petition of the undersigned, merchants and citizens of Baltimore, respectfully showeth:

That they, with their fellow-citizens generally, being seriously affected by, and deeply impressed with a sense of, the pecuniary embarrassment which prevails in every section of the country, beg leave to submit to the superior wisdom of Congress what appears to them as being amongst the prominent exciting and sustaining causes of the present distress, and respectfully to petition for a modification, which they are fully persuaded would afford very considerable, if not entire relief.

The very liberal policy which has been pursued by the American Government in relation to commerce, and particularly in regard to the collection of the duties on imported merchandise, appears to your memorialists to have caused the accumulation of a stock of foreign goods, not only in the seaport towns, but also throughout every part of the interior of our country, considerably above its necessary consumption, or the means of immediate payment.

The heavy stocks, thus accumulated, appear, in some measure, and in several descriptions of merchandise, to be kept up by the extended credits on which these articles may be obtained in Europe, but more particularly by the inviting convenience of the liberal credits given by the Government here for the payment of the duties on importation, which not only encourages the American merchants to project a scale of trade fully equal to our means of remittance, in the produce of our land and labor, taken from us by foreign countries, but also holds out the stronger inducement for foreign houses to press into the country large additional supplies on their own account, which, if it ever were desirable, in the more infant state of the commerce of this country, to encourage the use of foreign capital to aid the import trade, your memorialists apprehend that the period has now arrived which renders such a policy rather an evil than a benefit. The wealth thus acquired out of American industry, by transient merchants, or for foreign account, generally, in the end, leaves the country; while, in the progress of this trade, their operations oppress it with debt, and create a constant demand upon it for specie. In the mean time, a considerable amount of American capital, for want of employment, has been drawn into various unnatural channels: amongst others, your memorialists beg leave to notice the fitting out of vessels for the purpose of prosecuting, under foreign colors, illicit privateering and piracy; and for engaging in the cruel and unnatural traffic to Africa for slaves; to the great demoralizing tendency upon the mariners of our country, who are thus employed to execute crimes which originate in the secret forebodings and projects of others residing among us.

A large amount of American capital, employed by some of the most respectable houses hitherto engaged in the import trade, has also been forced out of it, by the superior advantages and obvious rivalship of those who work on foreign account, in the various refinements which take place between owner and agent, in regard to the original cost on which duties are paid.

In addition to what would be the demand for foreign merchandise, under a wholesome operation of trade, your memorialists beg leave to suggest that importations of goods, obtained on credit in a foreign market, thus paying a duty, on an extended credit here, have been effected to a very considerable extent, with the exclusive design of raising funds for other objects. Large consignments of merchandise are also made by foreign houses to their agents and others residing in this country, upon the information taken from American orders and commissions, after the American merchants had given these orders, to the full extent that it was safe and proper to be done; and many of the goods, thus imported, being sold at public auction for cash, afford to the foreign owner the use of capital equal to the amount and credit on the duties.

Voyages have likewise been executed to and from the West Indies, first by purchasing a cargo in this country on extended credit, with a view of realizing the return cargo, in cash, before the credit on the first or the credit on the duties would expire.

A cargo of teas, arriving in this country, to a favorable market, and immediately sold, will furnish the means, both as to time and amount, for a new voyage, of equal value, by the credit alone which is allowed for the payment of the duties, without the aid of any other capital. A cargo of West India spirits, arriving, and being sold, under the same circumstances, will furnish, in like manner, the means of two subsequent voyages, the second double the amount of the first, before the expiration of the credit on the duties.

The accommodation of a long credit, on the very heavy duties now payable on nearly all imported merchandise, but more especially on teas, foreign spirits, wines, sugars, coffee, and foreign manufactured goods, by constituting a considerable part of the price for which they are sold in this market, thus forms a prominent consideration in the commercial object of some merchants, under particular circumstances, without any regard to the evil consequences, both public and private, which attend their operations. If the rate of duties were increased to double their present amount, payable on the same term of credit, the defect in the policy of giving a long credit on heavy duties would be rendered still more obvious, by a great enlargement of unsound commercial operations, with an equal increase of all the other evils which attend the present system.

In this state of commercial existence, your memorialists beg leave further to suggest that the immense overstock of foreign merchandise, thus, in some measure, forced into the country, soon becomes pressed, from the superabundance, into the interior—generally on extended credits.

The merchants of the interior are thereby enabled to offer their merchandise on the same or more alluring credits, almost at the door of every consumer; while the consumers too often, in return, relaxing in their industry, and neglecting to improve the advantages which nature has placed around them, continue to supply themselves out of the foreign stock, until debt and embarrassment have arrested the procedure. Your memorialists are aware that the late excessive and fictitious banking operations contributed greatly to delude the American community; and that goods of domestic fabric, when offered in excessive quantities, and on immoderate credits, would also have a tendency to impair industry amongst the consumers. But it must appear equally obvious that a fair demand would exhilarate manufacturing industry, and that, in the same commonwealth, an equilibrium must soon take place. But the wide difference between the policy which invites the expenditure of wealth, even upon luxuries, produced from the industrious labor of our own country, and the policy which invites to the expenditure of the same wealth upon luxuries of foreign origin, thus supporting foreign industry and neglecting domestic, your memorialists apprehend to be worthy of a peculiar consideration.

From the practice and habit of using foreign goods in such abundance, your memorialists further apprehend that an unwarrantable prejudice has been created in favor of them, to the great moral injury of the American community, who are now disposed to consider many of those articles not only as matters of convenience and comfort, but also as the test of importance amongst their fellow-citizens. The expensive woollen, cotton, and linen fabrics of Great Britain and Ireland; the costly silks of China, France, and Italy; the coffee, sugar, and teas of the Indies; the extravagant wines of Madeira, &c., are, from an acquired taste, producing a vitiated standard of public opinion, considered essential for the table and for the apparel of a respectable family in the American community, and constitute a very considerable part of their consumption and expenditure. If the amount annually paid for the excessive proportions of these luxuries was, only for a few years, saved to the country, your memorialists feel confident that the United States would be placed, on the scale of independent prosperity, above the rivalship of any other people; but as the natural consequence of an import trade greatly overdone, from the causes which your memorialists have had the honor to suggest, the interior of the country now stands largely indebted to the merchants of the seaport towns, while the latter are scarcely less in debt to foreign countries; and to meet the balance of trade thus created against us, or, with a view to new importations, after the produce of the country is taken abroad to the extent of the present demand for it, they are engaged in collecting and exporting a part of the small quantity of specie remaining in the country, which it is now manifest would have been carried out to a greater extent but for the extensive sales and hypothecation of American stocks in England since the late war, contributing, hitherto, to keep down the premium on exchange, and retaining, for the time being, the specie in the country, but still leaving the nation, to an equal amount, in debt for future settlement.

Your memorialists, therefore, with a view to sound national policy, by raising an additional barrier to the excessive importation of foreign goods above our means of payment; with a view to a more equal and correct payment of the duties; with a view to check the inordinate preference given to foreign productions, by bringing those of our own country more into use; with a view to improve the condition of commerce, by coercing trade more into operations for cash, or on shorter credits; with a view to secure to the resident American merchant, and thus to the country, the profits growing out of American trade; with a view to turn the balance of trade as much as possible in our favor, and thereby to bring back a portion of the precious metals; and, finally, but still with a view of leaving commerce free, for the employment of American capital, in all articles which the country may require, and can afford to consume, whether as matters of necessity, convenience, or objects of taste and fancy—with these views and designs, your memorialists respectfully pray that the duties on all foreign goods, wares, and merchandise, imported into the United States, may be made payable in cash; or, if the goods are put into the public stores, that the duties may be made to bear an interest from the date of one month after the entry of the vessel in which they may be imported.

And, under the influence of a sense of justice, actuated by feelings of humanity, and with a high regard for the reputation of their country, and particularly for the city in which they reside, your memorialists further pray that effectual measures may be taken to arrest the practice (which, it is apprehended, still prevails to a considerable extent) of employing American vessels and American mariners, under foreign colors, in unlawful privateering and piracy, as well as in the African slave-trade.

WM. PATTERSON, *and others.*

BALTIMORE, *December* 20, 1819.

16th CONGRESS.] **No. 566.** [1st SESSION.

REMISSION OF DUTIES.

COMMUNICATED TO THE SENATE, JANUARY 4, 1820.

Mr. SANFORD, from the Committee of Finance, made the following report:

The Committee of Finance submit to the Senate their report upon the petition of Joshua Nevill.

On the night of the 4th of July last, a fire broke out in the city of Charleston, in South Carolina, which destroyed several houses, and a great quantity of other property, belonging to different individuals. Among the sufferers upon that occasion was the petitioner, who is a cabinet-maker. He lost by the fire certain goods and implements of his trade, which he had imported from Great Britain; the duties on the importation of those goods and implements, amounting to more than three thousand dollars, were secured by bonds, which are still unpaid; and the petitioner prays to be relieved from the payment of those duties.

The committee are of opinion that the Government ought not to give the relief desired in this case. When goods subject to duty have, after importation, passed into the hands of their owner, they are, like any other goods, at the risk of the owner. There is no reason that the Government should bear any share of hazards concerning the existence or value of such goods. This principle is essential to the collection and security of the revenue; and it is understood that no relief has ever been given by the Government in any similar case. If the application of the petitioner is considered as a prayer for charity, the answer is, that the Government cannot, justifiably, make charitable donations from the public treasure. In their view, the case of the petitioner is not one of more hardship than that of his fellow-sufferers upon the same occasion, nor is it more meritorious than other cases of private distress resulting from inevitable casualties.

The following resolution is submitted:

Resolved, That the prayer of the petitioner be not granted.

16th Congress.] No. 567. [1st Session.

OBJECTIONS TO THE PAYMENT OF DUTIES IN CASH, AND TO IMPOSING A HIGH DUTY ON SALES AT AUCTION.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 6, 1820.

To the honorable the Senate and the House of Representatives of the United States, in Congress assembled: The memorial of the chamber of commerce of the city of New York respectfully showeth:

That your memorialists have been informed that petitions are about to be laid before your honorable body, from this city and elsewhere, praying that a law be passed altering the system of collecting the revenue in such manner as to make the duties payable in cash, in place of allowing, according to the established practice, a credit on bonds; the nature and consequences of the proposed change, so interesting to all those concerned in the foreign commerce of the United States, your memorialists will respectfully attempt to point out to the Legislature of their country.

The present system of collecting duties formed a part of the first revenue laws of the United States: it was proposed thirty years ago by one of the ablest financiers of which this country can boast, was adopted after the maturest consideration, and has since been many times attentively re-examined; laws and regulations to enforce it, and to preserve the rights of the Government, have been carefully devised; and it may with safety be said, that in no country whatever have the imposts been collected with smaller losses or at a less expense; and, even of the small losses which have accrued, it is well known that a part has been owing to the want of vigilance and attention of the officers intrusted with the collection of the duties.

From the commencement of the present Government, the existing system of collecting the duties has confessedly been in successful operation; the commerce and agriculture of the country have been fostered by it, and under its influence the United States have advanced to wealth with a celerity beyond example, and have, in a great degree, by the activity of commercial and other national interests, stimulated and supported by this judicious system, risen from a state of infant feebleness to a maturity of strength and power. During this long period, this system has become interwoven and intimately connected with every interest of the community; it has been universally acquiesced in, and has scarcely had to encounter even a censure; but now the National Legislature are called upon to change laws of acknowledged excellence, whose utility has been sanctioned by the experience of thirty years, and to substitute others altogether new, and of uncertain operation and effect.

Great and sudden alterations of the commercial laws of a country ought not to be made, unless evils of magnitude can clearly be pointed out in the existing laws, or great benefits can be proved to accrue from the proposed changes. The reasons urged against the present system of collecting duties are, that it tends to encourage overtrading, and to inundate the country with foreign goods. These are, in part, true; for a credit on the first cost, or on the expenses of importing goods, will increase the quantity imported, and of course lessen the profits; the importer will sell lower, and the consumer buy cheaper; and as it operates by increasing a competition, the smallest possible profit on the trade will be charged, and in many instances it will even be carried on at a positive loss. But this cannot long endure; commerce will in this branch, as in every other, regulate itself, and will not continue to be carried on without producing some profit on the capital employed. The influx of goods into the United States is, however, attributable to other causes; the great increase of British manufactures and the decrease of their markets (other nations in time of peace manufacturing for themselves,) will much more satisfactorily account for the surplus of foreign manufactured goods in this country. But there is another cause for the accumulation of foreign manufactures here, and one which may fairly be hailed as an evidence of returning health in the body politic, because it proves that we are recommencing habits of economy and industry. By the late Treasury report, it appears that the amount of goods imported is much reduced; taking this fact in connexion with the assertions made to your honorable body from various sources, that we are deluged with foreign fabrics, and the inference, not that we have imported more, but that we have consumed less, is irresistible.

Another reason urged against credits on duties is, that it furnishes a capital for the merchant equal to the whole amount of duties bonded. This is also true, but to a certain degree only: so far as the importer of goods receives back from the buyer or consumer the duties for which he has bonded before the bonds have been paid, it becomes to him an additional capital. In the China and India trade, the capital thus raised out of duties is sometimes very large, but in all the other branches of the foreign commerce of the United States the reverse is true; and it is asserted, without fear of contradiction, that the duties are paid to the Government, on an average, before they are received from the consumer. But in those cases where the duties operate to increase the capital of the importer, what is the consequence? It *may* benefit him; it certainly *does* promote the interest of the community; as the amount of capital is increased, the profit on capital is diminished; the merchant gives more to the agriculturist for his productions, and sells him his supplies at a lower price.

Your memorialists respectfully solicit the attention of Congress to some of the consequences of the proposed recommendation, that *the payment of the duties on goods should be in cash*, at the time of their arrival.

Suppose such a law passed and rigidly carried into effect: at any time when it commences, the prospective payments into the Treasury from bonds for twelve months would amount to about twenty millions of dollars; the amount of duties accruing during the same period, and payable in cash, may be stated at about eighteen millions; the contributions of the community would thus be nearly doubled, and the payments of two years brought into one. Is any community, it may fairly be asked, able to bear an addition to heavy duties of ninety per cent. in one year? and if such an addition could be collected, the inquiry is of immense importance, what would be the consequence to the commercial, agricultural, and manufacturing interests of the country, of withdrawing so great a proportion of actual capital from those pursuits, and placing it in the hands of the Treasurer? It is no less important to inquire what would be the consequence to our numerous and respectable State banks, of disturbing, and perhaps withdrawing from them so great a proportion of their deposites, and placing them in the vaults of another moneyed institution?

But the chamber of commerce cannot suppose, for a moment, that a law will be enacted rigidly enforcing the payment of duties in cash on the arrival of the goods, or that, if enacted, it could possibly be carried into effect. A new law must provide for a great number of contingent cases: when goods arrive, some consignees may be absent, some may be dead, some have become bankrupt, some refuse to receive the consignment; some parcels of goods may be without invoices, others damaged; a malignant sickness prevailing in a port may prevent any consignee from entering his goods. These cases will show the absolute necessity of warehouses being provided by the collectors, to

receive such goods as are not entered, and of appointing a time by law when, if not entered and the duties paid, they shall be sold. So many exceptions will become necessary in the operations of the law, that the new system, instead of being for the collection of duties in cash on the arrival of the goods, will really be for the collection of duties on goods after they have been stored; thus, as to a credit on the duties, the old and new systems will approximate—the security for duties on the *former*, bonds with surety, and, on the *latter*, the goods themselves. If there is any advantage to the Government in this change, it will be gained by the introduction of serious evils and disadvantages; the charges of collection will be enormously enhanced, and the number of officers greatly increased. Individuals will be subjected to additional expenses, to new and vexatious regulations at the custom-houses, together with delays in business, and injury to the goods stored. Although the expense and inconvenience of storing goods would be very great, still the circumstances of many merchants would make it necessary to submit to them; others, more wealthy, would be able to pay the duties on arrival, and thereby avoid those inconveniences; in this class will be found the foreign agent, who will be furnished with funds by drawing on his principal at home, or his factor here: thus the tendency of the system will be to create and sustain a monopoly in the hands of foreign and other capitalists, and to oppress and bear down that class whose moderate means and great industry strengthen and invigorate the best interests of the community.

The effect of the proposed measure on the revenue of the country cannot fail, in the opinion of your memorialists, to be seriously embarrassing to the Government. The payment of duties in cash, or a charge of interest from the arrival of the goods until the duties are paid, will, it is true, be equal to an additional duty of about five per cent.; but still, a change from a system well understood, to one whose operations are unknown and uncertain, will alarm the timid, and increase the caution of the prudent merchant, and, until all its consequences are developed, will have a tendency greatly to restrain and limit the commercial operations of the country, and proportionably lessen the duties on importations; and the Treasury, after the first year, will have parted with a fund in bonds equal at all times to about twenty millions of dollars, payable within twelve months, and which would always prove a solid resource in case of a war with a maritime nation.

Your memorialists feel a deep solicitude on this subject, and are earnestly desirous that the National Legislature may see that the difficulties to which the commerce of this country has been exposed have arisen out of the great changes which have taken place in the state of the world some years past, and that our sufferings have been in common with other nations; that the evils complained of will naturally regulate themselves; and that to attempt to remove them by changing the established system of the country, and introducing new laws making duties payable in cash, will be equally unavailing and injurious.

The chamber of commerce, having thus taken the liberty respectfully to express their sentiments on one great national question, hope it will not be considered presumptuous if they introduce another important subject to the attention of your honorable body. Memorials from this city and elsewhere will, it is understood, be laid before Congress, recommending that a duty of ten per cent. be laid on all sales at auction. This, in the opinion of your memorialists, is equivalent to recommending a law prohibiting all sales at auction. The policy of *regulating*, and the impolicy of *prohibiting* sales at auction, seem to be equally clear and certain.

A considerable portion of the goods sold at auction in the United States are on account of foreigners, who ship them direct to the auctioneer, or to agents who place them in his hands; thus avoiding the expense of warehouses, stores, and other parts of a mercantile establishment, to which merchants in a regular line of business are subjected. So many goods are sold at auction as to regulate the prices of those sold at private sale; the importer, therefore, who intends to sell at private sale, must sell about as low as the auction prices, and be subjected to the usual expenses of a mercantile establishment. To place these classes of merchants on an equality, a moderate duty on sales at auction would seem to be necessary.

Your memorialists, therefore, respectfully recommend to your honorable body to pass a law laying a duty of two and a half per cent. on all goods sold at auction in original packages, and of five per cent. on all other goods sold at auction, with the exception of the property of bankrupts or insolvents assigned for the benefit of their creditors, the property of deceased persons, goods sold by process of law, and goods damaged at sea and sold for the benefit of the owners or insurers.

And your memorialists, as in duty bound, &c.

WM. BAYARD, *President.*

JOHN PINTARD, *Secretary.*

16th CONGRESS.] **No. 568.** [1st SESSION.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE SENATE, JANUARY 10, 1820.

To the honorable the Senate and the House of Representatives of the United States in Congress assembled: The memorial of citizens of Middletown and its vicinity, in the State of Connecticut, respectfully represents:

That your memorialists, viewing the success of American manufactures as an object of great national importance, earnestly hope that such duties may be imposed upon imported fabrics (more especially those of wool and cotton) as shall be adequate to protect our own from a ruinous competition. All wise nations, even those who from selfish motives would dissuade us from following their example, have strenuously extended this species of protection to their manufactures.

Most of your memorialists have no personal interest in manufacturing establishments. They are influenced solely by a wish to promote the cause of their country against foreign nations—a cause in which are involved the prosperity and happiness of all the different sections of these United States; in which the cotton planters of the South, and still more obviously the inhabitants of the Western States, from their remote inland situation, and the liability of their single outlet to the ocean to be obstructed, if not closed, by hostile squadrons, have as deep an interest as the artisans and farmers of the Northern and Eastern States. Our foreign markets are, and probably

for a long period will be, so limited and depressed, that the exportation of the surplus produce of our soil cannot furnish our former, nor indeed any considerable resources. Thus, while both our agriculture and our commerce languish, we must, of necessity, turn to domestic manufactures for relief. If American manufactures were duly protected, they would create for agriculture an extensive and permament home market, which would powerfully aid in removing the present severe pressure on our country; that useful branch of industry, doubly more valuable than our foreign commerce—the coasting trade—which generates no collision with other nations, would be prodigiously increased; our seamen be preserved, and in readiness to assist us in the exigencies of defensive or inevitable war.

A deadly blight ought not to be thrown upon the enterprise of our manufacturers by the fear of lessening the revenues of the customs. Their diminution would not be so formidable as is frequently apprehended; for the higher rate of duties imposed would in a considerable degree counterbalance the reduction in the quantity of our imports. Even were the receipts of the custom-house diminished more than we believe, the national debt would only require a few years more for its extinguishment. This consideration should not be allowed to expose multitudes of our fellow-citizens to ruinous speculation, or inactivity, or labor for a bare penurious subsistence—the sure consequences of the prostration of American manufactures at this period.

Nations, like individuals, must become poor and dependent when they habitually purchase to an amount larger than the product of their labor. Such a state of things, unfortunately now existing among us, will soon be as injurious to morals as to property. If long continued, not only moral but political virtue would be extinct, and patriotism a word of derision or reproach. Indolence, the parent of vice, would combine with artificial wants to enervate; the luxury and domineering influence of a few rich men, acting upon the poverty of the mass of our citizens, would corrupt; and the neglect of national industry by the Government would alienate the people from our inestimable political institutions. It should never be forgotten that, in the hour of danger, a safe reliance cannot be placed on the mere love of native soil. The paternal encouragement of all the various classes and of all the useful occupations in the community is requisite to secure the tie which binds the people to their Government. Every where, and particularly in a confederation of States like ours, mutual interest is the most indissoluble bond of union. Should our artisans be treated with cold neglect, while those under monarchies are warmly cherished, strong prejudices might be excited against our Government and our country.

Agriculture alone cannot furnish all the necessaries and conveniences of life. Again: independently of those engaged in the indispensable mechanic arts, a large portion of our people cannot be employed as cultivators of the soil. Women, children, and also many of our men, are incapable of tilling the ground, although they might be usefully employed in several departments of manufactures. And if they were capable, where should we find a market for the immense surplus of our agricultural products? We might have a useless superfluity of provisions, but we should be deeply in debt for our clothing and other necessary articles. It is evident that a plan of general husbandry would, in the present situation of these United States, if put in execution, be so unprofitable as to produce a most pernicious relaxation of national industry; because the supply of commodities is always proportionate to the demand occasioned by their consumption, and because the demand for our agricultural commodities abroad being only to a small amount, agriculture must look for its principal market at home; and, consequently, for an extension of that market, it must rely chiefly upon the encouragement of American manufactures.

Adequate protecting duties, at this juncture, would soon create or revive such a number of manufacturing establishments in this country, that ere long their rivalry would probably reduce the price of their fabrics below the present standard of those imported. But, on the other hand, if we now permit our manufactories to be prostrated by neglect, we shall be compelled to purchase from European workshops at an exorbitant advance, and thus reimburse, with excessive usury, the losses they had previously sustained. In vain we might then threaten Europe with competition; she would judge of the future from the past, and our menaces would be despised. Indeed, the mouldering ruins of our deserted manufactories would deter us from the attempt to execute our threats. We should dread lest the reluctant patronage of our Government might be suddenly withdrawn, and we be again exposed to those machinations which foreign merchants and manufacturers are now practising with success.

There are several fabrics which, possibly, for a considerable period, cannot be advantageously made in the United States. The importation and sale of such would employ a due proportion of merchants, and would be to an amount fully equal to this country's capacity of payment. But we now pay vast sums to other nations for various articles, which, with proper encouragement, we might soon make nearly, perhaps quite, as cheap ourselves. We are willing tributaries to Europe and to Asia. What is the consequence? The precious metals have nearly disappeared, and our circulating medium of trade is a precarious paper currency. For the discharge of the enormous yearly accumulating balances we owe abroad, we have remitted large quantities of our bank stock, and even of the evidences of the debt contracted by our Government with its citizens. We are thus placing not only our property, but even the credit of our country, in the power of foreign nations. It is to be feared that we are rapidly approaching a crisis not less perilous than degrading.

A complaint is sometimes heard that American fabrics were sold at high prices during the recent war with Britain. To this we answer, that, setting aside all the difficulties inseparable from new establishments, those prices were not higher than we paid for imported fabrics of the same quality; and also, that the competition of American fabrics prevented much of that extortion to which, but for them, we must have been subjected. Besides, why censure the manufacturer for obtaining the market price for his commodities, any more than the merchant, planter, and farmer for obtaining it for theirs?

In case of war with any great naval power, the necessity of our possessing manufactories, particularly those for arms and clothing, is so obvious as to render comment useless. But these establishments must be previously protected and matured by Government in times of peace, before the emergency which demands them actually arrives.

Had not heavy duties been imposed to encourage our fabrics of leather, fur, wood, iron, &c., there would have been very few of those numerous and useful classes of artisans who are at present engaged in manufacturing these articles in this country. Prodigious sums would have been expended abroad which now circulate at home, enriching large bodies of industrious, valuable citizens, who contribute essentially to the support of many others, as well as to the general wealth and happiness of the community. Proper encouragement would give as powerful a stimulus to several other branches of our manufactures. We might then have a respectable home market and home trade, which, as they would not be endangered by the frequent political and commercial fluctuations of other countries, would, from their security, their permanence, and their amalgamation of the interests of different parts of the United States, be of immense importance in a national point of view. This opinion is corroborated by our rapidly increasing population, which, in conjunction with the progress of our new settlements, has a tendency to incalculably augment the products of our soil, and, of course, to render an extensive and permanent home market indispensable.

Habitations, food, and clothing are the primary natural wants of mankind. No nation can be durably powerful that does not itself furnish them all, without recourse to others. We cannot be really independent until we

make our own necessary clothing; and the prosecution of this object is also closely connected with the advancement of national morality and industry. In proof of this assertion, we refer to Portugal and Spain. All the South American gold and silver mines of the one, and the Brazilian diamonds of the other, have weighed lightly in the scale against the ruin of their manufactures. The effect produced on Portugal by the Methuen British treaty, that abrogated the heavy duties once laid on British fabrics, places this subject in the clearest light of moral demonstration.

An evil of great moment—one, of whose extent few appear to be aware—results from the unprotected state of American manufactures, and the consequent influx of foreign woollen and cotton fabrics. This evil is the alarming diminution of our household manufactures, by which very many families formerly supplied themselves with the principal articles of their clothing. These were very durable; they were chiefly made by women and children at leisure hours, when their time would have been otherwise unproductive; such occupations wonderfully promoted habits of industry and frugality. But, unfortunately, imported woollen and cotton fabrics, flimsy in their texture, but handsomely finished, are sold ostensibly so cheap that great numbers have relinquished their highly beneficial system of household manufacturing, and are now becoming embarrassed by contracting debts for what they could have made better and cheaper for themselves.

Your memorialists would here suggest the expediency of imposing such a per centage upon sales at auction of woollen and cotton goods, and of any other fabrics that in your judgment ought also to be included, (with the exception of property of this description belonging to bankrupts' estates, to deceased persons, or which is sold by execution,) as may in future prevent the severe injuries arising to the regular, fair American trader, as well as to the American manufacturer, from the various artifices which are successfully practised through the medium of auctions.

Your memorialists conclude by respectfully repeating their earnest request that the honorable Congress of the United States, who are the guardians of the nation's welfare, will subject imported fabrics, more especially those of cotton and wool, to such duties as shall secure to American manufactures that protection which the interests and real independence of our country seem imperatively to require.

Signed in behalf of the meeting.

JNO. LAWRENCE LEWIS, *Chairman.*

ARTHUR W. MAGILL, *Secretary.*

MIDDLETOWN, CONN. *November* 27, 1819.

16th CONGRESS.] No. 569. [1st SESSION.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE SENATE, JANUARY 17, 1820.

To the Senate and House of Representatives of the United States in Congress assembled: The memorial of the subscribers, citizens of Pennsylvania, respectfully showeth:

That the policy hitherto pursued in this country, which has exposed most of our manufacturers, whose productions are excluded from nearly all the markets in Europe, to an unavailing struggle with the manufacturers of all that quarter of the world, and likewise of Hindostan, has been the principal cause of the present calamitous state of affairs, whereby industry, the source and parent of the power, prosperity, and happiness of nations, has been paralized; the wealth of our country, which ought to invigorate its agriculture, manufactures, trade, and commerce, been drained to foster the industry and support the Governments of foreign nations; a considerable portion of our farmers, manufacturers, merchants, and traders, reduced to, and others tottering on the verge of, bankruptcy; whereby, in a word, a state of decrepitude and decay has been produced, in the short space of three or four years, of which history affords few examples, in the same space of time, during a season of peace, and without any of those great natural calamities which interrupt the happiness of nations.

When your memorialists examine the policy of Europe, (that portion of the globe from whence sound lessons of political economy can be derived,) they find that the system pursued in this country is in direct hostility with that of every wise nation there. All of them sedulously guard the interests of their manufacturers, as one of the main sources of their wealth. They either restrain by prohibitory duties, or prevent by absolute prohibitions, the importation of such important articles as their own subjects can manufacture.

We are persuaded that sound policy dictates to all legislative bodies, particularly those of young nations, carefully to review the systems pursued in other countries; to trace their effects on the welfare of the people on whom they operate; and to shun those which destroy the industry, enfeeble the strength, and impair the resources of the respective nations; and, on the other hand, to adopt, as nearly as may be, such as have fostered their industry, and increased their strength and resources.

The limits of a memorial prevent us from entering into detail on the tariff of different nations. We cannot, however, in justice to the public interest, omit to touch slightly on some of the prominent features of the protecting system pursued in other countries, whose statesmen are certainly not inferior to ours in intellectual attainments, and whose examples and opinions should not be lightly rejected. We shall confine ourselves chiefly to four—Great Britain, France, Austria, and Russia. Other nations, as Prussia, Holland, Denmark, &c., pursue a system marked with similar characteristic features.

Great Britain prohibits, even from her own dependencies, calicoes, manufactures of gold, silver, or metal, laces, ribands, silk goods, &c. &c.; and her protecting duties are so high as, in most cases, to be equivalent to prohibition. The duty on hats is about seven dollars and a half each, and on woollen cloths seven dollars and a half per yard. There are above sixty articles, including manufactures of brass, copper, carriages, thread stockings, clocks, &c., subject to fifty-nine per cent.; china and earthenware, shawls, &c., pay seventy-nine; cotton manufactures, cotton stockings, caps, thread, and linen sails, pay eighty-five; glass manufactures, generally, one hundred and four-

teen; skins or furs, tanned, tawed, or curried, and articles made of leather, or whereof leather is the article of chief value, one hundred and forty-two per cent.

So minute is her attention to this grand point, that linen, when chequered or striped, painted or stained, is subject to one hundred and forty-two per cent. duty, but only to sixty-three when not chequered or striped. The object is to secure to her own subjects the profits of the staining, printing, &c.

Great Britain expended many hundred millions of pounds sterling to replace the Bourbon family on the thrones of France and Spain, and of course had high claims on the gratitude of both monarchs. Yet the paramount duty of justice to his subjects gained the ascendency over gratitude to his friends, in the councils of Louis XVIII. One of the earliest measures of his administration was the promulgation of a tariff, whereby above two hundred different articles, including all the most important of the British manufactures, and, among the rest, muslins, cambrics, woollen cloths, all articles made of leather, steel, iron, brass, tin, wood, bronze, &c., were totally prohibited.

Let us add that Ferdinand VII., as soon as he ascended the throne of Spain, issued a proclamation, not only forbidding the importation of cotton goods altogether, but ordering those actually in the country to be reshipped within twelve months.

For the policy of Austria on this important subject, we respectfully refer you to a recent British publication—Rordanes on European Commerce. It is therein stated that "*the importation of all silk, cotton, and woollen manufactures is forbidden in the whole extent of the Austrian dominions, as it has been hitherto in the ancient Austrian States only.*" There are various other prohibitions, unnecessary to be detailed.

The prohibitory system of Russia, a country, like our own, with a vast territory and a very disproportionate population, is carried to an extent far beyond that of any other in the world, except China. It embraces all the great leading articles of manufacture, as cotton, linen, leather, wool, wood, copper, iron, paper, silk, silver plate, glass, and a vast variety of articles of minor importance.

Every reason that exists for prohibitions in those nations, for the purpose of protecting the native manufacturer, and preserving the resources of the country, exists here. And we cannot but lament that the arbitrary Governments of Europe have displayed more attention to the interests of their subjects interested in manufactures than the same description of persons have experienced from their fellow-citizens in Congress. The former are protected, by the strong arm of the law, against the competition of *every nation whatever;* while the latter are exposed to the competition of *the whole world*, and consequently to ruin. It therefore irresistibly follows, that so far as regards the acquisition of property, and the protection of property acquired, a large portion of this class of citizens are debarred from one of the most substantial advantages of Government. This is a stain on our annals which cannot be regarded without deep regret—a stain which, we respectfully hope, for the honor of our common country, you will speedily obliterate.

Numerous objections have been raised against the protection of manufactures in this country, which we shall freely but respectfully examine.

Among the most prominent is the extortion said to have been practised by the manufacturers during the late war, which has been by many regarded as a complete justification of the refusal of an increase of duties.

We believe this accusation can be fairly disproved, to the satisfaction of every ingenuous mind; and we respectfully invite your attention to the subject. We shall state the case of superfine broadcloth, on which the chief reliance has been placed. The reasoning that applies to this article will apply equally to others. Foreign cloths were sold, in 1811, before the war, at eight, nine, and ten dollars per yard. Merino washed wool was then about seventy-five cents per pound. One hundred and fifty thousand pounds of imported merino wool were sold, in the course of that year, by Messrs. Warder & Son, of Philadelphia, to Messrs. Dupont, of Wilmington, and others, for from seventy to eighty cents. On the general establishment of the woollen manufactories, at the close of 1813, merino wool was sold at two dollars and a half to three dollars per pound, as appears by the Philadelphia price current; which also shows that on the 28th of March, 1814, the price was from three to four dollars, at which it continued stationary for the remainder of the year. The highest price of American superfine broadcloth, at that period, averaged from twelve to fourteen dollars. Foreign cloth was generally sold at a higher rate; and, but for the supplies from the American manufactories, would probably have been sold for twenty dollars. Thus, while the farmer, who advanced the raw material from four to five hundred per cent., and the importer, who raised his prices from fifty to two hundred per cent. on the various articles he had for sale, accuse the manufacturer of extortion, the latter did not advance his fabrics more than fifty per cent. *on the prices current before the war*, notwithstanding the extravagant rise in the price of the raw material, and likewise in wages, owing to the extraordinary demand for workmen, and notwithstanding the enormous expense of the manufacturing establishments, and the advance in the price of almost every article of food and dress.

We hope and believe that this accusation, though so often reiterated, will have no influence on your honorable Houses.

We beg leave, very respectfully, to take another glance at this subject. The cotton planters have for many years raised cotton at an expense of about eight or ten cents per pound, and sold it from twenty to thirty-five. The farmer has likewise raised wheat at an expense of one dollar per bushel, and frequently sold it from two to three dollars. While they made such exorbitant profits and independent fortunes, unenvied and uncensured by their manufacturing fellow-citizens, it cannot be very correct for them to reproach the latter (a large portion of whom have been ruined) with extortion, for selling at thirteen or fourteen dollars an article which actually cost them ten or eleven. Let it be observed, that every yard of superfine cloth requires four pounds of merino wool unwashed, or two washed. When the heavy expense of the manufacture, and the interest on the capital invested, are taken into consideration, it will appear that the profits were very far from unreasonable. This accusation, therefore, cannot fail to recall to recollection the parable of the beam and the mote.

But even admitting that the manufacturers had really been guilty, during the war, of tenfold the extortion they are unjustly charged with, it by no means follows that the prosperity of our country should be sacrificed by the suppression of its industry, and the protection of that of foreign nations; or that, therefore, manufactures should not be protected by adequate duties, lest similar extortions should now be practised; for, to avail ourselves of the cogent and irresistible arguments of Alexander Hamilton, the competition between our citizens engaged in those branches would secure the articles to the consumer at a fair price.

"Though it were true that the immediate and certain effect of regulations controlling the competition of foreign with domestic fabrics was an increase of price, it is universally true that *the contrary is the ultimate effect with every successful manufacture.* When a domestic manufacture has attained to perfection, and has engaged in the prosecution of it a competent number of persons, *it invariably becomes cheaper.* Being free from the heavy charges which attend the importation of foreign commodities, *it can be afforded cheaper, and accordingly seldom or never fails to be sold cheaper, in process of time, than was the foreign article for which it is a substitute.* The internal competition which takes place *soon does away every thing like monopoly, and by degrees reduces the price of the article to the minimum of a reasonable profit on the capital employed.* This accords with the reason of the thing, and with experience."

Another objection is, that labor is too high in the United States to afford any chance of competing with foreign manufacturers. To this we reply, there are various manufactures so well established here as to overcome foreign competition altogether; and it therefore follows that this objection falls to the ground. We might instance a great number, but we confine ourselves to the manufacture of shoes and boots, of which each individual in the United States probably averages a pair and a half per annum, amounting to about thirteen millions, which, at one hundred and twenty-five cents per pair, amount to $16,000,000 per annum. Of those articles, the importation in 1816, as may be seen by reference to the reports of the Secretary of the Treasury, was only 42,184 pairs, and in 1817 only 50,562. This decides, we trust, the question of high wages forever; for, if the objection were valid, it would apply to the manufacture of shoes and boots with as much force as to any other; and it is worthy of observation, that the duty on men's shoes is only twenty-five, and on children's fifteen cents per pair.

To this we beg leave to add another reply, of at least equal cogency. There are few manufactures, either wholly or chiefly depending on manual labor, which have not succeeded in the United States; whereas our defeat is principally in cottons and woollens, produced almost wholly by machinery, aided by the labor of an over proportion of old men and of women and children. Hence the advantages of our boundless water power, our extraordinary mechanical skill, and the superabundance (in the case of cotton, particularly) of the raw material, are injudiciously sacrificed.

The next objection we shall notice is the alleged demoralizing effects of manufacturing establishments. To refute this, we invite your attention to, and comparison between, two neighborhoods, in one of which manufactures are established, and another remote from such establishments. In the former, there are, as already observed, numbers of aged men and of women and children, usefully employed for themselves, and adding to the mass of the resources and happiness of their country; while, in the latter, a large proportion of persons of this description are doomed to idleness, and its inseparable attendants, vice and guilt. Children in manufacturing establishments are inured to habits of industry, order, and regularity, which generally adhere to them through life.

But we are not left to the guidance of mere hypothesis alone, which, however plausible, is often very fallacious. We have the strong basis of fact to rest on. There is no country in christendom where manufactures have been carried to a greater extent than in England proper; therefore, in no other country could the experiment be more accurately made; and there the question has been fairly decided. Colquhoun, a most indefatigable and accurate statistical writer, after a full survey of the pauperism and crimes of that country, informs us that the agricultural very far exceed the manufacturing counties in both those stains upon human nature. From this authority there can hardly be any appeal.

It is asserted that it would be a pernicious policy to entice away capital and labor from agriculture to workshops. This apprehension is wholly groundless. Farmers or planters rarely transform themselves into manufacturers. There is in this country a vast amount of capital, for which the owners cannot, in the present deranged state of our affairs, find any employment. But were there any assurance of adequate protection to manufactures, it would be immediately directed towards those objects. There are likewise great numbers of persons, skilled in the cotton and woollen branches, who are destitute of employment, and who could abundantly supply the demands of the United States, were they duly encouraged. We have already stated that the greater proportion of the labor is performed by old men, women, and children; let us add, that were those branches in such a flourishing state as to hold out inducements to emigrants, we should have constant accessions to our population of persons skilled in them, many of whom would bring with them large capitals, equal to our utmost wants, without drawing away any portion of the capital or labor engaged in husbandry.

The danger of encouraging smuggling is regarded, by many of our citizens, as an insurmountable objection to protecting or prohibitory duties.

This will be found to disappear, like the rest, when fairly subjected to examination. For, suppose it were necessary to raise the duties on woollens and high-priced cottons to thirty-five, forty, forty-five, or even fifty per cent.; we appeal to the candor of your honorable Houses, whether the objection to any of these duties on cambrics, muslins, and broadcloths, on the ground of the danger of smuggling, can be admitted for a moment, when it is considered that gin is subject to a duty of one hundred and twenty-four per cent.; rum, to eighty-six; brandy, to ninety-six; cheese, to seventy; souchong tea, to from seventy to one hundred and twenty; manufactured tobacco, to fifty; and wines, to fifty and sixty. We shall only add, that it is indubitably as easy to smuggle a pipe of wine, a chest of tea, a cask of rum or tobacco, as a trunk of muslins or cambrics, or a bale of broadcloth.

Another objection is against the injustice of taxing the many for the benefit of the few. This assumes the groundless position, that permanent protection of manufactures would necessarily produce permanent high prices; which is refuted by the luminous maxim quoted above from Alexander Hamilton. But even admitting this maxim to be incorrect, the objection may be answered fully in another mode. If one part of the community is not to be taxed for the benefit of another, why, we respectfully ask, is gin dutied at 124 per cent. for the protection of the peach brandy and whiskey of the farmer, and cheese at 70 per cent.? Why is the coasting trade secured to our merchants, by which foreign competition is wholly excluded? And why, we ask, are "the many taxed for the benefit of the few," by the enormous expenses of a navy, foreign embassies, &c., for the protection of commerce?

The protection of manufactures is strongly objected to on account of its interference with commerce. But omitting all considerations arising from the general distress produced by the existing system, we ask, have we at present, or are we likely to have, any commerce, to which it is right or proper to offer up as a sacrifice the welfare and happiness of the useful and productive body of men engaged in manufactures? Such is the prostrate state of our commerce, which, unfortunately, depends in a great measure for its success on European wars and famines, that there are few articles that can be imported, and as few that can be exported, without loss.

But even admitting for a moment that our commerce was not so highly disadvantageous as it is, and that the encouragement of manufactures would somewhat interfere with it, we cannot thence infer that it would not be amply indemnified. In fact, far from suffering, it would gain by the arrangement; for the diminution of the number of merchants, by a portion of them withdrawing to manufactures, would render the profession profitable to those who remained. It is obvious, even to a superficial observer, that the mercantile profession in this country has almost always been greatly overdone; and that an inevitable consequence of the superfluous number of merchants has been to raise the markets of our produce at home, and depress them abroad, not only to the injury and frequent ruin of the merchants, but to the injury of the nation. Hence it is more than probable that our commerce, in which for twenty years more than half of those who pursued it have been ruined, would have insured independence and happiness to two-thirds of the number, had the residue transferred their talents, their industry, and their capital to manufactures.

Another consideration deserves attention. The encouragement of manufactures would open new channels of commerce, by the importation of raw materials from abroad, and by the increase of the coasting trade, in transporting the manufactures of the Middle and Eastern States to the Southern, and the cotton and other raw materials of the latter to the workshops of their fellow-citizens. Even of late years, the tonnage employed in the trans-

portation of raw materials to the port of Philadelphia, has exceeded that employed in the transportation of piece goods.

To foster and cherish national industry, the paramount duty and the characteristic feature of good government, most of the nations of Europe either wholly prohibit, or impose high duties on, the exportation of raw materials. We are probably the only civilized people who, possessing to an immense extent, one of the most valuable raw materials in the world, not only send it abroad to distant nations wholly free of duty, but receive it back in a manufactured state, at an advance of from one hundred to two thousand per cent. It would not be more unreasonable to export our wheat to have it ground, and purchase it again in the form of flour, than to sell raw cotton and receive it back manufactured; as the advance on the flour would hardly ever amount to a third part of the advance on cambrics and muslins.

We respectfully state to your honorable Houses, that such is the wonderful increase in the value of cambrics and muslins, beyond the price of the raw material, that the labor of 100,000 cotton manufacturers, aided by machinery, would pay for the amount of the greatest export of the productions of the United States, in any one year since the declaration of independence. This fact, which, if you require it, shall be proved at the bars of your Houses by the most unexceptionable testimony, is the more extraordinary and lamentable, as the high rate of wages here has been, as we have said, among the objections raised to manufactures; whereas it appears that we exchange the produce of the labor of ten, twenty, or thirty of our citizens, for that of one foreign manufacturer.

Another objection arises from the supposed danger of impairing the revenue. We respectfully represent to you, that, in the scale of reason and justice, this objection does not appear entitled to as much importance as is attached to it. The expenses of the Government must be borne; the interest of the debt must be paid; and the debt itself gradually extinguished. But these objects can be effectually accomplished without any sacrifice of the national industry; for if low priced cottons and woollens, such as we can ourselves abundantly supply, were wholly prohibited, and the duties increased on those of greater value, the revenue would probably be indemnified, by the gain in the one case for the loss in the other. The same observation applies to most other articles which require protection.

But we beg leave further to represent to your honorable Houses, that the policy pursued, so highly injurious to the national resources and industry, has not been advantageous to, but may ultimately injure, the revenue; for the general distress, and the decay of trade and commerce, resulting from the drain of specie, to pay for the extravagant and ruinous importations of foreign goods, have produced such a disability of purchase at present, that the importations of the ensuing twelve or eighteen months, and consequently the duties, will fall very far short of those of former years; and thus the future deficit will probably more than countervail the past excess.

But should the system of protection impair the revenue, it would be only in a slight degree, and merely affect the question of the period of the ultimate redemption of the public debt, which may in consequence be somewhat protracted. When the alternative is between this effect on the one hand, and a continuance of the existing state of things on the other, we trust there can, in an enlightened body, be no difficulty in the decision. It would be unsound policy in a merchant to anticipate the payment of his debts so rapidly as to deprive himself of the means of carrying on his commerce; and it is equally unsound for a nation unnecessarily to press forward the payment of its debts with such rapidity as to exhaust its resources.

Among the reasons that alienated the affections of America, in its colonial state, from the parent country, a very powerful one was the restraints imposed on its manufacturing industry. These were the subjects of loud and unceasing complaints. And we respectfully ask you, whether the consequences to the nation and to individuals are not as fatal, when our industry is torn up by the roots through the means of a tariff fatally inadequate to protect it, as by an arbitrary edict? Does it administer any comfort to the hundreds of useful citizens who invested large capitals in those valuable manufacturing establishments spread throughout the country, whose ruins bear the strongest testimony against the policy we pursue; or to the tens of thousands of workmen reduced to mendicity, many of them with large families, that their sufferings have not proceeded from the mandates of a privy council, but from the erroneous policy of their fellow-citizens?

The policy of this country has been in a great degree predicated on the specious idea of Adam Smith, "to buy goods where they can be had the cheapest." It has had a fair trial, and its pernicious tendency has been clearly demonstrated. We buy cotton, wool, and muslins in Hindostan; cambrics, muslins, and broadcloths in France and England, because we can purchase them cheaper there than at home; and there is good reason to believe that we shall have large importations of "cheap" wheat from Odessa. This system has caused a large portion of the existing distress. But of what avail is it that every species of goods and merchandise, and even most of the necessaries of life, are "cheap," when the means of purchase are far more reduced with almost every class, and with some have nearly disappeared? The owner of houses, who was in the receipt of two or three thousand dollars per annum, and whose rents have fallen one-third or one-half; the storekeeper, who made a comfortable support for his family, and whose business is almost wholly suspended; the great body of our Western farmers, whose bread-stuffs are excluded from those European markets whence their supplies of "cheap goods" have been drawn, and whose industry has thus received a vital stroke; the workman, who earned six, eight, or ten dollars per week, and who is now destitute of employment; and every other class of the community now enduring more or less distress, derive little consolation in their difficulties and embarrassments from the consideration that they have bought, and can buy, foreign articles cheaper than domestic. We are persuaded, had the latter been twice as dear as the former, (the difference of price, however, has generally been insignificant,) that recent events prove it would have been sound policy to give the preference to the productions of our fellow-citizens.

We beg leave to correct an error of considerable importance. We said that "every class of the community was suffering more or less distress." There is one striking exception. Great capitalists find a golden harvest in these times. They can add farm to farm, house to house, ship to ship, and stocks to stocks, at their pleasure, to the ruin of the productive classes, who have been always regarded as the most valuable portion of society, and whom it has been the policy of all wise Governments to foster and cherish. The present state of affairs is wonderfully calculated to enrich the wealthy extravagantly; to impoverish and reduce to distress those who have heretofore furnished employment and the means of procuring a comfortable subsistence to thousands and tens of thousands of useful citizens, which they are now unable to afford; and not only to deprive the latter of the means of supporting themselves and families, but perhaps to drive many of them to desperate courses, as so frequently occurs in all countries in times of distress and difficulty. A capitalist with half a million of dollars could now purchase property which one year since would have sold for one million and a half, and which in one or two years hence, when the present calamitous state of affairs subsides, may realize the same sum. This is the poisonous fruit of the upas tree, of "buying cheap goods abroad."

We hope it will appear, on such an enlarged and liberal view of the subject as ought to be bestowed on it by a legislative body, fairly chosen, in a free country, that the advantages held out to farmers and planters from purchasing foreign goods cheap, however specious and plausible they may have appeared, are wholly illusory. The

great mass of those descriptions of citizens purchase so few foreign manufactured goods, which alone are to be taken into view in deciding this question, that the utmost saving that can be made on them is insignificant, compared with the solid advantages of securing a permanent home market for their productions. The average consumption of foreign manufactures by the citizens of the United States is not four dollars per head. Let us suppose every species of foreign goods to be 25 per cent. cheaper than domestic: in this case, the saving, by preferring the former, would be only one dollar per head throughout the Union. Let us respectfully call your attention, on the other hand, to the severe loss incurred by the sacrifice of domestic industry. This will enable you to form a correct decision on this important subject. The reduction in the price of cotton from thirty to eighteen cents per pound, is thirty-six dollars on a single bale; and the reduction in the value of the wheat produced by a single acre of land, suppose twenty bushels, by a fall from two dollars and fifty cents to one dollar and a quarter per bushel, is twenty-five dollars. And it will not admit of a doubt, that had the protection of our cotton establishments provided a home market for that important staple, the price, from the steady and increasing demand, would probably have remained stationary; at all events, it would never have experienced so rapid and so ruinous a reduction. Moreover, so far as regards the farmer, it is highly probable that a due protection of manufactures would, in a few years, as already observed, attract to this country so many foreign artists and manufacturers as would consume nearly as much of the necessaries of life as are now exported abroad.

Dearly, therefore, have they paid the forfeit for adopting the maxim of "purchasing where goods could be had the cheapest;" a maxim rejected in practice, as we have stated, by every wise nation in Europe, and acted upon only by Spain, Portugal, and the United States.

On a review of the proceedings of the fourteenth Congress, your memorialists find that the present calamitous state of affairs was clearly exhibited to their view as early as February, 1816. What was then prophecy, has, alas! fatally become history.

The Committee of Commerce and Manufactures, in a most excellent and eloquent report of the above date, ask:

"Do not the suggestions of wisdom plainly show that the security, the peace, and the happiness of this nation depend on opening and enlarging all our resources, and drawing from them whatever shall be required for public use or private accommodation?

"The committee consider the situation of the manufacturing establishments to be perilous. Some have decreased, and others have suspended business. A liberal encouragement will put them again into operation, with increased powers. But should it be withheld, they will be prostrated. Thousands will be reduced to want and wretchedness. A capital of nearly sixty millions of dollars will become inactive, a greater part of which will become a dead loss to the manufacturers. Our improvidence may lead to fatal consequences. The Powers jealous of our growth and prosperity will acquire the resources and strength which this Government neglects to improve. It requires no prophet to foretel what use foreign Powers will make of them."

It cannot be sufficiently lamented that these sage admonitions were unavailing. The tariff, on the most important manufactured articles, was fixed so low, that it required but little sagacity to foresee the ruin of the manufacturers, and the consequent impoverishment of the country.

Your memorialists respectfully state, that they further find that the manufacturers, while numbers of them were sinking victims of, and all of them suffering by, the overwhelming competition of foreign rivals, explicitly stated their sufferings and dangers to their fellow-citizens in Congress, each succeeding session, respectfully and earnestly soliciting that protection which they alone had the power, and which it was their imperious duty to bestow. It is painful to your memorialists to state, (but candor requires they should state,) that those applications were disregarded; that the applicants were left to fall victims in an unequal struggle; in which long established manufactures, immense capital, great credit, and governmental protection were arrayed on one side, and on the other infant establishments, exhausted capital, slender credit, and a tariff utterly inadequate for protection. The memorials from Rhode Island, Pittsburg, Baltimore, and Oneida county, are masterpieces of eloquence, admirably calculated to excite the sympathy and to command the aid of the Legislatures to which, unhappily, they were in vain addressed.

Although this memorial has already extended to a great length, we cannot close it without placing the subject in another important point of view, deserving of your most serious consideration.

The establishment of manufactures on a respectable scale in any town or village is of transcendent benefit to the agricultural interest, as they immediately enhance the value of the lands in the neighborhood from one to five hundred per cent. Independent of the advantage already glanced at, of a steady home market for his wheat, flour, corn, rye, &c., the farmer has "a certain demand for his cabbages, peas, turnips, and other garden stuffs, and fuel, which are too perishable for foreign markets, or not worth the expense of transportation." And this is not mere theory. There are two strong cases in point. The establishment of the manufactories at Brandywine and Pittsburg enhanced the value of the neighboring lands in the ratio above stated, and wonderfully increased the prosperity and comforts of the circumjacent farmers. The same effect has been produced in other parts of the Union; and it would be every where produced, in a greater or less degree, by the same cause. And, moreover, the sons and daughters of the farmers and country laborers, a large portion of whose time is at present entirely wasted, would have a source of profitable employment, to add to the comforts and the happiness of their parents.

We therefore pray that, taking the premises fully into consideration, you will be pleased to revise the tariff in such a mode as to revive our drooping manufactures, and afford effectual protection to the national industry.

PETER S. DU PONCEAU, *and others.*

16th Congress.] No. 570. [1st Session.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 17, 1820.

To the Senate and House of Representatives of the United States in Congress assembled: The memorial of the United Agricultural Society of Virginia, in general meeting of their delegates—

From the Agricultural Society of Prince George's—Thomas Cocke, Edmund Raffin.
From the Agricultural Society of Sussex—John Edmunds, George Blow, Wm. F. Raffin, Wm. I. Cocke.
From the Agricultural Society of Surry—Nicholas Faulcon, Charles H. Graves, Richard Cocke.
From the Agricultural Society of Petersburg—John Pegram, Roger A. Jones.
From the Agricultural Society of Brunswick—Theophilus Field, John Jones, and Henry Lewis.

Your memorialists present themselves to your honorable Houses, as a portion of the independent agriculturists of Virginia. In that character, we design not to harass our representatives with high-wrought pictures of distress which their wisdom could not have anticipated, and cannot remove; neither can we bring ourselves to detail, in the language of complaint, much less of reproach, those evils which we endure in common, not only with every class and denomination of our fellow-citizens, but with almost every rank and description of civilized man. We solicit not the fostering care and patronage of the Legislature to alleviate, by bounties, monopolies, or protecting duties, calamities in their nature as inevitable as they are incurable by legislative interposition, because resulting from a combination of circumstances over which our Legislature can exercise no control. War is an unnatural and calamitous state; its evils must be felt sooner or later, and not less severely by being deferred. The transition from war to peace was sudden, and found us, like the rest of the world, unprepared. But we can bear patiently the penalty of our own improvidence, convinced that our distresses will be but temporary, and recollecting that they were preceded by twenty years of almost uninterrupted prosperity. In this frame of mind, which we recommend to the imitation of our more discontented brethren, we have only to solicit, respectfully but earnestly, from your wisdom and experience, that we be left to ourselves to disembarrass our own affairs by active industry and strict economy, instead of being placed at the mercy of interested individuals, who would flatter us with relief by abridging our comforts, increasing our expense, and diverting to their own pockets that portion of the produce of our labor which, differently applied, might serve to extricate us from our present difficulties. The undefined projects and extravagant claims of the manufacturing associations, collected from their circulars, reports of committees, and other publications, could alone lead us to apprehend that we may not be left to this repose which we so earnestly solicit, and which the difficulties of our present situation so imperiously demand. We have always suspected the policy of forcing any branch of trade or manufacture by bounties, monopolies, or protecting duties; but, without entering into the discussion of the general question, we would respectfully suggest that no period more unfavorable than the present could be selected for the commencement of an experimental course of political economy, beginning with the taxation of the many for the emolument of the few. When we consider the taxes already imposed on foreign manufactures, (averaging, perhaps, twenty-five per cent.,) and estimate the amount of freight, double commissions, insurance, and various smaller charges incident to shipping and transporting to this country the products of the foreign artisan, a moderate calculation will give to the American manufacturer an advantage of forty per cent. If, to this immense advantage over the European competitor, we add the cheap terms on which the chief necessaries of life—meat, bread, and fuel—can be procured; the abundance in which the raw materials are produced; our happy exemption from the whole of that frightful catalogue of oppressive taxes, which, barely to read, makes the American citizen shudder, but under the continually accumulating weight of which the foreign artisan must labor; and still further, on the authority of the advocates of protecting duties, a considerable capital unemployed, and numerous laborers starving in idleness, and you exhibit a series of advantages on the side of the American manufacturer which would seem to put competition in our own market entirely out of the question. If, with such overwhelming odds in his favor, the American declines to compete with the foreign manufacturer, we must conclude either that capital is wanting to fit him out for the trial, or he scorns the consideration of such profits as would satisfy his opponent. If the former conclusion be true, it demonstrates the impropriety of attempting at this time to force manufactures by law; for, as capital is essentially necessary, and cannot be forced by law, we had better await its slow growth, from the gradual operation of the usual causes; and whenever it arrives at sufficient maturity, manufactures will follow without force. But if, on the other hand, our manufacturers are so impatient to enrich themselves as to disdain the gradual accumulation of moderate profits, we submit respectfully to your wisdom the impolicy of subjecting so large a portion of your fellow-citizens to such unreasonable cupidity—of laying them at the mercy of an association, who (competition being removed) will no longer consider the intrinsic value of an article, or what price would afford a fair profit to the manufacturer, but how much the necessities of the consumer would enable them to extort. Of this spirit, we had a sufficient specimen during our late war with Great Britain.

In reply to these arguments, we are told that many manufacturing establishments have been ruined for want of protecting duties. We doubt not the fact of ruin; but we more than doubt the cause assigned for it. We strongly suspect that, on a fair investigation, most of the failures may be accounted for very differently. For instance: 1st, by embarking in business on fictitious capitals; the sudden recall of which left the adventurers, as they originally were, without funds. 2d. Engaging in speculations unconnected with their factories, and, by the failure of these, ruining their establishments. 3d. From the impatience of growing rich, by the gradual accumulation of moderate gains, stimulating them to attempt establishments and projects beyond their means. Few, we believe, of those who commenced with real capitals, and pursued their business prudently, have failed to improve their fortunes. The greater part of this description of persons acknowledge, with honest candor, that they are sufficiently protected. But, as we have forced none of our fellow-citizens to embark their capitals in the precarious speculation of establishing manufactures—perhaps before their time; nay, as they have voluntarily involved themselves in ruinous projects not from patriotic motives, but views purely selfish, and founded on the fallacious prospect of a protracted war, we see no reason why they should call upon us to reinstate them by a heavy sacrifice, and this, too, at a time when it is with the utmost difficulty any of us can fulfil our own personal engagements, and many are reduced to the necessity of sacrificing their property to satisfy their creditors. Under these circumstances, we hope that your honorable Houses will not deem unreasonable our respectful remonstrance against any increase of burden beyond the necessary expenses of our Government.

One favorite argument insisted on by the manufacturers is so offensive a libel on the great body of the American people, that indignation will not suffer us to pass it unnoticed; to wit, that the establishment of home manufactures is necessary to keep the people firm to their duty in time of war. Thus, more than insinuating that the millions of independent high-minded agriculturists who people our extensive territory, constituting at once the pride and the strength of the nation, are to be taught the value of independence, and the necessity of self-defence, by the operations of an inconsiderable number of manufacturers scattered through the country.

In every nation, with whose internal affairs we are familiarly acquainted, the landed interest has been proverbial for liberality, in comparison with any other class; and we proudly believe the day will never arrive when the American yeoman will not suffer himself patiently to be shorn to the quick in defence of the independence or honor of his country; while, if "you but touch a bristle of the manufacturing interest, the whole sty is in an uproar." We wish not to be placed under such protections, especially when their projects for safety are accompanied by the expression of the alarming sentiment, that they consider the election of a President, a Governor, or a Representative of the people, as uninteresting in comparison with a question on the fabrication of druggets, calico, and penknives.

The specious vision of supplying all our own wants by our own labor, and thus being enabled to isolate ourselves from the other members of the human family, we look upon as a mere phantom, conjured up for the purpose of luring us into a prohibitory system. Could such a vision be realized, we would deprecate its influence as equally hostile to the advancement of science and the duration of liberty. We do not envy the condition of the Chinese, the only people completely abandoned to this chimera; amongst whom science has been retrograde for a thousand years,

the whole energies of the human mind reduced to the servile talent of imitation, and man degraded to a state of abject grovelling slavery. Compare the timid slave creeping through shallows in his clumsy junk, with the American seaman "among the tumbling mountains of ice of the arctic circle, penetrating to the antipodes, and engaged under the frozen serpent of the south." "Yet we know that he has not been squeezed into this hardy form, or inhaled this daring spirit from the constraints of a watchful and suspicious Government, but that, through a wise and salutary neglect, a generous nature has been suffered to take its own way to perfection." We are firmly persuaded that the best interests of men and of nations are promoted by free and extensive intercourse one with another. The great object of nations ought to be, to procure the greatest possible quantity of produce with the least possible expenditure of labor and of capital. This can be effected only by permitting the people to purchase such articles as they can buy cheaper than they can fabricate. Thus would be produced a most unrestricted state of commerce, permitting every country to employ its capital and industry to the greatest advantage, in devoting them to pursuits adapted to the soil and climate of each, and consonant with the genius of their respective inhabitants.

For these, and other considerations equally cogent, your memorialists feel themselves constrained to remonstrate against the pretensions of the manufacturing interest, as of a highly dangerous tendency, whether considered with respect to their influence on our Government, by establishing the precedent of investing one class with peculiar privileges and immunities at the expense of the rest—a measure pregnant with the most fearful consequences, being as inconsistent with the principles of justice as incompatible with the spirit of our free constitution; their tendency to demoralize our people, by the introduction of smuggling—an evil inseparable from high protecting duties, and one fromwhich the united natives of Europe and America could not guard a coast as extensive as ours; or their effect on our revenue, already diminished by protecting duties, without producing any corresponding energy on the part of our manufacturers, and which, if further diminished by an increase of tariff, and by diverting capital from the purchase of public lands, must necessarily call for a system of internal taxation; in the present state of our affairs, productive of incalculable distress. Commerce must decline under such a system; with its decline our seamen must diminish; and our gallant navy, after achieving more than our fondest hopes could anticipate, dwindle into insignificance. This sacrifice, too, we are called upon to make, that our manufacturers may be enabled to furnish us with cottons and woollens fifty per cent. higher than we could procure them in a foreign market.

With this view of the subject, your memorialists pray that no further protection be granted to manufactures, excepting such as in your wisdom you may deem essential for national defence; and that the existing duties be so reduced, as to produce the greatest possible revenue. And we revert to our original prayer, to be left to ourselves to disembarrass our own affairs, without being called on to repair the losses of any other class, still less to advance them to wealth and power at the expense of the best interests of the American people.

JOHN PEGRAM, *President of the Delegation.*

EDMUND RAFFIN, *Secretary.*

16th CONGRESS.] **No. 571.** [1st SESSION.

PROTECTION TO PAPER MANUFACTURERS.

COMMUNICATED TO THE SENATE, JANUARY 18, 1820.

To the Senate and House of Representatives of the United States in Congress assembled: The memorial of the Society of Paper Makers of the States of Pennsylvania and Delaware, respectfully showeth:

That at a time when the economy of the United States, in all its various branches of manufacture, presses itself upon the public attention by the extreme injury it sustains, your memorialists are impelled, by the deplorable state of that which they particularly represent, to ask for the patronage and assistance of the National Legislature.

Your memorialists believe there are some peculiar features in this manufacture which, if known, will entitle it to the attention of Congress. And they hope to be allowed to mention some general facts respecting the American manufactures which are needful to a full view of their own.

Your memorialists represent a manufacture which arose in these States at an early period of the settlement of the country—about the year 1730; and, being produced from the domestic saving of a raw material which offered no interference to agriculture or commerce, they conceive has always been so much gained in favor of its economy and industry. The arts depending upon it render it necessary to almost every branch of improvement, as the printing of books, maps, charts, prints, newspapers, &c., which materially promote the extension of knowledge, the advancement of education, and the various purposes of the state.

In an object of such extensive consumption, we cannot avoid bringing into view the amount which must have been saved to the nation for a period of one hundred years by the use of a domestic material which must otherwise have been lost; and by the employment of the youth of both sexes in a manufacture which has been more productive than even agriculture itself; the importation of which would have required the country to pay large sums annually for the refuse materials and industry of foreign nations instead of its own.

The paper, in common with several of our manufactures, was protected previous to the revolution by the general effect of the English laws in favor of its national industry; for, although they offered no encouragement to us to come into competition with manufactures abroad, they secured from general interference the benefit of our home market.

These domestic establishments were of great importance during the revolution, when the importations ceased. The security arising from the war contributed much to their improvement, and continued after the peace of 1783, in consequence of the limited intercourse with Europe. During the long period of the European war many of our manufactures were preserved by the interruption to those of the continent, and the heavy charges of shipment; so that from their first origin until the late treaty they experienced a virtual protection, and were prevented from being exposed to ruin by the effect of the laws made by foreign Governments to promote their commerce and the extension of their trade.

After this time an unlimited intercourse took place with distant nations, without regard to the important effects it would produce upon our domestic arrangements and economy; and it was not foreseen that when the policy of every nation of Europe prevented a use to us of their markets whenever our products come into collision with theirs, we were at all times exposed to an introduction of their manufactured articles, not for our regular wants, but

as a vent for such goods as they might have in excess. This had an effect to paralyze the internal industry of the country in a manner never before experienced since its settlement; and it has placed us in the situation of several of the countries of Europe whose manufactures had become superseded by those of a rival nation which had acted under the patronage and encouragement of its own Government. This, without affording a regular supply, eventually creates dependence for necessaries abroad, by the destruction of the productive objects of national wealth.

Your memorialists beg leave to represent that an effect of this kind is easily produced; for as manufactures become organized, the raw materials of the country are always enhanced by competition, and the prices of goods reduced so that they yield little more than a bare living; the economy of business then affording its chief emolument. Of course, an interference in the home market produces ruin to the regular establishments, by taking away the sale of the goods; creates in their place similar ones abroad, to supply the country; and subjects it in future to pay advantageous if not exorbitant prices, without affording a value to the raw materials of the country, or furnishing its labor.

It appears from the conduct of the nations surrounding us that this effect has been well understood, and they have found that the employment of the people in manufactures, with the aid of machinery, gives the means of buying from neighboring agricultural nations more agricultural products than the same number of people could raise on their own soil at home, and that the difference is again in favor of their national wealth. From this principle they have confined the people to the consumption of the manufactured products of the nation, in preference to buying those of a foreign one, even at a lower price; because the payment takes out of the country the full manufactured price, including both cost and profit; whereas, if the articles are made at home, the country receives all the profit of manufacture, which is so much added to its national stock; and though the consumer may pay something more for the domestic articles he may use in consequence of protecting duties, yet as these will not amount to the profit on the manufacture of the goods, the difference gained to the country is in favor of its improvement; and it is more than made up to the consumer in the benefit derived either in raising the materials, the employment of the people, the increase of industry, the benefit to agriculture, the circulation of money, or in the full use of all the natural advantages of the country.

While the introduction of manufactures prevents this injurious exchange, their establishment at home must increase a population to consume the product to great advantage.

The local situations for mills and factories occupy but little land fit for cultivation, and afford a market to the farmer, at his own door, for the articles of the easiest and most profitable description, which could not bear the expense of carriage; they give an immediate value to his property, to be paid in barter for his demands upon the manufacturer. The raw material, whether it be wool, iron, rags, leather, or wood, or the many wants a population requires, are new objects free from the expense of the labor of carriage, which takes place in transporting them to an uncertain sale in a distant market.

Your memorialists refer the application of these general remarks to their business. This has yielded from the factories within forty miles of Philadelphia a manufactured amount of $800,000, a year, by which it has employed nine hundred and fifty persons, half of them women and children. This gives a product of near 1,000 dollars per head per year, the material in this case being a clear gain. It is, therefore, a far greater amount than could possibly be obtained by the employment of the same people on the land. Now, as the nation would have to pay this amount for paper from abroad, it would have to send abroad the produce of at least four thousand people, employed upon the land to obtain it, even were the prices not raised in consequence of our dependence upon them.

The rising establishments of the country have suffered from the effect of the system pursued; and we believe, if they had been timely guarded in the manner they have been abroad, so as to take advantage of their prosperity, they would have preserved their standing, and have been now a great support to the nation, to its agriculture, and to the Government.

A view of the progress of the manufacture abroad will give us an illustration of the principle.

"The art of making paper was first brought from China into Persia in the seventh century, introduced into Spain, by the Arabs, the eighth or tenth; it passed into France and into Germany in 1312, and last of all into England, in 1320 and 1342."*

"Before the year 1690, there was scarcely any other kind of paper made in England but the coarse brown sort; but the war with France coming on, occasioning duties on foreign paper, the French Protestant refugees settled in England chiefly, and the English artificers also, began to make white writing and printing papers, which were brought to so great a perfection for beauty and elegance, as to supersede the importations of the continental papers into the British dominions. These, it was said, saved a remittance to France alone of one hundred thousand pounds sterling annually; and the country became able, in addition to the supply of its own wants, to export large amounts of papers to foreign markets, which had previously been supplied from the continent."†

The protection which the manufactures have since received in England, added to the scientific skill of the people, has carried it to a higher degree of perfection than any other nation of Europe, so that they have had a general preference and afford one of her advantages of obtaining the products of other nations by the employment of her people.

The duty on papers taken into England has remained for a long time, by the tariff, at nineteen pence sterling per pound, and a drawback of three pence per pound is allowed on the export of her own paper, which is equal to the excise laid on that consumed at home; so that it appears the advantages derived from the employment of the people have not been retarded, even when in competition with the revenue.

But we have had to contend alike against the manufactures of England and those of the continent; for while the improvements in this country required us to make paper of a superior quality, to compare with the English paper, we have had to do it under a competition with the prices of the low qualities of the papers from France, Spain, and Italy; which being excluded from England, were sent here, and obtained a sale from their cheapness, when their quality would not have commanded it.

We have been thus exposed to the collision of the interests of different nations from which their own laws severally protected them at home, and in one of which the export has been even promoted by a bounty. This would never have taken effect but among ourselves, and it affords at once a striking instance of the means used to export their surplus products, and to contend with each other for the advantage of a distant market. Nor have the various objects of the country been promoted by this competition.

The revenue obtained has not been considerable; for although large quantities of low priced paper, from France, Spain, and Italy, have been imported, so as to prevent the demands upon our factories, and to anticipate the consumption of the country very greatly, they have come in as objects of speculation, charged low to yield very little ad valorem duty; the collusion of duties being a leading motive for importing them.

Our commerce has not received much benefit, for papers which have been brought from the south of Europe have not given near so great an employ to our vessels as the same amount of capital invested in rags from thence

* Edinburgh Encyclopedia, article "paper." † Rees's Encyclopedia, article "paper."

would have done, if our paper manufacturers at home had been protected; for in this case the import of the manufactured paper would have been superseded by the rags, which would have been a great object of commercial attention.

Nor have our internal demands been usefully supplied. Paper is not only consumed for writing, but for books, maps, newspapers, prints, &c.; respectively requiring a particular style for the various orders, which these European papers could not meet, nor would have been used except from an extreme reduction of price; and they have in a measure retarded the advancement in our arts. When we place these considerations with that of their coming in direct interference with the whole system of our domestic industry and produce, the sacrifice of our improvement and labor with that of the very great expenditures and investments of mills, materials, and people, and every spirit of ambition to bring this business as an object under the security of a home market, we may fairly state the loss sustained not only to have been private but national.

Your memorialists, therefore, beg leave to call the attention of your honorable body to interpose for our relief.

We possess fully the means to supply the consumption of the United States with paper, the domestic saving of our own soil, which would otherwise be loss to the community, of a quality equal to that of any other country on earth, entirely adapted to every demand of use or elegance. That in a state of fair trade we will be able to export a considerable excess of manufactured paper to South America, and many other countries where the arts have not advanced as far as here. That, therefore, all foreign supply is not only necessary, but injurious. That it has offered not a fair rivalship, but to give overwhelming quantities of paper upon us, ordered upon speculation, and sold at auction, which has drawn off our wealth, and operated to the discouragement of the emulation and industry which would have arisen by the employment of our capitals at home.

The establishments which have been long in operation have afforded the public every advantage of competition, which has reduced the price of paper to the consumer as low as any where in the world; and were it even to advance, would tend to an improvement of the arts, and place them more on a footing with England and other nations, where printing, engraving, and other branches of science, tending to public education and improvement, are objects of national encouragement, from which the people derive so pre-eminent an advantage.

The district we represent offers, we think, a comparative view of the state of this manufacture in the country at large. In this there are erected seventy paper mills, which were in full operation until the importations after the late war; in these there were ninety-five paper vats, with a cost of establishments of about half a million of dollars, employing nine hundred and fifty persons at annual wages of two hundred and seventeen thousand dollars, consuming annually 2,600 tons of rags, value $260,000, and producing about $800,000 worth of paper a year; and from the causes we have mentioned we find now that there remain but seventeen vats at work, whose annual amount of wages is $45,000, and production $136,000; leaving unemployed 775 persons to seek other means of living, with a loss to the community of 2,128 tons of rags unconsumed, which would have produced a saving of $212,800 in raw materials, and a manufactured amount of $624,000.

Your memorialists cannot but state that the ruinous effects produced, as we have represented, would be as severely felt by the Government as ourselves, should it be found needful to rely upon national industry for support; and we cannot but bring into view the aid derived from the paper establishments, and the amount of the internal taxes collected during the war, when they were an availing source of income.

In this district, the mills then in active operation paid, at an average, 200 to $250 annually, per vat; yielding together a revenue of 20 to $25,000, when importations afforded none; and we conceive the Government may form an estimate of the loss to the country from that which the revenue would suffer between the income derived from ninety-five vats in full employ, and the aid afforded by the security of our home market, contrasted with that which would now accrue from seventeen vats existing under the depression from filling our market with the produce of foreign nations, which has shut up seventy-eight vats, left our employers and workpeople embarrassed and dispirited, while we have given our resources, the natural basis of our own support, towards the establishment of business, and the creation of revenues in the hands of nations who are the rivals of the country in its domestic as well as political advantages.

Your memorialists believe they have given a candid statement of the facts which they have brought before you; they can only rely upon the wisdom of the Government to guard its national interests. They believe their cause to be mutually involved with that of their country; it remains with its Government to prevent the extension of the present, or the recurrence of future calamities. Their business cannot remain as it is now situated; its advantages have left us, and the shadow of it only exists. They truly believe a protection granted to them protects thus far the property of the nation; that the policy adopted by other Governments in this case would secure the same results to us which it has done to them; that it would render us independent at home, would employ and enrich the nation, and would give us a surplus value to export in barter for the products of foreign countries, useful and necessary to our wants.

Your memorialists propose a duty of twenty-five cents per pound on all writing, printing, and copper-plate papers, and fifteen cents per pound on all others.

Your memorialists remain with great respect.

By order of the society.

THOMAS GILPIN, *Secretary.*

PHILADELPHIA, *January* 15, 1820.

16th CONGRESS.] No. 572. [1st SESSION.

PROTECTION TO PRINTERS OF BOOKS.

COMMUNICATED TO THE SENATE, JANUARY 26, 1820.

To the Senate and House of Representatives of the United States of America in Congress assembled:

The subscribers, inhabitants of the city of Philadelphia, beg leave to state that they are extensively engaged in the manufacture of printed books, a branch of business which has increased within a few years to such an extent as

could not have been anticipated, and in which there is at this moment as much capital engaged as would suffice to answer the demand, were it to be increased to treble its present amount. As an evidence of this, they state the fact that there are no less than five Family Bibles, and numerous smaller Bibles and Testaments, kept constantly standing in type in this country; that a large Latin Dictionary has been recently stereotyped in Philadelphia, and an English one in New York; and refer also to the numerous extensive works lately published, or now in a course of publication, among which are Rees's, Gregory's, and Edinburgh Encyclopedias, the Edinburgh and Quarterly Reviews, Hume and Smollett's England, (three editions,) Gibbon's Rome (two editions,) British Classics, British Poets Ramsey's Universal History, &c. &c.; and also to the circumstance that there are five type foundries in the United States, capable of producing types to almost any extent.

It has attained its present height without the aid of high duties (the highest, except during the war, ever imposed, being 15 per cent.,) and would not now require protection against importations regularly made; but the present state of affairs in Great Britain having lessened the demand for books there, many persons in that country have been induced to turn their attention to the United States, to obtain a vent for their publications.

In consequence, there are great quantities, and of very inferior quality, sent out for the purpose of being disposed of in this country by subscription, deliverable in numbers, by which method the purchasers are deluded into a belief that they are obtaining them at lower prices than they could be procured of domestic manufacture; whereas the contrary is the fact. These books are disposed of by hawkers, (all of whom are foreigners, and pay nothing whatever for the support of the General or State Governments,) who are traversing the whole country, and obtaining subscribers to a great extent; thereby destroying the business of the regular trader, whether manufacturer or importer. They are frequently shipped to this country in such a fraudulent manner as to be passed at the custom-houses for little more than waste paper; one part or volume of a work being shipped to one port, and the remainder to another, thereby defrauding the revenue of almost the whole duty; the books being appraised as imperfect, and therefore of little value.

Your memorialists believe that it can only be necessary to state the fact, that, from the best information they can obtain, there have been recently imported not less than seven or eight hundred thousand numbers of a Family Bible, (while at the same time there were, as before stated, no less than five Family Bibles, one of movable types, and four of stereotype plates, existing in this country, with a capital sufficient to supply almost ten times the present demand for that book,) to convince you of the necessity of adopting a system that will give protection to this branch of manufactures, without which there will be a most deleterious effect produced upon it, which will very seriously affect the type founders, paper makers, printers, manufacturers of leather, bookbinders, goldbeaters, engravers, &c.; in all of which branches the supply is, we believe, fully equal to the demand.

Your memorialists believe that when your honorable body take into consideration the powerful effect produced in enlightening the great body of the community by the quantity and cheapness of books manufactured in this country, compared with what would have been the effect had we been dependent upon Europe for our supplies, burdened with the expenses of freight, &c., and also that every article made use of in this business is entirely of domestic manufacture, and the great number of persons whose support depends wholly upon it, you cannot fail to see the propriety of securing the home market to those citizens who have embarked their capital in it, and who have displayed as much enterprise as any other part of the community, without exception.

Your memorialists, aware that you would feel indisposed to make any alteration that would be likely to be injurious to the cause of literature, and believing that their interests and those of literature are perfectly reconcilable, beg leave to propose a plan by which they believe both will be served. It is, that the present duty of 15 per cent. on books be repealed; that, in lieu thereof, there be levied on them a specific duty of thirty-three and one-third cents per pound weight; and that, in order to give greater encouragement to the business of bookbinding, as well as to place the person who imports books in sheets, with a view of having them bound in this country, on an equal footing with those who import them bound, there be a duty of fifty per cent. upon the binding of whatever books are imported in that state.

This alteration will have the effect of excluding, almost entirely, the common articles, of which the means of production in this country are almost unlimited, and in the manufacture of which the competition is so great as to insure an ample supply at fair prices; and will, at the same time, admit at a fair rate of duty those books in the higher departments of literature and science, for which there is not yet a sufficient demand to warrant printing them. It will also have the effect, which is greatly to be desired, of preventing those frauds upon the revenue which have been practised to a very considerable extent, and will make all importers pay the same duty upon the same articles.

MATHEW CAREY, *and others.*

PHILADELPHIA, *January* 10, 1820.

16th CONGRESS.] **No. 573.** [1st SESSION.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS, AND AGAINST A CHANGE OF THE REVENUE SYSTEM IN RELATION TO CREDIT AND DRAWBACK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 31, 1820.

To the honorable the Senate and the House of Representatives of the United States of America in Congress assembled: The undersigned memorialists, merchants and inhabitants of Salem, in the Commonwealth of Massachusetts, and of the towns in its vicinity, beg leave most respectfully to represent:

That they have seen, with unfeigned regret and surprise, some propositions recently brought forward in Congress, and others advocated by respectable portions of the community, which, in their humble opinions, are calculated seriously and certainly to injure, if not eventually to destroy, some of the most important branches of the commerce and navigation of the United States. The memorialists have not the slightest intention of casting any imputation of unworthy motives upon those, from whom on this occasion they feel themselves compelled to differ in the most decided manner. They are ready to admit that many of those who are inclined to revive commer-

cial prohibitions and restrictions, and to change some of the fundamental rules of our financial policy, are governed by motives solely suggested by their own views of the national interest. They are free also to admit that the manufacturing interests of the country deserve to receive the fostering care and patronage of the Government. But while they make these admissions, they also beg leave to suggest that the interests of commerce are not less vital to the welfare and prosperity of the Union than manufactures; and that it never can be a sound or safe policy to build up the one upon the ruins of the other. Under a wise and enlightened revenue system, the commerce of our country has hitherto advanced with a rapidity and force which have exceeded the most sanguine expectations of its friends. This commerce has contributed largely to the employment of the capital, the industry, and the enterprise of our citizens. It has quickened the march of agriculture, and, by increasing the value as well as amount of its products, has given to the planter and husbandman a reward in solid profit for their toils. It has also materially sustained the credit and finances of the nation, by insuring a regular and growing revenue through a taxation scarcely felt, and cheerfully borne by all classes of our citizens. It has also given birth to our naval power, by fostering a hardy race of seamen, and patronizing those arts which are essential to the building, preservation, and equipment of ships. It has greatly enlarged, and the memorialists had almost said created, the moneyed capital of the country. And the memorialists believe, that it cannot be too frequently or deeply inculcated as an axiom in political economy, that productive capital, in whatever manner added to the stock of the country, is equally beneficial to its best interests. Its real value can never be ascertained by the sources from whence it flows, but from the blessings which it dispenses. A million of dollars added to the productive capital by commerce is at least as useful as the same sum added by manufactures.

The benefits of the commerce of the United States, which have been enumerated, are not deduced from theoretical reasoning; they are established by thirty years' experience, since the constitution was adopted. At that time our capital was small, and had suffered for a series of years a continual diminution. Our agriculture was depressed, and our finances were embarrassed. The changes, which a thrifty commerce during this period has contributed to produce, are so striking, that they scarcely require to be stated. There is not a single portion of the country that has not felt its beneficial influence. On the seaboard we have every where flourishing towns and cities, the busy haunts of industry, where the products of our soil are accumulated on their transit to foreign countries. In the interior, hundreds of towns have arisen, which but a few years since were desolate wastes or dreary forests. The agriculture of the old States has grown up and spread itself into a thousand new directions; and our cotton and our wheat, our tobacco and our provisions, are administering to the wants of millions, to whom even our very name was but a short time ago utterly unknown.

The memorialists would respectfully ask, if it be not a part of the duty of a wise nation to profit by the lessons of experience? Is it just, is it salutary, is it politic, to abandon a course which has so eminently conduced to our welfare, for the purpose of trying experiments, the effect of which cannot be fully ascertained, which are founded upon mere theoretical doctrines, at best complex and questionable, and it may be, in practice, ruinous as well to morals as to property? Suppose it were practicable to arrest the present course of commerce, to narrow its limits, and even reduce it to the mere coasting trade of the nation; is it clear that the capital, thus withdrawn from commercial pursuits, could be as usefully or as profitably employed in any other branch of business? It is perfectly certain that such a change must be attended with severe losses to the merchants, and with ruin to numerous classes of our citizens, to our seamen and shipwrights, and other artisans, whose business depends on, or is connected with, commerce. Cases may possibly arise in which the interests of a respectable portion of the community may be justly sacrificed; but they are cases of extreme public necessity, not cases where the rivalry and the interest of one class of men seek to sustain themselves by destruction to another. In a free country, too, it may well be asked if it be a legitimate end of government to control the ordinary occupations of men, and to compel them to confine themselves to pursuits in which their habits, their feelings, or their enterprise forbid them to engage. While the manufacturers are left free to engage in their own peculiar pursuits, enjoying in common with others a reasonable protection from the Government, the memorialists trust it is no undue claim on their own part to plead for the freedom of commerce also, as the natural ally of agriculture and naval greatness. Nothing, however, can be more obvious than that many of the manufacturers and their friends are attempting, by fallacious statements, founded on an interested policy, or a misguided zeal, or very short-sighted views, to uproot some of the fundamental principles of our revenue policy, and to compel our merchants to abandon some of the most lucrative branches of commerce—branches which alone enable us to contend with success against the monopoly and the competition of foreign nations.

It is not a little remarkable, too, that these attempts, to which the memorialists allude, are not only repugnant to those maxims of free trade which the United States have hitherto so forcibly and perseveringly contended for as the sure foundation of national prosperity, but they are pressed upon us at a moment when the statesmen of the old world, in admiration of the success of our policy, are relaxing the rigor of their own systems, and yielding themselves to the rational doctrine, that national wealth is best promoted by a free interchange of commodities, upon principles of perfect reciprocity. May the memorialists be permitted to say, that it would be a strange anomaly in America to adopt a system which sound philosophy is exploding in Europe; to attempt a monopoly of the home market, and yet claim an entire freedom of commerce abroad; to stimulate our own manufactures to an unnatural growth, by the exclusion of foreign manufactures, and yet to expect that no retaliatory measures would be pursued by other nations? If we are unwilling to receive foreign manufactures, we cannot reasonably suppose that foreign nations will receive our raw materials; we may force other nations to seek an inferior market for their productions, but we cannot force them to become buyers when they are not sellers, or to consume our cottons when they cannot pay the price in their own fabrics. We may compel them to use the cotton of the West Indies, or of the Brazils, or of the East Indies, or the wheat of the Mediterranean—an experiment in itself sufficiently dangerous to some of our most vital interests; but we cannot expect them to carry on with us a ruinous trade, when the profit is all on one side. Nations, like individuals, will pursue their own interests, and sooner or later abandon a trade, however fixed may be its habits, where there is no reciprocity of benefit.

There is another consideration which the memorialists would respectfully suggest, that is entitled, in their opinion, to great weight on questions of this nature; and that is, the dangers and inconveniences which fluctuations in the commercial policy of a nation unavoidably produce. The trade of a nation is of gradual growth, and forms its channels by slow and almost imperceptible degrees. Time and confidence, and protection and experience, are necessary to give it a settled course. It insinuates itself into the general commerce of the world with difficulty, and, when incorporated into the mass, its ramifications are so numerous and intricate, that they cannot be suddenly withdrawn, without immense losses and injuries. Even the temporary stoppage of but a single branch of trade throws thousands out of employment, and, by pressing the mass of capital and shipping which it held engaged in its service into other branches, it is sure to produce embarrassment and depression, and not unfrequently ruin to the shipholders and the merchants. Besides all this, men are slow to engage their capital in new pursuits. They have a natural timidity in embarking in enterprises to which they are not accustomed; and if the commercial policy

of the nation is fluctuating, they feel so much insecurity in it that they are unwilling to yield themselves up even to prospects apparently inviting. No nation ever prospered in commerce until its own policy became settled, and the channels of its trade were worn deep and clear. It is to this state of things that the capitalist looks with confidence; because he may conclude that, if his profits are but small, they are subject to a reasonable certainty of calculation. Another state of things may suit the young and enterprising speculators; but it can never be safe for a nation to found its revenue upon a trade that is not uniform in its operations. The memorialists most sincerely believe that it is a sound political maxim, that the more free trade is, and the more widely it circulates, the more sure will be its prosperity and that of the nation. Every restriction, which is not indispensable for purposes of revenue, is a shoal which will impede its progress, and not unfrequently jeopard its security.

Having made these preliminary observations, which they cannot deem unworthy of the serious attention of the National Legislature, the memorialists now beg leave more particularly to call the attention of Congress to the measures which have been recently proposed, and apparently approved, for the purpose of prohibiting the introduction of foreign woollen and cotton goods, and, as auxiliary thereto, the abolition of drawbacks and credits upon the duties due upon goods imported into the United States; measures which, if adopted, will, in the opinion of the memorialists, bring a premature decay and a general distress upon the whole commercial and agricultural interests of the nation.

It has been suggested, both in and out of Congress, when measures have been heretofore proposed having a direct bearing upon commercial interests, that the silence of merchants ought justly to be considered as an acquiescence in the justice and policy of such measures. Truth compels the memorialists to say that the reverse has generally been the case. The merchants of our country have had a deep, and it is hoped not an ill-founded, confidence, in the firmness, the wisdom, and enlightened policy of Congress. They have not been prepared to suppose that old, and well-tried, and successful systems would be abandoned, merely because they were assailed by those whose interest or whose mistaken zeal led them to plan their overthrow. They have believed (nor is it an idle or vain credulity) that our statesmen, selected from the whole community, would watch with anxiety and diligence over the interests of all; and that they would distinguish the natural biasses of those whose judgments were blinded by a partial view of their own interests, from the just influences of superior political foresight, aided by the most comprehensive knowledge. On many occasions, therefore, in which their interests have been assailed, (and, as the memorialists think, injuriously assailed,) the merchants have been silent, not from indifference, but from confidence; not from a sense of propriety and justice, but from a proud belief that their interests were safe, when they were understood, and that the National Legislature could not be presumed to want knowledge or inclination to protect them. On the present occasion, however, so wide have been the exertions of the manufacturers, so plausible some of their statements, and so popular, though delusive, some of their doctrines, that the memorialists feel themselves called upon to resist them in the most serious manner, as injurious to the country, and to throw themselves upon the intelligence and firmness of the representatives of the nation to vindicate their rights.

The subjects of drawbacks and of credit upon duties are intimately connected in their general aspects, but, at the same time, admit of some distinct views, which may well entitle them to separate consideration. Both of them originated at the earliest period of our Government, and were incorporated into our first revenue laws. Both of them had the unequivocal approbation of our most enlightened statesmen of that day, and both of them have the sanction of nearly thirty years of experience in their favor. At no period of our political history, until the present, has any doubt been publicly breathed, at least to the knowledge of the memorialists, of their practical advantages; and during this whole period our commerce has been progressively increasing. Almost all commercial nations, too, have a system analogous to ours engrafted into their revenue regulations. In all, it is believed, a discrimination is made between goods imported for home consumption, and those designed for exportation; and the duties on the latter are very trifling, especially when compared with the duties usually paid on the former. In respect to credit for duties, the known equivalent is the deposite of the goods in entrepot, and the duties are only paid after a limited period, or upon an eventual sale in the domestic market. In Great Britain, to whose system of revenue ours bears the strongest resemblance, imported goods are warehoused under the joint direction and keys of the Government and the owner, and the duties are in general paid when they are disposed of in the market. This system of deposite is exceedingly expensive, and onerous, and complicated, and requires large stores in every commercial city, and numerous officers, and is attended with injurious delay. Its object is to give the benefit of credit to the merchant; and it has that effect, but it is at a heavy expense to the Government. In this country the same object is obtained, at a very small expense, in a much more simple way; and, where the officers of the customs act with prudence and vigilance, the risk of loss to the Government, from the non-payment of the bonds, given with sureties, for the duties, is small—very small, indeed—compared with the expense of the other system. In the district of Salem and Beverly, the whole amount remaining unpaid on bonds for goods imported, from the origin of the Government to the present time, deducting the debentures due and unpaid on the same goods, is but $1,562 46; yet that district alone has furnished many millions to the revenue of the United States.

The fact, however, that in all foreign commercial nations, a credit is allowed for duties upon goods imported, and a drawback is allowed directly or indirectly upon exportation, seems to justify, in an eminent degree, the opinion that the system is useful to the public, and salutary to commerce. And the experience of this country is entirely in its favor. It may, then, with some confidence, be asked, why should it be changed? Why should we leave fact for conjecture, and hazard new experiments in cases where the great objects of the Government have been already attained? Why should we involve the immense manufacturing, agricultural, and other interests, connected directly with commerce, in distress or ruin, for the purpose of speculating in new schemes, ill adapted to the state of our country, and whose success is yet to be ascertained? It appears to the memorialists that it is incumbent on those who would lead the nation into such schemes, to demonstrate their widsom and policy before they are adopted; and not, by arithmetical calculations, bottomed on visionary notions, to call upon the nation to reject the lights already furnished by its own experience.

But it may, perhaps, be inquired, what are the benefits derived to commerce from a credit upon duties? The memorialists are perfectly willing to state some of the leading benefits, public as well as private; for in this, as in almost all the like cases, public and private interests go hand in hand.

It will not be denied that the United States, even at the present time, does not, when compared with the great nations in Europe, abound in moneyed capital. This is in almost every nation a subject of slow accumulation, even under circumstances peculiarly favorable to its growth; but in a young nation the obstacles are generally great, from the character and various pursuits of the inhabitants, the extent of their wants, and the rivalry and superior advantages for its employment presented by flourishing nations. At the time when the United States adopted its system of credits and drawbacks on duties, its moneyed capital was very small; and the great policy of the Government was to give every facility for its full employment. It is obvious that the more capital is employed in commerce, the more extensive will be its reach, and the more revenue will be acquired by the Government. Whatever of capital, naturally flowing in this channel, is withdrawn from it and remains unemployed, is so much

lost to the commerce of the country. The duties upon the importation of goods are, on an average, at least twenty-five per cent. of the value of those goods, or of the capital employed. It follows that, if this is immediately withdrawn from the funds of the merchant, it is so much loss of his commercial capital. A little detail will render this apparent. Whenever a voyage is undertaken, the merchant invests as much capital as he thinks necessary for the purchase of the goods to be imported, and also as much more as will be necessary to meet all the disbursements and expenses of the voyage. All this is paid in advance. When the goods are imported, they are not immediately sold. The market may be depressed, or the goods be of slow consumption, or not be adapted to the wants of this country, or be ultimately destined for a foreign market. In these cases, (and these are common cases,) it is obvious that no immediate sale can be made without great sacrifices—sacrifices which are wholly inconsistent with any profitable commerce. Even when sales are effected, they are rarely made for cash. A credit is almost universally allowed to the purchaser, varying according to the nature of the commodity and the demand in the market, from four to eight, and even twelve months. Under such circumstances, if a cash payment is required for the duties, it is obvious that the merchant must either, in anticipation of this demand, gradually withdraw from his other business a portion of his capital equal to the duties; or he must divert an equal portion ready to be employed in another voyage; or he must procure money upon credit from other sources, loaded with the payment of interest; or he must consent to make enormous sacrifices, by an immediate forced sale. If he be a prudent, cautious merchant, this very circumstance will operate to prevent him from employing his whole capital in commerce, lest he should be compelled to make ruinous sacrifices, or, by a mere temporary depression of the market, be exposed to the most painful embarrassments. It is with the express view of preventing this palsy upon commercial operations, that a credit upon duties has been allowed by the wise and great men who have hitherto governed our country; and this credit is carefully adjusted to the different portions of our trade, so as to form a credit equal, in a general view, to the time consumed and credit allowed before the merchant receives his money upon the sales of the goods upon which the specific duties have accrued.

In confirmation of this general statement, the memorialists would respectfully call the attention of Congress to the East India trade—a trade in which Salem has been long, and deeply, and successfully engaged; a trade, too, which, however decried by the misguided zeal of some, and the interested suggestions of others, has largely contributed to the revenue of the United States, and yields not in importance to any other branch of commerce. Voyages to the East Indies are undertaken at very heavy expense, and with proportionably large capitals. The goods that are brought home consist of articles either of such high prices, such slow consumption, or of such bulk and quantity, as require a considerable length of time before they can be sold at a reasonable profit, and the money actually realized upon the sale. The home market, too, for many of these goods, is so limited, that, ultimately, a re-exportation to Europe becomes indispensable; and, after a second voyage, thus undertaken, the proceeds find their way, by a circuitous remittance, to England; and then again, before the merchant can realize his funds, he must have notice of the remittance, and be able to sell his exchange at a reasonable rate in the market. It is not uncommon for cargoes designed for home consumption to remain on hand for six months, and sometimes a twelve-month; and when sales are effected, the usual credit is from four to eight and twelve months. So that, even with the credit for duties allowed in this trade, it usually happens that the first and second instalments become due before the proceeds of the sales have been realized, and, not unfrequently, before the cargoes have been finally disposed of. Yet the duties on these voyages are exceedingly heavy, amounting, in some cases, to $100,000; a sum which even our wealthiest merchants could not readily advance, and which would materially check even their commercial expeditions. It is not too much to declare that, in all probability, an abolition of the credit of duties would immediately occasion a diminution of the East India trade one-quarter part, and, of course, occasion a proportionate diminution of our revenue, and of employment to those whose bread is as hardly earned, and whose lives are as dear, and whose welfare is as important to the country, as those of the manufacturers, who seek to found their own fortunes upon the ruins of this commerce.

Some of the ill effects which would result from the abolition of this credit will be obvious to the most careless observer. There is no pretence to say that there is a superabundance of moneyed capital in our country. The universal opinion proclaims, in a manner too audible and too distinct to be misunderstood, that much of the public distress arises from a deficiency of capital. The first effect, therefore, of the abolition of this credit, would be a diminution of active capital engaged in trade, and yielding a profit. It would be hoarded up to meet the anticipated demands of the Government for accruing duties. The revenue would, as has been already intimated, immediately suffer. But other evils, of a still graver cast, would ensue. Men of small capitals could no longer engage in trade, and least of all in a trade where the voyages were long and the returns slow. Capitalists, and they alone, could successfully carry on the great branches of commerce; and in their hands it would become a monopoly, which they might wield and manage at their own pleasure. The young and enterprising merchants would be crushed in their attempts at competition, and would be compelled to navigate only in those narrow channels where trade almost stagnates, or yields a scanty subsistence. Another necessary result would be the enhancement of the prices of all foreign articles of domestic consumption. The merchant would charge an interest and profit upon every advance made to the Government in the shape of duties; and thus the consumer, upon whom all such charges ultimately fall, would pay these additional charges, together with the enhanced price, which a smaller importation, with an equal demand, would necessarily produce. These are evils of no ordinary magnitude; and it is confidently believed that no wise Legislature would introduce them upon mere speculations, thus taxing the whole for the conjectural benefit of the few.

In respect to *drawbacks*, some additional considerations seem necessary to be stated, inasmuch as the subject has been greatly misunderstood by some of those who advocate their abolition. The drawback of duties is allowed upon importations of goods into the country, which are re-exported within a year from the time of their entry. The object of the system is to increase the navigation and commerce of the country, by securing to our citizens a carrying trade, between distant and foreign nations, in commodities which are either unsuitable to our market, or of which a great surplus is imported. In every such case, the Government derives a direct revenue of two and one-half per cent. on the duties of the re-exported goods; this amount being always retained. This is a positive benefit to the Government. It is obvious that, if no drawback were allowed upon such re-exportation, no surplus beyond the consumption would ever be imported; for, upon such re-exportation, the goods would be loaded with the whole duty, and the merchant could not afford to sell them so cheap in the foreign market, by the full amount of that duty, which would much exceed the whole profit reasonably to be expected upon the goods. Under such circumstances, the shipping and capital of foreign merchants would be exclusively engaged in the carrying trade, and all the benefits of an increased employment for our seamen, our shipwrights, and our ships, including freight and profits, would be entirely lost. This is stated upon the supposition that such a trade could not be carried on, except circuitously, and after an actual importation into the United States; and this is regularly true in respect to the whole trade with the British East Indies, with which we are not permitted to carry on any trade direct to Europe, but are compelled, by treaty, first to land the goods in the United States.

In respect to the other portions of the carrying trade, the abolition of drawbacks would immediately lead to a direct trade between foreign ports, whenever foreign nations would permit our merchants to engage in it. This would compel them to equip, repair, and man their ships in Europe, and thus to give all their disbursements in this great trade to foreigners. No goods would be imported into the United States either from Europe or India, which were not indispensable for our consumption; and this diminished supply of the home market would increase speculation, and tend to produce, in a very great degree, alternating fluctuations from a depressed to a high market. Commercial adventures would be thereby rendered more hazardous and precarious, since the foreign market would be ordinarily cut off after an importation into the United States; and if, at any moment, the foreign market should happen to be so high as to justify an exportation, an artificial scarcity, far beyond what now can ever arise, would immediately ensue in the United States. The abolition of drawbacks would, in this view, operate as a direct tax upon the consumers in this country. It would diminish the productive revenue, and give a foreign character to our seamen and commerce, instead of concentrating both as their home in the bosom of the country. Nor should it be forgotten how highly important the carrying trade has hitherto been, and how much it has increased our moneyed capital. During the years 1802, 1803, and 1804, the drawbacks allowed, on an average of these years, considerably exceeded a quarter part of the duties secured to the Government; in the succeeding years, 1805, 1806, and 1807, they constituted more than a third of the whole duties. So that, on an average of these six years, the last three of which were the most prosperous years of our commerce, the carrying trade constituted nearly one-third of our whole foreign commerce. And although this carrying trade be now, from the general state of the world, somewhat diminished, yet it still remains one of the most lucrative branches of our commerce, and yields a steady revenue to the Government. Under this aspect of the subject, the memorialists would respectfully inquire whether the abolition of drawbacks would not be disastrous to the most important interests of our country, and dry up some of the best sources of our national glory as well as national wealth? Let it be considered, also, that the policy of all commercial nations has uniformly dictated the same course; and that drawbacks, or their equivalent, are uniformly held out as an encouragement to importations, and thus the supply is always kept considerably above the domestic consumption, and enterprise and industry are protected and rewarded. Will America be the first to abandon a policy by which she has so greatly profited? At the very moment when her commerce is gasping for life from the accumulated competitions of foreign nations, zealous for their own interests, will she aid the blows aimed at its existence, and consign it to a premature destruction?

The next subject to which the memorialists would respectfully ask the attention of Congress is a measure very pertinaciously and zealously advocated by manufacturers and their friends—they mean the entire prohibition, either directly, or by duties equivalent to a prohibition, of the importation of cotton and woollen goods. That the tariff of duties now existing is singularly favorable to manufactures, the memorialists had supposed would have been freely admitted. Whatever articles are useful for domestic manufactures pay but a trivial duty; whatever articles can be wrought here are loaded with a heavy duty, varying from fifteen to thirty per cent. ad valorem. The duty upon East India cottons is indeed enormous, and practically amounts to a total prohibition. The coarser fabrics of cotton in the British East Indies cost about six cents a square yard, and were formerly imported in large quantities into the United States, and supplied the poorer classes of citizens with necessary though humble clothing. The tariff directs all such cottons to be estimated at the cost of twenty-five cents per square yard, and levies upon them, therefore, a duty of one hundred per cent., or a sum equal to their original cost. During the years 1802, 1803, and 1804, the average imports from the British East Indies were about three millions and a half of dollars; of which a little short of three millions were goods paying ad valorem duties, being principally white cotton goods. In 1807, the goods paying ad valorem duties, imported from the same places, had increased to upwards of four millions of dollars. In the same year, fifteen ships were employed in this trade from the town of Salem alone. In the past year, two only have been so employed; and for the four years last past, no cotton piece goods have been imported into this town for home consumption; the duty alone amounting to a prohibition. The sacrifice of this branch of our trade alone has very seriously affected the whole mercantile community engaged in East India commerce, and has no where been more sensibly or injuriously felt than in Salem. It has operated, too, as an excessive tax upon the poorer classes of the community, who have been compelled to buy domestic fabrics to supply their wants, at higher prices, which their narrow means could ill afford. It has also annually struck off from the revenue of the Government the whole duty upon seven-eighths of the importations of East India cottons; that proportion having been absorbed by the domestic consumption. The loss to our ship owners, and seamen, and commercial artisans, has been proportionably great. And the memorialists cannot refrain from expressing their decided convictions, that this sacrifice was not called for by the public interests, but was a liberal indulgence granted for the exclusive benefit of the manufacturers, and pressed upon the nation by their importunate solicitations. However painful this measure was, it was borne in silence, under the hope that experience would one day establish the propriety of its repeal, and that the zeal of the manufacturers would be satisfied with the destruction of one branch of commerce, and the heavy duties imposed upon all others.

These expectations, however, have not been realized; and the memorialists now learn, with regret, that one sacrifice is to be demanded after another, and one prohibition heaped upon another, by the friends of manufactures, until all the sources of foreign commerce are dried up, and domestic manufactures sustained, by enormous bounties, absorb the whole moneyed capital of the nation. The memorialists would most respectfully, but most solemnly, protest against the policy and the justice of such measures.

And what are the claims, the memorialists beg leave respectfully to ask, of any one class of our citizens, to throw such enormous burdens upon the other classes of the community? Is the agricultural interest nothing? Is the commercial interest nothing? Are the interest of the public and its revenues nothing? The cotton and woollen trade is already loaded with twenty and twenty-five per cent. duties; and if there be added the freight and charges upon importation, the domestic manufactures have now an encouragement of the profit of from thirty to thirty-five per cent. more than the European manufacturers possess, if the same articles can be manufactured as cheap at home as abroad. In respect to the East India cotton trade, the encouragement is still more striking; the duties upon the coarsest fabrics in that trade amounting, as has been already seen, to one hundred per cent. upon the original cost. And if cotton and woollen goods cannot be manufactured here and sold as cheap, with all these differences of duty in their favor, does it not establish the conclusion that such manufactures are not the natural growth of our present situation, and are not adapted to the physical, and moral, and happy condition of the people? Why should the farmer, and the planter, and the merchant, and the mechanics, and the laboring classes of the community, be taxed for the necessaries of life a sum equal to more than one-quarter part of their whole expenditures on these objects, that the manufacturers may put this sum into their own pockets?

The memorialists are no enemies to manufactures; but they most sincerely express it as their deliberate judgment that no manufactures ought to be patronized in the country which will not grow up and support themselves in every competition in the market, under the ordinary protecting duty; that the only manufactures which can ultimately flourish here are those which are of slow growth and moderate profit, such as can be carried on by capitalists with economy and steadiness; and that a change of system, which should suddenly introduce great profits, by

encouraging undue speculation, and the expectation of inordinate gain, would end in the deepest injuries even to manufacturing establishments. The history of the cotton manufactories in New England completely demonstrates the truth of these positions. They grew up gradually, under the protection of our ordinary duties, in a time of peace, and were profitable to those engaged in them. But when the embargo and non-importation systems produced a deficiency in the foreign supply, a feverish excitement was produced; manufactories were established without sufficient capital; extravagant expenditures in buildings and machinery followed; for a while the demand was great, and the profits high; but, upon the return of the ordinary state of things, many of these establishments sunk, one after another, and involved their owners in ruin. And such, in the opinion of the memorialists, would be the scene acted over again in a few years, if the manufacturers could now succeed in accomplishing their present objects. For a short time their establishments would flourish; but in a free country like ours, there would be a re-action of the other great interests of the community, and the national distress and national policy would soon require a repeal of the monopolizing system. A moderate protecting duty is the best support of domestic manufactures, for the very reason that it may be safely calculated on as permanent. It may not encourage speculation, but it will encourage the employment of capital, as fast as safety and a reasonable profit are connected with it.

Nor will the high prices and eventual insecurity to domestic manufactures be the only evils attendant upon this prohibitory system. It will encourage smuggling and frauds to an extent truly formidable, and never yet practised in our country; and the same effect will arise, though in a more limited degree, from the abolition of drawbacks and credit on duties. The utter impossibility of suppressing frauds and smuggling, where the markets are very high, and the prohibitions very extensive, has been demonstrated by the experience of all Europe. During the most rigorous enforcement of the continental exclusion of British manufactures, aided by civil vigilance, and military bayonets, and despotic power, these manufactures found their way into every part of Europe, from the cottage to the throne. Great Britain herself, insulated as she is, and with a naval force adequate to every object, has not been able to suppress smuggling. Prohibited goods find their way into the United Kingdom, notwithstanding the vigilance of her custom-houses, and the unwearied jealousy of her manufacturers. In the United States, with a thousand miles of seacoast, indented with innumerable bays and harbors, how can it be reasonably expected that the temptations to illicit traffic will not soon outweigh the habits of obedience to the laws, especially when those laws shall become odious, as the supposed instruments of one class to oppress another? Hitherto, our country has exhibited a spectacle not unworthy of a free people. Frauds upon the revenue have been comparatively few; and smuggling has been repressed by the general sense of the mercantile community. What system could be more disastrous than that which should hold out permanent temptations to smuggling, connected with a sense of the impolicy and injustice of the laws? The memorialists believe that one of the first objects of legislation is to become auxiliary to the preservation of the morals of the people, by interfering as little as possible with pursuits consonant with their habits and feelings, lawful in their objects, and adapted to their wants.

Upon the whole, the memorialists would respectfully state their unequivocal opinion, that all the measures to which they have alluded are calculated to impair our naval strength and glory; to injure our most profitable commerce; to diminish, in an alarming degree, the public revenue; to promote unjustifiable speculation; to enhance the prices of manufactures; to throw the great business and trade of the nation into the hands of a few capitalists, to the exclusion of the industrious and enterprising of other classes; to introduce general distress among commercial artisans and agriculturists; to aggravate the present distress of the other classes of the community; to provoke and extend an undue appetite for fraud and smuggling; and, in fine, to destroy many of the great objects for which the constitution of the United States was originally framed and adopted.

The memorialists, therefore, most respectfully ask the interposition of Congress to prevent these great evils, and to promote the general good, by a perseverance in that system under the protection of which our commerce, and navigation, and agriculture have flourished: a system, conceived in political wisdom, justified by experience, and approved by the soundest maxims of national ecomomy.

SALEM, *January*, 1820.

16th CONGRESS.] **No. 574.** [1st SESSION.

PROHIBITION OF FOREIGN COTTON AND WOOLLEN FABRICS, AND IRON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 1, 1820.

SIR: TREASURY DEPARTMENT, *January* 27, 1820.

In obedience to a resolution of the House of Representatives of the 4th instant, directing the Secretary of the Treasury "to inform the House what reduction, in his opinion, it will make in the revenue, if the importation of cotton and woollen manufactures, and iron, be prohibited; and in what manner the deficit in the revenue may be supplied, should the prohibition be made;" I have the honor to submit statements of the amount of revenue which accrued from those articles from the year 1815 to 1818, inclusive.

The very great difference in the amount of revenue which accrued during those years renders it difficult to determine what the reduction would be, should the prohibition be enforced. It is probable that the deficiency, for a number of successive years, would amount to the average sum of six millions of dollars.

If an increase of the rate of duty would necessarily augment the revenue in the same proportion, the deficiency might be readily supplied. But reason and experience forbid the expectation of such a result. The importation of foreign merchandise is regulated by the capacity of the importing country to pay an equivalent for them. Any increase of duty diminishes this capacity. When carried to an extreme, it amounts to prohibition. But the revenue will frequently be diminished by an increase of duty, when the consumption of the article is not diminished. Whenever the duty is raised so high as to equal the risk incurred by an attempt to introduce dutiable articles illicitly, smuggling, upon an extensive and systematic plan, commences. In that case, not only their consumption, but the capacity to pay for them, may be increased, whilst the revenue may be diminished.

Considering the facilities which the extent of our coasts and frontiers, and the numerous harbors, bays, inlets, and rivers, by which they are indented, furnish for the illicit introduction of foreign merchandise, the settled policy of the Government has been to diminish, as far as practicable, the temptation which high duties would furnish to take advantage of these facilities. Should the existing duties be considerably raised, there is just ground to apprehend that the revenue will be reduced rather than augmented by the change. Indeed, there is just reason to believe that, with the present rate of duty, the practice of smuggling is gradually increasing. Any attempt to raise the deficiency which will be produced by the prohibition under consideration, by an increase of duty upon the articles which will still be imported, will greatly increase the expense of collection, by the necessity which it would create to employ a greater number of officers of the customs, to guard against smuggling, and eventually fail to augment the revenue to the required extent. The principal reliance for supplying the deficiency which would be produced by the adoption of the measure contemplated by the resolution, must, it appears to me, be placed in a system of internal duties, or direct tax.

In aid of either of these modes of augmenting the revenue, a small addition might be made upon the rate of duty now paid upon linens, manufactures of hemp, stuff goods, coffee, brown sugar, teas, wines, molasses, spices, and other small articles. If a system of internal duties should be deemed at this time advisable, an entire prohibition of ardent spirits might be adopted without material injury to the revenue, and with manifest advantage to the agricultural interest. In that event, the revenue which has been heretofore received from the duties imposed upon foreign spirits might be collected from domestic spirits.

I have the honor to be your most obedient servant,

WM. H. CRAWFORD.

Hon. SPEAKER *of the House of Representatives.*

A statement of the duties arising on imported merchandise paying an ad valorem duty of twenty-five per cent. to 30th June, 1819, *of which woollens and cottons form almost the exclusive articles, for the years* 1815, 1816, 1817, *and* 1818, *with the amount of drawback annually paid on re-exportation.*

Years.	Amount of duties.	Amount of drawback.	Total amount.
1815, - - - - -	$17,813,277 00	$189,768 00	$17,623,509 00
1816, - - - - -	11,013,142 00	981,791 00	10,031,351 00
1817, - - - - -	4,967,503 00	644,653 00	4,322,850 00
1818, - - - - -	6,753,008 00	534,307 00	6,218,701 00

NOTE.—The Treasury records do not afford any means of ascertaining the amount of duties, so as to distinguish woollens from the various descriptions of cottons, whether from India or Europe; nor of cotton yarns from cotton piece goods.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *January* 6, 1820.

JOSEPH NOURSE, *Register.*

A statement of the duties arising, in the years 1815, 1816, 1817, *and* 1818, *on the importation of articles of iron manufacture paying a specific duty, with the amount of drawback annually paid on their re-exportation.*

JOSEPH NOURSE, *Register.*

16th Congress.] No. 575. [1st Session.

BANKS AND THE CIRCULATING MEDIUM IN DISTRICT OF COLUMBIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 2, 1820.

Mr. Kent made the following report:

The Committee of the District of Columbia, to whom were referred sundry petitions with respect to the banks of the District, and a resolution directing an inquiry into the expediency of prohibiting the circulation within the same of notes of a denomination under five dollars, have, according to order, had the same under consideration, and, after much deliberation and reflection, prepared a bill in relation thereto, which accompanies this report:

In the prosecution of the various inquiries to which the attention of the committee was directed, they were impressed with the belief that most serious injury would result to the District from an effort, at this time, suddenly to call in a considerable part of the debt due to the several banks. While the price of the staple commodity of the Potomac market is unusually depressed, such a measure would expose to sale, at a great sacrifice, much of the real property of the District, would totally prostrate its remaining commerce, and prove alike injurious to all classes of its citizens. It is needless to say that such a calamity would be sensibly felt by the adjacent country.

While the committee have been strongly impressed with the belief that the multiplication of banks within the District has been pushed to an extent injurious both to the lender and the borrower, they could find no safe remedy for this imprudence in a sudden prostration of the existing banks, nor in a forced consolidation of them into a smaller number.

The evil of excessive banking has its consequential or natural corrective in the reduced profits of the stockholder, and the frequent embarrassments of his debtor.

This remedy your committee found already in operation. The Franklin Bank has asked for time only to wind up its affairs. Several other banks, it is believed, like the Union Bank of Alexandria, will not avail themselves of the small extension afforded to their charters by this bill, except with a view either to follow the example of the Franklin Bank, or to embrace the opportunity presented to them by this bill, of uniting their funds, and saving the annual expense of a double or triple set of officers, and a like waste of fixed capital.

The committee would have endeavored to prescribe the principles of the associations expected to arise from the disposition manifested by the banks to reduce their number by consolidation; but they thought it better to leave those compromises, in which considerable difficulties are to be encountered and removed, to be settled by an intimate knowledge of the actual circumstances of the different banks. More harmony will be thereby assured to the society of the District, so likely to be agitated by questions vitally important to its prosperity.

To coerce a consolidation of the banks, it was believed, would prove not less injurious to their interest, and to that of the community around them, than to deny to them an opportunity of effecting such a consolidation in a mode adapted to both.

In preferring two banks to a single one, in each of the towns of the District, the committee have accommodated the number to the wishes of a great majority of their inhabitants, and have reserved the restraint of competition upon institutions, which, partaking of the character of powerful monopolies, might, without this salutary corrective, degenerate into cabals for private and sinister purposes.

The District of Columbia, although possessing very narrow dimensions, is marked by strong moral as well as physical divisions; and, in all legislation for its local concerns, its towns, if their wishes are at all consulted, must be regarded as distinct and separate communities. Any other course of legislation, instead of effacing, would render those divisions more prominent and injurious.

The committee have equally consulted the interest of the country, whose circulating medium is derived in part, at least, from the District, and whose chief market is there found. It would be an unmerited reproach upon the District banks to charge them with an excessive circulation. With an actual capital of $5,500,000, and a debt due to them of $6,845,000, they have a circulation of but $840,000, which is less than one moiety of their circulation at the close of the year 1818, but little more than one-third of that of the year next preceding, and about a moiety of the average annual circulation of the last ten years. Yet the accompanying bill is believed to furnish additional securities to the country against excessive bank issues.

The circulation of notes by corporations, instituted for purposes wholly distinct from banking, is an evasion of a former act of Congress, for which the bill, conforming to the provisions of that act, provides a similar remedy.

To preserve some specie in circulation for purposes to which it can be more conveniently applied than paper, and with less danger of actual loss to society; to invite and retain a larger supply at home, against the arrival of unforeseen emergencies, are among the motives which have dictated the provisions for the exclusion of small notes from circulation. A part only of the District banks have now the power to issue them. None of those in the neighboring State of Virginia are allowed to do so; and Maryland cannot be expected to follow this prudent example, while Congress authorizes the emission of such notes in the District of Columbia.

The premium charged for the charters of the consolidated banks is less than a moiety of the annual revenue which their consolidation will save them. Applied, as the bill proposes, to the education of the children of the indigent, it will more widely diffuse the blessing of instruction around the seat of the National Government, and illustrate a policy which, if the people of America did not begin, they have the glory to have prosecuted to a greater extent than any other nation.

16th Congress.] No. 576. [1st Session.

BALANCES IN THE TREASURY AND IN THE HANDS OF THE TREASURER ON JANUARY 1, 1820, AND THE AMOUNT OF PUBLIC DEBT REDEEMABLE IN THE YEARS 1820, 1821, 1822, 1823, AND 1824.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 3, 1820.

SIR: TREASURY DEPARTMENT, *January* 24, 1820.

In obedience to sundry resolutions of the House of Representatives of the 17th instant, directing the Secretary of the Treasury to report, first, the actual balance in the Treasury, and in the hands of the Treasurer, as agent of the Navy and War Departments, and the amount of any subject to the control of the Commissioners of the Sinking Fund, on the 1st day of January, 1820; second, the principles upon which the receipts into the Treasury from the sales of public lands for the year 1820 have been estimated; and, third, what amount of the public debt will be redeemable, according to the terms of the contract, in the years 1820, 1821, 1822, 1823, and 1824; and what amount would be left of the sinking fund in each year respectively after payment of the interest of the public debt, and the portion of the principal which may be redeemable within the year; I have the honor to submit two statements, marked A and B.

If the payments for public lands are made when they fall due, the greatest accuracy might be attained in estimating the receipts into the Treasury from the sales previously made. So far as the receipts would be affected by sales made during the year embraced by the estimate, it would necessarily be conjectural. But, as the purchasers are subject to no penalty for delay of payment until the expiration of five years from the date of the sale, except the payment of interest, a general want of punctuality every where prevails. The sums which ought to be paid at the end of the second, third, and fourth years, are more generally paid in the fifth year.

If the indulgence which, since the year 1809, has been uniformly extended to the purchasers of the public land, had not grown into a system, it would be practicable to determine with sufficient accuracy the amount of the receipts into the Treasury during any year, so far as they depended upon sales previously made, after the principal land offices had been opened for five years. The debt contracted by the purchase of lands in any given year would not materially differ from the sum which would be receivable during the fifth year after it was contracted. But the frequent and general indulgence which has been extended to the purchasers of the public land has rendered the application of this rule for estimating the receipts into the Treasury from that source of the revenue entirely nugatory. The payment of interest is, in fact, under this system of indulgence, the principal inducement to the punctual discharge of the instalments as they become due, or at any later period. As the use of money is generally worth more than legal interest, where the payments are made, the want of punctuality will probably become more general. In estimating the probable receipts into the Treasury during the year 1820, more reliance has been placed upon the quantity of land which will within the year be offered at public sale, than upon the sums which may be payable during that period on account of sales previously made.

I have the honor to be, with great respect, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

A.

Statement of the actual balance in the Treasury, and in the hands of the Treasurer, as agent of the War and Navy Departments, and the balance in the Treasury subject to the control of the Commissioners of the Sinking Fund, on the 1st day of January, 1820.

Balance in the Treasury, - - - - - - - - -	(*a*) $2,536,823 28
In the hands of the Treasurer, as agent of the War Department, - - -	995,945 13
In his hands, as agent of the Navy Department, - - - - -	372,913 70
Balance in the Treasury, subject to the control of the Commissioners of the Sinking Fund,	(*b*) 2,378,398 42

(*a*) This sum will probably be increased when the returns from all the receivers of public money, and of the banks in which they make their deposites, are received for the month of December. At the date of their last returns there were in their hands $334,560 53, which sum would be augmented by the payments made during that month.

(*b*) Of this sum $1,646,117 42 are applicable to the payment of that amount of Louisiana stock, still outstanding, which was redeemable on the 21st October, 1819.

B.

Statement of the amount of the public debt redeemable in 1820, 1821, 1822, 1823, *and* 1824; *exhibiting, also, the interest payable in, and the balance of the annual appropriation of* $10,000,000, *which will remain unapplied at the close of each year.*

Balance of appropriation for 1819 unapplied in that year,		$2,378,398 42	
Appropriation for 1820,		10,000,000 00	
		12,378,398 42	
Principal redeemable in 1820:			
Claims on account of the instalments of Louisiana stock payable in 1818 and 1819, unapplied for on the 31st December, 1819,	$1,646,117 42		
Residue of Louisiana stock,	2,216,462 77		
Six per cent. stock of 1796,	80,000 00		
Reimbursement of deferred stock,	503,196 94		
Total principal,	4,445,777 13		
Interest payable in 1820,	4,911,843 00		
		9,357,620 13	
Balance of appropriation which will be unapplied on the 31st December, 1820,			$3,020,778 29
Appropriation for 1821,		10,000,000 00	
Principal redeemable in 1821:			
Reimbursement of the deferred stock,	534,033 08		
Interest payable in 1821,	4,773,737 68		
		5,307,770 76	
Balance of appropriation which will be unapplied on the 31st December, 1821,			4,692,229 24
Appropriation for 1822,		10,000,000 00	
Principal redeemable in 1822:			
Reimbursement of the deferred stock,	566,588 75		
Interest payable in 1822,	4,741,182 01		
		5,307,770 76	
Balance of appropriation which will be unapplied on the 31st December, 1822,			4,692,229 24
Appropriation for 1823,		10,000,000 00	
Principal redeemable in 1823:			
Reimbursement of deferred stock,	602,836 47		
Interest payable in 1823,	4,704,934 29		
		5,307,770 76	
Balance of appropriation which will be unapplied on the 31st December, 1823,			4,692,229 24
Appropriation for 1824,		10,000,000 00	
Principal redeemable in 1824:			
Reimbursement of deferred stock,	356,858 93		
Interest payable in 1824,	4,666,267 31		
		5,023,126 24	
Balance of appropriation which will be unapplied on the 31st December, 1824,			4,976,873 76
Total amount of the annual appropriations of $10,000,000 for the years 1820 to 1824, inclusive, which will, according to the terms of the contracts in relation to the redemption of the public debt, remain unapplied on the 31st December, 1824,			$22,074,339 77

TREASURY DEPARTMENT, REGISTER'S OFFICE, *January* 22, 1820.

JOSEPH NOURSE, *Register.*

16th CONGRESS.] No. 577. [1st SESSION.

REMISSION OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 3, 1820.

Mr. SMITH, of Maryland, from the Committee of Ways and Means, to whom was referred the memorial of John Wilmot and others, reported:

That it appears, from the papers submitted, that the schooner Collector, Captain Snow, on her return from St. Domingo, was seized by John Randal, (collector of Annapolis,) on the 26th day of December, 1806, laden with coffee and logwood, the property of John Wilmot and others; that the said schooner and cargo were libelled and condemned in the district court for the district of Maryland, and, on the 5th day of March, 1807, the said schooner and cargo were, with the consent of the owners, ordered by the judge to be sold by the marshal, and the proceeds brought into court, "subject to the future orders of the court," to wit: the schooner on a credit of sixty days, and the coffee for cash. It appears, by the deposition of Thomas Butler, (the marshal,) dated March, 1810, that he took possession of the said schooner at Annapolis, and caused her to be removed, with the cargo, to Baltimore; that, on her arrival, he, the said marshal, entered the said vessel and cargo with the deputy collector, in the usual manner, and subject to the payment of the legal duties; and executed bonds, with two sureties, agreeably to law, for the

amount of the duties; that, when he presented the bonds to the collector, he, the said collector, refused to receive them, on the ground that the coffee, &c. were now the property of the United States, and were, of course, *subject to no duty.* The marshal further attests that the collector ordered that the coffee should be sold at the short price; that is, that the purchaser should be informed that he would have no claims to drawback, in case he should export the same; that, before he, the said marshal, made the sales, he consulted the district attorney, who confirmed the decision of the collector; that, in pursuance of these orders, he did sell the coffee (the cargo of the said schooner Collector,) for cash, at the short price, free of drawback on exportation, to wit:

19,161 pounds at 20¾ cents,
33,588 pounds at 20½ cents.

It also appears, from the deposition of Joshua Dorsey, auctioneer, that he acted as clerk to the said marshal at the sales of the Collector's cargo; that it was sold for cash, and declared by the said marshal "*not entitled to drawback;*" and, further, that St. Domingo coffee is not generally used for the consumption of the country, but is purchased for exportation, and, consequently, if the privilege of drawback be taken away, the sales will be materially affected. He also declares that St. Domingo coffee, with the privilege of drawback, sold in the months of February and March, 1807, at from twenty-five to twenty-seven cents per pound; the difference between that price and the sales of the Collector's cargo being the duty payable at that time on coffee, to wit, five cents per pound, or thereabout.

It also appears that, on an appeal to the Supreme Court of the United States, the said cargo of the schooner Collector was ordered to be restored to the claimants, *subject to the payment of the usual duties;* and by the testimony of the marshal, it appears that he did deduct from the proceeds of the sales the amount of duties to which such a quantity of coffee was liable, amounting to $2,568. It further appears, by the testimony of the said marshal, as well as by the records of the court, that the cargo of the schooner Gottenburg, which had been sold in the same manner as that of the schooner Collector, and during the same year, (1807,) was ordered to be restored to the claimants without their paying duty. The point being made in that case, the Supreme Court, February term, 1810, declare: "Upon the question in this case, referred to the court, from the circuit court of Maryland, upon the prayer of the claimant in the said circuit court, 'to order the sum retained, pursuant to the mandate in the case, to be paid to him, on the ground that, as the United States were not bound to pay drawbacks on the said coffee, and the owner or claimant was, by the circumstance aforesaid, prevented from receiving them, nothing ought to be paid to or retained by the United States, on account of duties thereon;' upon which question the opinions of the judges of the said circuit court were opposed. It is the opinion of this court that, under the circumstances in this case, the United States *are not entitled to the duties* on the coffee, in the said proceedings mentioned, and that the sum retained, pursuant to the mandate in this case, should be paid to the owner or claimant of the said coffee. All which is ordered to be certified to the said circuit court of the United States for the district of Maryland."

The petitioner states that the Supreme Court were not apprized, at the time of their decree, (in the case of the schooner Collector,) that her cargo had been sold at the short price, and as exempt from duty; but, being afterwards informed thereof, the court decided that the United States were not entitled to duty on the said cargo; but, inasmuch as the same had been paid over, beyond the reach of the court, into the Treasury of the United States, recommended him to apply to Congress, as the only power capable of affording him a redress that the said court (when in its power) had afforded to others similarly situated.

The committee further report that the said schooner Collector entered one of the ports of St. Domingo, contrary to the act of 28th February, 1806, entitled "An act to suspend the commercial intercourse between the United States and certain parts of the island of St. Domingo," and was seized by the collector of Annapolis whilst the said act was in force, to wit, on the 26th December, 1806; but that the decision of the court condemning the vessel and cargo did not take place until after the law had expired, and was, in consequence of that circumstance, reversed by the Supreme Court of the United States. The committee submit the following resolution, to wit:

Resolved, That the prayer of the petitioner be not granted.

16th CONGRESS.] No. 578. [1st SESSION.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 5, 1820.

WASHINGTON, *February* 5, 1820.

The Commissioners of the Sinking Fund respectfully report to Congress:

That the measures which have been authorized by the board, subsequent to the last report of the 5th of February, 1819, so far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the 4th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as a part of this report.

JOHN GAILLARD, *President of the Senate pro tem.*
JOHN QUINCY ADAMS, *Secretary of State.*
WM. H. CRAWFORD, *Secretary of the Treasury.*
WM. WIRT, *Attorney General.*

The Hon. PRESIDENT OF THE SENATE.

The SECRETARY OF THE TREASURY respectfully reports to the Commissioners of the Sinking Fund:

That the sums disbursed from the Treasury, during the year 1818, on account of the principal and interest of the public debt, as per last annual report, was $21,596,783 68
From which deduct amount of repayments in that year, - - - 300,477 64
$21,296,306 04

Which, with a sum arising from damages and interest on protested bills of exchange, being the difference between the cost of said bills at par and the amount received into the Treasury in repayment thereof, - - - - - - - -		(a) 33,752 06
Together with a further sum, being the difference between the principal of stock purchased during the year 1818, and the money paid for the same, - - - - -		4,708 14
Amounting, together, to - - -		$21,334,766 24

Have been accounted for in the following manner, viz:

The sums actually applied during the year 1818, to the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as appears by the annexed statement A, to the sum of		$20,770,003 72	
In the reimbursement of the principal of the old 6 per cent. and deferred stocks, -		1,191,933 51	
In the redemption of the domestic debt, - - - -		277,493 87	
In the redemption of the Louisiana stock, - - - -		4,856,700 00	
In the payment of the principal of Treasury notes, - - -		8,426,769 00	
In the payment of certain parts of the domestic debt, - - -		792 36	
		14,753,688 74	
On account of the interest, - - -	$6,011,388 67		
On account of charges, - - - -	4,926 31		
		6,016,314 98	
		20,770,003 72	
But of this sum there was short provided, consisting of unclaimed dividends on the public debt, not applied for by the proprietors, as per the annexed statement B, - - - - - - -		128,427 69	
			20,641,576 03
The funds in the banks, out of which a part of the interest which accrued on the funded debt for the year 1817 was paid, and which appeared to be short provided, per statement B of last year, was covered by warrants in 1818, - - - - -			693,058 45
And there was a loss on exchange in remittances from America to Europe during the year 1818, as appears by statements D and Dd, annexed to the last report, - - -			131 76
			$21,334,766 24

(a) Payment by Minturn & Champlin, per statement E of last year, - - - - -	$20,506 46		
Cost of bill for £4,000 sterling, - -	17,777 78		
		$2,728 68	
Payment by A. Brown and Brown & Hackman, per statement E of last year, - - -	$44,380 38		
Balance due by them for the cost of two bills, per note *a* to statement G, accompanying report of February, 1818, - - - -	13,357 00		
		31,023 38	
			$33,752 06

That, during the year 1819, the following disbursements were made out of the Treasury, on account of the principal and interest of the public debt:

On account of the interest on the funded domestic debt and reimbursement of the principal of the deferred stock, - - - - - - - -			5,508,493 03
On account of the principal and interest of Treasury notes, - - - -			82,220 29
On account of the redemption of the Louisiana stock, - - - -			1,419,285 42
Whereof, in payment of stock purchased, - - - -		$203,835 69	
In payment of instalments 21st October, 1818, and 1819, - -		1,215,449 73	
		$1,419,285 42	
On account of the interest on the same, payable in Europe, - - - -			206,264 48
On account of the redemption of the domestic debt, - - - - -			504,693 42
On account of certain parts of the domestic debt, - - - - -			64 32
Making together, as will appear by the annexed statement C, the sum of - -			$7,721,020 96

Which disbursements were made out of the following funds, viz:

From the annual appropriation of $10,000,000, for the year 1819, agreeably to the second section of the act to provide for the redemption of the public debt, passed the 3d March, 1817, -	7,621,601 58
From repayments into the Treasury on account of moneys heretofore advanced for the purchase of bills of exchange, and for the payment of interest and reimbursement of the funded debt, -	17,199 09
And from the appropriation in relation to Treasury notes, being the amount of payments on account of the principal and interest thereof, per statement C, above recited, - -	82,220 29
Making the amount paid on warrants, as above stated, - - - -	$7,721,020 96

And have been accounted for, as far as respects the redemption by purchase of the public debt, under the act passed the 3d March, 1817, and as is exhibited in statement I, annexed, and which is rendered as a part of this report:

Stock purchased $711,957 55, cost - - - -	665,982 73
The residuary balance of - - - - - -	7,055,038 23
	$7,721,020 96

Will be accounted for in the next annual report, in conformity with the accounts which shall then have been rendered to this Department.

In the mean time, the manner in which the said balance has been applied is estimated as follows:

There is estimated to have been applied to the payment of the deficiency of the provision, at the end of the year 1818, as per statement B,		$128,427 69
Also, in the reimbursement of the deferred 6 per cent. stock,	$485,334 58	
Also, in the payment of the principal of Treasury notes,	80,000 00	
Also, towards the redemption of the Louisiana 6 per cent stock,	(a)1,215,449 73	
Also, in payment of certain parts of the domestic debt,	64 32	
	1,780,848 63	
And in payment of the interest on the funded debt and Treasury notes,	5,186,892 96	
	6,967,741 59	
In the next annual statement the repayments in 1819 will be exhibited as a deduction from the total amount of warrants issued for the public debt in that year, and of which this forms a part, to the amount of	17,199 09	
And there is estimated as remaining unapplied in the hands of the agents in Europe, and in protested bills, on the 1st January, 1820, as per estimate G, the sum of	64,232 12	
	7,049,172 80	
From which deduct this sum short provided, on account of unclaimed dividends payable but not demanded at the Treasury, (by estimate,)	122,562 26	
		6,926,610 54
		$7,055,038 23

(a) The amount payable in 1819, on account of the Louisiana stock,	$2,861,567 15
Whereof, on application for payment, warrants were issued for	1,215,449 73
Remained to be issued after the 1st January, 1820,	$1,646,117 42

That, on the 21st of October, 1820, the last instalment of the Louisiana stock, amounting to $2,216,462 77, will be payable.

That, in compliance with the sixth section of the act of the 3d March, 1817, for the redemption of the public debt, the certificates which, by payment or purchase, have become the property of the United States, are regularly cancelled.

A statement marked H is annexed, which exhibits the amount of the debt on the 1st January, 1820.

All which is respectfully submitted.

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *February* 4, 1820.

A.

Statement of the application, during the year 1818, *of the funds provided for the payment of the principal and interest of the public debt.*

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 3, 1820. JOSEPH NOURSE, *Register.*

B.

Statement of the provision which remained to be made after 1st January, 1819, for the payment of the principal and interest of the public debt falling due before that day.

The demands to be satisfied on the 1st January, 1819, were as follows:			
1. Dividends payable by commissioners of loans, including dividends due on that day, and exclusive of dividends no longer demandable at their offices, - - - - -	-	$1,521,641 54	
2. Unclaimed dividends from the loan offices, payable at the Treasury, beyond the amount advanced for their payment, -	-	223,484 21	
3. Balance due agents in London on the 31st December, 1818, £13,288, at 4*s.* 6*d.*, - - - - - -	-	59,057 77	
			$1,804,183 52
The funds provided for these demands were only as follows:			
I. *On account of the foreign debt.*			
1. Cash in the hands of the agents at Amsterdam 31st December, 1818, 97,574*g.* 10*st.*, at 40 cents, - - -	$39,029 80		
2. Amount of payments made at the Treasury before the 1st January, 1819, for bills which had been protested for non-payment, and which, on that day, had not been repaid into the Treasury,	103,937 74		
		142,967 54	
II. *On account of the domestic debt.*			
1. Cash due from commissioners of loans deceased or out of office,	5,778 97		
2. Cash in the hands of commissioners in office, and applicable to dividends, - - - - - -	1,503,221 65		
3. Cash advanced for Treasury dividends over the amount payable,	19,966 06		
4. Cash heretofore advanced to a commissioner of loans no longer in office, for the reimbursement of exchanged six per cent. stock, and remaining unapplied, - - -	3,821 61		
		1,532,788 29	
			1,675,755 83
Remained to be provided for after 1st January, 1819, - -	-	-	$128,427 69

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 3, 1820.

JOSEPH NOURSE, *Register.*

16th Congress.] No. 579. [1st Session.

REMONSTRANCE AGAINST A CHANGE IN THE REVENUE SYSTEM, IN RELATION TO CREDIT AND DRAWBACK.

COMMUNICATED TO THE SENATE, FEBRUARY 8, 1820.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The undersigned, merchants and inhabitants of Baltimore, beg leave to present to your honorable body the sentiments which they anxiously entertain on the proposed measure of discontinuing credit on import duties and denying drawbacks on duties.

Your memorialists contemplate the proposed change with concern; and they would, indeed, view any such projected innovation with alarm, if they did not believe that the mercantile interest is under watchful and wise control in your honorable body. A lenient system of imposts on foreign commerce is, in the opinion of your memorialists, not only conducive to active commerce, but also favorable to the public revenue; and under such a system the commerce of the United States has flourished, and the national treasury has been enriched. For a course which hitherto has richly and faithfully answered every object of the laws, and every demand which the fiscal policy has made upon commerce, it is now proposed to substitute a system at once experimental, harsh, and precarious. Under the existing terms of the collection of duties, the United States have surely experienced but little cause for discontent; and your memorialists can, with the most confident anticipation, declare, that fewer evasions of law and fewer defaults in payment have taken place under the present system than what will occur under the rigid and peremptory conditions to which that system is proposed to be contracted. The exaction of duties hitherto, on principles liberal and prudent, and gradual and gentle in its operation, has afforded to industrious commercial enterprise the patronage which judicious policy owes to it. Such a patronage is vitally due to it, in a country whose energies are excited and cultivated by commerce, whose power is in so great a degree the fruit of commerce, whose rank among nations owes to it so much of its elevation. The policy which pervades our present code of duties contemplates and adopts meritorious enterprise as part of the national wealth, and, viewing a free and extended commerce as the most bountiful source of revenue, and surest means of power, does not consecrate the field of commerce to the capitalist, and make it the monopoly of the rich.

The policy which now dignifies our system of duties assumes that principle of sterling truth, *that all duties on imports are* TAXES *on consumption;* and hence, how fair and important is it that some time should be granted to the importer *to convey to the consumer* the articles of importation. Not only the custom, but the very nature of commerce requires, in almost every instance of sale, that at least some *term of credit* shall be afforded *to the purchaser;* and hence, some period must be allowed to the importer *to levy the tax for the United States*, and some estimate ought to be made by our system of revenue of *the delay of sales.* In few or no cases does the credit on the duty exceed the period within which the capital can be realized, or recovered from suspense.

In the terms of those duties upon which a drawback is paid, the principle to which your memorialists allude appears to receive a more distinct and marked respect. The duty originally charged is there only *contingent* upon the stay and *consumption of the articles* in the country, and the term of credit there extended by the United States is the period to the importer for ascertaining whether they shall be appropriated for consumption or exported to a foreign quarter. Duties in these cases being thus *contingent* in the eye of our *revenue policy*, a credit is here not so much an *indulgence to the importer*, as a necessary *sequel* from the *nature* of the duty. Must, then, all *principle* be here violated, and the intolerable severity be here prescribed by Government to the importer, that he shall enjoy no credit, however *natural* and essential an *attendant* it be on the duty charged against his importation? Your memorialists do believe as a maxim, safe as a guide, and propitious wherever it is applied, that not only by the dictate of the law, but *in every construction of policy*, duties are emphatically a lien on the articles subjected to them; they attach to them, and should be *gathered* from them.

Where, in the collection of duties, the United States surrender to the importer the specific articles, their claim against him is not then embarked upon the conscience or substance of the individual importer; but two additional pledges are involved in the responsibility. Their means are bound, and the assurance of their character is given, all tributary to the demand of the United States. Interwoven with this strong defence, is that preferred claim which the United States has against the property of its debtor, a supreme prerogative lien, which thus finishes a security calculated to elevate the United States almost *above the danger of loss.*

The necessity which binds every importer to give to the Government such a security, while their discretion *in considering* it is unrestricted, would seem to be a sufficient guard against all importations destined for sacrifice, or to aid any wanton schemes of private finance; and your memorialists can scarcely imagine that, for premeditated sacrifice, any goods have been imported into this country. Your memorialists cannot conceive that, where a threefold security, in fortune and commercial reputation, is required by the United States, as *preliminary* to the credit on duties, the indulgence of credit could *prompt* or *facilitate* any importations not in the course of honest industry. Commerce always tends to extremes; excesses of trading occur under all systems and in the freest periods of commercial prosperity. But if importation does sometimes swell until business stagnates, commerce has a power of self-correction and the resource of self-recovery, and reverses soon allay the intemperate ambition of gain.

Your memorialists need not, however, dwell upon the inherent energies of commerce, and its ebbs and flows; nor show how *certainly*, by the salutary force of *experience* and COMPETITION, it is soon shorn of all inordinate adventure, built upon desperate or fanciful speculation. The present system of duties, although its indulgence, or rather its *equity*, is *so necessary an auxiliary to the small commercial capital of the United States*, has connived at and contributed to none of the irregularities of our commerce. All that have occurred may be explained by the late history of Europe, or traced to the very spirit of commerce itself, since fluctuation and irregularity are inseparable from *its life and motion.* Restriction may make commerce of smooth and uniform surface, but it cannot *be so* without being *sluggish and shallow;* and until commerce be so tamed by restriction and embarrassment, and become the *privilege* of the wealthy, it will be subject to irregularity and this inequality of character. Young as our country is, and far from being endowed with abundant commercial capital, the necessary consequence of the proposed alteration in the payment of the duties will be to consign commerce to the grasp of a few, expelling from the franchise of commerce, as it will, those who have but moderate means, although they be annexed to character and enterprise: this revolution in our revenue system will limit commerce to the circle of the capitalists; and commerce, the basis and pride of our fame, will dwindle into the diminutive condition, and fade into the pitiful character, of a monopoly! *Witness the fate of Spain!* What if goods do now occasionally accumulate inordinately, and if regu-

lar calculating industry sometimes suffers by the careless sacrifices made by wanton speculators; will not the consumer, the whole mass of society, be subjected to severe and painful terms under the new system? Is there not more enormity in the danger that exorbitant prices will then be dictated by the select importers, than ground of rational regret that prices have sunk, while the existing system has prevailed? This is one of the sure results of the proposed change, and, though there be a pause in business now, commerce will ever be partial and inadequate then.

There is, indeed, one palliative against all restrictions which press on the very nerve of commerce, and, though the refuge be a profane one, your memorialists appeal to human nature, and the history of the commercial world, whether it be not certainly and invariably the resource, where commerce is severely confined. Your memorialists here allude to the practice of smuggling; and they make this allusion not only under perfect conviction, but with feelings of alarm. Your memorialists call on your honorable body to consider how far the universal fidelity of this country to the revenue law has been commensurate with the interest of the mercantile community, and with their sense of *justice;* and, though your memorialists do not mean to identify mercantile virtue with interest, yet, with many, even the justice of Government is measured by *calculations of interest!* Your memorialists beg you to reflect whether the proposed severity will not instigate delinquency; whether the revenue laws will not, in many instances, be evaded, with all the serious consequences of such criminality, not only to the national morals, but also to the national treasury.

Unless the United States can make a discrimination in the amount of duties between citizens and foreigners, no change in the terms of payment can ever exclude foreigners from competing with citizens, whenever such privileges belong to them. But they enter into the crowd of competition, and competition always regulates its own wholesome extent. Your memorialists on this point think it indisputable that the introduction of foreign capital into our country, by this foreign participation in our trade, has been of essential benefit—an important aid in the present inadequate amount of our own commercial capital.

Your memorialists beg you to reflect earnestly and feelingly on the subject of discontinuing drawbacks on duties, and to remember that the advantage of drawback is emphatically our license for conducting a carrying trade. It is to the benefits of this branch of trade that the United States principally owes all that rapid advancement which is at all attributable to commerce, and to this that it has hitherto been indebted for its pecuniary abilities. To extinguish drawbacks is at once a sentence of banishment against American merchants from a commercial sphere of the greatest national and individual profit. If the United States thus deprives us of all that remains to us of our former greatness in this branch of commerce, but a miserable fragment of commerce will continue to the American people! To abolish drawback will have this fatal effect: for what shall we meet but inevitable loss, if we venture into the competition of a foreign market with goods loaded with the gross duty, of which, by the judicious policy of our present system, we are now disencumbered? The question of drawback is indeed a vital question, and involves the vocation and prosperity of thousands whose pursuits, during a long and brilliant lapse of time, have been tributary to the treasure and renown of the Union.

When your memorialists consider that the present system of duties has pressed leniently upon American commerce, and has yet been richly and faithfully productive to the United States; when we consider that the proposed change of making duties payable in cash will imprison commerce within the limits of a dictatorial monopoly, whose members will by their wealth be constituted the representatives of the once universal American commerce; when we consider that the consumers, the great body of society, will be subjected to oppressive terms, which give an unfair proportion to their labor and their relation to the Government—when all this is, to the minds of your memorialists, the certain offspring of this paralyzing change, your memorialists ask you, not only in justice but humanity—not as the patrons of commerce, but as *friends of your country—to forbear from this innovation.*

Your memorialists, viewing the abolition of drawbacks as an excommunication from a trade which has yielded so much to enrich and distinguish us, and which, in many points, does not in the remotest degree conflict with any imaginable views of domestic policy, cannot but consider the discontinuance of drawback as a useless privation to the United States of commercial benefit, and a work of ruin to the individuals who depend on that trade which is fostered by the indulgence of drawback.

ISAAC McKIM, *and others.*

16th Congress.] **No. 580.** [1st Session.

RECEIPTS AND EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 16, 1820.

SIR: TREASURY DEPARTMENT, *February* 7, 1820.

In obedience to a resolution of the House of Representatives of the 6th of January last, directing the Secretary of the Treasury to lay before the House "statements of the receipts and expenditures of the United States, from the commencement of the Federal Government until the 31st of December last, distinguishing the revenue derived from customs, internal taxes, direct tax, postage, public lands, and miscellaneous sources; and, also, classing the expenditures under the following heads: military, viz. pay and subsistence of the army, fortifications, ammunition, arms, arming the militia, detachments of militia, services of militia, services of volunteers; Indian Department; Naval Department; foreign intercourse; civil list; miscellaneous civil expenses; revolutionary pensions; other pensions; exhibiting an aggregate of the receipts and expenditures for each year separately," I have the honor to submit the enclosed letter and statement sfrom the Register of the Treasury, which give the information required.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

Hon. SPEAKER *of the House of Representatives.*

SIR: TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 4, 1820.

I have the honor to transmit, herewith, a statement formed in pursuance of a resolution of the House of Representatives of the United States of the 6th ultimo, with accompanying documents, marked A, B, and C.

The receipts into the Treasury, from customs, have been		$318,738,161 02
Internal revenue,		21,715,964 85
Direct taxes,		12,560,130 45
Postage of letters,		1,081,618 15
Sales of public lands,		18,287,828 03
Miscellaneous,		2,005,331 24
	374,389,033 74	
The receipts from foreign and domestic loans, as per statement A, amount to		143,314,753 74
Total receipts to the 30th June, 1819, the latest period to which the Treasurer's account is settled at the Treasury,		$517,703,787 48

The expenditures are stated, viz:			
Pay and subsistence of the army,	$64,907,056 72		
Pay of deranged officers and discharged soldiers,	1,200,000 00		
Gratuities and travelling expenses to discharged soldiers,	70,000 00		
Forage,	1,192,892 78		
Clothing,	11,464,535 17		
Bounties and premiums,	4,684,636 48		
Medical and hospital department,	1,381,452 39		
Quartermaster's department,	16,834,434 39		
Contingent account,	2,790,182 80

Other pensions,		-	3,253,245 38
			260,509,263 59
To which add the expenditures in relation to the payment of the interest and charges on the foreign loans, and principal of the foreign and domestic debt at the Treasury of the United States, and by the commissioners abroad, as per statement B,			252,741,575 80
And the expenditures on account of the Revolutionary Government, as per statement C,			316,268 70
Sum total of expenditures from the 4th March, 1789, to the 30th June, 1819,			513,567,108 09
Which, with the balance in the Treasury on the 30th June, 1819,			4,136,679 39
Make the sum total of receipts, as before stated,			$517,703,787 48

Similar statements having heretofore been rendered, under dates of 31st March, 1810, 24th December, 1812, and 20th January, 1816, by orders of the House of Representatives of the United States, those now formed are a continuation in the same form, and only vary in a distribution of expenditure to objects which had, in some instances, been incorporated under the general head of military establishment, particularly in the recent call of the House to distinguish the revolutionary and other pensions.

For the purpose of exhibiting the expenditures for the whole of the year 1819, those from 1st July to 31st December are added at foot, subject to variation in the settlement of the Treasurer's accounts to the 31st December, 1819. It was found that we could not render the receipts to a later period than the 30th June last.

I have the honor to be, sir, your most obedient servant,

JOSEPH NOURSE, *Register.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

A statement of the annual receipts and expenditures of the United States from the 4th March, 1789, to the 30th June, 1819, (exclusive of moneys received from foreign and domestic loans, and payments on account of the foreign and domestic debt, and on account of the Revolutionary Government, separately stated in the accompanying documents A, B, C,) formed in pursuance of a resolution of the House of Representatives of the United States, of the 6th of January, 1820.

16th CONGRESS.] No. 581. [1st SESSION.

REMISSION OF DUTY.

COMMUNICATED TO THE SENATE, FEBRUARY 21, 1820.

Mr. SANFORD, from the Committee of Finance, made the following report:

The Committee of Finance have considered the petition of Andrew Low, Robert Isaac, and James McHenry; the petition of John Tanner; the petition of J. E. White & Co.; the petition of Gaudry & Dufaure; and the petition of John Shillman: and they submit to the Senate their report upon all these cases.

All the petitioners are merchants of the city of Savannah, in Georgia. On the 11th of the last month, a great part of that city was destroyed by fire; the petitioners were owners of large quantities of imported merchandise, which was consumed by fire upon that occasion.

The three petitioners first named, composing the firm of Andrew Low & Co., lost by the fire imported goods amounting in value to more than $150,000. Some part of these goods, or some part of their value, was insured against fire, but the valuation of $150,000 excludes any sum insured, and appears to be an actual loss sustained by these petitioners. Of the duties on these goods, more than $14,000 have been paid into the Treasury, and the balance of those duties, amounting to $20,729 64, remains unpaid.

The petitioner John Tanner owes to the United States $4,810 14 for duties on goods imported. He lost goods of the value of $40,000; and of his stock of goods nothing more was saved from the fire than an amount of $1,000 or $1,500. He states that his goods were deposited in stores which were considered fire-proof; that, therefore, no insurance was made upon them; and that, by this calamity, he is rendered unable to pay his debts.

The petitioners J. E. White & Co., who are not named otherwise than by this compendious description, lost the whole of their stock in trade, consisting of foreign merchandise. They are indebted to the United States in the sum of about $20,000, for duties which accrued upon a part of their merchandise which has been destroyed by fire. They state that they placed confidence in the security of a building believed to be fire-proof; that insurance was deemed unnecessary; and that, from a succession of losses, which they could not foresee or control, they are rendered unable to pay their debts.

The petitioners Gaudry & Dufaure lost a quantity of Madeira wine which they had imported. The duties on this wine are $347, and they are still unpaid.

The petitioner John Shillman lost certain crockery, glass, and earthern wares, which he had imported. The duties on these articles, amounting to $2,132 90, are yet unpaid.

It is stated that some of the petitioners have paid large sums to the United States for duties on imports, and that their former debts for duties have been punctually paid.

The petitioners Andrew Low & Co. pray that the duties remaining unpaid, upon their goods which have been destroyed, may be remitted; and that they may be authorized to import, without duty, an amount of goods equivalent to the amount of their goods which have been destroyed, and were not insured, and upon which the duties have been paid into the Treasury.

The petitioners John Tanner, J. E. White & Co., Gaudry & Dufaure, and John Shillman, pray that the duties for which they are respectively indebted may be remitted.

This Government has, in general, refused to afford relief in such cases. Like cases have frequently occurred; similar applications have been often made; and relief has always been refused, except in a very few instances.

In the case of a fire at Norfolk, in Virginia, and in the two cases of fire at Portsmouth, in New Hampshire, the credit for unpaid duties upon imported merchandise, which had been destroyed by those fires, was prolonged for one year. This relief was given by laws of the 19th February, 1803, the 19th March, 1804, and the 10th February, 1807.

By an act of Congress of the 9th of May, 1794, the duties on eleven hogsheads of coffee, which had been destroyed by fire at Baltimore, were remitted.

By an act of the 7th of June, 1794, the internal duties on certain distilled spirits, which had been destroyed by fire at Middlebury, in Vermont, were remitted.

In January, 1801, certain teas were destroyed by fire at Providence, in Rhode Island. Those teas had been deposited under the care of the officers of the customs, in order to secure the payment of the duties. By an act of the 3d of March, 1801, the duties on those teas were remitted.

These are the only instances, known to the committee, in which any relief whatever has been afforded by this Government to sufferers by fire.

The teas destroyed at Providence were in a peculiar situation. They were in the custody of the Government, for the purpose of securing the payment of the duties. Though the duties were a debt from the importer, and the teas were held at his risk, yet, as the merchandise was deposited in the warehouse by the Government itself, and was held there as the principal security for the duties, it seems to have been thought fit to release the importer from his personal responsibility, when the chief subject upon which the Government relied for payment had been destroyed.

If the relief granted in these several instances was proper, the like relief should be granted in all similar cases; but it is certain that, in numerous cases, exactly similar, all relief has been refused. In the opinion of the committee, this Government cannot afford relief, in such cases, upon any principles which are susceptible of general and impartial application.

The case of Joshua Nevill received the decision of the Senate on the 6th of the last month. In that case a mechanic of Charleston, in South Carolina, lost, in a general conflagration, the tools of his trade, which he had imported, and upon which the duties remained unpaid. It was a case of the strongest merit, in every view which can recommend such an application from a suffering citizen. But relief was refused, for public reasons, which appeared in the report of this committee made in that case.

It cannot be supposed that there is any obligation upon this Government to afford relief to these sufferers. Imported goods, like others, are, in all situations, at the risk of their owners; whether the goods of a citizen are lost in a foreign country, or in their passage to this country, or after their arrival here; and whether they are consumed by fire, or destroyed or diminished in value by any other casualty, the Government is under no obligation to indemnify the owner. The citizen is protected in the enjoyment of his property. His enjoyment and dominion are exercised by the free disposition which he makes of his goods, according to his pleasure. All his goods are, at all times, exposed to perils which may destroy their existence or impair their value; but the Government is not a party to the private dispositions of the owner, and it bears no share of his hazards. Nor is it otherwise in the case of goods subject to duty. During the short period in which imported goods are in the possession of the Government, for the purpose of ascertaining the duties, they are held at the hazard of the owner. Our laws have cautiously provided that even while the possession and control of the owner are suspended, and the goods are actually in the hands of the public officers, the risks which attend them shall belong to the owner, and not to the public. But when the duties are paid or secured, the goods pass into the hands of the owner; he receives them augmented in value by the amount of the duties; he holds them as he holds any other goods; and whether they are lost by accident, or sold with profit, the loss or the gain belongs to him alone. The occupation of the merchant is exposed to great hazards, which are all his own. Is he successful in his commerce, he alone reaps the benefit of his industry, his sagacity, and his hazards. Is he unfortunate, either by his own errors, or by accidents, the Government is not his partner, and it never insured him against the errors or the hazards of his own enterprise. The public is never invited to partake of his profits. Is it more reasonable that the public should participate his losses? The importer, indeed, pays the duties in the first instance, as he also pays the foreign price of the goods, the freight, the premium of marine insurance, and all other charges which may be incurred in bringing the goods into the domestic market. These component parts of the domestic value fall not upon him, unless he is the consumer as well as the importer. They are all reimbursed to him when he sells. He may, indeed, sometimes receive less than he has paid, or he may sometimes receive much more, as the goods, in particular cases of great fluctuations, may either fall or rise greatly in value. But, in the general course of things, the importer receives all the sums which he has paid, with profit to himself, upon the whole. When he incurs or pays a debt for duties, he has no higher merit than when he incurs or discharges any other debt. The circumstance that goods have been charged with duties imposes no obligation whatever upon the Government to relieve the owner of the goods from any loss which he may sustain.

But though there is no obligation to remit or mitigate the duties, is it not fit that these sufferers should receive from the Government some charitable donation, or some act of grace in consideration of this great calamity? This idea appears to be inadmissible. The Government of the United States cannot justifiably make charitable donations from the national treasure. If it were proper to make such donations, they should be made impartially to all our citizens who have equal claims to charitable relief. If the sufferers by the fire at Savannah have just claims to relief, the sufferers by the recent fires at Wilmington in North Carolina, and Schenectady in New York, and all other sufferers by all other fires which have occurred in the United States, have equal claims to relief. Every purchaser of imported goods pays the duties in the price of the goods. If the importer who loses his goods by fire is entitled to relief because he has paid the duties, is not every other citizen who pays duties upon imported goods entitled to the same relief when his goods are destroyed by fire? The proprietor of imported goods, the owner of the products of our own soil, and the manufacturer of our own country, all lose their property by a fire. All persons, of all conditions, suffer by the conflagration. Has one class of these citizens a better claim to relief than another? Though a conflagration is a great calamity, it is not greater than many others. Are losses by fire more worthy of relief than losses and distresses produced by inundations, tempests, pestilence, war, or other misfortunes which no precaution can avert, and against which no insurance can be obtained? If charity is the motive, charity would dictate that our alms should be given to the indigent, the helpless, and the virtuous, rather than to those who, though they have lost much, may still be far above want. Private persons may bestow their charity as they please; but if this Government is to be charitable, it must be so at the expense of the nation. If the nation is to bestow charity, the benefits of its charity should be dispensed throughout the nation with an equal hand. The Government cannot relieve all cases of private distress, however severe or meritorious they may be in themselves. This Government was not instituted for any such purpose; and, were it justifiable under the constitution to apply the national treasure to such objects, a system of rules should first be established, by which facts might be investigated, and cases of real distress and merit be ascertained, in order that the bounty of the nation might be judiciously and impartially distributed.

Finally, general relief in such cases is impossible, and partial relief would be unjust.

The following resolution is proposed:

Resolved, That it is inexpedient to grant relief to the petitioners.

16th Congress.] No. 582. [1st Session.

BANK OF THE UNITED STATES AND OTHER BANKS, AND THE CURRENCY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 24, 1820.

SIR: TREASURY DEPARTMENT, *February* 12, 1820.

In obedience to a resolution of the House of Representatives, passed on the 1st of March, 1819, directing "the Secretary of the Treasury to transmit to Congress, at an early period in the next session, a general statement of the condition of the Bank of the United States and its offices, similar to the return made to him by the bank; and a statement, exhibiting, as nearly as may be practicable, the amount of capital invested in the different chartered banks in the several States and the District of Columbia, the amount of notes issued by those banks and in circulation, the public and private deposites in them, the amount of loans and discounts made by them and remaining unpaid, and the total quantity of specie they possess; and, also, to report such measures as, in his opinion, may be expedient to procure and retain a sufficient quantity of gold and silver coin in the United States, or to supply a circulating medium, in place of specie, adapted to the exigencies of the country, and within the power of the Government," I have the honor to submit the subjoined report and statements.

Statement A exhibits the condition of the Bank of the United States and its offices on the 30th of September, 1819.

Statement B exhibits the amount of bank capital authorized by law during the years 1814, 1815, 1816, and 1817. As this statement is founded upon the applications made to the Treasury under the acts imposing stamp duties, it is believed to be substantially correct. The average dividends upon which the stamp duty was paid, during those years, amounted to about 7½ per cent. upon the nominal amount of capital; it is, however, a matter of general notoriety that the dividends upon bank capital actually paid exceeded that rate. If it is assumed that the dividends declared, and upon which the duty was paid, amounted during those years to 10 per cent., then the capital actually paid in the year 1817, instead of being more than $125,000,000, as it is exhibited in statement B, will be found to be about $94,000,000; but, when it is recollected that, after the first payment required by the charters of the different banks, they have generally gone into operation, it is probable that a considerable proportion of the remaining payments have added nothing to their active capital. This fact being assumed, and a deduction being made of the amount of permanent accommodation enjoyed by the stockholders, in their respective banks, the active bank capital of the United States may be fairly estimated at a sum not exceeding $75,000,000. That these deductions ought to be made, in an attempt to ascertain the real amount of bank capital, cannot, it is presumed, be contested. If a stockholder to the amount of $10,000 has a permanent accommodation in the bank of $8,000, he has, in fact, but $2,000 of capital in the bank. This is equally true when a portion of his subscription has been paid with his own note, however well endorsed: so long as the note remains unpaid, it adds nothing to the real capital of the bank.

Such, it is believed, has been the process by which the capital of most of the banks has been formed, which have been incorporated since the commencement of the late war. Since that period, banks have been incorporated, not because there was capital seeking investment; not because the places where they were established had commerce and manufactures which required their fostering aid; but because men without active capital wanted the means of obtaining loans, which their standing in the community would not command from banks or individuals having real capital and established credit. Hence the multiplicity of local banks, scattered over the face of the country, in particular parts of the Union, which, by the depreciation of their paper, have levied a tax upon the communities within the pale of their influence exceeding the public contributions paid by them.

Statement C presents the condition of the State banks from which returns have been received, or have been transmitted by the Secretaries of State of different States, in conformity with the request of the Treasury Department. By comparing this statement with statement B, it will be perceived that it is very imperfect. Independently of the banks which have been created since the year 1817, it will be discovered that bank capital to the amount of more than $18,000,000, comprehended in statement B, is not embraced in it. As the amount of bank capital exhibited in statement C is $72,000,000, and its specie $9,828,000, the whole specie possessed by the State banks may be estimated at $12,250,000; if to this sum be added the specie in the possession of the Bank of the United States and its offices, the specie capital of all the banks in the United States may be estimated at $15,500,000. There are no means of ascertaining, with any degree of precision, the amount of specie in circulation; it is probable, however, that it does not exceed $4,500,000. Assuming this amount to be nearly correct, the whole metallic currency of the Union may be estimated at $20,000,000. Applying the same rule for ascertaining the circulation of the banks not embraced by statement C which has been employed to determine their specie, the whole amount of bank notes in circulation may be estimated at $46,000,000. It is probable, however, that this estimate is too high, as, according to the general practice of banks, all notes issued are considered in circulation, which are not in the possession of the bank by which they were issued. A reasonable deduction being made from the notes supposed to be in circulation, but which are, in fact, in the possession of other banks, it is probable that the actual circulation, both of paper and specie, is less at this time than $45,000,000. By the same mode of calculation, the whole amount of discounts may be estimated at $156,000,000.

The destruction or loss of the returns made to the Treasury before the year 1816, by the banks in which the public money was deposited, prevents any satisfactory comparison being drawn between their condition before and since that period. Comparative statements, however, have been received from sixteen banks in different parts of the Union, showing their situation on the 30th day of September, in the years 1813, 1815, and 1819. By statement D, it appears that those banks, at the first period, with a capital of $6,903,262, and with $3,059,149 of specie in their vaults, circulated $6,845,344 of their notes, and discounted to the amount of $12,990,975; at the second period their capital was $8,852,371, specie $1,693,918, circulation $9,944,757, and discounts $15,727,218; and at the third period their capital was $9,711,960, specie $1,726,065, circulation $4,259,234, and discounts $12,959,560.

By statement B, already referred to, it has been shown that, in the year 1814, the nominal bank capital in the United States exceeded $80,000,000. It is understood that a large addition was made to it in that year in several of the States. If it be admitted that such addition amounted to $15,000,000, the bank capital in operation in the year 1813 may be stated at $65,000,000. Allowing to this capital the same amount of specie, circulation, and discounts as was comparatively possessed by the banks comprehended in statement D, the estimate will be, specie $28,000,000, circulation $62,000,000, and discounts $117,000,000. In 1815 the bank capital had increased to $88,000,000; whilst, upon the same principle of calculation, the specie would have been estimated at $16,500,000,

circulation at $99,000,000, and discounts at $150,000,000. Applying this principle to the $125,000,000 of bank capital in operation during the year 1819, the specie possessed by all the banks would amount to $21,500,000, circulation $53,000,000, and discounts $157,000,000.

These last results, with the exception of the discounts, very materially differ from those which have been obtained by the mode of calculation previously adopted; they, nevertheless, furnish materials which may be useful in the progress of this inquiry. From them the following deductions may be drawn:

1st. That, in the year 1813, the circulation of bank notes was nearly equal to the bank capital.

2d. That, in the year 1815, it exceeded the capital by one-eighth.

3d. That, in the year 1819, it was less than the capital nearly in the proportion of 1 to 2.5.

4th. That, whilst the amount of bank capital has increased since 1813 from sixty-five to one hundred and twenty-five millions, the metallic basis, upon which the circulation of notes is founded, has decreased in the proportion of 15.5 to 28; being equal to 44.6 per cent.

5th. That the circulation of notes in the year 1819, in proportion to the specie in the possession of the banks, exceeded that of 1813 by 25.9 per cent.

6th. That, in the year 1813, the discounts, in proportion to the bank capital employed, exceeded those of 1815 in the ratio of 18 to 17, and those of 1819 in the ratio of 18 to 12.

7th. That the increase of bank notes in circulation, between the years 1813 and 1815, exceeded the increase of discounts during the same period by $4,000,000; whilst the specie in the vaults of the banks was diminished $11,000,000.

8th. That whilst, between the years 1815 and 1819, an addition of $37,000,000 has been made to the nominal bank capital, but $6,000,000 have been added to the aggregate amount of discounts.

It is probable that, between the year 1811 and the year 1813, a considerable addition was made to the paper circulation of the country. From a return of the former Bank of the United States, made to the Treasury in 1808, it appears that, with $15,300,000 of specie, it circulated only $4,787,000 of notes. Another return made in 1810 shows its condition was not materially changed. Shortly after the expiration of its charter, bank capital, to a great amount, was incorporated in some of the States. The expenditures produced by the war which was declared in 1812, without doubt, contributed, in some degree, to produce the difference between the condition of the sixteen banks already referred to, and that of the former Bank of the United States. If it be admitted, however, that the circulation in 1813 was not redundant, it must have become excessive in 1815. An increase of the currency, in the space of two years, in the proportion of 99 to 62, even if it had been wholly metallic, could not have failed to have produced a very great depreciation; but, when it is considered that not only the increase, but the whole circulation, consisted of paper not convertible into specie, some idea of its depreciation may be formed. The depreciation, however, was not uniform in every part of the Union. The variation in the degree of depreciation depended not only upon the greater issues of banks in one section of the nation than in others, but also upon the local advantages which they enjoyed as to commerce. It is impossible to determine, with precision, where the most excessive issue of bank notes occurred. Statement E, which exhibits the rate of exchange between the principal cities to the east of this place and London, and the price of bills at New York upon Boston, Philadelphia, and Baltimore, during the years 1813, 1814, 1815, and 1816, may be considered presumptive evidence of that fact. So far as it can be relied upon for that purpose, Baltimore was the point of greatest depreciation among the above-mentioned places. This is probably true; as it is known that the banks in that place made greater advances to the Government in the loans which it obtained during the late war, in proportion to their capital, than those of Philadelphia, New York, and Boston. But the greatest depreciation of the currency existed in the interior States, where the issues were not only excessive, but where their relation to the commercial cities greatly aggravated the effects of that excess.

This statement may also assist in explaining the cause of the necessity which existed in 1814 for the suspension of specie payments by the banks. From the commencement of the war until that event, a large amount of specie was taken out of the United States by the sale of English Government bills, at a discount frequently of from 15 to 20 per cent. Immediately after the suspension, they commanded a premium in those places where the banks had suspended payment, which gradually rose to 20 per cent.; whilst at Boston they remained at a discount of about 14 per cent. until February, 1815.

Whatever may have been the degree of depreciation of the currency in 1815, it continued to augment throughout the first six months of the year 1816, if the rate of exchange with London is considered conclusive evidence of that fact. The excessive importations of British merchandise during that period, and in the preceding year, might indeed account for the increase of premium paid upon sterling bills, and was, probably, one of the principal causes of it. The great fluctuations which occurred in the latter part of that period furnish some reason, however, for ascribing them, in some degree, to changes in the value of the currency in which their price was calculated rather than to the ordinary principles of exchange. It is more probable that the currency, in those places where it was not convertible into specie, fluctuated in value according to the efforts which were made, in particular places, to prepare for the resumption of specie payments, than that the balance of payments between the two countries should have varied to such an extent as is indicated by the sudden variations which occurred during that period in the rate of exchange. So far as these fluctuations are ascribable to the currency in which the rate of exchange was determined, a considerable appreciation of that currency took place in the last months of the year 1816. From that period until the present time, the circulation has rapidly diminished; and all the evils incident to a decreasing currency have been felt in every part of the Union, except in some of the Eastern States.

If, as previously stated, the circulation of 1813 be admitted to be the amount required to effect the exchanges of the community with facility and advantage, and that, in the year 1815, that circulation was extended to $99,000,000, (which was, in some degree, augmented in 1816,) the extent of the diminution of the currency, in the space of three years, may be perceived. But it is probable that the currency in 1815 exceeded $99,000,000. The banks, upon whose situation that estimate is founded, were established at a period when the practice of dispensing with the payment of those portions of their capital falling due after they went into operation had not been generally introduced. Some of them did not suspend specie payments during the general suspension. The rest were among the first to resume them, and have continued them to the present time. It cannot be expected that banks which went into operation during the war, and after the general suspension had occurred, were conducted with an equal degree of prudence and circumspection. A reasonable allowance being made for bank notes supposed to be in circulation at that period, but which were, in fact, in the possession of other banks, and for the excess of issues beyond the estimate, the circulation may, it is believed, be safely calculated at not less than $110,000,000. The paper circulation in 1813 has been estimated at $62,000,000. At that period, however, gold and silver formed a substantial part of the currency. The condition of the old Bank of the United States in 1810, and of the sixteen banks in 1813, proves that the demand for specie from the vaults of the banks was inconsiderable. It is therefore probable

that the whole circulation of 1813 amounted to $70,000,000. In 1815, it is estimated to have risen to $110,000,000; and this amount was probably augmented in 1816. At the close of 1819, it has been estimated, upon data believed to be substantially correct, at $45,000,000. According to these estimates, the currency of the United States has, in the space of three years, been reduced from $110,000,000 to $45,000,000. This reduction exceeds 59 per cent. of the whole circulation of 1815. The fact that the currency in 1815 and 1816 was depreciated has not sensibly diminished the effect upon the community of this great and sudden reduction. Whatever was the degree of its depreciation, it was still the measure of value. It determined the price of labor, and of all the property of the community. A change so violent could not fail, under the most favorable auspices in other respects, to produce much distress, to check the ardor of enterprise, and seriously to affect the productive energies of the nation. The reduction was, in fact, commenced under favorable auspices. During the year 1817, and the greater part of 1818, all the surplus produce of the country commanded in foreign markets higher prices than ordinary. The rate of foreign exchange afforded no inducement for the exportation of specie, for the purpose of discharging debts previously contracted. The only drain to which the metallic currency was subject was the demand for it for the prosecution of the trade to the East Indies and to China. In this trade, specie being the principal commodity, and indispensable to its prosecution, the amount exported during those years was very great, and seriously affected the amount of circulation, by compelling the banks to diminish their discounts.

Notwithstanding the drain for this commerce during these years was unusually large, every other circumstance was favorable to the restoration of the currency to a sound state, with the least possible distress to the community. The capacity of the country to discharge a large portion of the debts contracted with banks, and which had occasioned their excessive issues, was greater than at any former period, and than it probably will be again for a lapse of successive years. The effort to reduce the amount of currency during those years, though successful to a considerable degree, was not pursued with sufficient earnestness. In the latter part of 1818, when the price of the principal articles of American production had fallen nearly 50 per cent. in foreign markets, when the merchant needed the aid of additional loans to sustain him against the losses which he had incurred by the sudden reduction in the price of the commodities he had exported, he was called upon to discharge loans previously contracted. The agriculturist, who saw his income reduced below his indispensable necessities; the manufacturer, who was not only struggling against foreign competition, but who saw the sale of his manufactures reduced, by the incapacity of his customers to buy; in fact, all classes of the community, under circumstances so adverse to the command of funds, were subjected to curtailments wherever they had obtained discounts.

All intelligent writers upon currency agree that where it is decreasing in amount, poverty and misery must prevail. The correctness of the opinion is too manifest to require proof. The united voice of the nation attests its accuracy. As there is no recorded example in the history of nations of a reduction of the currency so rapid and so extensive, so but few examples have occurred of distress so general and so severe as that which has been exhibited in the United States. To the evils of a decreasing currency are superadded those of a deficient currency. But, notwithstanding it is deficient, it is still depreciated. In several of the States the great mass of the circulation is not even ostensibly convertible into specie at the will of the holder. During the greater part of the time that has elapsed since the resumption of specie payments, the convertibility of bank notes into specie has been rather nominal than real in the largest portion of the Union. On the part of the banks, mutual weakness had produced mutual forbearance. The extensive diffusion of bank stock among the great body of the citizens, in most of the States, had produced the same forbearance among individuals. To demand specie of the banks, when it was known they were unable to pay, was to destroy their own interests, by destroying the credit of the banks in which the productive portion of their property was invested. In favor of forbearance was also added the influence of the great mass of bank debtors. Every dollar in specie drawn out of the banks, especially for exportation, induced the necessity of curtailments. To this portion of the community all other evils were light when compared with the imperious demands of banks. Their exertions to prevent the drain of specie in the possession of those who controlled their destiny equalled the magnitude of the evils which were to be avoided. In most parts of the Union this forced state of things is passing away. The convertibility of bank notes into specie is becoming real wherever it is ostensible. If public opinion does not correct the evil in those States where this convertibility is not even ostensible, it will be the imperious duty of those who are invested with the power of correction to apply the appropriate remedy.

As the currency is, at least in some parts of the Union, depreciated, it must in those parts suffer a further reduction before it becomes sound. The nation must continue to suffer until this is effected. After the currency shall be reduced to the amount which, when the present quantity of the precious metals is distributed among the various nations of the world, in proportion to their respective exchangeable values, shall be assigned to the United States; when time shall have regulated the price of labor and of commodities, according to that amount; and when pre-existing engagements shall have been adjusted, the sufferings from a depreciated, decreasing, and deficient currency will be terminated. Individual and public prosperity will gradually revive, and the productive energies of the nation resume their accustomed activity. But new changes in the currency, and circumstances adverse to the perpetuity of the general prosperity, may reasonably be expected to occur. So far as these changes depend upon the currency, their recurrence, to an extent sufficient to disturb the prosperity of the nation, would be effectually prevented, if it could be rendered purely metallic. In that event, we should always retain that proportion of the precious metals which our exchangeable commodities bear to those of other nations. The currency would seldom be either redundant or deficient to an extent that would seriously affect the interests of society. But when the currency is metallic, and paper convertible into specie, changes to such an extent, it is believed, will frequently occur.

The establishment of banks which are restrained from issuing notes of small denominations furnishes great facilities for the transmission of money, and increases the efficiency of the capital subject to their control to the extent of the credit employed by them. The degree of facility afforded by them for the transportation or transmission of money depends upon the extent of country within which their notes circulate, and preserve a value equivalent to specie. Ordinarily, this extent is determined by the interior trade of the country; they will circulate through the whole extent of country, the produce of which is carried for sale to the place of their establishment. If they are established only in the principal commercial city of the nation, their notes will circulate through the whole extent of its territory, and afford the greatest possible facility for the transmission of money. If they are established in several of the commercial cities, their circulation will be circumscribed by the sections of country the inhabitants of which trade to those cities. The facility for transmitting money will be diminished by their establishment. But if banks should be established in all the interior towns, this facility would be impaired to a still greater degree. In that event, their notes would circulate within very narrow limits; but, within those limits, the notes of the banks in the commercial cities would no longer form part of the circulation. Should they, by accident, be carried within it, the first individual having remittances to make, and into whose hands they might come, would use them for that purpose.

The degree of credit which a bank can employ, in proportion to its capital, depends upon a variety of circumstances. If the community repose great confidence in the prudence and integrity of those who direct its concerns; if the capital employed be small in proportion to the demand for the transmission of money; if there be no other bank whose local situation repels its circulation from those sections of country, the produce of which is ultimately carried to the place where it is established, the credit which it will be able to employ will be very great. Where all these facilities are wanting, the extent of the credit which it will employ will be very inconsiderable. The additional efficiency which, in the latter case, will be imparted to capital invested in banks, will not, it is believed, countervail the evils which necessarily result from their establishment.

Among the advantages which have been supposed most strongly to recommend their establishment, especially in a community whose resources are rapidly expanding, their capacity suddenly to increase the currency to the utmost demand for it has been considered the most important.

In a country where the currency is purely metallic, no considerable addition can be made to it without giving, at the time of its acquisition, articles in exchange of equal value. No addition can be made to the currency without affecting, to the extent of such addition, the enjoyments of the community. The amount so added will, to the same extent, diminish the quantity of articles which would otherwise be imported into the country for domestic consumption, or for re-exportation.

Ordinarily, the currency of one country will not be exported to another, because its value in every country is nearly the same. It will not, therefore, like other commodities, command a commercial profit upon exportation. It will be taken from one country to another only when the price of commodities in the former is so high as to produce a loss in the latter equal to the expense of transporting specie. It is this condition, annexed to every acquisition to the currency of a State, when it is purely metallic, of diminishing, to the same extent, the enjoyments of the community, which affords the most efficient protection against its becoming redundant. It is equally efficient in guarding against a deficiency, to an extent that can seriously affect the interest of the community. But this condition is not annexed to the increase of the currency by the issue of bank notes, even when convertible into specie. The notes by which the currency is suddenly augmented do not, in any degree, diminish the enjoyments of the community. No equivalent is, by such issue, transferred to another community, as is invariably done when an acquisition is made to a metallic currency. Whenever the currency can be augmented, exempt from such transfer, it must be subject to some degree of fluctuation in quantity. Every addition made to the currency by the issue of bank notes changes the relation which previously existed between the amount of the currency and the amount of the commodities which are to be exchanged through its agency. Their issue depends not upon receiving in exchange articles of equal value, but upon a pledge of the credit of one or more individuals to the amount of such issue. No evil can result to the community from the advance of the capital of a bank in exchange for the credit of individuals. In that case, no addition is made to the amount of the currency previously in circulation. It is perfectly immaterial to society whether this capital be lent by individuals or by corporations. The relation between the currency and the exchangeable commodities of the State is not disturbed. But, when their credit is greatly extended, the currency is expanded, and that relation is deranged. An expansion of the currency, through the agency of banks, will generally occur only in periods of prosperity. During such periods, enterprise will be fostered, industry stimulated, and the comfort and happiness of the people advanced, without the factitious aid of an expansive currency. But there can be no doubt that a sudden increase of the currency, during periods of prosperity, through the agency of bank issues, gives additional force and activity to the national enterprise. Such an increase will be followed by a general rise in the value of all articles, especially of those which cannot be exported. The price of lands, houses, and public stock will be augmented in a greater degree than if no such increase had taken place.

If these prices could be maintained, if they could even be protected against sudden reduction, they would be cause of gratulation rather than of complaint. But the expansion of the currency, by the issue of paper, in a period of prosperity, will inevitably be succeeded by its contraction in periods of adversity. The extent to which the currency may be contracted, through the agency of banks, depends upon the use which they may have made of their credit. The excess of their discounts beyond their capital actually paid determines the amount of the credit which they have employed. Thus, in 1813, the capital of the banks in the United States has been estimated at $65,000,000, and their discounts at $117,000,000. The extent to which their credit was then employed was $52,000,000. Their circulation, at the same period, has been estimated at $62,000,000. In this estimate no allowance was made for notes stated to be in circulation, but which were probably in the possession of other banks. A reasonable deduction being made on that account, it is probable that the paper circulation did not much exceed $52,000,000. But the liability of the banks for specie was equal to the whole amount of notes represented to be in circulation, besides the individual deposites. To meet an immediate demand, they are estimated to have had $28,000,000 in specie. If the deposites of individuals should be estimated at $18,000,000, their ultimate means of meeting the demand of $62,000,000, without sacrificing their capital, would consist of $10,000,000 in specie, and $52,000,000 secured by the notes of individuals; this sum being the excess of their discounts over their capital. Under ordinary circumstances, the basis upon which the credit of this circulation rested might be considered sufficient to sustain it. A debt of $117,000,000 could not, under the most adverse circumstances, be considered inadequate to meet one of $52,000,000. But, in the case of currency, the capacity of ultimate redemption is not sufficient. The capacity to redeem it as it is presented is indispensable. Whenever the public confidence in this capacity is impaired, an immediate demand for specie will be created; and, if it is not promptly met, depreciation will ensue. But, even in circumstances in some degree adverse to the operations of banks, if their discounts consisted principally of notes founded upon real transactions, in which the idea of renewal was excluded, and if specie formed a considerable proportion of the circulation, the capacity of the banks to meet the demands upon them for specie might have been sufficient to sustain the credit of the currency. If, on the other hand, the debts due to the banks consisted chiefly of fixed or permanent loans, generally denominated *accommodation paper;* if specie had been banished from circulation, by the issue of dollar notes, the suspension of payment by the banks could not fail to be the result of any considerable pressure upon them for specie. In the former case, as their notes should be withdrawn from circulation, they would gradually be reduced to the demand for them for the transmission of money. If the effort to withdraw them should be continued beyond that point, specie would be paid into the banks by their debtors, in preference to bank notes; and the just proportion between the paper circulation and the specie in their vaults would be promptly restored. In the latter case, as the debts due to the banks would not, according to the understanding of the parties, become due at short intervals, the only mode of meeting the increasing demands upon them for specie would be to require of the whole mass of debtors the payment of a fixed proportion of the sums due by them. As the circumstances which would require this measure, on the part of the banks, would generally affect the community in the same degree, the capacity of their debtors to meet this demand would generally be found to be in an inverse ratio to the demand. The demand itself, being inconsistent with the impression under which the debt was contracted, would be resisted in every case where the

interest of the debtor would be subserved by delay. As specie formed but an inconsiderable part of the currency, the reduction of the paper circulation would have to be carried to a greater extent than in the former case. A just proportion between the paper circulation, and the specie necessary to support it, could be obtained only by the positive reduction of the former, as it would be impracticable to increase the latter, while the demand continued. Under such circumstances, the suspension of payment would be the probable result.

Such, in fact, were the circumstances under which the suspension in 1814 occurred.

The injudicious multiplication of banks, where capital in that form, to some extent, might have been useful; the establishment of them where they could only be injurious; the permission to issue dollar notes, by which specie was banished from circulation; and the demand for specie for exportation, which existed during the years 1813 and 1814, imposed upon the banks in the Middle, Southern, and Western States the necessity of suspending payment. A longer effort to discharge their notes in specie would not only have been ineffectual, but would certainly have postponed, to a more remote period, the resumption of specie payments. The evils which have resulted to the community from that suspension have certainly been great; but it may well be doubted whether others of equal magnitude would not have been suffered, if that event had not occurred. The extent to which the currency must have been reduced, in order to have avoided the suspension, could not have failed, at any period, to produce great embarrassment and distress to the community. But, in a time of war, when the country was invaded; when the public safety required that the energies of the nation should be fully developed, a sudden and extensive reduction of the currency, by any cause whatever, would have been fatal. Under such circumstances, the demand for currency would have been too imperious to be resisted. It would, from necessity, have been supplied by the issue of Treasury notes.

The fact that, in a small portion of the Union, specie payments were continued, cannot be admitted as evidence that it was practicable throughout the nation. In that part of the country, the extensive bank issues consequent upon loans to the Government in the Middle States had not occurred. Foreign trade, which, in the other parts of the Union was nearly annihilated, still preserved there a languid existence, through the permission or connivance of the enemy. These circumstances could not fail to enable the banks in the Eastern States, to continue specie payments longer than those of the Middle, Southern, and Western States. In an effort to preserve their credit, they would, inevitably, be the last which would fail. In such a struggle, however, they must have failed, had not the circulation of the paper of their weaker neighbors and the issues of Treasury notes come to their aid. But for this adventitious assistance, wholly unconnected with the wisdom and foresight of their directors, specie payments must have been suspended there, or the best interests of the community have been sacrificed. From that period, until the resumption of specie payments in the early part of 1817, Treasury notes, and the notes of the banks which had suspended payment, formed the great mass of the circulation in the eastern part of the Union. Specie, or the notes of banks which continued to pay specie, formed no part of the receipts of the Government in Boston and the districts east of that town, until about the close of the year 1816.

In all great exigencies, which, in the course of human events, may be expected to arise in every nation, the suspension of payment by banks, where the circulation consists principally of bank notes, is one of the evils which ought to be considered as the inevitable consequence of their establishment. Even in countries where paper does not form the principal part of the circulation, such an event will sometimes happen. In the year 1797, when the restriction was imposed upon the Bank of England, the average of its circulation for several successive years was about £10,000,000 sterling, whilst the metallic currency was estimated at £30,000,000. Yet, in that country, whose trade in time of war, through the protection of its fleets, was rather expanded than contracted, it was found necessary to authorize the bank to suspend payment; which suspension, after a lapse of twenty-three years, still continues. When the existence of banks depends upon the authority which regulates the currency, it may be practicable to impose salutary checks against excessive issues of paper during suspension, and, in some degree, to guard against an excessive depreciation of the currency. But where these institutions are created by an authority having no power to regulate the currency, and especially where they are created by a great variety of authorities independent of each other, and practicably incapable of acting in concert, it is manifest that no such checks or restraints can be imposed. It is impossible to imagine a currency more vicious than that which depends upon the will of nearly four hundred banks, entirely independent of each other, when released from all restraint against excessive issues. By the term *currency*, the issue of paper by Government, as a financial resource, is excluded. Even such an issue, in a state where the reign of law is firmly established, and public opinion controls the public councils, would be preferable to a currency similar to that which existed in some parts of the United States during the general suspension, and which now exists in some of the States. This truth has been practically demonstrated by the redemption of the whole of the Treasury notes issued during the war, within the short space of about two years after the peace; whilst a large amount of bank notes issued during the suspension are yet unredeemed, and greatly depreciated.

There can be no doubt that a metallic currency, connected with a paper circulation, convertible into specie, and not exceeding the demand for the facile transmission of money, is the most convenient that can be devised. When the paper circulation exceeds that demand, the metallic currency, to the amount of the excess, will be exported, and a liability to sudden fluctuations to the same extent will be produced.

If banks were established only in the principal commercial cities of each State; if they were restrained from the issue of notes of small denominations; if they should retain an absolute control over one-half of their capital, and the whole of the credit which they employ, by discounting to that amount nothing but transaction paper payable at short dates, the credit and stability of the banks would at least be unquestionable. Their notes could always be redeemed in specie, on demand. The remaining part of their capital might be advanced upon long credits to manufacturers, and even to agriculturists, without the danger of being under the necessity of calling upon such debtors to contribute to their relief if emergencies should occur. Such debtors are, in fact, unable to meet sudden exigencies, and ought never to accept of advances from banks but upon long credits, for which timely provision may be made. The latter class, of all others, is the least qualified to meet the sudden demands which a pressure upon banks compels them to make upon their debtors. The returns of capital invested in agriculture are too slow and distant to justify engagements with banks, except upon long credits. If the payment of the principal should be demanded at other periods than those at which the husbandman receives the annual reward of his toil, the distress which would result from the exaction would greatly outweigh any benefit which was anticipated from the loan. That the establishment of banks in agricultural districts has greatly improved the general appearance of the country, is not denied. Comfortable mansions and spacious barns have been erected; lands have been cleared and reduced to cultivation; farms have been stocked and rendered more productive, by the aid of bank credits; but these improvements will eventually be found, in most cases, to effect the ruin of the proprietor. The farm, with its improvements, will frequently prove unequal to the discharge of the debts incurred in its embellishment. Such, in fact, is the actual or apprehended state of things wherever banks have been established in the small inland towns and villages. Poverty and distress are impending over the heads of most of those who have attempted to

improve their farms by the aid of bank credits. So general is this distress, that the principal attention of the State Legislatures, where the evil exists, is, at this moment, directed to the adoption of measures calculated to rescue their fellow-citizens from the inevitable effects of their own indiscretion. If, in affording a shield to the debtor against the legal demand of his creditor, the axe shall be applied to the root of the evil, by the annihilation of banks where they ought never to have existed, the interference, however doubtful in point of policy or principle, may eventually be productive of more good than evil.

The general system of credit which has been introduced through the agency of banks, brought home to every man's door, has produced a factitious state of things, extremely adverse to the sober, frugal, and industrious habits which ought to be cherished in a republic. In the place of these virtues, extravagance, idleness, and the spirit of gambling adventure have been engendered and fostered by our institutions. So far as these evils have been produced by the establishment of banks where they are not required, by the omission to impose upon them wholesome restraints, and by the ignorance or misconduct of those who have been intrusted with their direction, they are believed to be beyond the control of the Federal Government. Since the resumption of specie payments, measures have been adopted in some of the States to enforce their continuance; in others, the evil has been left to the correction of public opinion. There is, however, some reason to apprehend that the authority of law may be interposed in support of the circulation of notes not convertible into specie.

But the Federal Government has, by its measures, in some degree, contributed to the spirit of speculation and of adventurous enterprise which, at this moment, so strongly characterizes the citizens of this republic. The system of credit, which, in the infancy of our commerce, was indispensable to its prosperity, if not to its existence, has been extended at a period when the dictates of sound discretion seemed to require that it should be shortened. The credit given upon the sale of the national domain has diffused this spirit of speculation and of inordinate enterprise among the great mass of our citizens. The public lands are purchased, and splendid towns erected upon them, with bank credits. Every thing is artificial. The rich inhabitant of the commercial cities and the tenant of the forest differ only in the object of their pursuit. Whether commerce, splendid mansions, or public lands be the object of desire, the means by which the gratification is to be secured are bank credits.

This state of things is no less unfriendly to the duration of our republican institutions than it is adverse to the development of our national energies when great emergencies shall arise; for, upon such occasions, the attention of the citizen will be directed to the preservation of his property from the grasp of his creditors, instead of being devoted to the defence of his country; instead of being able to pay with promptitude the contributions necessary to the preservation of the state, he will be induced to claim the interference of the Government to protect him against the effects of his folly and extravagance.

This ought not to be the condition of a republic when menaced by foreign force or domestic commotion. Such, it is apprehended, will be the condition of the United States, if the course which has been pursued since the commencement of the late war be not abandoned. Since that period, it is believed, the number of banks in the United States has been more than doubled. They have been established in the little inland towns and villages, and have brought distress and ruin upon the inhabitants. When the cause and the extent of the evil are known, no doubt is entertained that the appropriate remedies will be applied by those who, in our complex form of government, are invested with the necessary authority.

But the resolution requires the Secretary of the Treasury "to report such measures as, in his opinion, may be expedient to procure and retain a sufficient quantity of gold and silver coin in the United States."

It has already been suggested, that, if the currency were purely metallic, or connected with paper convertible into specie, to the extent only of the demand for the transmission of money, the United States would retain a proportion of the precious metals which the value of their exchangeable commodities bore to those of other States. But if paper can be made to circulate independent of its employment in the transmission of funds, gold and silver, to the same extent, will be exported. If paper will be received and employed generally as the medium of exchange, and especially if it be issued in bills of small denominations, the amount of specie which will be exported will be great in proportion to the paper in circulation. If this position be correct, the power of Congress will be insufficient to retain any considerable portion of gold and silver in the United States. Bank notes, from one dollar to those of large denominations, have circulated, and, it is presumed, will continue to circulate, independent of its authority. As long as bank notes will be received as a substitute for specie, the quantity of specie necessary for currency will be small and may be easily retained without the aid of Government. But the demand for specie, where the circulation is principally paper, is extremely fluctuating. When there is but little or no demand for it, the temptation to increase their discounts, by the issue of more paper, is too strong to be resisted by banks. When a demand for specie arises, the currency has to be suddenly diminished by the contraction of their discounts. Fluctuations in the amount of the currency, produced by this means, is the principal mischief to be remedied; these fluctuations will frequently occur in every State, where the currency is principally paper convertible into coin. In the United States, where the specie exported as a primary article of commerce to the East Indies and to China bears so large a proportion to the metallic currency of the country, they must not only be more frequent than in States where no such commerce exists, but more extensive in their effects. The demand created for Spanish milled dollars, by the exportation of specie, in the prosecution of this trade, has, without doubt, caused their importation to an extent which otherwise would not have occurred. As this demand is in some degree contingent, the supply will also be contingent. When it exceeds the demand, the banks will be tempted to new issues of paper. When it is deficient, the deficiency will be drawn from the banks, and will cause a sudden diminution of the currency. If this diminution could be limited to the amount of the deficiency thus drawn from the banks, the evil would be no greater than if the currency were metallic. But this is not the fact. When the paper circulation is returned upon the banks for specie, prudence requires that an effort should be made to preserve the same proportion between the specie in their vaults and their notes in circulation as existed at the moment the pressure commenced. If the paper in circulation should be three times the amount of specie in the possession of the banks, a demand upon them for $1,000,000 of specie would produce a diminution of $3,000,000 in the currency if the specie should be exported, and of $2,000,000 if it remained in the country. It is even probable that the comparative diminution would exceed this ratio. As the demand increased, apprehensions would be excited for the credit of the banks; the exertions produced by that apprehension would correspond with the magnitude of the evil to be avoided, rather than with the positive pressure; this, it is presumed, would be the effect of such an emergency, where banks had not become familiarized with bankruptcy, and were not countenanced by society in a course of conduct which, in private life, would be considered dishonest.

If, by any constitutional exercise of the power of Congress, banks can be restrained, first, from issuing notes of small denominations, and, secondly, from excessive issues when their notes are not returned upon them for specie, fluctuations in the currency, to an extent to derange the interests of society, may be prevented. But if the imposition of these restraints are not within the constitutional powers of Congress, the evils which have been suffered for the want of those restraints must continue until the present system of banking shall be abandoned.

In an inquiry into the state of the currency, the consideration of the coinage is necessarily involved. The principles upon which the coinage of the United States has been established are substantially correct. The standard fineness of the gold coinage corresponds with the coinage of England and Portugal. The standard of the silver coinage differs but little from that of Spain. The American dollar is intrinsically worth about one per cent. less than the Spanish milled dollar. This difference, if the Spanish dollar had not been made a legal tender, might have secured to the nation a more permanent use of its silver coinage. American dollars would not be exported as long as Spanish dollars could be obtained for that purpose at a reasonable premium. If this latter coin were not a legal tender, the banks might afford to import it, and might sell, at a fair premium, the amount which might be required of them for the China and East India trade.

The relative value of gold and silver has been differently established in different nations. It has been different in the same nation at different periods. In England, an ounce of gold is equal in value to about 15.2 ounces of silver; in France, it is equal to 15.5; and in Spain and Portugal, to 16 ounces. In the United States, an ounce of gold is equal to 15 ounces of silver. But the relative value of these metals in the markets frequently differs from that assigned to them by the laws of the different civilized States. It is believed that gold, when compared with silver, has been for many years appreciating in value, and now every where commands, in the money markets, a higher value than that which has been assigned to it in States where its relative value is greatest. If this be correct, no injustice will result from a change in the relative legal value of gold and silver, so as to make it correspond with their relative marketable value. If gold, in relation to silver, should be raised five per cent., one ounce of it would be equal to 15.75 or $15\frac{3}{4}$ ounces of pure silver. This augmentation in its value would cause it to be imported in quantities sufficient to perform all the functions of currency. As it is not used to any considerable extent as a primary article of commerce, the fluctuations to which the silver currency is subject from that cause would not affect it. It would be exported only when the rate of exchange against the country should exceed the expense of exportation. In ordinary circumstances, such a state of exchange would not be of long continuance. If the currency of the United States must, of necessity, continue to be paper convertible into specie, an increase of the gold coinage, upon principles which shall afford the least inducement to exportation, is probably the most wholesome corrective that can be applied, after the rigid enforcement of that convertibility.

The copper coinage is believed to be susceptible of improvement. Copper itself is too massive to serve the purposes of change. One hundred cents are too cumbrous to be carried and used in the numberless transactions which daily occur between individuals. Coin compounded of silver and copper, of from one to ten cents, would be much more suitable for that object. This kind of coinage has been adopted in other countries, with great advantage.

It has, however, been objected to this coinage—

1. That, as compounded metals are much harder than the component ingredients, it would be difficult, and, consequently, expensive to work.

2. That the coin itself would be of little or no intrinsic value; copper or brass being of superior value in the manufactures to which it might be applied. And that the public would scarcely submit to the circulation of a coin so worthless.

3. That it might be counterfeited by a composition of zinc and copper.

After giving to these objections their due weight, it is believed that a change of this nature, in the copper coinage, would be beneficial. Although the expense of such a coinage should be twice as much as that of an equal number of silver coin, still it might be advantageous. Small change, both of silver and copper, may be abundant in Philadelphia, the seat of the mint; but it is not generally so elsewhere. If it were, tickets of $6\frac{1}{4}$, 10, $12\frac{1}{2}$, 25, and 50 cents, issued by mayors and corporation officers, and dollar bills torn in two pieces, for the purposes of change, would not be employed for that purpose. This single fact is an answer to the second objection. The fractional parts of a dollar are so indispensable in the transactions of individuals, that any thing which assumes that character will be employed. If the tickets, which at this moment form so great a portion of the change of this city, and of various other places, are employed for that purpose, it is inconceivable that the community should refuse to permit a compound coin of silver and copper to circulate, containing the intrinsic value which it represents, merely because, for manufactures, it will not be worth more than brass or copper, and that the expense of refining will be equal to the value of the silver. Change (that is, the fractional parts of a dollar) is so indispensable to the community, that its inapplicability to manufactures, and its exemption from liability to exportation, instead of forming objections, are recommendations in its favor.

The objection that this coin may be easily counterfeited is, if it cannot be obviated, entitled to great consideration. As has been before stated, this compound coinage has been successfully practised in other States. If compound metals are much harder than their component ingredients, may not a sufficient security against counterfeiting be derived from that circumstance? The dimensions and power of the machinery, which constitute one of the objections to the coinage, will render it extremely difficult to secure that secrecy and concealment which are indispensable to the success of the counterfeiter. If this compound coinage should not be carried higher than ten cent or disme pieces, the inducement, compared with the danger of detection, resulting from the magnitude of the machinery, would not, it is believed, be sufficient to encourage counterfeiting. If, however, it should be deemed impracticable to guard against this evil, in a coinage composed of silver and copper, an attempt might be made to obtain a supply of small change, by a mixture of silver and zinc. The danger of counterfeiting would then be removed.

As various plans have been suggested, during the last twelve months, for alleviating the general distress which has prevailed, by the emission of a large amount of Treasury notes, a few observations on that subject will close this part of the report.

If Treasury notes are to be issued for this purpose, they will be either receivable in all payments to the Government, or they will be made redeemable at a fixed period.

1. If they are made receivable in all payments to the Government, the revenue will, from the time that $5,000,000 are issued, be substantially received in them. The Government will be immediately unable to pay the interest and reimbursement of the public debt in specie as it becomes due. These notes, when compared with the notes of the Bank of the United States, will be at a discount. The latter notes, independently of their being every where receivable in all payments to the Government, are convertible, at the place of their issue, into specie. They are equal to the Treasury notes in payment of the revenue, and superior to them, as they can command specie when the holder shall desire it.

If the fourteenth section of the bank charter were modified, so that the notes of the bank and of its offices should be receivable by the Government only when tendered where they are made payable, a small amount of Treasury notes might be issued, and circulated, without depreciation. In that case, they would be used for the transmission of money, and would be in constant demand for that purpose. It is the reception of the notes of the Bank of the United States, and its offices, by the Government, wherever they are tendered, that causes them to be considered

as a good remittance throughout the United States. If they should cease to be so received, a demand for Treasury notes to a small amount, for the transmission of money, would be created, and would preserve them from depreciation. If the notes thus issued should be made redeemable at the Treasury, in specie, upon demand, the amount which might be put and retained in circulation would probably exceed, to a considerable extent, the sum demanded for the facile transmission of money. Such Treasury notes would, however, have no advantage over the notes of the Bank of the United States, as long as they are receivable in all payments to the United States, without reference to the place where they are payable. It is even probable that they would not be of equal value and currency with those notes, as the latter would generally be made payable in the principal commercial cities, where remittances are continually made, whilst the Treasury notes would be payable only at this place. If Treasury notes, payable in specie, on demand, when presented at this place, should be preferred to the notes of the Bank of the United States, it would be in consequence of the abuses which have been practised by banking institutions, which have, in some degree, shaken the public confidence in the integrity of their direction.

2. If Treasury notes were to be issued, not receivable in payments to the Government, but redeemable at a fixed period, they would immediately depreciate, unless they bore nearly six per cent. interest. In the latter case, they would be of little more use, as currency, than the funded debt. They would not perform the functions of money.

3. In any case whatever, whether they are receivable in payments to the Government, or bear an interest, and are redeemable at a fixed period, they will afford no substantial relief where the distress is greatest, unless they should be advanced as a loan in order to alleviate that distress. If they are to be issued from the Treasury in discharge of the demands upon the Government, they would never reach those sections of country where relief is most required. *There*, the Government already collects more than can be expended. One of the causes of this distress is the necessity of transferring the public funds from those sections, for the purpose of being expended, to those where there is no deficiency of currency.

As a financial resource, the issue of Treasury notes is justifiable only where the deficiency which they are intended to supply is small in amount, and temporary in its nature. As a measure of alleviation, it will be more likely to do harm than good. If a sufficient amount of those notes, of any description whatever, should be issued, and put into circulation where they are most wanted, unless they were given away, a debt in that part of the Union would be contracted to the extent of the issue. It might enable the borrowers to pay debts previously contracted, but their relative situation would be the same. Unless the currency became vitiated by the relief which was afforded, the ultimate payment of the debt would consummate the ruin which the measure was intended to prevent. But it is probable that the sums which might be advanced, by way of loan, would, in a great degree, be lost. The Government is not, from its nature, qualified for operations of this kind. The general system of credit which has been introduced by the agency of banks, and by the inevitable effect of the measures of the General Government, has produced an artificial state of things, which requires repression rather than extension. The issue of Treasury notes for the purpose of alleviating the general distress, would tend to increase this unnatural and forced state of things, and give to it a duration which it would otherwise never attain. If much of the evil resulting from a decreasing currency had not already been suffered, there might be some plausible reason for urging the issue of Treasury notes as a measure of alleviation. This ground cannot be urged in its favor; it is therefore indefensible, upon the ground of expediency as well as of principle.

The last member of the resolution assumes, by implication, the practicability of substituting, by the constitutional exercise of the powers of Congress, a paper currency for that which now exists.

In considering this proposition, the power of Congress over the currency of the United States cannot, consistently with the respect which is due to that body, be either affirmed or denied. It cannot be supposed that the House of Representatives, in adopting the resolution in question, intended, through the agency of an executive department of the Government, to institute an inquiry as to the extent of the constitutional authority of a body of which it is only a constituent member. Yet it will necessarily occur to the House, that, if the power of Congress over the currency is not absolutely sovereign, the inquiry, whatever may be its immediate result, must be without any ultimate utility. The general prosperity will not be advanced by demonstrating that there is no intrinsic obstacle to the substitution of a paper for a metallic currency, if the power to adopt the substitute has been withheld from the Federal Government. Without offering an opinion upon the weight to which these views would have been entitled had they been urged whilst the resolution was under consideration, it is admitted that they furnish no ground for declining the performance of the duty imposed by its adoption. In the discussion of a question of so much delicacy and importance, the utmost confidence is reposed in the justice and liberality of those who have rendered it indispensable.

At the threshold of this inquiry, it is proper to observe that it is deemed unnecessary to present an analysis of the motives which led, even in the most remote antiquity, to the general adoption, by civilized States, of gold and silver as the standard of value, or of the advantages which have resulted from that adoption. The circumstance to which, in the course of this investigation, it will be necessary to advert, is the tendency which a metallic currency has to preserve a greater uniformity of value than any other commodity; and the facility with which it returns to that value, whenever, by any temporary causes, that uniformity has been interrupted. No argument will, in this place, be offered in support of this proposition. It is founded in the experience of all nations. Its truth, for the present, will therefore be assumed. But the proposition itself admits that gold and silver, when employed by the consent of all civilized States as the standard of value, are subject to temporary variations of value. It is equally true that they are subject to permanent variations. The cause and effect of these changes will be considered previously to the discussion of the practicability of substituting a paper for a metallic currency.

1st. When, by any circumstance whatsoever, a greater portion of these metals is found in a particular State than is possessed by other States having articles of equal value to be exchanged, they will, in such State, be of less value than in the adjacent States. This will be manifested by an increase in the price of the commodities of such State. This increase of price will continue until the metallic redundancy is exported or converted into manufactures. Whenever this redundancy is disposed of, the currency will return to its former value, and the price of other commodities will be regulated by that value.

2d. But the exportation of specie may take place where there is no such redundancy. This occurs whenever the general balance of trade continues for some time unfavorable to a particular State. The currency then appreciates in value, and the price of all other commodities in such State is diminished. As commerce is nothing more than the exchange of equivalents, the reduction in the price of the articles of such State, and the increased value of the currency, will promptly produce a reaction; and gold and silver will soon return in the quantities required to reduce their value to that which they maintain in the adjacent States. With the return of specie, all other articles will return to the prices which they commanded before its exportation. Like fluids, the precious metals, so long as they are employed as the general measure of value, will constantly tend to preserve a common level. Every variation from it will be promptly corrected, without the intervention of human laws. These fluctuations, being

temporary in their nature, are wholly independent of the permanent causes which may affect the value of gold and silver when employed as the general standard of value. They will equally occur, whether the quantity of these metals, compared with the exchanges which they are destined to effect, be redundant or deficient. The limits, however, within which these fluctuations are confined, are so contracted, that the great interests of society cannot be seriously affected by them. But this observation must be understood to apply to a currency purely metallic, or, at least, when the paper which is connected with it does not exceed the demand for the convenient transmission of money.

3d. Gold and silver, when employed by the common consent of nations as the standard of value, are subject to variations in value from permanent causes. When their quantity is increased more rapidly than the articles which are to be exchanged through their agency, their price will fall, or, what amounts to the same thing, the price of all exchangeable articles will rise. It has been admitted by all intelligent writers upon this subject, that, immediately after the discovery of America, towards the close of the fifteenth century, a sudden and extensive depreciation in the value of these metals occurred; and that, from that time to the close of the eighteenth century, they continued gradually to depreciate. This depreciation, it is believed, has been accelerated during the last century, as much by the substitution of paper for specie, as by the increase in the quantity of those metals during that period, beyond the demand which would have existed for them as currency had that substitution not taken place. The precise effect upon the depreciation of these metals, produced by the partial substitution of paper in various countries for a metallic currency, will not now be inquired into; but it is generally conceded that the depreciation has been more rapid since that substitution than at any former period, except when the accumulated stock of ages in the new world was brought into Christendom, and thence distributed into every other region where gold and silver were in demand. Since the close of the last century doubts have existed whether those metals, even when employed as currency, have not appreciated in value; and it is contended, by the advocates of a paper currency, that this appreciation will probably continue through a long succession of years, and seriously affect all the operations of the civilized world. It is maintained by these writers that the demand for currency at present, throughout the world, is greater than the supply which the existing quantity of the precious metals will afford, without materially depressing the price of all the objects of human industry and human desires. When it is recollected that production is regulated by demand, and that both are directly affected by the quantity of currency compared with the quantity of articles to be exchanged, it is readily perceived that an increase in the currency of the world, by the substitution of paper, even when convertible into coin, will increase the quantity of exchangeable commodities in the world beyond what would have existed had such increase of currency not taken place. Under such circumstances, a sudden reduction of the currency, by the rejection of the paper which had been employed, could not fail to derange all the relations of society, by diminishing the quantity of currency, whilst the articles to be exchanged through its agency would suffer no such diminution. An immediate depression in the price of all commodities would be the inevitable consequence of an unqualified return to a metallic currency, upon the supposition that the quantity of gold and silver annually produced should remain undiminished. But, if this return to a metallic currency should be attempted at a period when the annual product of these metals, either from temporary or permanent causes, should have considerably decreased, all the great interests of society would be most seriously disordered; property of every description would rapidly fall in value; the relations between creditor and debtor would be violently and suddenly changed. This change would be greatly to the injury of the debtor; the property which would be necessary to discharge his debts would exceed that which he had received from his creditor; the one would be ruined without the imputation of crime, whilst the other would be enriched without the semblance of merit. Until the engagements existing at the moment of such a change are discharged, and the price of labor and of commodities is reduced to the proportion which it must bear to the quantity of currency employed as the medium of their exchange, enterprise of every kind will be repressed, and misery and distress universally prevail. When this shall be effected, the relations of society, founded upon a new basis, will be equitable and just, and tend to promote and secure the general prosperity.

Such, it is contended by the advocates of a paper currency, are the circumstances under which the principal States of Europe are endeavoring to return to a metallic currency. For a century past, the currency of those States has been greatly increased by the employment of paper, founded, it is true, originally, upon a metallic basis. During the last twenty years, this paper has ceased to be convertible into specie; and, as no systematic effort has been made to prevent excessive issues, it has become redundant, and, consequently, depreciated. Notwithstanding this depreciation, the productions of those countries, it is believed, have more rapidly increased than those of countries where a metallic currency has been preserved. The first efforts that are seriously made by those States to return to a metallic currency, will be the repression of enterprise of every description among themselves. It will be foreseen that the currency must appreciate, and that all other articles must depreciate in value. The effects of this appreciation of money will be first manifested in those States by the fall of the price of all articles which cannot be exported. In the progress of these measures, the price of the exportable articles will also be affected, by the reduction in the currency employed in effecting their exchange. It is even probable that the quantity of exchangeable articles will be diminished. Whilst the appreciation of the currency is perceptibly advancing, the manufacturer will not hazard his capital in producing articles, the price of which is rapidly declining. The merchant will abstain from purchasing, under the apprehension of a further reduction of price, and of the difficulty of revending at a profit. It is even probable that the interest of money will fall, whilst the cry of a scarcity of money will be incessant. Under such circumstances, loans will not be required, except to meet debts of immediate urgency. None will be demanded for the prosecution of enterprises, by which the productive energies of the community will be increased.

As the measures which have been adopted by England, and several of the continental States of Europe, for returning to a metallic currency advance, the interest of those States which have adhered to it will be affected. Whilst gold and silver were, in the former States, dispensed with as coin, they were sought for merely as commodities. The quantity necessary for their manufactures was readily obtained, without deranging, in any serious degree, the currency of other States.

It has been estimated that from eighty to one hundred and twenty millions of dollars were necessary to England. Taking the mean sum, and admitting that the other European States engaged in the same effort require an equal amount, a supply of two hundred millions of dollars is necessary. The commencement of the measures necessary to obtain that portion of this sum which cannot, in a short time, be drawn from the annual product of the mines, may not be immediately felt by other States. But, when these measures approach their completion; when a large quantity of gold and silver is necessarily withdrawn from the currency of other States, the price of specie will, in the latter, appreciate, and the price of all commodities will decline. All the evils incident to an appreciating currency will be felt in those States, though in a less degree than where a paper currency had been exclusively adopted. The example presented by the return to a metallic currency in France, even in the midst of a revolution, which probably had some influence upon the decision of this question by other States, is believed to be,

in no degree, analogous in its principal circumstances. At the precise period that this change was operating, England and the principal continental States abandoned the precious metals as currency. The supply demanded by France was not only at hand, but was seeking the very employment which that change had made indispensable. At the same time, immense sums were brought into France by her conquering armies, which, being raised by military contributions, had, in some degree, rendered a resort to paper currency, in the invaded States, necessary. At present, the civilized world is at peace, and each State is endeavoring, by systematic measures, to secure to itself a just participation of the benefits of equal and reciprocal commerce. The States which are now attempting to return to a metallic currency will find much greater difficulty in effecting this change than was experienced by France.

The demand for gold and silver, as the medium of exchange, cannot be supplied until the price of all exchangeable articles has fallen in proportion to the reduction of the currency, which the abandonment of paper must produce. It is even probable, as has been before suggested, that, after the price of commodities and of labor shall have fallen, so as to bear a just proportion to the currency which is to be employed in effecting the necessary exchanges, the currency will continue gradually to appreciate. This, however, is matter of conjecture. It depends entirely upon the fact, whether the annual product of the mines, after furnishing the quantity necessary for the consumption of the precious metals in manufactures, will be equal to the increased demand for currency, arising from the increase of exchangeable commodities throughout the world. The great advancement in the arts and sciences, the rapid improvements in machinery which characterize the present age, acting through a long succession of ages, cannot fail to augment, in an astonishing degree, all the products of human industry.

It may, however, be urged, that the same improvements will augment, in an equal degree, the product of the mines; and that, therefore, the quantity of the precious metals in the world will continue to bear to other commodities the same relation which they may assume when the return to a metallic currency is effected. This may be true; but, so far as it depends upon the general principle, that the supply of all articles is regulated by the demand, there is reasonable ground of doubt. The maxim, although good as a general rule, admits of exceptions. A demand beyond the supply increases the price of the thing demanded, and invites to the investment of additional capital in its production. But, when the article demanded is to be produced from a material which no investment of capital, no application of skill, can augment, the only effect of such investment and application is to produce the most which the material has the capacity to furnish. Such, in fact, is the case of gold and silver. The material from which they are made is limited in quantity, which neither capital nor skill can augment. It is probable that the improvements in machinery, and the art of refining, will be counterbalanced by the exhaustion of the mines, or the difficulty of working them, arising from the depth and extent of their excavations. It is, therefore, possible that the demand for the precious metals, for currency and for manufactures, may exceed the production of the mines.

Previously to entering upon the immediate discussion of the practicability of substituting a paper for a metallic currency, it is proper to observe, that gold and silver derive part of the uniformity of value which has been ascribed to them, from the general consent of civilized States to employ them as the standard of value. Should they cease to be used for that purpose, they would become more variable in their value, and would be regulated, like all other articles, by the demand for them, compared with the supply in any given market. It is presumed that, if they should cease to be employed as the standard of value by several States, their uniformity of value would be, in some degree, affected, not only in those States where they were considered as mere commodities, but in those where they were still employed as currency. Whenever, as commodities, they should rise in value, a drain would take place from the currency of other States; and when they should fall in value, as commodities, they would seek employment as currency, and render, in some degree, redundant the currency of the States where they are employed. After making due allowance for the depreciation of bank notes in England, from the time of the bank restriction, in 1797, to the present period, the price of gold and silver in that country is believed to have varied more than at any former period. Their price, when compared with bank notes, from the year 1797 to 1808, showed but a slight degree of depreciation—considerably less, in all human probability, than actually existed. During that interval, the demand for those metals was limited in England to the sum required for manufactures. It is highly probable that, if the quantity of the paper circulation had been reduced to the amount of the currency in circulation at the time, or for one year before the restriction, the price of bullion would have been below the mint price. On the contrary, in the year 1808, when the employment of a British force in Spain created a sudden demand for specie, the depreciation of bank notes, indicated by the price of bullion, was probably greater than that which really existed. In the year 1814, after the treaty of Paris, the price of bullion, estimated in bank paper, was not above the mint price; whilst, in the succeeding year, it rose to more than twenty per cent. above that price: the amount of bank notes in circulation at the former exceeding, in a small degree, that of the latter period. It is impossible that these variations in the price of gold and silver, in the short space of one year, can be entirely chargeable to the depreciation of bank notes. The effect which these variations, in a great commercial State, where the precious metals were considered only as commodities, were calculated to produce upon the currency of the neighboring States, has not been ascertained. The convulsions to which most of these States were subject during that period may account for the want of sufficient data to elucidate the subject. It is, however, highly improbable that these fluctuations were not sensibly felt by them.

Having considered the nature and extent of the variations in value, to which a metallic currency is necessarily subject, it remains to examine whether it is practicable to devise a system by which a paper currency may be employed as the standard of value, with sufficient security against variations in its value, and with the same certainty of its recovering that value, when, from any cause, such variations shall have been produced. It is distinctly admitted that no such paper currency has ever existed. Where the experiment has been made directly by Government, excessive issues have quickly ensued, and depreciation has been the immediate consequence. Where the experiment has been attempted through the agency of banks, it has invariably failed. In both cases, instead of being used as a mean of supplying a cheap and stable currency, invariably regulated by the demand, for effecting the exchanges required by the wants and convenience of society, it has been employed as a financial resource, or made the instrument of unrestrained cupidity. In no case has any attempt been made to determine the principles upon which such a currency, to be stable, must be founded. Instead of salutary restraints being imposed upon the moneyed institutions which have been employed, the vital principle of whose being is gain, they have not simply been left to the guidance of their own cupidity, but have been stimulated to excessive issues, to supply deficiencies in the public revenue. This is known to have been the case, in an eminent degree, in the experiment which has been attended with most success. The issues of the Bank of England, on account of the Government, were frequently so great as to destroy the demand for discounts by individuals. In consequence of these excessive issues, the interest of money fell below five per cent., the rate at which the bank discounted; the demand for discounts at the bank, therefore, ceased. It is, indeed, not surprising that no systematic effort has been made to restrain excessive issues. In the case of banks, the experiments which have been made were intended to be temporary; they were the result of great and sudden pressure, which left but little leisure for the examination of a subject so abstruse.

The employment of a paper circulation convertible into specie, the favorite system of modern States, having, as has been attempted to be shown in a previous part of this report, the inevitable tendency to produce the necessity of resorting, in every national emergency, to paper not so convertible, imposes upon those who are called to administer the affairs of nations the duty of thoroughly examining the subject, with a view, if practicable, to avoid that necessity. If the examination should not result in the establishment of a paper currency, unconnected with specie, it may lead to the imposition of salutary checks against excessive issues, when the necessity of suspending payment may occur.

It has already been said that every attempt which has been made to introduce a paper currency has failed. It may also be said, that of all the systems which, during the discussion of this interesting subject, both in Europe and the United States, have been proposed, none are free from objections. It is possible that no system can be devised which will be entirely free from objection. To insure the possibility of employing such a currency with advantage, it is necessary—

1. That the power of the Government over the currency be absolutely sovereign.
2. That its stability be above suspicion.
3. That its justice, morality, and intelligence be unquestionable.
4. That the issue of the currency be made not only to depend upon the demand for it, but that an equivalent be actually received.
5. That an equivalent can only be found in the delivery of an equal amount of gold or silver, or of public stock.
6. That whenever, from any cause, it may become redundant, it may be funded at an interest a fraction below that which was surrendered at its issue.

1. This proposition needs no elucidation. Coinage and the regulation of money have, in all nations, been considered one of the highest acts of sovereignty. It may well be doubted, however, whether a sovereign power over the coinage necessarily gives the right to establish a paper currency. The power to establish such a currency ought not only to be unquestionable, but unquestioned. Any doubt of the legality of the exercise of such an authority could not fail to mar any system which human ingenuity could devise.

2. A metallic currency, having an intrinsic value, independent of that which is given to it by the sovereign authority, does not depend upon the stability of the Government for its value. Revolutions may arise; insurrections may menace the existence of the Government: a metallic currency rises in value under such circumstances; it becomes more valuable, compared with every species of property, whether moveable or immoveable, in proportion to the instability of the Government. Not so with a paper currency: its credit depends, in a great degree, upon the confidence reposed in the stability of the authority by which it was issued. Should that authority be overthrown by foreign force or intestine commotion, an immediate depreciation, if not an absolute annihilation, of its value would ensue.

3. It might, however, be saved from such destruction by a well grounded confidence in the justice and intelligence of the Government which should succeed that which had been overthrown. The history of modern times furnishes examples that are calculated to inspire this confidence. In France, during the revolution which has just terminated, the public debt was reduced to one-third of its amount. The same rule was applied to the public debt of the Dutch republic, when it fell under French domination. In the successive political changes to which France has, since that period, been subjected, the public debt and the public engagements have been maintained with the strictest good faith. In Holland, that portion of the public debt which had been abolished by the French Government has been restored. In the opinion of well informed men, however, the conditions connected with that restoration were so onerous as to render it almost nominal. Indeed, the public debt in that country had become so disproportionate to the means of the nation when deprived of the resources it enjoyed when the debt was contracted, that the reduction which it underwent while the country was annexed to the French empire was not generally considered an evil. The reduction of the national debt of France during the revolution was perhaps equally indispensable. If the intelligence of the age, and the influence of public opinion, even in States where the reign of law was but imperfectly established, have been sufficient to induce the Governments which have alternately succeeded each other for the last twenty-five years, in France and Holland, to respect the public engagements which had been previously contracted, well grounded expectations may be cherished that the period is rapidly passing away when the public faith of nations can be violated with impunity.

If public engagements, under such circumstances, have been considered obligatory upon those who have successively administered the affairs of those nations, a reasonable confidence may be reposed in the fufilment of the obligations which may be contracted by existing Governments, where the reign of law is firmly established. It is not denied that a paper currency furnishes strong temptations to abuse. Millions may be issued in a few days, and the deficiencies in the revenue promptly supplied, if the condition of receiving an equivalent is abandoned. The moment the currency shall be issued as a financial resource, depreciation will follow, and all the relations of society will be disturbed. If the Government of the nation in which a paper currency has been established shall be deeply impressed with this truth, will it not be restrained from the apprehended abuse? Currency of every kind is liable to great abuses. The history of the coinage of every nation whose annals are known, is little more than a detail of the frauds which have been practised by Governments upon the people. Until the twentieth year of the reign of Edward III. of England, a pound troy of silver, of standard fineness, and a pound sterling, were synonymous terms; twenty shillings sterling being, in fact, a pound troy of standard silver. Change followed change in rapid succession, until, in the reign of Elizabeth, a pound troy of standard silver was directed to be coined into sixty-two shillings. This immense change in the value of the currency was effected in the space of about two centuries. In other modern States, during the same period, changes not less important occurred in the coinage. Frequently, these changes were effected by deteriorating the standard fineness of the coin. For more than a century past, the coinage of the civilized world has undergone no material change, with a view to the practice of fraud upon the people. Whether this forbearance is to be attributed to an improvement in the morality of modern Governments, or to a more correct understanding of the principles of currency and of the consequences that must result from every change by which the relations of society are affected, it furnishes just ground of expectation that they will not hereafter be attempted. Nothing more is necessary to secure an unalterable adherence to the maxims upon which it is manifestly necessary that a paper currency must be founded, in order to preserve a uniformity of value, than the same morality and the same intelligence. Without assuming the principle of the perfectibility of human nature, the hope may be indulged that the nature of currency will continue to command the attention of statesmen, and that the abuses which have resulted from improper changes in the currency will not again occur in the same degree.

4. When the currency is metallic, no addition can be made to it without giving an equivalent. It is indispensable that this condition should be annexed to the acquisition of the paper currency, preliminary to its entering into circulation. If it can be put in circulation only on paying its nominal amount in that which has a general and fixed value, determined by the consent of other nations, it will continue to preserve that value during the time it circu-

lates, unless the relation which it bore at the time of its issue to the quantity of articles the exchanges of which it is destined to perform shall be varied.

5. As a paper currency is issued upon the national credit, the whole property of the nation is pledged for its redemption, whenever, by any circumstance, it may become the interest of the community that it should be redeemed. It is, therefore, manifest that it should not issue upon the credit of any individual, or association of individuals. A part can never be equal to the whole. The credit of any individual, or association of individuals, cannot be equivalent to that of the nation, of which they form a part. But it may be said that, although the credit of individuals is not equivalent to the credit of the nation, yet an equivalent for a particular portion of that credit may be found in the pledge or mortgage of property of equal or greater value than the currency issued upon it. This may be true; but the value of property has been continually fluctuating: it will continue to fluctuate, after giving to the advocates of a paper currency full credit for the superior stability which they suppose will attend its substitution for gold and silver as the standard of value. But this is not the only objection to the acceptance of property, as a pledge for the payment, by individuals, of an equivalent for the paper currency which may be advanced upon such pledge. Frauds will be practised by pledging property which is encumbered, which it would be extremely difficult to detect. The Government will be involved in endless litigation with individuals who are interested in the encumbrances by which its rights to the property pledged is embarrassed. In such contests, the interest of the Government is always endangered, even where right is on its side. It is not qualified to enter into such litigations with an equal chance of success. The feelings of the community are always, except in flagrant cases of fraud, upon the side of an individual supposed to be struggling with the overwhelming influence of authority. Besides, in all contests of this nature, something of the respect for the Government, which ought to be cherished by the citizens, especially of a free State, will be lost. The situation is invidious, and ought not voluntarily to be assumed by a Government jealous of its dignity and purity of character. It is, therefore, believed that a national currency cannot be issued with safety, with a reasonable prospect of success, and with sufficient security against redundancy, but in exchange for gold and silver of a definite standard, or for the public stock at certain fixed rates. When issued in exchange for them, and for them alone, there is, though not the same, yet perhaps an equal security against redundancy as in the case of a metallic currency. When it is issued in exchange for coin, there is no addition made to the currency. When it is issued in exchange for public stock, commanding, previously to the exchange, its par value in coin, the party who acquires the currency parts with that which was equal to specie, and is deprived of the annual interest which it produced. Unless the interest of the currency, resulting from its scarcity, should exceed that paid upon the stock, it would not be demanded in exchange for the stock. In either case, the danger of redundancy is extremely remote. By the exchange of specie for currency, the active capital of the country will be increased to the amount of the currency; and the capacity of the nation to redeem it, whenever it shall, by any circumstance whatever, become expedient, will be unquestionable.

But it may be doubted whether, under such conditions, a paper currency ever can be put in circulation. Under a Government firmly established, conducted by upright and enlightened councils, and possessing absolute power over the currency, it is believed there is no just reason to apprehend a difficulty of that nature. If, in such a Government, banks existed, deriving their powers from it, the specie in their possession would be gradually exchanged for the paper currency which would become the basis of their operations. Not only the specie which they possessed would be thus exchanged, but exertions would, from time to time, be made to acquire the sums necessary to support their banking operations. Specie would be imported, even at an expense, for the purpose of being exchanged. Whilst specie formed the basis of the operations of banks, its importation could not fail to be productive of loss; each importation not only producing the necessity of additional importations, but at an increased expense. But, when importations shall be made for the purpose of being exchanged for the currency, the exportation of the specie thus imported will not affect the operations of the banks. It is only when the funding of the currency shall commence, that they will be admonished to desist from further importations. Individuals and banks would likewise exchange public stock at the rates prescribed by the system for the paper currency. Whenever the demand for currency should be such as to raise the interest of money considerably above that produced by the public stock, it would, by banks and individuals, be given in exchange for the currency. But the facility which the existence of a public debt furnishes in procuring the paper currency is counterbalanced by the difficulty of complying with the public engagement to discharge such debt in a metallic currency. After a paper circulation shall be substituted for gold and silver, they will be found in the country only in the quantity demanded for manufactures, and for such branches of commerce as are entirely dependent upon them. A considerable demand for gold and silver by the Government, to meet its engagements previously contracted, would raise their price in the market, and render the obligation to discharge those engagements in the precious metals not only extremely onerous, but, perhaps, sometimes impracticable. In such a state, a compromise with the public creditors would seem to be a preliminary measure. This, under any circumstances, would be a measure of great delicacy and difficulty, and, in some cases, would probably be utterly impracticable.

6. Whenever, from any cause, the currency should become redundant, the redundancy may be funded at a rate of interest a fraction below the rate of legal interest.

In determining the rate at which it may be funded, due regard should be paid to the rate of interest previously existing in the State. The rate of interest, it is conceived, ought not to depend (and, where a metallic currency prevails, does not depend) solely upon the amount of currency necessary to perform with facility the exchanges required by the wants and convenience of society. In a new country, where there is but a slight accumulation of capital, the interest of money will be high, notwithstanding there may be even a redundancy of currency beyond what is necessary to effect its exchanges. In such a country, all the objects upon which capital may be employed, except those of the most simple kind, are unoccupied. The currency necessary to effect the exchanges of its property, moveable and immoveable, will be entirely insufficient to satisfy the demand for capital for those objects. If it should be multiplied so as to equal that demand, it would exceed the demand for the necessary exchanges of society, and consequently depreciate; such, in fact, it is believed, would be the consequence of issuing the currency upon individual credit, or upon the pledge of property, at a rate of interest below that which previously existed in the State. Any change of the interest of money by law, previous to its having taken place in individual transactions, in consequence of the accumulation of capital, would be unjust, and could not fail to produce serious inconvenience to the community. Admitting the rate of interest, in a State about to make the experiment, to be six per cent., then the currency should be issued only in exchange for specie, or six per cent. or other stock, according to that ratio. If the currency should, when by any means a redundancy existed, be fundable at five and a half per cent. interest, the utmost depreciation to which it could be subject would be eight and one-third per cent. But it is probable that the real depression in its value would not, at any time, be more than half that amount. Before funding would commence, the public stock receivable in exchange for the national currency would be above the rates at which it was receivable. Its issue upon the exchange of stock would therefore have ceased. There are, in every community, capitalists who would prefer lending to the Government at five and a half per cent., than to indi-

viduals at six. The funding of the currency would, therefore, begin before the redundancy would offer any general inducement to that mode of reducing it. The variation to which its value would be subject would, therefore, be less than eight and one-third per cent. It would be the interest of the Government to reserve the right of redeeming the stock created by funding at its par value, under the condition, however, of redeeming it according to the order of time in which it was created. Connected with this system should be a permission to the banks to purchase public stock, but not to dispose of it, except to the Government, at its par, or current value when under par, unless the Government should decline the purchase. The currency, upon being funded, should be invariably cancelled. Under a system of this kind, if no other paper were permitted to circulate than the national currency, a redundancy which would affect its value could only occur by a temporary diminution of the articles which were to be exchanged through its instrumentality. In that event, the price of the articles would be enhanced so as to require a greater amount of currency to effect their exchange. Should the price not be enhanced in proportion to the diminution in the quantity of the articles, that portion of the currency which would, under such circumstances, be left without employment would be funded. A just relation between the amount of currency and the demand for it would be promptly restored, without affecting injuriously the relations between individuals. On the other hand, should a greater quantity of exchangeable articles be produced, the demand for currency would exceed the supply, and lead immediately to additional issues, until the necessary supply should be obtained.

But, in a State where banks already existed, which derived their charters from the sovereignty that regulated the currency; where the people were accustomed to bank notes, and in the habit of receiving them, the agency of these institutions might be admitted in supplying a portion of the currency. They might be permitted to issue their notes, payable on demand, in the national currency; their notes would, of course, be issued on personal security. In this case, the currency might become redundant by the issues of the banks. Whenever this should happen, the national currency would be demanded of them for the purpose of being funded; the banks would be compelled to curtail their discounts, to relieve themselves from the pressure; and the amount of the currency would be promptly reduced to the legitimate demand. Wherever the agency of banks should be employed in furnishing part of the circulation, a refusal or omission to discharge their notes, on demand, in the national currency, should be treated as an act of bankruptcy. The national currency, being a legal tender in the payment of debts to individuals and to the Government, would, in relation to the banks, perform the functions of specie, where bank notes are convertible into coin. But, in order to impose a salutary check against excessive issues of bank notes, the national currency should alone be receivable in all payments to the Government.

In an attempt to trace the probable results of a paper currency, founded upon the principles which have been developed in the preceding pages, the influence which it will have upon foreign exchange requires investigation. The want of stability, morality, and intelligence in the Government which may undertake to substitute a paper for a metallic currency, are the objections which have already been considered. To these, according to common opinion, is to be added the injurious effect which it is supposed it will have upon foreign exchange. In a country where the currency is metallic, an unfavorable state of foreign exchange will probably have the following effects:

1st. To raise the price of exportable articles as much above that which they ought to bear as the premium paid upon foreign bills, until it exceeds the expense of exporting specie to the foreign market.

2d. When this rise exceeds the expense of such exportation, the price of exportable articles will fall gradually below what they ought to command, to the extent of that excess.

3d. Until this fall in their price shall be effected, specie will be exported; after which it will cease.

4th. This fall in their price, by increasing their consumption in the foreign markets, ultimately provides for the return of the specie which had been exported.

5th. During the second and third stages of this process, the price of all articles not exportable is affected in a greater degree, enterprise is damped, and distress prevails.

Such are the necessary effects of an unfavorable state of foreign exchange, where the currency is metallic. As the vital principle of commerce is gain, it is probable that, generally, the price of exportable articles would, in fact, be rather higher than is stated in the preceding deductions. The timid might export specie before the premium upon exchange exceeded the expense of its exportation; but timidity is not the predominant characteristic of commercial enterprise. On the other hand, the sanguine and enterprising, relying upon the chance of better markets, would give higher prices rather than submit to certain loss upon the exportation of specie, or the purchase of bills above par.

In a country where a paper currency has been adopted, and the principles by which a redundancy may be prevented have been enforced, an unfavorable state of foreign exchange will probably have the following effects:

1st. The effect of raising the price of exportable articles as much above what they ought to bear as equals the premium upon foreign bills; but, in this case, gold and silver, being exportable articles, will rise in the same proportion as all other articles.

2d. When the price of all articles is raised so high that a loss will be incurred by their sale in foreign markets, those who have no remittances to make will withdraw from the competition. If profitable investments in other enterprises cannot be made, a portion of the currency, at their disposition, will be withdrawn from circulation, by being converted into funded stock; competition will, in this manner, be diminished; the price of articles for exportation will be reduced by the reduction of the currency, and by diminished competition among the purchasers. It is not probable, however, that the price will fall so low as to admit of a profit in foreign markets, as long as the premium upon exchange continues above the ordinary commercial profit upon exported articles. But exportation will not be continued at a certain loss longer than the discharge of debts previously contracted renders indispensable; foreign articles will not be imported, when the loss upon remittances, whether made by bills of exchange, or by the exportation of commodities, is equal to the profit upon importation; the high price given for exported articles will increase their production, and restore foreign exchange to a favorable state. The balance of trade and the rate of foreign exchange, which have given so much trouble to statesmen for two centuries past, when left to the laws by which they will be governed, in despite of human devices, as invariably regulate themselves, as fluids, when unrestrained, find their common level. They will probably more promptly conform to these laws in a State where a well regulated paper currency prevails, than where it is metallic. In the latter, the currency is exported to make up any temporary deficiency, and, by that means, provides against the recurrence of the evil, by indirectly causing an increase of the exportable articles of the State, and diminishing the importation of foreign articles. Until the capacity to purchase these by the exchange of articles shall be restored in the former, as the currency cannot be exported, the importations will be more promptly reduced to the capacity of the country to purchase, whilst the increase of its exportable articles will be the direct, instead of the indirect, consequence of a temporary incapacity to pay for previous importations.

3d. During the whole process of restoring a favorable state of exchange, in a country where a well regulated paper currency prevails, the price of all articles not exportable will suffer no material variation. The funding of the currency, which will probably take place, will not be immediately carried so far as to reduce the price of exportable articles so as to command a profit in foreign markets. They will, so long as the rate of exchange is

unfavorable, continue to command higher prices than when the exchange is favorable. This increased price will encourage industry and enterprise, and constantly tend to augment the productive energies of the community. This effect cannot fairly be attributed to any depreciation in the currency. That will continue to bear nearly the same proportion to the exchangeable articles of the State as when foreign exchange was favorable. It is probable, even, that its relation to those articles will be changed, so as to produce an appreciation of the currency; and that this appreciation will be perceived, in a slight degree, in the depression of the value of all articles not exportable. The effects of this appreciation will, however, be diminished by the impulse given to industry and enterprise, by the increased price of all articles which can be exported.

These are conceived to be the effects which a well regulated paper currency will have upon the foreign exchanges, and upon the domestic industry of the country which may adopt it. If the value of currency depends, like that of all other articles, upon the quantity compared with the demand, the idea of its depreciation, in raising the price of articles in the case which has been considered, must be rejected. That this position is incontrovertible, seems to have been admitted by all writers upon the subject. This admission is found in the reports which have been made to the British Parliament; in the evidence upon which those reports have been founded; and in the essays of those who have opposed the paper system in that country, since the year 1797. The objection to the paper system, as it existed in England, was the absence of all restraint upon the issue of paper, and the supposed impossibility of imposing any efficient restraint. In fact, no attempt has been made to impose such restraint in that country, unconnected with the convertibility of bank notes into the precious metals. So far as this restraint is limited to the convertibility of bank notes into bullion, at any given rate, it is rather an attempt to regulate foreign exchange through the instrumentality of the bank, than to confine the issue of bank notes to the sound demand for currency. The restraint imposed seems to rest upon the idea that an unfavorable state of foreign exchange must be the result of a redundant currency. Nothing can be more incorrect than this hypothesis. Considering the vitiated state of the currency of England for more than twenty years past, it is not surprising that this idea should there be entertained. During that period, the unfavorable rate of foreign exchange which generally prevailed was, if not directly, at least indirectly, attributable to the depreciation of their currency. But, in this interval, a favorable rate of foreign exchange more than once occurred. To what could this favorable exchange be attributed? Certainly not to the depreciation of their currency. But it would be as unjust to attribute every unfavorable state of foreign exchange to the depreciation of the currency, as to ascribe to that currency the credit of any favorable state of such exchange. The truth is, that fluctuations in the exchange between two countries having a metallic currency continually occur, and depend upon principles wholly unconnected with the idea of a depreciated currency.

If these views be correct, the only obstacles to the establishment of a paper currency, by a Government having a sovereign right to establish it, is the danger of the instability and want of integrity and intelligence of the Government. There is certainly just reason to apprehend that emergencies may arise in the affairs of every nation, in which their stability may be menaced, by foreign force or domestic insurrection. In such an event, a panic might ensue, and the credit of the currency be utterly annihilated. How far the recent examples which have been adverted to in other States; how far the influence of public opinion over the conduct of Governments, may be relied upon, as an efficient preventive against evils of such magnitude, must be determined by those to whom, under Divine Providence, the prosperity and happiness of nations are committed. The subject involves all the complicated interests of society, except the enjoyment of civil, political, and religious liberty. It ought to be approached with more than ordinary circumspection. In States the best qualified to attempt the change, it is environed with doubts which can only be dispelled by the light of experiment. In the United States these doubts are greatly increased by the complex form of the government. In the division of power between the Federal and State Governments, the line of separation is not sufficiently distinct to prevent collisions, which may disturb the harmony of the system. Collisions have already arisen, and, in the course of human events, may be reasonably expected to arise, until the line of separation by which their relative powers and duties are determined shall be distinctly defined by practice, or by explanatory amendments of the constitution, effected according to the forms prescribed in that instrument. Upon no question will collision more likely arise than that contemplated by the resolution under which this report is submitted. No attempt to make the change has succeeded. The measure, when stripped of extraneous difficulties, must be admitted to be of doubtful tendency. Under the most auspicious circumstances, it may prove abortive; under circumstances in any degree adverse, it must inevitably fail. Any obstacle opposed to its execution, by one or more of the State Governments, would be decisive of its fate. Their simple acquiescence in the measure would not be sufficient to secure to it that issue to which the principles upon which it might be established would necessarily lead. Their active co-operation would be indispensable. The banks which derive their authority from the State Governments are generally bound by their charters to discharge their notes in specie on demand. From this obligation it would be necessary to the system to relieve them. The obligation to discharge their notes upon demand, in the national currency, should be substituted for that of paying them in specie.

If these obstacles should be removed, that connected with the public debt, which has been suggested in a previous part of the report, would still remain. After the substitution of the national currency, gold and silver would be imported only in the quantity required for manufactures, and for the prosecution of those branches of trade in which they are primary articles of commerce. For these purposes, the importations would be sufficient. They might even be sufficient, and at a reasonable price, for the payment of the annual interest of the public debt. But, after the year 1824, when the sum of $10,000,000 would annually be expended by the Commissioners of the Sinking Fund, it is probable that the premium which would be paid upon it would be considerable, until the debt was extinguished. A compromise, as has already been suggested, with the public creditors, would seem to be a measure preliminary to any attempt to establish a paper currency. It is more than probable that the attempt would not only be unsuccessful, but that it would injuriously affect the public credit.

It may, also, be proper to observe, that those sections of the Union where a measure of this kind would be most likely to be acceptable, would probably derive from it the least benefit. In the West and in the South the complaints of a deficient currency have been most distinctly heard. In the latter, these complaints are of recent date. In both, they proceed in a greater degree from the disbursement of the public revenue than from any other cause. The great mass of public expenditure is made to the east of this city. The revenue accruing from imports, though principally collected in the Middle and Eastern States, is paid by the great mass of consumers throughout the United States. That which is paid for the public lands, although in some degree drawn from every part of the Union, is principally paid by the citizens of the West and of the South. The greatest part of the revenue accruing from the public lands, as well as that collected in the Southern States, upon imports, has been transferred to the Middle and Eastern States to be expended. The necessity of making this transfer arises from the circumstance that the great mass of the public debt is held in those States, or by foreigners, whose agents reside in them; and from the establishment of dock-yards and naval stations in their principal ports. This transfer will continue to be necessary until the public debt shall be extinguished, and until the other expenditures of the Government can, consistently with the public interest, be more equally distributed. If a national currency should be established, the

demand for it in the Southern and Western States, for the purpose of transmission, would be incessant; whilst its return, by the ordinary course of trade, especially in the latter, would be slow, and, in some degree, uncertain. The currency, being every where receivable by the Government, would, for the purpose of remittance, be more frequently demanded in that section than specie, for the same reason that the notes of the Bank of the United States and its offices command there, at this time, a premium in specie. As the transfers of the public money are made by the Bank of the United States, the excitement produced by the demand for specie, or funds that can be remitted, consequent upon such transfers, has been directed against that institution. All the evils which the community, in particular parts of the country, has suffered from the sudden decrease of the currency, as well as from its depreciation, have been ascribed to the Bank of the United States, which, in transferring the public funds, has been a passive agent in the hands of the Government.

It is, then, believed that the evils which are felt in those sections of the Union where the distress is most general will not be extensively relieved by the establishment of a national currency. The sufferings which have been produced by the efforts that have been made to resume and to continue specie payments have been great. They are not terminated, and must continue until the value of property, and the price of labor, shall assume that relation to the precious metals which our wealth and industry, compared with those of other States, shall enable us to retain. Until this shall be effected, an abortive attempt, by the substitution of a paper currency, to arrest the evils we are suffering, will produce the most distressing consequences. The sufferings that are past will, in such an event, recur with additional violence, and the nation will again find itself in the situation which it held at the moment when specie payments were resumed.

I have the honor to be your most obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

A.

General statement of the Bank of the United States and its offices of discount and deposite at the dates specified herein.

DR.

Date.		Funded debt U.S. including that pledged by Charleston banks.	Bills discounted on personal security.	Bills discounted on funded debt.	Bills discounted on bank stock, &c.	Foreign bills of exchange.	Domestic bills of exchange.	Baring, Brothers, & Co. on account of bills in favor of J. Richards.	Due from offices of discount and deposite.	Due from State banks.	Real estate, permanent expenses, and bonus.	Expenses.	Cash deficiency.	Notes of the Bank United States and branches.	Notes of State banks.	Specie.
1819.

* United States' stock is not generally distinguished in the returns from Maine and Massachusetts, and not always in others.
† Notes of specie-paying banks are sometimes entered as specie in the statements of the Pennsylvania banks.
‡ This is stated on the authority of a report made by a committee of the New York Legislature at its last session.

Later returns from the banks in Maine and Massachusetts, and several of the banks in Pennsylvania, show the following results:

Maine, - Capital increased about 1-13; circulation increased about 1-30; specie increased about 8-10; discounts decreased about 1-52.
Massachusetts, Capital increased about 1-10; circulation decreased about 1-19; specie increased about 5-10; discounts increased about 1-25.
Pennsylvania, Capital increased about 1-64; circulation decreased about 4-10; specie increased about 1-13; discounts decreased about 1-6.

D.

A statement showing the aggregate amount of the capital, circulation, specie, and discounts of several banks, (sixteen in number,) situated in Maine, Massachusetts, Rhode Island, Pennsylvania, District of Columbia, Virginia, South Carolina, Georgia, and Ohio, on the 30th of September, annually, in 1813, 1815, *and* 1819.

Year.	Capital.	Circulation.	Specie.	Discounts.
1813,	$6,903,377	$6,845,344	$3,059,149	$12,990,975
1815,	8,852,371	9,944,757	1,693,918	15,727,218
1819,	9,711,960	4,259,334	1,726,465	12,959,560

E.

A statement showing the rate of exchange between Boston, New York, Philadelphia, and Baltimore, and London, during the years 1813, 1814, 1815, *and* 1816; *and, also, the price of specie at New York, and the rate of exchange between that place, Boston, Philadelphia, and Baltimore, during the same period.*

16th Congress.] No. 583. [1st Session.

INTEREST ON OUTSTANDING MISSISSIPPI STOCK.

COMMUNICATED TO THE SENATE, MARCH 3, 1820.

Sir: Treasury Department, *March* 2, 1820.

In obedience to a resolution of the Senate of the 23d ultimo, referring to this Department the petition of Henry Remsen and others, stating, among other things, that they are largely interested in Mississippi stock, issued under an act entitled "An act providing for the indemnification of certain claimants of public lands in the Mississippi Territory;" that the outstanding stock created under that act was, on 10th December, 1819, $1,909,576 81; and that it appears, by the reports of the Secretary of the Treasury, that sales of lands to an amount much exceeding the outstanding Mississippi stock have been made, but that the memorialists have not been able to ascertain at what period the claims of the State of Georgia have been satisfied, so as to entitle them to have their certificates paid; and stating that they consider themselves entitled to interest on the amount of their certificates from the period when the sales have amounted to a sum sufficient to pay the same, whether the amount was in the Treasury in money, or in obligations bearing interest; I have the honor to submit the enclosed proceedings of the Commissioners of the Sinking Fund, which will, it is believed, sufficiently explain the nature of the claim of the memorialists.

By referring to the act under which this claim has originated, it will be seen that the claim to interest, before the money is received into the Treasury, is without foundation. Their claim is to the money in the Treasury arising from the sales of the lands pledged, and not upon the United States for money due for those lands. As the act does not prescribe the manner in which the payment is to be made, when there shall be money in the Treasury applicable to the discharge of the outstanding stock, it is presumed that the United States have the right to direct the mode in which it shall be effected. The principle adopted by the Commissioners of the Sinking Fund is believed to be equitable and just. Indeed, doubts may well exist whether the obligation to pay is perfect, until a sum shall have been received sufficient to discharge the stock.

By returns which have been received subsequently to the annual Treasury report of the 10th of December last, it is ascertained that the stock which has been received to the 1st of January last amounts to $2,435,216 18, leaving $1,846,934 94 outstanding; and that the receipts in money to the same period amounted to $2,800,408 11; from which the sum of $1,250,000 due to the State of Georgia, and $311,148 91, for the expenses of surveying, being deducted, leaves in the Treasury the sum of $1,239,259 20 applicable to the payment of the outstanding stock, which is equal to 66 per cent. thereof.

I have the honor to be, very respectfully, sir, your most obedient servant,

WM. H. CRAWFORD.

The Hon. the President of the Senate.

At a meeting of the Commissioners of the Sinking Fund: present, John Gaillard, President of the Senate *pro tem.;* John Marshall, Chief Justice of the United States; John Quincy Adams, Secretary of State; William H. Crawford, Secretary of the Treasury; William Wirt, Attorney General:

The Secretary of the Treasury reported that the stock issued under the act of the 31st of March, 1814, entitled "An act providing for the indemnification of certain claimants of public lands in the Mississippi Territory," amounts to $4,282,151 12; that, of this sum, there has been received at the Treasury and cancelled $2,435,216 18; and that there is now outstanding the sum of $1,846,934 94; that, of the proceeds of the public lands in the States of Mississippi and Alabama, after satisfying the claims of the State of Georgia, and the expenses of surveying said lands, there remains in the Treasury, applicable to the discharge of the said stock, the sum of $1,239,259 20; that this sum is equal to 66 per cent. of the stock outstanding: Whereupon,

Resolved, That the Secretary of the Treasury is hereby directed to apply the said sum of money in discharge of the said stock in the proportion of 66 per cent. of each certificate thereof which may be presented at the Treasury upon and after the 15th day of May next.

JOHN GAILLARD, *President of the Senate pro tem.*
J. MARSHALL, *Chief Justice of the United States.*
JOHN QUINCY ADAMS, *Secretary of State.*
WM. H. CRAWFORD, *Secretary of the Treasury.*
WILLIAM WIRT, *Attorney General.*

February 26, 1820.

New York, *February* 10, 1820.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The memorial of the undersigned respectfully showeth:

That they are largely interested in Mississippi stock; that, by the certificates issued under the authority of an act of Congress passed in March, 1814, it is certified "that the amount is payable out of the first moneys in the Treasury of the United States arising from the sales of public lands in the Mississippi Territory, after the money due to the State of Georgia and the expenses of surveying such lands have been satisfied."

That it appears, by the reports of the Secretary of the Treasury, that the amount outstanding of the awards made by the commissioners appointed for indemnifying certain claimants of public lands, which it is understood includes the Mississippi stock, was, on 10th December, 1819, $1,909,576 81; that it appears, by the reports of the Secretary of the Treasury, that sales of lands to an amount much exceeding the outstanding balance of Mississippi stock, have been made, but your memorialists are unable to ascertain at what periods enough had been sold to satisfy the claims of the State of Georgia, and to entitle your memorialists to have their certificates paid. Your memorialists respectfully submit, that they consider themselves entitled to interest on the amount of their certificates from the period when sales of the lands pledged for the redemption of this stock have been made sufficient to pay the same, whether the amount was in the Treasury in money, or in obligations bearing interest; inasmuch as it cannot be doubted that such security has been taken as to the wisdom of the Government was deemed sufficient to render the final payment certain, and inasmuch as, on a different construction, the United States would be receiving interest for a delay of payment, manifestly at the expense of your memorialists.

Your memorialists, relying confidently in the justice of Congress, therefore respectfully pray that a law may be passed authorizing the Secretary of the Treasury to redeem the Mississippi stock, with interest, from the period when it shall appear from the returns in the proper offices that sales to an amount sufficient to pay off the same have been made.

16th Congress.] No. 584. [1st Session.

REMISSION OF DUTY.

COMMUNICATED TO THE SENATE, MARCH 6, 1820.

Mr. Sanford, from the Committee of Finance, made the following report:

The Committee of Finance submit to the Senate their report upon the petition of William C. Kausler.

On the 9th day of April, 1818, the brig Nordberg, laden with a cargo of sugar, coffee, logwood, and segars, sailed from Havana for Hamburg. The brig belonged to a Danish subject; the cargo was the property of merchants and citizens of Hamburg; and the petitioner, who is a subject of Denmark, was the supercargo. On the 11th day of the same month, in the latitude of Cape Florida, the brig and cargo were met by an armed schooner, and were forcibly and piratically seized by the persons belonging to the schooner. The officers and crew of the brig, and the petitioner, were taken from their vessel, put on board of the schooner, and sent to the West Indies. The pirates, having taken the brig and cargo into their possession, conducted them to the port of Savannah in Georgia. The cargo was entered at the custom-house of Savannah; the duties upon it were paid by the person or persons who entered the goods; and those duties have been paid into the Treasury. The cargo was discharged and sold. It was sold by some agent or agents appointed by the pirates, and was purchased, in parcels, by different persons in Savannah. It is stated that the sums for which the cargo was sold were received by the pirates, or by their agents. Soon after the arrival of the brig at Savannah, the attorney of the United States for Georgia instituted a suit in the district court of the United States against the brig and cargo, and against all persons into whose hands the cargo or its products had come, claiming these effects as having been obtained by piracy, in order that they might be adjudged as justice should require. The agents of the pirates, and the persons who had purchased the cargo at Savannah, were made parties to this suit. The petitioner, having arrived in Savannah after the commencement of the suit, became a party to it, and, as the agent of the owners, claimed the benefit of the suit, and restitution of the cargo, or its value. After a course of legal proceedings, the litigation was terminated by a decree made by the consent of the parties. It was agreed, by this decision, that the several purchasers of the cargo should pay to the petitioner the value of the parts of the cargo which they had respectively purchased, taking that value as it existed at Savannah, but deducting therefrom the amount of the duties which had been paid to the United States. The sum thus agreed to be paid by those who had purchased or received the cargo from the pirates, and to be received by the petitioner, was forty-two thousand dollars; the duties which had been paid to the United States were sixteen thousand three hundred and six dollars and fifty cents; and these sums together, amounting to fifty-eight thousand three hundred and six dollars and fifty cents, are stated to have been the value of the cargo at Savannah.

Upon these facts the petitioner prays that the duties which have been paid to the United States may be paid from the Treasury to him.

The reasons urged in support of this application are, that these goods were not subject to our duties; that the rightful owners are entitled to restitution of the goods, or to their full value; and that the United States ought not to derive profits from an act of piracy.

1. It is said that these goods were not legally subject to duty, because they were imported by pirates, and not with the assent of the true owners. Our laws concerning duties make no such distinction. Our duties are imposed upon merchandise imported in fact. Whether the importer is the true owner or rightful possessor of the goods or not, the goods are equally subject to duty. The goods are themselves subjected to duty, whoever may be the importer; and all questions of private rights, between different claimants of the same goods, are left to the ordinary course of justice. These goods, therefore, though imported by pirates, were justly subject to our duties.

2. It is the duty of all nations to lend their justice and employ their force to suppress piracy. We acknowledge this obligation, and obey its precepts. The true owners of these goods were entitled to restitution of the goods, or to just compensation for their loss. If specific restitution could not be made, because the goods had been removed, dispersed, or consumed, a just equivalent was to be paid, not by this Government, but by the pirates, and by those who had been engaged with pirates in the commerce of these goods. This Government was not bound to pay or to lose any thing whatever in this case. Our obligation was, to lend the arm of our justice to compel restitution or compensation. We were bound to give to the true owners the aid of our laws and tribunals against the goods and against all persons within our jurisdiction. This obligation has been discharged. The petitioner resorted to one of our courts for redress. He impleaded the persons who had purchased or received the goods from pirates. His claim against them was just, and was admitted. If he was entitled to recover against them, he was entitled to the full value of the goods—to the value which the goods bore at Savannah—to that sum which the goods had already produced, or would produce, upon a sale in the market of Savannah. That value comprehended the amount of the duties which had been paid to the United States. Such, at least, might be one measure of his redress; and it is to

be presumed that, if he had prevailed in adverse litigation, he would have recovered the amount of the duties as a part of the value of the goods. But the suit was compounded by the parties. An amicable decree was made, by which the petitioner agreed to accept from the purchasers or receivers of the goods at Savannah a part of the value in question. This compromise gives him no claim upon the Government for the residue of that value. The duties had been paid, and the goods were in the market of this country before the petitioner appeared to claim redress. If the petitioner had arrived after the importation, and before the duties were paid, he could not have obtained possession of the goods, without discharging the duties to the United States. If he had advanced the duties, he, like any other owner of goods paying duties, would have found his compensation for the duties advanced in the superadded value which such goods derive from the duties with which they are charged. If the petitioner had obtained restitution of the goods in kind, at Savannah, after the duties had been paid by others, he would have had no pretence to ask this Government for the duties; since, in that event, the goods in his hands would have been augmented in value by the amount of the duties. If he had obtained from the pirates or their agents the full value of the goods, comprehending the duties, he would have had no pretence to ask for the duties in the Treasury. He could never be allowed to recover the amount of the duties once in the augmented value which the goods had derived from the duties, and once more in the payment of the duties themselves to him from the Treasury. If he could not obtain restitution in kind or in value, because the goods could not be traced, or because the persons responsible to him for their value could not be found within our jurisdiction, or because those persons might be unable to make satisfaction, he might be unfortunate, but this Government would be under no obligation to indemnify him for any part of his loss. It is not necessary here to determine what would have been the true standard of his redress against the pirates or the receivers of the goods. Whatever may be the just measure of his redress against them, and whatever has been, or might have been, the event of his claim, either upon the goods themselves, or against persons in this country, or in any other country, these duties to the public have been rightfully levied and received by us. These duties belong to our revenue; and, though the petitioner had rights, they were not rights against our revenue. He had no pretence of claim upon this Government for compensation. Having made a voluntary composition with other parties, by which he has obtained more than two-thirds of the amount of his claim from them, he now proposes that the Government shall pay him the residue; and the compromise thus made is offered as one of the reasons for this request. This Government never owed him any compensation; and he is not at liberty to convert his claim upon private persons into a demand upon the Treasury of the United States.

3. It is said that to retain these duties would be to avail ourselves of an act of piracy; since, if the goods had not been seized by pirates, they would not have been imported into the United States. Our duties are levied upon the importation of merchandise into our country; and our laws allow no exemption from those duties in favor either of pirates, or of those who may be robbed by pirates. Our revenue has no concern with the private questions of right and wrong which may exist, either abroad or here, in relation to the merchandise imported. The question now presented is not so much whether we shall gain, as it is whether we shall lose by this importation? Have the goods been consumed in this country? If so, the duties have been paid by the consumers; and, as taxes levied upon our own citizens, they should accrue to our own revenue. Have the goods been exported? In that case, the duties have been paid from the Treasury to the exporter. If we should now pay these duties to the petitioner, the amount would be an absolute loss to our revenue. The petitioner would, indeed, receive the benefit of the amount; but his claim to this benefit is not against this Government. It was against the pirates and receivers of the goods; and they have already received the amount of the duties, by their own disposition of the merchandise. When we levy and retain our own duties in a case like this, we merely enforce our own revenue laws; we give no sanction to piracy, and we do no injustice.

Such is the opinion of the committee, and such would it be were the petitioner and they whom he represents citizens of the United States. He and they are foreigners; but the law of nations affords no support to the claim which is now preferred. It is not required even by the most scrupulous and delicate regard to the obligations of nations that the loss of these duties should fall upon the Government of the United States.

The claim of the petitioner for the duties paid into the Treasury appearing to the committee to be destitute of merit, they recommend the following resolution:

Resolved, That the prayer of the petitioner be refused.

16th CONGRESS.] **No. 585.** [1st SESSION.

THE MINT.

COMMUNICATED TO THE SENATE, MARCH 10, 1820.

To the Senate of the United States: WASHINGTON, *March* 10, 1820.

I transmit to Congress a report from the Director of the Mint, of the operations of that institution during the last year.

JAMES MONROE.

SIR: MINT OF THE UNITED STATES, *January* 1, 1820.

I have now the honor of laying before you a report of the operations of the Mint during the last year.

From the statement of the treasurer, accompanying this report, it will appear that, within the above period, the coinage has been—

In gold, 51,723 pieces, amounting to	$258,615
In silver, 2,352,000 pieces, amounting to	1,140,000
In copper, 2,671,000 pieces, amounting to	26,710
Making, in the whole, 5,074,723 pieces, amounting to	$1,425,325

The amount of coinage would have been considerably greater had a sufficient supply of bullion been regularly furnished; but, for four or five months, no deposites of any consequence were received. During this interval, however, the workmen were advantageously employed in completing and improving the buildings and machinery belonging to the establishment; and it is now believed to be fully competent to coin all the gold and silver which it is probable will hereafter be received, as well as to carry on the copper coinage to any desirable amount; for, even with a single press, at the rate it is now working, eighty tons (seven and a half millions of cents) may be coined in the course of a year.

I have the honor to be, sir, with the greatest respect, your most obedient servant,

R. PATTERSON.

JAMES MONROE, *President of the United States.*

A statement of the coins struck at the Mint of the United States, from January 1 to December 31, 1819, viz:

	Half-eagles.	Half-dollars.	Quarter-dollars.	Cents.	Value.	Number of pieces.

JAMES RUSH.

16th CONGRESS.] No. 586. [1st SESSION.

REMONSTRANCE AGAINST A CHANGE IN THE REVENUE SYSTEM IN RELATION TO CREDIT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 11, 1820.

To the Senate and House of Representatives of the United States in Congress assembled: The memorial of the chamber of commerce of the city of Philadelphia respectfully showeth:

That your memorialists entertain, and beg leave to submit to your consideration, the following sentiments upon propositions which have been introduced to your notice, for a very important change in the revenue system of the United States.

That the scheme which was adopted at the commencement of our fiscal system, for the collection of duties on foreign imports, was wise, and well adapted to the state of the country, has, perhaps, never been questioned. Its excellence has been tested by nearly thirty years experience; and it may safely be said, that the advantages which were contemplated by the framers of this system have been secured. The Government has received its revenue with punctuality; it has sustained no loss by reason of the credit for duties, which deserves consideration. The collection has been made with the least possible expense; and a widely extended, active, and vigorous commerce has contributed largely to the stock of national wealth and prosperity.

In considering the proposition to abolish a system of credit which experience has thus approved, it becomes proper to inquire what are the evils which are supposed to be connected with the existing system, and what are the advantages which are expected to result from a change?

It is supposed by those who advocate a change, as your memorialists understand, that the credit for duties has furnished capital for an extension of business, and that from this cause have proceeded the embarrassments and difficulties which have been felt throughout the country.

The credit for duties is not intended, nor is it fairly to be considered, as putting the use of a capital into the hands of the merchant, because it does not in reality afford him a capital to trade upon, but simply relieves him from the burden of making an advance beyond his means. Its object is rather to be just than to be generous; and it is as wise and politic in relation to the community at large, as it is just to the importer. The foundation of the credit is the fact that the goods do not produce their price immediately upon importation; and the principle, that it would be unjust that the importer should be in advance to the Government for the duty, and severe upon the consumer that he should bear the heavy consequences of such an advance. It is, therefore, a wise and sound calculation, that, by allowing to the importer, upon good security, time, according to the nature of the commodity, to make his sales, the Government will receive its dues when it ought to receive them; and no one will suffer, as would be the case by an anticipation of the payment of duties on articles which oftentimes are long retained by the importer, and, when sold, are necessarily sold upon a liberal credit.

Your memorialists believe this view of the system to be correct; and, although instances may occur in which this credit is abused, and is made to furnish the means of wild adventure, it is an unsound argument to draw therefrom an inference against the system.

Your memorialists are convinced, upon these grounds, that the opposers of the present system of credit for duties entertain mistaken views in relation to the nature, policy, and operation of the system itself, in supposing

that it furnishes a capital to trade upon, and has a connexion with the evils and embarrassments which afflict this country.

The capital of the country has doubtless increased, and, at particular periods of time, it may be that even more is devoted to commerce than can be profitably employed. Whenever this is found to be the case, there can be no doubt that the surplus will readily find its way into other channels, and seek for employment in more profitable modes.

But it cannot be pretended that there is an excess of capital in the country; and, until that shall be the case, it would seem to be unwise to condemn to a state of inactivity so great a portion as would, by the plan proposed, be continually in deposite in the public stores.

And further, your memorialists are convinced that the reasoning is erroneous which is founded upon the supposition that an extension of capital, or credit equivalent to capital, would be productive of mischief.

It is not alleged, as your memorialists believe, by the advocates of a change, that it would promote the great objects which are ever to be regarded in relation to revenue—security of the debt, punctuality in its payment, and ease and economy in its collection. On the contrary, it must be doubted whether, if a system of deposite in public stores were established, the collection would not be more expensive, and the payment less certain and punctual, than at present. It is well known that, in times past, the calculations of the Treasury upon the receipt of duties have been made without disappointment; and that this portion of the public income is collected without oppression or inconvenience to those who pay, and with little expense to the Government. So far, then, as relates to the great interests of the Treasury, the contemplated change seems to promise no advantage.

If the proposed change should be effected, your memorialists conceive that much mischief would unavoidably ensue.

The men of moderate capital, however deserving of confidence, and however active and skilful in the prosecution of business, would be driven from the field; and it would be occupied alone by men of large capital, who could bear the burden of heavy advances for duties upon unsold goods. Even these would probably be foreign agents, who, by a system of exchange, could comply with the requisites of law, without, in fact, making the same advances as must be made by the American merchant. We should exchange a certain for an uncertain revenue; the expense of collection would be increased; and if the perils of fire, waste, pillage, and sacrifice by sale of unredeemed goods, be regarded, it may be said that the ultimate product would, no doubt, be diminished.

But, above all, your memorialists beg leave to suggest that the present state of the country is adverse to such a measure as that proposed. At a moment of general embarrassment, to call for such advances as this plan requires would make the embarrassment doubly felt, and give a most serious blow to the commerce of the country.

Your memorialists hereupon express the earnest hope that there will be a firm and unyielding adherence to the system of credit, which is founded in justice and a wise policy, and which has been approved by the experience of many years; and that the mere hope of escaping from present evils, by an untried way, opposed to such experience, will not be permitted to influence the Government to an abandonment of this system.

ROBERT RALSTON,
President of the chamber of commerce of the city of Philadelphia.

Attest: JOHN VAUGHAN, *Sec'y C. C.*

PHILADELPHIA, *March* 6, 1820.

16th CONGRESS.] **No. 587.** [1st SESSION.

THE MINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 10, 1820.

SIR: TREASURY DEPARTMENT, *April* 8, 1820.

I have the honor to transmit, herewith, a letter from the Comptroller of the Treasury, accompanied by sundry statements, which have been prepared in obedience to the act entitled "An act establishing a Mint of the United States," passed April 2, 1792.

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *April* 8, 1820.

The statements herewith, marked A, B, and C, have been prepared pursuant to the seventh section of an act of Congress, passed the 2d April, 1792, entitled "An act establishing a Mint, and regulating the coins of the United States."

They contain all the information relative to the transactions of the Mint which the settlements made at the Treasury enable me to afford.

With great respect, I have the honor to be, your obedient servant,

JOS. ANDERSON, *Comptroller.*

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

A.

16th CONGRESS.] No. 588. [1st SESSION.

DUTY ON MOLASSES.

COMMUNICATED TO THE SENATE, APRIL 13, 1820.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The subscribers, being merchants, distillers, and owners of distilleries, in the town of Boston and its vicinity, beg leave respectfully to represent:

That the proposed increase of duty on molasses will, if carried into effect, prove not only injurious to them, but, through them, to the most important interests of our country.

In the first place, the consumption of molasses for the purpose of distilling enables the West India planter to buy the produce of our fisheries, soil, and domestic industry, and to pay for it in an article which, being bulky, furnishes employment and freight for an immense tonnage, and is a raw material, which, in the process of manufacture, gives employment to as great a portion of the active industry of the country as any branch of business whatever. And your memorialists cannot see why a raw material, and principally for the manufacture of rum, should be chargeable with a duty equal to one-half its first cost, when hides, skins, copper, brass, tin, dye-woods, rags, and a variety of other raw materials, are suffered to be imported duty free. Nor can your memorialists understand the policy which should thus paralyze, and perhaps destroy, a very old manufacture, the very buildings and apparatus of which, in the various establishments of this commonwealth, may be estimated at one million of dollars; making, annually, from thirty to forty thousand hogsheads of rum, and furnishing the means of subsistence for thousands of persons; furnishing a most important article of trade, for our coasting business; and creating a demand, for putting up the molasses and rum, of one hundred and sixty thousand casks.

Your memorialists might enter into a great variety of details to show the importance of the distilling business to the public; but it must be obvious to your honorable body, without the necessity of its being forced on your observation, that the active industry of the country, employed in the importation of fifty or sixty thousand hogsheads of molasses into the United States; the wharfage, cartage, cooperage, storage, and labor, consequent on the landing; the vessels employed to bring the molasses; the seamen who navigate them; the labor, wood, carting, and other expenses necessary to convert it into rum; the casks, cooperage, carting, and tonnage necessary to distribute the rum to its various consumers—that these operations of trade, consequent to, and connected with, the distilling business, being considered, it may safely be affirmed that, with the sole exception of the manufacture of flour, there is hardly another species of manufacture which sets in motion and supports such a large and important portion of the productive industry of the United States as the distillation of rum.

In addition to what your memorialists conceive the injustice of taxing the raw material used for one species of manufacture, when the principal raw materials for other species of manufactures are imported duty free, your memorialists beg leave to state, that in New England, generally, the consumption of molasses by the poor, always great, has increased, and is increasing, since the diminished value of all our own products; the consumers being unable to afford to pay for sugar, as formerly.

Your memorialists may be suffered to remark, with some surprise, that in a tariff of duties, purporting to encourage domestic manufactures, the raw materials for such a manufacture as the distilling of rum from molasses (one of the oldest manufactures in the country, and intimately connected with the lumber, fishing, coasting, and West India trade) should be taxed, as before stated, to about one-half of its first cost.

NATH. HALL, *and others.*

16th CONGRESS.] No. 589. [1st SESSION.

DEFICIT IN THE REVENUE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 14, 1820.

Mr. SMITH, from the Committee of Ways and Means, to whom had been referred so much of the President's message as relates to the revenue of the United States, submitted the following report:

The total nett receipts into the Treasury, during the year 1819, were - - -	$24,812,419 09
The payments from the Treasury, during that year, amounted to - - - -	24,044,568 77
Leaving a balance of income, after paying all expenses, of - - -	$767,850 32

State of the Treasury, public revenue, and appropriations made for the service of the year 1820.

I. *The state of the Treasury.*		
The amount of money in the Treasury on the 1st day of January, including the second instalment from the bank of $500,000, paid that day, was -	-	$2,542,293 27
From which the following deductions must be made, to wit:		
1st. Special deposites of notes of banks which will not be available during the present year, but most of which, it is believed, will ultimately be paid, -	$610,376 59	
2d. Amounts remaining to be paid of the Louisiana stock, which was payable in 1818 and 1819, and not yet demanded, - - - -	1,646,117 42	
3d. Other claims on the year 1819, and not then paid, exclusive of the balance due the Commissioners of the Sinking Fund, - - - -	40,133 91	
Total, -		2,296,627 92
Leaving available funds in the Treasury, on the 1st January, the sum of -	-	245,665 35

STATEMENT—Continued.

II. *The public revenue for* 1820.		
Customs, (as estimated at the Treasury,)	$19,000,000 00	
Public lands, (as estimated at the Treasury,)	2,000,000 00	
Arrears of internal duties and direct taxes,	450,000 00	
Instalment due by the United States Bank,	500,000 00	
Incidental receipts,	50,000 00	
Dividend from the United States Bank will probably be 6 per cent.—certainly 4 per cent.,	280,000 00	
		$22,280,000 00
Aggregate amount of means available for the service of the year 1820,		22,525,665 35
III. *Amount of the several appropriations made for* 1820.		
1st. Permanent appropriations:		
For the sinking fund, $10,000,000		
Gradual increase of the navy, 1,000,000		
Arming the militia, 200,000		
Annuities to Indians under treaties, 149,725		
Trading houses with the Indians, 19,250		
Civilization of Indians, 10,000		
	11,378,975 00	
2d. Temporary expenditures, agreeably to appropriations, to wit:		
For the service of the navy, 2,538,940		
For the military establishment, 8,119,580		
Civil and diplomatic, 2,306,444		
Public buildings, 222,916		
Private claims, estimated at 50,000		
	13,237,880 00	
For payment of two-thirds of the Mississippi stock, to be paid by order of the Commissioners of the Sinking Fund on the 15th of May next, 1,239,259 30		
Arrearages for the Navy Department, agreeably to the act passed December last: amount drawn subsequent to the 1st January, 443,050 00		
	1,682,309 30	
Total amount of expenditures authorized by law for 1820,		26,299,164 30
Leaving a deficiency of means for the year 1820 of		3,773,498 95
And of the sinking fund for the year 1820.		
Annual appropriation,	10,000,000 00	
Payable by the Treasury thereout:		
Residue of Louisiana stock redeemable this year, 2,216,462 77		
Six per cent. stock, 80,000 00		
Reimbursement of the deferred stock, 503,196 94		
Interest of the funded debt, payable this year, 4,911,843 00		
	7,711,502 71	
Leaving a balance, which may be applied to satisfy part of the deficit, of		2,288,498 29
Leaving an actual deficit of funds to meet the expenditures authorized by law, for 1820, of		1,485,001 66

The committee further submit an estimate of the receipts and expenditures for the year 1821, founded on information received from the several Departments.

1. RECEIPTS.		
Customs,	$16,000,000 00	
Land,	3,000,000 00	
Arrears of direct tax and internal duties,	250,000 00	
Incidental receipts,	50,000 00	
Dividend from the United States Bank, 6 per cent.,	420,000 00	
		$19,720,000 00
2. EXPENDITURES.		
Permanent, to wit:		
Reimbursement of deferred stock,	534,033 08	
Interest on the funded debt,	4,773,737 68	
Gradual increase of the navy,	1,000,000 00	
Arming the militia,	200,000 00	
Annuity to Indians,	149,725 00	
Trading houses with Indians,	19,250 00	
Civilization of Indians,	10,000 00	
	6,686,745 76	
Temporary, agreeably to the amount of the several appropriation bills for 1821,	13,237,880 00	
To which must be added the amount of unexpended balances in the hands of the Treasurer, and which was applied to the expenditure of the year 1820,	358,154 00	
	20,282,779 76	
From which appropriations for 1820, there may be deducted the following items, which will not be required for 1821, and parts of items which are either unnecessary, or may, without injury to the public service, be spared, to wit:		

STATEMENT—Continued.

For completing several arsenals,	$60,650		
Arrearages prior to 1818 for Military Academy,	21,428		
Arrearages,	200,000		
Half-pay pensions to widows and orphans, (part,)	75,000		
Revolutionary pensions,	650,000		
Balances due certain States,	250,000		
Taking the census,	240,000		
Cumberland road,	141,000		
Holding of Indian treaties,	70,000		
Claims of the inhabitants of the late province of West Florida,	24,231		
Payments for outstanding debentures for internal duties,	20,000		
Balance due M. Poirey and M. de Vienne,	4,481		
Fortifications,	100,000		
	$1,856,790		
Deduct therefrom for expenditures that may be required for the service of the year 1821, and which cannot be foreseen,	256,790		
Leaving an amount charged in the year 1820, and which, it is believed, will not be required for the year 1821,		$1,600,000 00	
Estimate of expenditure for the year 1821,		18,682,779 76	
Estimated excess of receipts over the expenditures of the year 1821,		1,037,220 24	
			$19,720,000 00

The committee also submit, that no part of the principal of the funded debt becomes payable until the year 1825, except the annual reimbursement of the deferred stock; and they present the following view of the sums annually reimbursable on the public funded debt for the years 1825, 1826, 1827, and 1828, to wit:

Year 1825, Six per cent. stock, per act of March 14, 1812,		$6,187,006 84	
Six per cent. stock, per act of July 6, 1812,		2,668,974 99	
Six per cent. Treasury notes, funded, per act of February 24, 1815,		1,419,125 61	
		10,275,107 44	
Seven per cent. Treasury notes, funded, per act of February 24, 1815,		8,595,298 27	
			$18,870,405 71
1826, Six per cent. stock, per act of February 8, 1813,		15,521,136 45	
Six per cent. stock, per act of August 2, 1813,		6,836,232 39	
			22,357,368 84
1827, Six per cent. stock, per act of 24th March, 1814,		-	13,011,437 63
1828, Six per cent. stock, per act of March 3, 1815,		-	9,490,099 10
The committee further state that, from the 1st of January, 1801, to the 1st of January, 1808, inclusive, there was redeemed of the principal of the public debt the sum of		32,257,841 10	
And between the 1st January, 1817, and the 1st January, 1820, the sum of		32,085,750 17	

An act passed on the 3d March, 1817, "to provide for the redemption of the public debt." That act vests in the Commissioners of the Sinking Fund the sum of ten millions of dollars, to be applied yearly by them to the payment of the interest and charges, and to the reimbursement or purchase of the public debt; and provides that the said annual appropriation shall be paid from the proceeds of the duties on merchandise, the tonnage of vessels, internal duties, and sales of Western lands. Although that act is not considered as a pledge of those funds, yet it is understood at the Treasury that the appropriation for the sinking fund has a preference over every other, and must, if required by the commissioners, be first paid. The documents before the House show that there is no part of the principal of the public debt payable during the years 1821, 1822, 1823, and 1824, except the reimbursement of the deferred stock.

The sinking fund can operate, of course, during those years, only in manner following, (unless the United States stock should be purchased at par,) to wit:

1821, Interest and reimbursement payable this year,	$5,307,770 76
1822, Interest and reimbursement payable this year,	5,307,770 76
1823, Interest and reimbursement payable this year,	5,307,770 76
1824, Interest and reimbursement payable this year,	5,023,126 24
And for the present year of 1820, as already stated,	7,711,502 71
Total of actual demand on the fund,	$28,657,941 23

leaving the sum of $21,342,058 77 for those years which cannot be applied to the payment of the principal of the debt in any other way than by purchase. No purchase can be made, agreeably to the act, unless the same can be effected at or under par. The present market value of the United States six per cent. stock is known to be three and a half to four and a half per cent. above par, and, it is believed, will continue above par during the years 1821 and 1822, and perhaps longer. Under these circumstances, it is submitted whether it is not more for the interest of the United States to authorize the Treasury to transfer to the surplus fund the balance of the sinking fund which may remain unexpended on the 31st December, 1820, than that the same should remain in the Treasury unemployed.

The unexpended balances of the sinking fund are transferable (under the existing laws) to the surplus fund two years after the calendar year for which the appropriations have been made, in like manner as all unexpended balances for other objects of expenditure are transferable.

The preceding statement shows that the expenditures authorized by law for the year 1820 will exceed the receipts into the Treasury of that year the sum of by $3,773,498 95; that sum may be reduced to $1,485,001 66, by the application of the balance of $2,288,497 29, which will, agreeably to the preceding view, remain unexpended of the sinking fund on the 1st of January, 1821. In recommending the application of the surplus of the sinking fund to the current expenses of the present year, your committee deprecate a recurrence to a like resort in future years, if the same can, with any propriety, be avoided; and it is hoped that such retrenchments will be made in the public expenditures as may render a recurrence to that fund unnecessary.

A resort to Treasury notes, to meet the deficit, appeared to your committee inexpedient. Such notes could not, in their opinion, become a medium, unless the banks should be authorized to tender them in payment for any demands made on those institutions; without such authority, Treasury notes would be sold and bought in the market, for the purpose of paying the public dues; and, when paid into the bank, could be considered by the bank only as a special deposite of the Treasury, on which it would not be bound to pay either its own notes or specie.

It appearing to your committee inexpedient to resort to Treasury notes, and it being impracticable (if no objections existed against the adoption of such a course) to carry into effect a system of internal duties, in time to meet the deficit of the present year, your committee had only to choose between a loan of a temporary character, or one of longer duration. They have preferred the latter, because it carries the time beyond that in which other debts are payable, and because it is believed that the loan will thereby be obtained on decidedly better terms than on one of a shorter duration. By authorizing the subscription of the Mississippi stock, of which two-thirds must otherwise be redeemed during the current year, it is inferred that little new debt will be created. Conformably with those views, the committee respectfully submit a bill to authorize a loan of $2,000,000.

The committee have deemed it useful to present a view of the probable receipts for the year 1821, and of the expenditures, which, under the existing laws, are indispensably chargeable thereon. They have founded their statement of expenses on the appropriations actually made for 1820; and have shown that therefrom a variety of items, amounting to $1,856,790, which will not be required for 1821, may be deducted: at the same time, they are ready to admit that new and unforeseen demands may arise, which may show that too much reliance ought not to be placed upon an expectation of an expenditure less than that of the current year. The view for 1821 is founded on the indispensable expenses, and does not include the amount of principal which the Commissioners of the Sinking Fund are bound to purchase, if the same can be bought at or under par. Taking that view, the estimates of receipts and expenditures will be shown by the following statement, to wit:

Permanent expenditures, - - - - - - -	$11,378,975
Temporary expenditures, - - - - - - -	13,596,034
	24,975,009
From which deduct items not required (as specified) for 1821, - - - -	1,600,000
	23,375,009
From which deduct estimated amount of receipts for 1821, (per statement,) - - -	19,720,000
Leaving a deficit, in 1821, of - - - - - - -	$3,655,009

Your committee, having assigned the reasons which have led them to recommend the bill herewith reported, beg leave respectfully to present their views of the necessity which exists for retrenchments and economy in the public expenditures. They approach this subject with feelings which the House can duly appreciate. A Government, like individuals, will generally increase its expenditure in proportion to its increase of means. The revenue, after the peace, had swollen to an amount surpassing all former experience; and, passing from a state of war, during which expensive establishments were indispensably necessary, it was not to have been expected that we could immediately make such reductions as a state of profound peace would render prudent and proper. The war pointed our attention to the weak points of the nation; and the appropriations of former years have been increased by objects of great national importance which have added to our security, and by an act of benevolence towards the survivors of the army of the revolution.

Large outstanding claims, resulting from the war, to an amount exceeding thirty millions of dollars, have been discharged; and the sum of $32,085,750 of the public debt has been redeemed since the 1st day of January, 1817. Establishments have been created, under the sanction of law, to maintain and advance which will make it necessary either to resort to annual and successive loans, or to a system of internal revenue. As to the first of those alternatives, it cannot be necessary to urge any observations; their natural tendency to involve the nation in debt is obvious, and they will be avoided when they are not indispensably necessary. We are warned against the effects of a large and accumulating debt by the experience of other nations. A nation laboring under the pressure of a large debt, no more than an individual, can be considered independent. Money is power; and that nation will become powerless which shall mortgage its resources without the prospect of relieving them by discharging its engagements.

Reasons powerful and cogent exist against a resort to internal duties and direct taxes to supply a deficiency occurring during a state of profound tranquillity, and ought to be avoided if the necessity be not evident and pressing; and such has heretofore been the policy of the nation. We have been accustomed to a system of taxation which, in its operation, has been paid without being perceptibly felt, and will reluctantly resort to one of a different character in times of profound peace.

From the extraordinary depression of commerce within the last three years, the stagnation of our navigation, the depreciation in the value of our exports, the corresponding depreciation in the value of property of every description, and the serious embarrassments under which every branch of industry now labors, economy and retrenchment in the expenditures of every citizen are imperiously required. The finances of the nation being seriously affected by those causes, there would seem to arise a correspondent obligation on the Government to retrench its expenditures and economize its means. In the infancy of our institutions our expenses were, in general, limited by our receipts. We have been satisfied to advance gradually in furthering the system of national security and independence. Our pace has been greatly quickened towards the accomplishment of those objects since the restoration of peace, by the great accession of our revenue. From that period our revenue has been in what may be considered a forced state. We are now getting back to a condition more congenial with our population and national wealth.

The committee believe that wisdom requires us to recur also, to the policy which has heretofore governed us. Our nation is still in its infancy; its resources are daily increasing. If, then, we should keep pace in the building up of our national establishments with the revenue of the country, we shall have consummated all our wishes without oppression to the citizen. Therefore,

Resolved, That the President of the United States be requested to cause such a plan to be prepared as will enable Congress, at its next session, to make such reductions in the various branches of public expenditures as may be required by the state of the finances and the public good.

16th Congress.] No. 590. [1st Session.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE SENATE, APRIL 15, 1820.

To the Senate and House of Representatives of the United States: The memorial of the Pennsylvania Society for the encouragement of American manufactures respectfully showeth:

That your memorialists have read, with the deepest regret, two remonstrances presented to your honorable Houses, from agricultural societies in the State of Virginia, deprecating your interposition in favor of the manufacturing part of the community.

These documents, containing sundry allegations injurious to your memorialists, and resting, as shall be made to appear, on an unsound basis, require a detailed investigation, to which we respectfully request your attention.

We must premise, that we should have hoped that the ruin of so many of the manufacturers, the depressed state of those who have hitherto escaped the situation in which their brethren have been involved, and the distresses of that class whose sole dependence is on their labor, would have prevented this unkind interference, calculated to continue their sufferings; that the generous sympathy which their situation ought to have excited in the breasts of fellow-citizens, embarked in one common cause, would have averted this hostility, even had all the allegations of the remonstrances been irrefragable; whereas, we hope to prove that such as are of any importance are easily susceptible of refutation. The disappointment fills us with surprise and regret, and is ill calculated to foster those kind regards and attachments which ought to subsist among members of the same community, and which we have always cherished towards our agricultural fellow-citizens.

But our appeal and that of our brethren has not been made to the generosity or compassion of our fellow-citizens. We appeal to their honor—to their justice. We ask, at length, after a lapse of thirty years in which the Government has existed, for a share of that protection so bountifully bestowed upon commerce, and which agriculture, as will appear, has abundantly enjoyed.

The allegations of the agricultural societies are principally confined to three points:

1. The extortions said to have been committed by manufacturers during the war.
2. The danger and oppression of monopolies, exclusive privileges, &c.
3. The injustice of affording protection to manufactures, when agriculture disclaims all protection.

There are sundry minor points, which we shall pass over, in order to avoid prolixity.

The charge of extortion is couched in these words:

"We submit respectfully to your wisdom the impolicy of subjecting so large a portion of your fellow-citizens to *such unreasonable cupidity*; of laying them at the mercy of an association, which, competition being removed, *will no longer consider the intrinsic value of an article, or what price would afford a fair profit to the manufacturer, but how much the necessities of the consumer would enable them to extort. Of this spirit we had a sufficient specimen during our late contest with Great Britain.*"

This uncharitable accusation we hope to prove wholly destitute of foundation. The article on which it chiefly rests is superfine broadcloth, which was raised from eight or nine dollars, the price before the war, to twelve, thirteen, and fourteen, during the war. The reasoning applicable to this case applies with equal force to all the others.

All doubt of the injustice of this allegation will be laid at rest forever by the simple fact that merino wool, the raw material of that cloth, which, before and shortly after the commencement of the war, was sold at seventy-five cents per pound, was raised during the war to three and four dollars—an advance of three hundred per cent.; so that there was less profit per cent. on the capital employed by the manufacturer at the high prices of the cloth, so much the subject of complaint, than at the former moderate prices.

We trust that this strong fact, which can be judicially proved at the bar of your Houses, will prevent any man of honor or candor, as he values his reputation, from ever again repeating so unfounded an accusation.

But if we have never retorted this charge against our accusers, if we have forborne recrimination, it has not been for want of materials, but from an unwillingness to cherish an unkind and unfriendly spirit towards our fellow-citizens. And now, notwithstanding the repeated and wanton provocations we have received, we resort to the measure with pain. We should gladly have buried in oblivion all our causes of complaint, and cherished a kind and fraternal spirit, in the hope of exciting a suitable reciprocation. But the style and manner of the accusations against us, their unceasing repetition, the hostile disposition they display, and the ruinous consequences they are calculated to produce on the general welfare of the nation, render it a duty to ourselves, to our country, and to the cause of truth, to prove that our accusers are far from invulnerable in this point, and are under high obligations to us for past forbearance.

In the year 1788 flour was four dollars per barrel in our seaports, which was regarded as a fair and liberal price. In the next year the demand for the supply of France took place, and this article was raised to five and six dollars; from year to year afterwards it rose to ten, twelve, and fourteen dollars; and probably it averaged, during the whole of the French revolution, above ten. We submit to a candid world whether this fact does not more completely establish the charge of "*extortion*," than the rise of broadcloth from eight or nine to fourteen dollars, or even to thirty, had it taken place, when the raw material rose from seventy-five cents to four dollars per pound? and whether the rise on the wool itself is not incomparably more "*extortionate*" than that on the broadcloth? The latter was not only justifiable, but imperiously necessary, by the rise which we have stated on the raw material; but, for the rise on wool or flour, no such reason existed. It did not proceed from any advance "*in the intrinsic value of the article*," to borrow the words of the Petersburg remonstrance, "*nor from a consideration of what price would afford a fair profit to the*" farmers; "*but how much the necessities of the consumers enabled them to extort.*"

At the same period (1788) butter was ten cents per pound; beef and pork five cents; tobacco three or four; and all other agricultural articles in the same proportion. They have since been raised from one to two hundred per cent. above those prices. Yet we have never alleged against the farmers or planters the odious charge of "*extortion*," at which they would have revolted. Have they, we ask, a right to raise their prices one or two hundred per cent. at pleasure, when the demand warrants it, without "*extortion;*" and yet to wound the feelings and injure the characters of their fellow-citizens, by the odious imputation of "*extortion*," when the advance of the raw material by themselves renders a rise of manufactures necessary? If this be a chartered privilege, we wish to know whence it is derived, and by what tenure it is held. Seriously, we presume this to be the strongest illustration of the parable of the beam and the mote that the variegated history of mankind presents.

Flour is now four dollars and seventy-five cents per barrel on the seaboard. Should war or famine take place in Europe, the price would be immediately raised one, two, three, four, or five dollars per barrel; and in proportion to the intensity of the distress would be the tax levied on the consumers in this country. There are about three millions of white people in the United States not engaged in agriculture, who consume, on an average, two barrels of flour per annum. A rise of three dollars, which might take place immediately, in case of a very extraordinary demand, would amount, on this article, to a gain of eighteen millions of dollars, levied by the farmers on the rest of the community during the ensuing year, exclusive of probably an equal amount on all other agricultural productions, liable to a proportionate advance of price. And this is not a mere hypothesis of what may occur; it is the history of the last thirty years, and of the immense prices (again to borrow the vituperant language of the remonstrance) which "*the necessities of the consumers have enabled*" the farmers "*to extort.*"

Nothing but the endless, the irritating misrepresentations we have experienced, would induce us to retort this strong language upon our accusers.

The United Agricultural Societies of Virginia prefer a claim to a high degree of superiority over the other classes of the community, which calls for observation. They state that—

"In every nation, with whose internal affairs we are familiarly acquainted, *the landed interest has been proverbial for their liberality in comparison with any other class.*"

It is unfortunate that this assumption of *liberality* appears in an instrument, the direct object of which is to bar the door to the relief of their fellow-citizens, and to consign them and their families to that wretchedness and ruin which has befallen so many of their brethren! Before this claim to "*proverbial liberality*" can be admitted, proofs must be adduced different from the document in which it is asserted. The contrast between this strong assumption and the object of the remonstrance, though very striking, is not uncommon. Every day's experience so strongly proves the extreme discrepancy between profession and practice, that no illustration can be necessary.

The societies distinctly hold forth to the world that agriculture neither has been, nor is, secured by "*protecting duties.*" They state—

"We solicit not the fostering care or patronage of the Legislature to alleviate, by bounties, *monopolies*, or *protecting duties*, calamities in their nature as inevitable as they are incurable by legislative interposition."

The Fredericksburg Society also state—

"*We ask no tax upon manufacturers for our benefit.* Neither do we ask any thing of Government, to enable us to cultivate the soil as we could wish."

The high character of the members of those societies forbids the supposition that this was an intentional misstatement. We are, therefore, inexpressibly astonished at the utter unacquaintance with the real state of the case betrayed in these quotations, which evinces how superficially these gentlemen studied the subject on which they undertook to interpose to prevent the success of our applications for relief.

The view they present is so far from fact, that it is the reverse of fact. The average of duties on such agricultural productions as are usually imported into this country has been, from the commencement of the Government, far higher than those on manufactures.

We will state the case at two periods, remote from each other, viz. 1789 and 1820. The intermediate space exhibits the same features.

In the former period, cheese was subject to a duty equal to *fifty-seven per cent.;* indigo, *sixteen;* snuff, *ninety;* manufactured tobacco, *one hundred;* coals, *fifteen;* hemp and cotton, *twelve;* whereas, seven-eighths of all the manufactures imported, including cottons, woollens, and iron, were subject to only *five per cent.* This, we presume, is full proof of the inequality of the system of legislation with which the Government commenced, and of the care with which the agriculturists, who formed the great mass of the National Legislature, guarded their own interests.

Hemp, at present, is subject to a duty equivalent to *twenty-six per cent.;* cotton, *thirty;* cheese, *ninety;* spirits, *eighty;* snuff, *seventy-five;* manufactured tobacco, *one hundred;* coals, *thirty-eight and a half;* sugar, *thirty-seven and a half;* and potatoes, *fifteen*—averaging *fifty-eight per cent.* Few other articles, the product of the earth, are imported; but they are all, except three or four, subject to fifteen per cent.

Of the manufactures imported in the year 1818, one twenty-fifth part paid a duty of *seven and a half* per cent.; one-third, *fifteen;* one-sixth, *twenty;* two-fifths, *twenty-five;* and one twenty-fifth part, *thirty* per cent.*

On this striking contrast, which affords no proof of "the proverbial liberality" of the landed interest, we offer but a single comment. It adds one to the numerous melancholy instances with which history abounds, that where one particular interest predominates in a legislative body, the others rarely experience impartial justice. We will notice only one article, which places in a strong point of light the different degree of protection experienced by agriculture and manufactures. Cotton, a raw material, is subject to a duty of thirty per cent., and the freight is about the same. The cotton planter has, therefore, a protection of sixty per cent.; whereas fine muslins and cambrics pay but twenty-seven and a half per cent. duty, and the freight is not more than one or two per cent. Thus the planter, who disclaims the idea of "protection," has an advantage over his manufacturing fellow-citizens of above thirty per cent., independent of the immense difference between the protection necessary for articles produced by agriculture and those by machinery. It may be assumed, without danger of contradiction, that cotton would be better protected by a duty of twenty per cent. than cambrics or muslins by sixty or seventy. We do not find that the tariff of any other country whatever presents such an extraordinary feature.

Great emphasis is laid, by the agricultural societies, on the danger of "monopolies granted to one class or order at the expense of another."

This forms a fertile theme, on which they descant very freely. They remonstrate against—

"Unequal and partial taxes, awarding *exclusive privileges*, or sustaining the manufacturers in the enjoyment of *oppressive monopolies, which are ultimately to grind us and our children after us to dust and ashes.*"

"In this way alone can the benefits of good government be equalized among the various orders and classes of society, the prosperity and happiness of which depend not upon *immunities, privileges, and monopolies granted to one* class or order at the expense of another," &c.

We are constrained to state, that the want of due consideration which prevails throughout the remonstrances is here very conspicuous. Monopoly, according to Johnson, means "the exclusive privilege of selling any thing." And a monopolist, according to the same authority, is "one who, by engrossing or by patent, obtains the sole power

* At 7½,	$2,387,693
15,	19,455,525
20,	9,524,531
25,	24,804,188
30,	2,633,637
	$58,805,574

or privilege of vending any commodity." There is not, therefore, such a thing or person in this country as a monopoly or monopolist; nor, while our present constitution exists, can there be a monopoly. For, suppose manufactures of wool, cotton, iron, and leather were altogether prohibited, those branches would be open to the admission, and consequently to the competition, of any part of the community—to farmers as well as others, and even to capitalists from any and every part of Europe, if they judged proper to embark in them. Where, then, is the monopoly?

While the agricultural societies were thus denouncing what they thought proper to brand with the odious term "*monopoly*," they did not reflect that they were themselves far more liable to the accusation than those against whom they preferred it. The great mass of the manufactured articles purchased by the farmers and planters of the Southern States, and probably one-half of what are purchased by those in the others, are imported. Whereas, the manufacturers of the United States have not consumed of foreign articles of food and drink, since the organization of the General Government, two per cent.

Thus, while there has been an incessant clamor against "*the monopoly*" of the manufacturers, whose market is open to and engrossed by rivals from half the nations of Europe, it appears that the farmers and planters have what they term "*a monopoly;*" which, however, is only an exclusive supply of the home market. It may be doubted whether a more extraordinary case is on record.

We shall conclude our observations on those memorials with one further extract.

"To guard" (the Fredericksburg Society observes) "against the possibility of misapprehension, we take this occasion to say that *we are incapable of feeling any thing like enmity against manufacturers, or any other useful description of citizens*, but heartily wish them all the success to which their skill and industry may entitle them, in whatever way applied."

This declaration would have been more acceptable, and claimed our gratitude, had it not accompanied an attempt, on the part of those who make it, to do us all the injury in their power to inflict; to prevent a compliance with our just claims, and to perpetuate our present intolerable sufferings.

Your memorialists regret to find that the same adverse spirit towards them that prevails among these small bodies of their agricultural fellow-citizens has been excited among a portion of the mercantile class. They request your favorable hearing of a few remarks on the memorial of the merchants of Salem on this subject. It "calls the attention of Congress to measures that have recently been proposed, and apparently approved, for the purpose of *prohibiting the importation of foreign woollen and cotton goods.*"

Your memorialists are constrained to state that this view is very uncandid. They never did comtemplate "a prohibition of foreign cotton and woollen goods," generally. There is not a sane man in the country, who, if he had the power, would enact a total exclusion. A large portion of those goods is not, and, for a long time to come, cannot be manufactured in this country, and therefore must be imported. Your memorialists deprecate and solemnly protest against the influence of a system which has been heretofore too successfully pursued; that is, defeating their fair and legitimate objects, by ascribing to them views which they wholly disclaim. Of this unfair system, their dearest interests have been frequently the victims. Were it necessary, they could produce numerous instances, of early and recent date.

"If we are not willing to receive foreign manufactures, we cannot reasonably suppose that foreign nations will receive our raw materials."

"We cannot force them to become buyers when *they are not sellers*, or to consume our cottons when they cannot pay the price in their own fabrics."

"We cannot expect them to carry on a ruinous trade, when *the profit is all on our side.*"

These paragraphs are liable to the exceptions urged against the preceding one. They assume the extraordinary idea (which insanity alone could harbor) that importation is expected to be wholly prohibited. All that is necessary for the restoration of the country, and for the prosperity of the manufacturers, is such a modification of the tariff, as will reduce our imports within the limits of our exports, and prevent our manufactures and manufacturers from being overwhelmed by the inordinate inundation of foreign fabrics.

"While the manufacturers are left free to engage in their own peculiar pursuits, enjoying, in common with others, a reasonable protection from the Government, the memorialists trust it is no undue claim on their part to plead for the freedom of commerce also, as the natural ally of agriculture and naval greatness."

There is an assumption here of "*freedom for the manufacturers*," which is not warranted by the fact. When their business is annihilated, and themselves ruined by the immoderate introduction of foreign merchandise, as has occurred to too many of them, can it be said that they "*are free to engage in their own peculiar pursuits?*" We will render this plain, by applying it to the case of the merchants. The vessels employed in the coasting trade for thirty years have averaged about four hundred thousand tons, annually. Were foreign vessels allowed to engage in that trade, to the amount of three hundred thousand tons, would it not be a mockery were the merchants informed, while their ships were rotting at the wharves, and themselves reduced to bankruptcy, that "*they were free to engage in their own peculiar pursuits?*" And is it not a perfectly analogous case, when the manufacturers are ruined, and their machinery rotting and rusting through the extravagant influx of foreign articles, to be gravely told that they are "free to engage in their own peculiar pursuits?"

"It is a sound political maxim that *the more free trade is*, and the more widely it circulates, the more sure will be its prosperity. *Every restriction which is not indispensable for the purposes of revenue is a shoal which will impede its progress, and not unfrequently jeopard its security.*"

The doctrine here advanced, on the broad and unqualified scale on which it is predicated, is unsound and contrary to the practice of the most prosperous States, and to the principles of the wisest statesmen. Can the prosperity of trade be promoted by the free introduction of foreign luxuries, which destroy the industry of our own citizens? Has it been promoted by the immoderate quantities of goods imported into this country, whereby its circulating medium has been exhausted, and an enormous debt contracted for articles which our own citizens could have supplied?

To test this plausible maxim, which has done infinite injury to this country, we will, as in the former case, apply it to the merchants themselves. The use of foreign vessels is almost virtually prohibited in this country by "*restrictions not indispensable for the purposes of revenue.*" Suppose these "restrictions" were removed, and that foreign vessels were entitled to the same privileges as our own; what would be the consequence? They would be employed here in large numbers, to the ruin of the merchants and ship-builders. Would they not, in that case, as zealously contend against the maxim as they now uphold it? And can there be any just reason why the manufacturer, entitled to equal rights with the merchant, should be ruined by foreign rivals, and the merchant secured against this rivalship? In the scales of impartial justice, the rights of each ought to have equal weight.

Although the merchants of Salem invoke Congress in such emphatical terms to support that "freedom of trade" which impoverishes the nation, and, by exposing their manufacturing fellow-citizens to the competition of rivals in every quarter of the world, has ruined so large a portion of them, there is scarcely a session in which the mercantile interest does not memorialize Congress for protection against foreign competition. On this conduct, so partial to themselves, and so excessively unkind to us, we dare not trust ourselves to comment.

It would extend this memorial to an unreasonable length, if we particularized one-half of the "*restrictions*" of foreign commerce in favor of our merchants. We shall confine ourselves to a few prominent cases to prove that this maxim, now so zealously urged, has had no weight when the interests of that class were at stake; and that the "restrictions" on foreign commerce which they succeeded in obtaining, were not only "not indispensable for the purposes of revenue," but in many cases pernicious to it.

When the competition of foreign merchants in the coasting trade was wisely destroyed in the very outset of the Government, by a heavy prohibitory tonnage duty, and afterwards by positive prohibition, was this measure "*indispensable for the purposes of revenue?*" Was it not, according to the Salem memorial, "*a shoal to impede the progress of trade?*"

When, in the first session of Congress, foreign merchants were excluded from the China trade by extra duties on teas imported in foreign vessels, averaging one hundred and seven per cent., were they "*necessary for the purposes of revenue?*" Did they not rather impair the revenue?

When, more recently, an extra tonnage duty of two dollars per ton was imposed on foreign vessels arriving from ports which American vessels were not allowed to enter, was this "*necessary for the purposes of revenue?*" Where then was the alarm about "*shoals to impede the progress of trade?*"

Was the act prohibiting the introduction of plaster of Paris in foreign vessels "*necessary for the purposes of revenue?*" or was it not rather "*a shoal to impede the progress of trade?*"

Was the act passed in a late session of Congress, of which the object was to coerce the British nation to abandon the chief feature of their navigation act, which they prize so highly, "*necessary for the purposes of revenue?*" Has it not, on the contrary, injuriously affected revenue and agriculture?

And, in fine, we ask, and hope for a fair and explicit answer, whether the strong "*restrictions*" now contemplated against both Great Britain and France are "*necessary for the purposes of revenue?*" Whether they are not, like the former, "*shoals to jeopard*" agriculture and "*revenue?*"

The acts above alluded to, and a great variety of others which abound in our statute book, do not require much comment. They speak a language not to be misunderstood. It appears, and cannot fail to astonish your honorable Houses, that, while the merchants have, from the commencement of the Government, applied for and been favored with "restrictions" not only "*not necessary for the purposes of revenue,*" but in many cases pernicious to it, a portion of them now use all their energies to defeat the reasonable objects of your memorialists, and consign them to destruction, on the ground that the restrictions contemplated are "*not necessary for the purposes of revenue.*"

"One sacrifice is to be demanded after another; one prohibition heaped upon another, until all the sources of foreign commerce are dried up; and domestic manufactures, sustained by *enormous bounties*, absorb the whole moneyed capital of the nation."

It ill becomes the advocates of a commerce "sustained by *enormous bounties*," in the shape of tributes to Barbary Powers; foreign intercourse; a most oppressive naval expenditure, amounting for the current year to $3,500,000; a commerce which has entailed on the nation a war debt of nearly $80,000,000, to hold this language respecting manufactures, on which the *Government has never expended a single cent* in thirty years. And what, we ask, has called forth this emphatical denunciation of manufactures? Merely a request, on the part of the manufacturers, of a duty of forty or fifty per cent. on cottons, woollens, iron, and some other articles, in order to enable our citizens to compete with the half-starved and half-clothed workmen of foreign nations. This is the tremendous danger which is "*to dry up all the sources of foreign commerce,*" and "*absorb all the moneyed capital of the nation!*"

We cannot forbear to state that it is no proof of the intrinsic goodness of a cause, when its advocates are reduced to the necessity of drawing high-colored and extravagant portraits of dangers which have no existence but in their own heated imaginations.

"It is not a little remarkable that these attempts are not only repugnant to those maxims of free trade which the United States have hitherto so forcibly and perseveringly contended for as the sure foundation of national prosperity, but they are pressed upon us at a moment when *the statesmen of the old world, in admiration of the success of our policy, are relaxing the rigor of their own systems*, and yielding themselves to the rational doctrine, that national wealth is best promoted by *a free interchange of commodities, upon principles of perfect reciprocity.*"

It is painful to us to state that this entire paragraph rests upon untenable ground. We look in vain for the evidences of "*the national prosperity*" on which the merchants predicate their reasonings. Where are those evidences to be found? Is it in the decay and destruction of so large a portion of the national industry? If this be a sign of "*national prosperity,*" then is this nation prosperous to a degree unexampled in its annals, except in the interval between the close of the revolutionary war and the establishment of the present form of government. Is it in the decline of commerce and navigation? Is it in the bankruptcy of so large a portion of the merchants, traders, and manufacturers of the country? Is it in the violent measure which the Legislatures of four or five of the States have adopted, of arresting the course of justice, and suspending the collection of debts? Is it in the augmentation of poor rates, the increase of mendicants and soup houses? Is it in the failure of revenue to the enormous amount of $5,000,000 for the present year? Is it in the exclusion of one of our chief staples from the British markets, and the very great depreciation of the price of the rest? Is it, in a word, in that state of affairs, justly characterized in a recent report, by the Secretary of the Treasury, in these strong terms:

"But few examples have occurred of distress so general, and so severe, as that which has been exhibited in the United States?"

These, alas! are no symptoms of "*national prosperity,*" and of "*the success of our policy,*" which, we are told, and with a grave and sober air, as if the assertion were irrefragable, excites "*the admiration of the statesmen of the old world!*"

We look around in vain, we repeat, for this "*national prosperity,*" which sounds so captivatingly. And we look equally in vain for "*the admiration of the statesmen of the old world,*" of "*the success of our policy,*" which is brought forward to tickle our national vanity. It would be vain to seek for the "success of a policy," which, after twenty years of a most extensive commerce, in which we received exorbitant prices for all our staples, has, in five years of profound peace, with abundant harvests, and wholly free from any natural calamity, reduced an intelligent, industrious, active population, possessed of almost every possible advantage of soil and climate, with water power unequalled in the world, from a towering state of prosperity to its present lamentable situation—a situation which, notwithstanding "*the admiration of the statesmen of the old world,*" emphatically warns us to change a policy, which built our prosperity not on the solid basis of national industry, but on the wretched foundation of foreign wars and famines, and which has rendered us dependent on foreign nations even for the chief part of the clothes we wear, although possessed of the most valuable raw material in the world, to an extent commensurate with the demand of nearly half the globe.

But if we look in vain for this "*national prosperity,*" for "*the success of our policy,*" and for "*the admiration of the statesmen of the old world,*" we look equally in vain for "*the relaxation of the rigor of their systems.*" When this memorial was draughted, early in January last, and likewise when it was presented to Congress, on the

31st of that month, there was not before the American nation a trace of such relaxation in any part of Europe whatever. The assumption, therefore, on which so much of the argument of the memorial is predicated, was unwarranted by the fact.

The countries with which the chief part of our intercourse is carried on are Great Britain and France. In the three last years, of our domestic exports, amounting to $192,000,000, there were $141,000,000 exported to these two countries; whereas, to Russia, Sweden, Denmark, Norway, Prussia, the Hanse Towns, and all the ports of Germany, we only exported $11,000,000. Of course, we are little interested in the commercial arrangements of those nations.

The signers of the Salem memorial are called upon to produce any symptom in Great Britain or France of this very extraordinary "*admiration*," or its effects. Our policy is truly a subject of "*admiration*" for the desolation it has produced, as hurricanes and tornadoes are; but not of imitation to any wise nation. No symptoms of such imitation can be found. On the contrary, the cords are every day drawn tighter. So far as respects France, the Edinburgh Review for July, 1819, informs us that

"The anti-commercial system of the ex-Emperor, instead of being modified or repealed, has, in fact, been adopted in all its extent, by his legitimate successors, and *in their hands has become doubly efficient.*"

No alteration has taken place since that period. We are therefore warranted to state that the "*admiration*" and imitation of "*the success of our policy*," which form so capital an item in the Salem memorial, cannot be substantiated in France. And the rigorous acts recently passed and now contemplated by this Government, to counteract the British restrictive commercial policy, prove that that nation, in like manner, does not fall within the description of the Salem memorial, as excited to "*admiration*" or imitation of "*our policy*" by its wonderful "*success.*"

When the Salem merchants laid down the maxim that "national wealth is best promoted by a *free interchange of commodities, upon principles of perfect reciprocity*," did they mean to convey the idea that the United States enjoy such a "*free interchange?*" It cannot be. There is no nation in the world which carries on commerce more completely destitute of "*perfect reciprocity.*"

Our ports are open to the manufactures of all the world. Whereas, most of the ports of Europe, and all those of the colonies of that quarter of the globe, are shut against ours. This is a practical commentary on the "*perfect reciprocity*" which the Salem memorial insinuates we enjoy.

Again: we exchange necessaries of life, and raw materials in the most rude state, for manufactures elaborated with the last finish of human industry and skill: thus, in every case, we exchange the labor of two or three, and, in many, that of ten, twenty, and thirty persons for one. Our cotton is returned to us in a manufactured state at an average of fivefold its original cost.

It is this species of one-sided "perfect reciprocity" which has produced "*a distress so general and severe*" that "*few examples*" of equal intensity "*have occurred*," and which has rendered the situation of the United States an object of regret and sympathy for its friends, and of exultation for its enemies. It is full time for the guardians of the nation's rights to secure to it something like "*reciprocity*" in its intercourse with the rest of the world.

We cannot close this memorial without expressing our astonishment and regret that an idea could ever have prevailed of the existence of hostility between the interests of agriculture and manufactures; whereas, the great mass of the productions of the former derive their chief value from the market afforded by the latter. The hides, the skins, the furs, the wool, a large portion of the cotton, the timber, the coals, the lead, the iron, the pitch, the tar, the turpentine, the tallow, the indigo, the flax of the farmer, find a ready sale among the manufacturers, who likewise consume of provisions one thousand per cent. more than the amount exported to all the world in the most flourishing period of our history.

Your memorialists are gratified to find that the opposition to their just requests has been confined to a small portion of the two great classes of their fellow-citizens.

In submitting these premises to the most serious attention of your honorable Houses, your memorialists hope that you will make such a modification of the tariff as will secure to all persons interested in agriculture, manufactures, and commerce, a full and equal share of protection.

16th CONGRESS.] **No. 591.** [1st SESSION.

FOREIGN GOLD COINS.

COMMUNICATED TO THE SENATE, APRIL 17, 1820.

To the honorable the Senate and House of Representatives in Congress assembled: The General Assembly of the State of Louisiana respectfully represent:

That the law passed at the last session, providing that from and after the 1st day of November, 1819, foreign gold coin should cease to be current in the United States, has produced in this State the most pernicious consequences.

Your honorable body must be aware that the annual proceeds of the Mexican mines having greatly diminished, by reason of the revolution of that colony, the exportation of precious metals, which was formerly carried on from that country to Louisiana, has been necessarily affected by that reduction; and that, on the other hand, the perils attendant at all times on that kind of commerce have increased beyond all measure, in consequence of the enterprises of a lawless band of pirates, attracted by hopes of plunder in the Mexican Gulf. The General Assembly, without fearing the imputation of exaggeration, declare that the concurrence of these several causes has deprived the United States of more than four millions of dollars, which would have been brought to New Orleans during the

last eight years, and which, flowing into circulation, would have prevented, or at least diminished, the general embarrassments under which our commerce labors.

Whatever may be the case as to that fact, and however small may be the amount of gold specie lately brought into this place from Mexico, it had, nevertheless, the effect of augmenting our facilities for exchange, and the sale of our goods, and enabling our merchants to be refunded of such sums as may be due from that part of Spanish America.

Those real advantages have disappeared, under the operation of the abovementioned law, inasmuch as doubloons having ceased to be current in the United States, no reasonable hopes can be entertained that traders will persist in bringing them here, when, in all the ports of the West Indies, they can easily, and at an advantageous rate, exchange them for every kind of commodities and necessary supplies.

If we inquire into the effects of the same law respecting the doubloons already in the country, we shall find that they have not been happier. In ordinary times, that specie remains generally in the hands of moneyed men, who rest satisfied that they can place out advantageously those funds, whenever willing to do so; but the great scarcity of specie, under which every part of the Union has labored for the last eighteen months, has caused a great quantity of that kind of specie to be put into circulation where it was received, without difficulty, at the rate of $16, a circumstance which facilitated payments, and the sale of the produce of the country, and of foreign merchandise, and from which there are but few persons in this country who have not derived some relief, which, under unfortunate circumstances, is always better appreciated.

Was that law intended to place at the disposal of Government for coinage a sufficient quantity of gold for the actual wants of the Treasury? If such was its object, it appears improbable that it will be attained, inasmuch as gold specie, being received at a very high rate at Havana, and several other places, will be purchased here for exportation at a low price by the moneyed men.

It appears that Congress, when they fixed a term after which that money should cease to be current in the United States, had reason to believe that, before the time prescribed, a quantity of American eagles, nearly equal to the amount of foreign specie withdrawn, would be thrown into circulation. But the General Assembly do not perceive that that object has been fulfilled; and even had it been, they could not have viewed without regret the adoption of a measure which tends sensibly to affect the commercial relations which have always existed between Louisiana and Mexico, and which would flourish as formerly, if a more immediate protection was extended to our navigation in those quarters, and the abovementioned law repealed.

The General Assembly submit the foregoing observations to your honorable body, with full confidence in your superior wisdom and exalted patriotism; and they are respectfully persuaded that, amidst your arduous and multiplied labors, the prosperity of the United States and the welfare of your fellow-citizens will be the continual and primary objects of your solicitude.

Resolved, That copies of the foregoing memorial be forwarded to our Senators and Representative in Congress, and that the former be instructed, and the latter requested, to use their utmost exertions in order to obtain the end proposed in said memorial.

DAVID C. KER, *Speaker of the House of Representatives.*
JULIEN POYDRAS, *President of the Senate.*

BANKS IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE SENATE, APRIL 24, 1820.

Mr. HORSEY made the following report:

The Committee for the District of Columbia, to whom was referred the bill from the House of Representatives, entitled "An act concerning the banks in the District of Columbia, and for other purposes," respectfully submit the following report:

Without noticing many of the modifications and conditions of the bill, most of which the committee approve, they beg leave to call the attention of the Senate to its principal provisions. These are two: first, an extension for five years of all the charters of the several incorporated banks in the District of Columbia, which now pay, on demand, their notes in specie; secondly, a plan of consolidation for reducing the number of banks to two in each town.

As to the first, the committee doubt the expediency of extending the existing charters for so long a period as five years, conceiving, as they do, a more immediate reduction of the number of banks in the District, and consequently of their expenses, to be of great importance to the interest of the stockholders, as well as of the public.

A reason, however, of more decisive influence with the committee is, it does not appear that the present applications for an extension of the several charters proceeded from the stockholders, or by virtue of any direction or authority from them; no general meeting of the stockholders having been called, or other proper steps taken to obtain an expression of their sense respecting the measure proposed. On the contrary, the applications appear to have been made by the several presidents and directors without their pretending to have received any such directions or authority from the stockholders. The committee do not consider it altogether correct legislation to countenance the exercise of such a right on the part of the directors. But the bill goes further: it not only admits the directors thus to apply for a renewal of the bank charters, but also to assent to and accept such renewals, with all the modifications, restrictions, and conditions which may be imposed. This is conferring on the directors the

right to exercise a power, of all others the most important to the stockholders, and which it is believed to be their peculiar right to exercise.

Concerning the provision which relates to the consolidation of the banks, desirous as the committee are to see the number of banks reduced, they doubt whether the present plan would be attended with entire success.

A due regard does not appear to have been paid to the principles of equality and reciprocity; and the committee fear the provisions of the bill are rather too coercive for a plan, the success of which must so materially depend on a spirit of compromise and of amicable arrangement among the stockholders of the several banks; at a time, too, when stockholders have but small inducements to wish an extension of their charters.

The committee deem it their duty further to state that there appears to be considerable division of opinion among the directors of the several banks respecting the bill; the directors of the banks, generally, in Alexandria being in favor of it; those in Washington somewhat divided; and those in Georgetown generally opposed.

On the whole, the committee, after giving to the subject their best reflection, have come to the conclusion that it would probably conduce more to a spirit of amicable arrangement among the several banks, and the accomplishment of the important object in view, to do no more for the present than to extend the charters of such of the banks as expire before the 1st of January, A. D. 1822, to that time, that being the period when the charters of most of the banks in the District expire; so that all may expire at one and the same time, in the hope and expectation that, by the next meeting of Congress, general meetings of the stockholders will be called, and their sense duly taken on this or some other plan for reducing the number of banks in the District, more likely to insure unanimity, and to impart general satisfaction.

16th CONGRESS.] No. 593. [1st SESSION.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 24, 1820.

To the honorable the Senate and House of Representatives in Congress assembled: The memorial of the American Society of the city of New York for the encouragement of domestic manufactures respectfully represents:

That your memorialists deem it a duty incumbent on them again to address your honorable body on the subjects embraced in their memorial of the 16th December last.

The excessive and continued importation of foreign manufactures, which is encouraged and supported by the *existing tariff*, the *credit given for the duties*, and *free sales at auction*, have destroyed order and safety in business, discouraged enterprise, suspended labor, and excited the most lively apprehensions for the future peace and welfare of the country.

The facts that have transpired in this market recently are too important in their bearing on this subject to pass unnoticed. By statements, carefully made out, it appears that, in this city alone, about *twelve thousand packages of foreign manufactures* have been sold at auction, from the 1st January last to 15th April instant, the duties on which are estimated at $1,000,000; which sum, by this short process, has now become active capital, loaned by this Government to foreign manufacturers and their agents in this country, in aid of such operations, to crush the enterprise and industry of this nation.

The contrast between the policy of this Government, and that of all the great States of Europe, on this subject, is appalling to every citizen who reflects upon it. *We admit* a free importation of all the manufactures and products of Europe and India, subject only to a light duty, payable at a distant period. *We admit* foreign adventurers, immediately on landing, to compete with our citizens, in every profession, at their very doors, free from all taxes, and exonerated from all the legal duties imposed on citizens, while *they* exclude *even our bread-stuffs*, except when threatened by famine; and it is equally notorious that they are making every effort to exclude also our *cotton, tobacco, and other great staples*, by encouraging the production of them in their colonies. *They* impose high import duties, and still higher excise, on all foreign products, which are payable in cash, on delivery of the goods from the ship or public stores, and invariably secure peculiar privileges to *their* subjects over foreigners.

Your memorialists cannot believe that your honorable body have been duly informed of the deleterious effects arising from the existing system, which is availed of by foreigners, to the utter ruin of all regular business and honest industry. The numerous memorials presented this session for relief, the distresses throughout the country generally, the almost total stagnation of business in all our great cities, speak a language which cannot be misunderstood any longer. The utmost anxiety exists, and is suspended on the deliberations of your honorable body. The nation expects, at your hands, some efficient measures for relief from present embarrassments, and security for future enterprise.

Your memorialists, therefore, humbly hope that Congress will not adjourn without acting efficiently on the important bills now pending before your honorable body.

W. FEW, *Vice President.*

PETER H. SCHENCK, JOHN E. HYDE. } *Secretaries.*

16th CONGRESS.] No. 594. [1st SESSION.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE, APRIL 28, 1820.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled: The memorial of the chamber of commerce of the city of Philadelphia respectfully showeth:

That we have seen, with great concern, the project of a bill reported to the House of Representatives by the Committee of Commerce and Manufactures, calling for a considerable increase of duties on goods imported into the United States. We had hoped that, during the uncommon depression of our commerce and agriculture, no measures would have been taken by our Government to add to the accumulated distress of either. If the mere item of revenue were the only object proposed by the bill, we should think it inexpedient, and as by no means calculated to effect the end proposed; but, considering it as calculated seriously to injure, or perhaps destroy, our foreign commerce, and to erect on its ruins a manufacturing system, incompatible with our habits and the state of our population, it becomes the duty of those who are to be the victims respectfully to remonstrate against such manifest injustice.

Whatever may be the merits of the system of finance which has existed since the adoption of the federal constitution, it is, at least, entitled to sufficient respect to preserve it from abrogation before a proper substitute be offered. That which is now proposed, so far from increasing the revenue, will, in our opinion, have a contrary effect, and will, at the same time, tend to destroy our foreign commerce, and introduce an unfavorable change in our habits and morals. But we beg leave to call your legislative attention especially to that class of society of which we are members, and to reflect upon the consequences that will result, not only to us, but also to the numerous descriptions of tradesmen and artisans who depend on us for their employment and support, from any sudden and radical change in our present condition. Our capitals, to an immense amount, are vested in shipping, warehouses, wharves, and other appendages belonging to mercantile establishments. We have been prepared by education and habit for the different branches of our calling, and are unfit for any other. Are we, then, to be required to submit to the destruction of our property, and to renounce the great branch of maritime commerce which is coeval with the settlement of our country? It is in the power of Congress to change our laws, but it is beyond its power to change the force of nature and of habit. We have an extensive line of seacoast, indented with fine harbors; we have a bold and enterprising population on that seacoast, to whom the ocean has hitherto furnished subsistence and comfort: they will, therefore, there is too much reason to believe, not be withdrawn from it by any tariff that Congress may think proper to establish. The honorable, conscientious trader may be compelled to abandon his calling, by reason of the regulations which Government may impose on it; but the smuggler will take his place, and furnish, on easy terms, every article of foreign luxury on which our legislators may impose prohibitory duties. The warehouses and shipping may be destroyed, and their owners ruined; but they will be replaced by British ships and British warehouses at Montreal, St. Andrew's, and on the English side of the lakes.

We hope that the class of citizens who are so zealously employed in this great work of change will be called on to show from what source the Government will derive its revenue during the period that must intervene between the overthrow of the present system and the establishment of another; nay, we will even add, after it shall be established. The duties on imports are already so high that the consumption decreases daily; and yet it is proposed to increase the revenue by increasing the imposts: our own experience suggests a very different remedy. Another policy, and we think a better, would have lowered the duties, and sought for greater revenue in increased consumption. Whilst these destructive restrictions are to be resorted to, we hear nothing of internal taxes, when a moderate and wholesome tax on domestic spirits would nearly supply, of itself, the deficiency in the revenue. Whatever may be the object of the tariff proposed, we respectfully believe the end will be such as we have here stated. The revenue will be diminished, and foreign commerce carried on by fraudulent dealers. We would ask the advocates of this innovation for information as to what is to be done with our surplus agricultural productions during the time of this violent restriction on foreign commerce. We know well how it is to be disposed of when our country shall be covered with workshops and manufactories. We are then to consume it ourselves. But, as the interval will certainly be of many years' duration, it is necessary to make some previous arrangement for the disposal of this important item. If we tax to prohibition the produce of other countries, those countries will do the same by ours. We have a notable instance in the duties imposed by us on the wines of Portugal and Spain. Of these we destroyed the consumption by excessive duties; Spain and Portugal have destroyed the consumption of our corn and flour by the same means. This fine branch of trade was thus destroyed; and how does the account stand with the parties now? Why, we drink whiskey that pays no duties, and Spain and Portugal get grain from other countries. We imposed high duties on British goods, and a restrictive duty on her tonnage; she defeated our tonnage duty by an equivalent duty on our tonnage, and superadded a bounty to her own. We were glad to compound, by agreeing to remove all discriminative duties and bounties on the shipping of both nations. Had we also agreed to diminish our duties on such of her manufactures as cannot, for a long time, interfere with our own, we should probably not have witnessed the very extraordinary efforts which she has lately made to procure cotton, the great staple of our Southern States, from the East Indies, to the great prejudice of the value of ours. She would gladly take our raw materials, and pay us in such manufactures as we shall be unable to rival, with the aid even of prohibitory duties, for a long series of years. But, if we take measures to lessen the sale of her goods, she will not be backward in retaliating, by lessening, as much as she can, the consumption of our raw materials. Unfortunately, we have no productions of a character so peculiar as to defy competition, like the teas of China, and the wines and brandies of France. All of our productions are to be found in other countries; and we must not be surprised to see her, at no distant day, forego the use of our cotton, as Portugal now does that of our flour. If England is the original from which we propose to copy our restrictive system, we should consider whether her situation was analogous to ours when she adopted hers. We shall find that every acre of her good land was in cultivation, and that her population and capital were redundant. In none of these items is there a conformity with our present situation: our population is very sparse, compared with our immense extent of territory; and both our population and capital are feeble, compared with the exertions that will be called for in this arrangement. But those are not the only difficulties we shall have to contend with. We have just stated to you the effect of the rivalry and counteraction of other nations, as it respects the exports of our surplus productions. We beg leave to call your attention to the actual situation of England, as it respects her exports. Every nation in Europe is at war with her restrictive system, and have, by their counteraction, reduced her manufacturing establishments, and the persons connected with them, to a condition of unparalleled distress. Even this, our proposed measure, is principally

levelled at her. The fact is, that as long as we have surplus productions we must export, and, as long as we export, we must import. But, if we determine not to import, and effect this purpose either by prohibition or by excessive duties, we must be prepared to meet a corresponding feeling on the part of other nations, and to suffer the inconveniences that have uniformly attended restricted commerce, both as it respects our revenue and agricultural interests.

It is not only on general principles that we object to the proposed plan of restriction and high duties, but we are also urged by the peculiarity of our own situation to remonstrate against their unequal and unjust operation. During the last two or three years the aggregate of the commerce of the United States has been productive of great loss to those who have been concerned in foreign trade; so that the merchant, who should only be the organ through which the revenue is conveyed to the Treasury, has, in fact, been burdened with a very large proportion of the duty which was intended to fall on the consumer. The diminution of capital has been such as to produce many and very heavy failures throughout the maritime ports of the Union. As long, therefore, as this state of things continued, we, as before observed, had hoped that no additional duties would have been imposed, inasmuch as those now levied have such an unequal, and, we may add, unjust bearing. We have waited, without murmuring, in hopes that a change of circumstances might enable us to receive a decent return for the employment of our capital and labor, but we had not imagined that an aggravation of our sufferings would come from a quarter where we look only for relief. If we are asked why, under such great disadvantages, we have continued to import foreign productions, we answer, that, during the whole period, there has been a gradual diminution of mercantile establishments throughout the Union; that those whose capital has principally been invested in shipping have cherished a hope that the reaction, consequent on the convulsed state of the commercial world during the last twenty-five years, would soon cease to operate; and, moreover, that it cannot be expected that, as long as there are even hopes of improvement, a very numerous description of persons should abandon a calling to which they have been uniformly devoted, and of which only they have any knowledge. But there are not wanting other considerations of a very serious nature, which must have escaped the notice of those who propose an increase of duties at this time, even presuming that such increase would improve the revenue. Surely it will be allowed that the measure of taxation should be proportioned to the means of payment. In our country we have no other criterion for fixing the extent of these means than the value of our agricultural productions; and, if we are to be influenced by a test of so natural a character, we are bold to affirm, that, since the adoption of the present constitution, we have, with the exceptions of the periods of war and embargo, at no time been in a condition so ill prepared to face an increase of taxes. We believe that, throughout our whole country, the products of our agriculture are in a state of extreme depression. There may be some few exceptions, one of which we shall have occasion to speak of hereafter; but, as a general observation, we think ourselves correct; at all events, we can speak with confidence as to the article of flour, the great staple of the Middle States. In a note which we transmit herewith, you will find that the average prices of flour, from the year 1789 up to the present period, have uniformly exceeded that which prevails at this time. Now, as the price of provisions regulates the price of every species of labor, we find that the latter has also declined proportionably in its value; and that the means of enjoyment, or even support, are very much contracted in every department of life. How, then, are we to support the present rate of taxes, so far above the rates of those which prevailed in the early days of our constitution, when our means are reduced even below the standard of that age? We can only support them by rigid economy, which now pervades every branch of society. And let us here observe, that the very causes which operate so unfavorably to the agricultural and commercial interests have a tendency directly opposite, as it respects those who are concerned in manufacturing establishments. Every cent which is deducted from the price of labor is an additional bounty to them. A cotton factory in the neighborhood of Boston, established on sound principles, as it respects capital and conduct, has given an annual dividend of twelve per cent. for some years. We do not believe that, during the same period, there has been in the Middle States an equal investment in commerce or agriculture that has given equal emolument; and yet it is contemplated to sacrifice these unerring sources of wealth and power merely to promote the views of a small class of citizens; and that, too, without any reasonable expectation of seeing their theories reduced to beneficial practice.

We here beg leave to close, for the present, our general observations as to the expediency of increasing the present rate of duties, and shall proceed to make some few of a more specific character as it respects some of the leading articles in the proposed tariff; and we do this the more cheerfully, as we feel satisfied that it will appear, from the facts we shall present to your view, that the existing rate of duties, so far from being enhanced, should be, in many instances, reduced, if it be intended to apply them to the beneficial purposes of revenue.

LIQUORS AND GROCERIES.

Wines.—We observe that the duty on this important article is left in blank to be filled up. In the course of these remarks, and also in a memorial which we lately presented to the Congress, we have shown the destructive effects produced by high duties on wines; and it affords an instructive lesson to us for our future conduct in regard to laying high duties on articles which are considered as luxuries. We promoted the agricultural as well as commercial interests of the Union by exchanging our provisions and lumber for the wines of Spain and Portugal, which, for many years, were a source of considerable revenue. On these we imposed such high duties that we have, in a great measure, destroyed the consumption of them, and we have lost the sale of the provisions which we gave in exchange for them. As it has not pleased the Lord to grant us any vineyards, and as we once found this a profitable article of revenue, when properly managed, we trust it will not offend the most fastidious economist if we respectfully suggest to you the propriety of treading back on our steps, and reducing, by almost one-half, the duties actually paid. Perhaps it may produce a policy on the part of Spain and Portugal to retrace their steps, and to remove the restriction which they have imposed on our productions. We may then again have a chance of calling on the farmers for some part of the surplus grain which, from present appearances, they are likely to have on hand.

Brandy.—We find this article, in the existing as well as in the proposed tariff, classed with spirits of other denominations. We think that brandies (to use a plural term) should be classed, and that French brandy should pay at least fifty per cent. more duty than any other species, not only because the French Government are endeavoring to wrest a part of our carrying trade from us, but because the brandies of France are of a peculiar character as to goodness, and cannot be supplied (of equal quality and request) by any other nation; and are, in fact, of far greater value at the place of their growth than any other. If any difficulty should occur in separating them from other brandies in the tariff, they might, we conceive, be properly admitted into the list of ad valorem articles with the others; and we should then tax them by value, which, in this case, we should consider the true criterion for the measure of duty. The tariff, as it now stands, virtually prohibits the importation of Spanish brandy; but as we do not approve of high duties, except in most special cases, we propose to produce the effect by reducing the duty now paid on Spanish brandy, so as to leave that of France at the proposed advance.

Rum.—We would recommend precisely the same course as to this article, which is now taxed too high, in our opinion. It has been a source of great emolument to our revenue; but, under the present rate of duty, the consumption, as far as we can judge, is very rapidly declining. It recommends itself, moreover, to our favor, by its being one of the principal articles of payment given in the West Indies for our agricultural productions. If we drive it from our market, we must expect these productions will be treated there in the same manner as they have been treated in Spain and Portugal. Even under the existing tariff, we contemplate that this will be its fate ere long; but under the proposed addition of duty, it will not be imported in a way that will yield any efficient benefit to the revenue. Indeed, we are not without something more than apprehension that a considerable quantity is now introduced in a clandestine manner; nor need you be surprised that it is so, when every puncheon thus introduced affords a profit of from forty to fifty dollars.

Coffee.—Almost every observation we have made in respect to rum may be applied to this article. We are of opinion that the present duty of five cents per pound is too high, and we are persuaded that a reduction of one per cent. per pound would have a favorable effect on the revenue. We consider it a fair object of revenue, as far as that revenue can be collected, and as far as we can afford to pay it; but we think the present duty sufficiently high to invite to the frequent breach of our revenue laws; and we are satisfied that, in our part of the country, the consumption has very much decreased.

Sugar.—This is a most important article, not only as it respects the revenue, but as forming a leading item in the comforts, we may even say the necessaries, of life. Without any certain data, we venture to estimate the quantity of this article consumed in the United States at 60,000,000 pounds, producing, at 3 cents per pound, a revenue of $1,800,000. When the duty was imposed on sugar, it was intended for the purpose of revenue only; and it was not contemplated that in our country there existed a climate and soil calculated for its production. But, during the last few years, a certain portion of Louisiana has been found to possess these advantages; and such has been the rapidity with which they have been improved, that it is estimated that the produce of Louisiana will amount this year to about 40,000 hogsheads of 900 lbs. each, or a total of 36,000,000 pounds. As no duty is paid on this enormous amount, that which is paid on sugar from other countries operates as a protecting duty to it, and gradually loses the character of a revenue duty, and will soon cease to exist as such; because the increased cultivation in Louisiana bids fair to supersede the necessity of importing from other countries. There will then have occurred in our revenue, for the present year, a deficit, in this single item, of $1,080,000. But, without anticipating the consummation of the deficit, we beg leave to call your attention to that which will, in our opinion, be sustained in the present year. We have stated already, on the best information we can procure, that the last crop amounted to about 36,000,000 pounds. This sugar, being protected by our present high duties, is wholly consumed in the United States; and every hundredweight of sugar imported from foreign countries, admitting it cost the same price, must be sold for three dollars more, in order to indemnify the importer. But, inasmuch as the sugars of the West Indies require twice the labor and expense requisite in Louisiana, the price at which they are bought by us cannot be supposed to be less. Thus it evidently appears that the whole duty which is thus subtracted from our revenue is neither more nor less than a bounty granted to the sugar planters of Louisiana; and that the amount thus granted on $36,000,000 pounds, at three dollars, is $1,080,000. But this is not all. It is generally understood that two hogsheads of sugar yield one hogshead of molasses, and this latter an equal quantity of rum; so that there will exist the materials for 20,000 hogsheads of rum, which, at the moderate estimate of one hundred dollars each, at a bounty of thirty cents per gallon, will amount to $600,000; if not distilled, it will only receive a bounty of $80,000. But admitting one-half to be used without distillation, and the other to be converted into rum, the mean sum will be - - - - - - $340,000

Which, added to the bounty on sugar, - - - - - - 1,080,000

Then the aggregate bounty will be - - - - - - $1,420,000

We do not pretend to be accurate in this estimate, because we receive the principal data from public report. But we are willing to make large deductions from its amount; and we will suppose that the amount paid as a bounty to Louisiana for the present year will amount only to $1,000,000. As probably the subject has not been considered in this point of view, the result may be matter of surprise; and we shall no longer be at a loss to account for a diminution of our revenue in one of its most important branches. But there is a feature in this protecting duty, of so singular a cast, that we do not believe it can be paralleled in the history of commercial bounties. It seems that the soil calculated for raising the sugar cane in Louisiana is very limited, and that the culture of it is as yet confined to a small number of persons. We do not believe that the number of sugar planters exceeds from one to two hundred. We cannot vouch for the correctness of the estimate; but, presuming it to be correct, and that the number of planters amounts, say to one hundred, then, assuming our reduced estimate of bounty of $1,000,000, it will appear that the United States grant an average sum of $10,000 per annum to each of these hundred planters; or $5,000, if their number be two hundred. If these statements be correct—and the Legislature have better means than we possess for ascertaining their correctness—we presume that no comment is necessary.

Again: we are not to suppose that the evil ends here, and that we are to suffer no other inconvenience than the payment of these splendid sinecures. We have now to present the case to you in a point infinitely more interesting, and such as we trust will excite the most serious attention on the part of Congress. We have supposed that the consumption of sugar in the United States amounts to about 60,000,000 pounds; and, in the estimate of the crop now delivering at New Orleans, we have rated it at 36,000,000 pounds. There is, then, only required an increase of 24,000,000 pounds in the growth of Louisiana sugars to complete the supply for the actual demand of the whole Union. From the rate at which they have increased for some years, the production will soon have attained to this point; and the importation of foreign sugars and rum, as articles of consumption, will, of necessity, cease. The consequences of this change will be much more serious than they at first appear.

Our commerce with the West Indies is, in our present situation, of the greatest importance to our agricultural as well as to our maritime interests. Excluded from the ports of Europe by our own bad policy, our provisions and lumber have scarcely any other mart than the West Indies; and the principal returns which they afford are sugar, rum, and molasses. Now, if these are wholly driven from consumption, we must cease to receive them in payment, for we cannot continue to import them with a chance of being indemnified for their cost, by reshipping them to Europe; and, if we cannot receive them in payment, our agricultural products will, of necessity, be rejected, and this other branch of commerce will either expire, or be continued in a very diminished and languishing condition.

There is also another view of this subject, which we consider of importance. We have stated the amount of sugar made in Louisiana this year to be 36,000,000 pounds, which, rated at the moderate price of seven dollars per 100 pounds, will amount to $2,520,000; of which amount we have shown that we now pay as bounty more than $1,000,000, and that when the quantity shall have increased to the measure of our supposed consumption,

(60,000,000,) the bounty will be increased to $1,800,000, exclusive of that which will accrue on the rum and molasses. Thus an enormous and increasing contribution is levied on every individual in the Union, to pamper a few individuals living in the most remote and most favored angle of our country. To add to their excessive gains, we are to destroy the most active and beneficial branch of our commerce, and to dissolve those branches of foreign commerce through which we are to receive our supplies, in the event of being at war with a nation having a maritime force superior to our own. It will be in vain that we shall be told that the commerce which we lose will be replaced by that of Louisiana. The whole of the maritime States furnish scarcely a single article with which she cannot supply herself without our assistance. The value of our exports to New Orleans, in native productions, is so small, and diminishes so rapidly, that Louisiana bids fair, and that very soon, to stand in the same relation to us with China. We must send our specie to purchase her productions, and that, too, when they shall no longer enjoy the bounties now granted by us with such prodigality.

We are sensible that the bounty (for such it is, in effect,) granted on the sugar, rum, and molasses, has not been produced by any legislative act formed for the purposes of revenue, and which, by the gradual increase of these articles, has been virtually converted into a bounty, and the measure of their increase is precisely that by which we may estimate the progressive reduction of our revenue, and of our West India trade. In the infancy of the sugar establishments on the Mississippi, it might have been prudent to grant protection, and even positive bounty, if required; but, in their present state of consistency, when it is ascertained that no species of agriculture can compare with this as to emolument, we think it is time to withdraw a portion of the bounty, and apply it to other branches of agriculture, which, in their turn, require support. Our flour, our corn, our tobacco, our rice, our salted fish, and lumber, call for support. But we do not ask for it in the form of restricted duties, but in the removal of such as operate to depress those staple commodities. So far are we from approving of an increase in the duties of rum, sugar, and molasses, that we think it will be both wise and just on the part of our Government to reduce by one-half the amount of those which now exist on those articles. It is a most oppressive tax on the farmer of the seaboard to pay as a protecting duty on a *barrel of New Orleans sugar seven bushels of wheat*, at the prices of the present day; and how much more oppressive is it still, that this enormous bounty, when paid, should operate to destroy the sale of his produce in the marts to which it has been usually exported? Such, however, is the extent of the tax, and such its effect. In asking thus for a diminution of duty on West India produce, we do not apprehend a diminution of the revenue; the existing high duties have contributed principally to the great reduction on the consumption of it. We contemplate very favorable results to the revenue, which the enlarged consumption, under reduced prices, will create; and that soon the most beneficial effects will be felt in the important branches of agriculture and commerce.

Having thus respectfully taken a view of the immediate and prospective operation of the actual duty on sugar, we shall close our protracted observations on this most important item, begging leave to invite the particular attention of the Congress to it, as well from considerations of general policy as from those which attach peculiarly to agriculture and commerce.

Molasses.—Our observations on sugar apply with equal, if not greater, force to molasses. It is the humble and nutritious sweet resorted to by those who cannot afford to buy sugar, and seasons the simple repast of all ages and of all sexes. If we do not ask a reduction of the present duty, we at least deprecate an advance, more especially as that called for by the new tariff will still add to the bounty now granted to the planters of Louisiana.

In respect to all the actual and proposed duties on the important items of cotton and woollen goods, we subjoin a body of notes, showing what is and will be the effect of the proposed changes. The observations which accompany them are made by a practical merchant, and we conceive are highly worthy of consideration. It will be seen that the present duties operate as a very heavy tax on the consumer; that they are abundantly large for the protection of our manufactures, and that the proposed advance will not only tend to diminish our revenue, but to produce the most demoralizing effects in our society. The importers of woollen and cotton goods, whatever may be their opinions as to the present rate of duties, are of opinion that the duties, generally speaking, are fairly paid; but they have no hesitation in declaring that the proposed advance will have the effect of producing a very extensive branch of contraband trade. As far as our own opinion may have weight, we do not hesitate to say that, if the present high duties will not protect our manufactures, it is an evident proof that we are not prepared, under our present circumstances, to engage more extensively in them, and that justice and sound policy require that we should not increase the actual bounties. Nay, we are of opinion that, in some instances, the proposed increase, amounting to prohibition, would injure our manufactures as well as our revenue. In fact, we do not consider either our population or means are such as to invite us to engage in such as may rival the finer productions of the European looms. We respectfully believe, for the present, we ought to be satisfied with the manufactures of coarse goods, and leave to those who take our raw materials the supply of fine goods. The purposes of commerce as well as revenue will thus be promoted. At any rate, the establishment of new branches of manufactures is the work of time; and something more than a desire to establish those of fine goods should be manifested before we proceed to strike a deadly blow at other branches of industry, of the greatest national interest, and on which the prosperity and happiness of our country have hitherto been founded. It would seem well to pause before it be determined by any legislative means to effect any sudden change in the habits and character of our population. It would be well, we respectfully believe, to examine cautiously those which we are to assume in lieu of those which we are called on to renounce. Our institutions have hitherto been such as to render our happiness proverbial. What, on the other hand, is the condition of those whom we are attempting to imitate in this new career? The manufactories and workshops of England are the nurseries of pauperism and discontent. Ought we to wish to rival her fine muslins or splendid toys? If our poor rates, like hers, are to amount to thirty-six millions of dollars, and if our soldiers and farmers are to be employed in suppressing the insurrections of our manufacturers, let her enjoy the emoluments and miseries of her manufacturing system, and let us avoid it until a crowded population may render it expedient and secure. We have known of many attempts in Europe at the hotbed process of raising manufactures, and we believe that it has almost universally failed. The truth is, in respect to legislation on this subject, the Congress have done all that they can do, if we are to expect revenue from our imports. They have protected coarse goods to such an extent, that those who have formed manufacturing establishments in well peopled districts, and have conducted them properly, acknowledge that they are sufficiently protected by our present duties, and they ask no advance. But this is not enough. We must lay the groundwork of a general system of manufacturing, and, as a prelude to it, it is proposed to begin by destroying our whole commercial and agricultural systems at one sweeping blow; for such promises to be the result of the proposed tariff. It would be reasonable to suppose, from the summary mode of proceeding contemplated, that the looms and the anvils and the artists were impatiently waiting for the signal from Congress to supply us with chintzes and muslins, with needles and watches. But so far from this being the case, we do not believe that the advocates of this important change have in contemplation one single branch of the higher class of fabrics; and it will be prudent for them to abstain from engaging in them. Their efforts, supported by legislation, will be unequal to the attainment of the

proposed end. As before observed, we may ruin the fair merchant, but we cannot suppress the trade when transferred to the smuggler, who will undersell our own manufacturers.

If the spirit in which these exactions are made is characteristic of the new system which is to be introduced, we confess that we should for this alone deprecate its progress; for, if it is thus in the gristle, what will it be in the bone? It seeks to destroy one great and hitherto beneficial system, before it is prepared to furnish a substitute. It abolishes imposts that are paid with fidelity, and calls for others that we seriously fear will not be paid. The interests that it places in advance of all others are those of only a few, compared with those whose interests it seeks to demolish. What, on the other hand, has been the conduct of the farmer and the merchant? They have borne with cheerfulness, and discharged with punctuality, the taxes which have been imposed on them, whether for the support of Government, or for the promotion of other branches of industry; they have seen their commerce injured in some points, and destroyed in others; they have furnished the means of paying what may be considered as bounties to domestic manufactures, to the fullest extent of good policy; and yet, far from even murmuring, or torturing Congress by their repeated demands, they have either suffered in silence, or restricted themselves to suggesting measures which would promote the public weal as well as their own. Are they, then, after their patience under protracted sufferings, to be called on, in this time of general distress, to sustain new injuries in their agricultural interests, and to have their commercial establishments overthrown, and even the very nature of their being changed, merely to promote the delusive projects of a few interested individuals? They have too much confidence in the wisdom of the National Legislature to suppose that they will encourage these vague and ephemeral schemes, calculated to make a revolution in our condition, and, in the end, to produce effects the very contrary to what they profess.

Your memorialists respectfully remark, that they are opposed not only to the principle of the proposed tariff, but also to the details to which it is applied; and that, so far from adding one cent to the present duties, it is our opinion that an increase of revenue and an improvement in our general condition can only be expected by a diminution in the existing duties, especially on the articles referred to, and more particularly the wasteful bounty on the sugars, rum, and molasses of Louisiana; and, finally, that the actually depressed state of agriculture and commerce calls for such gentle and considerate measures on the part of Congress as may strengthen the confidence in and attachment to the Government of the citizens, and for the rejection of all those which, like the projected tariff, must be likely to have an opposite tendency. There exist already in the Union of these States too many sectional causes of weakness to make it expedient to increase their effect by artificial means. The endeavor should be to retard, and not to hasten, a crisis which all must contemplate with horror. Although it is not our particular view to give an opinion relative to the general finances of the Union, yet, as we are practically connected with the various branches of commerce from which our revenue is derived, the suggestions which we presume to offer may not be wholly useless. We think there is the most satisfactory proof that the consumption of every species of goods imported from Europe and the East and West Indies is in a state of rapid decline, owing to the inability of our population generally to support any other than necessary expenses. The causes of this decline have been touched on in what has been already said, but the effect will most assuredly be a great and increasing deficit in our national revenue.

We are satisfied that this revenue, so far from being increased, will be diminished by any addition to the present duties. We are strongly impressed with the opinion, as already stated, that an opposite course would, as it respects revenue, lead to more favorable results; but we are far from believing that any measure of finance, short of an excise and internal taxation, will efficiently meet the evil. We respectfully concur in the proposition of a loan, or any other temporary resort for the present year, in the contemplation at the next session of recurring to an organized system of internal taxation, which will be less subject to fluctuation than that on which we now rely for revenue.

On behalf of the chamber of commerce of Philadelphia.

ROBERT RALSTON, *President.*

PHILADELPHIA, *April* 20, 1820.

Observations as to the operation of the present tariff in giving protection to the manufacturers of this country, and in excluding the importation of goods of foreign manufacture similar to those manufactured here.

The cotton goods manufactured in this country to the greatest extent are plaids, stripes, chambrays, and cotton shirting of the coarser qualities, which now cost in England less than 25 cents the square yard, and are, consequently, subject to a very heavy duty; so much so, as nearly to exclude their importation. A yard of plaid stripe, or chambray, would now cost in England 6*d.* of 24 inches wide, of good quality. For example:

100 yards of plaid stripe, or chambray, 24 inches wide, at 6*d.*, cost £2 10*s.* sterling. It would contain 66⅔ square yards, which, at 25 cents, is $16 68. The duty, 25 per cent., upon the same, is $4 17. Thus the 100 yards of plaid stripe, or chambray, which cost £2 10*s.*, or $13 20, would now pay a duty of $4 17, which is equal to 32 per cent.

A piece of cotton shirting, 50 yards, would now cost in England £1 7*s.* sterling, of 30 inches wide, and would contain 44½ square yards, which, at 25 cents, is $11 12. The duty upon the same, 25 per cent, is $2 78. Thus, the piece of shirting, which cost 27*s.* sterling, or $6, pays a duty of $2 78, or 46 per cent.

A Carlisle gingham, which has heretofore been much used by the poorer people, of 40 inches wide, would now cost 8*d.* per yard. 100 yards of Carlisle ginghams, 40 inches wide, at 8*d.*, is £3 6*s.* 8*d.* sterling, and would contain 111 square yards, which, at 25 cents, is $27 75. The duty upon the same, 25 per cent., is $6 94. Thus 100 yards of ginghams, which cost in England £3 6*s.* 8*d.*, or $14 82, pay a duty of $6 94, or 46½ per cent.

Printed calicoes, which are not made in this country, but much worn, more particularly by the poor people, and considerably by all classes of females, now cost from 15*s.* 6*d.* sterling to 33*s.* per piece of 28 yards, upon which there is a debenture allowed upon exportation, in England, of 3½*d.* the square yard; and as they are from 23 to 25 inches wide, the debenture is from 5*s.* to 5*s.* 6*d.* sterling per piece; and all which cost less than 25*s.* sterling per piece are now subject to additional duties, as the cost is less than 25 cents the square yard.

A very good calico, 23 inches wide, cost, in December last, 18*s.* 9*d.* sterling per piece, upon which the debenture was 5*s.* 3*d.*, making the nett cost 13*s.* 6*d.* sterling, and contained 18 square yards, which, at 25 cents, is $4 50. The duty, 25 per cent., is $1 12. Thus the piece of calico which cost 13*s.* 6*d.* sterling, or $3, pays a duty of $1 12, or 37 per cent.

Cambric muslins 6-4 wide, of 12 yards each, cost from 7*s.* to 20*s.* per piece; and all which cost less than 13*s.* per piece are subject to additional duties, the cost being less than 25 cents the square yard. A piece of cambric muslin, 39 inches wide, cost 7*s.*, would contain 13 square yards, which, at 25 cents, is $3 25. The duty, 25 per cent., is 81 cents. Thus the piece of cambric muslin, which cost 7*s.*, or $1 55, pays a duty of 81 cents, or 53 per cent.

The operation is proportionate upon all low priced cambric muslins of other dimensions, as well as low priced fancy muslins, book muslins, and ginghams, and upon every other description of cotton goods of low cost and not enumerated.

Upon woollen goods, under the present tariff, there is no discrimination between coarse and fine in calculating the duties; nor is it considered necessary there should be, even for the protection of our own manufactures: for, at present, there is but a very small quantity of foreign imported of similar descriptions to those we manufacture. The principal part of those now imported are superfine cloths, low priced blue and white plains for negro clothing, flannels, baize bocking, baizes, and blankets, most of which are *absolutely* necessary for the use of the country.

The proposed tariff contemplates a duty of 33 per cent. ad valorem on all cotton or woollen goods, of whatever description, from this side the Cape of Good Hope, which, upon all goods paying an ad valorem duty, will, in reality, amount to 36⅓ per cent.; and, upon all cotton goods costing less than 25 cents the square yard, 33 per cent. upon the calculated cost of 25 cents the square yard.

Accordingly, the duty upon 100 yards of plaid stripe, or chambray, costing £2 10*s.* or $13 20, and upon which the duty is, according to the existing tariff, $4 17, or 32 per cent., would be $5 56, or 42 per cent. upon the cost. Upon 100 yards of Carlisle ginghams costing £3 6*s.* 8*d.*, or $14 82, upon which the duty now is $6 94, or 46½ per cent., would be $9 25, or 62½ per cent.

Upon a piece of cotton shirting costing 27*s.* or $6, upon which the duty, according to the present tariff, now is $2 78, or 46 per cent., would be $3 71, or 62 per cent.

Upon a piece of calico costing nett 13*s.* 6*d.* sterling per piece, or $3, upon which the duty now is $1 12, or 37 per cent., would be $1 50, or 50 per cent. Upon a piece of cambric muslin costing 7*s.*, or $1 55, upon which the duty now is 81 cents, or 53 per cent., it would be $1 08, or 70 per cent. upon the cost; and upon all other cotton goods costing less than 25 cents the square yard, the duty would be proportionate, according to the dimensions and cost.

The contemplated tariff proposes that the duty shall be calculated upon the real cost of the article whence imported, "together with the amount of all such bounties, premiums, drawbacks, allowances, or discounts, as may be given, paid, or allowed at the place whence imported." Upon all printed cotton goods exported a debenture is allowed in Great Britain of 3½*d.* the square yard; and, should the contemplated duty be laid upon that, as well as upon the actual cost, it will amount to a complete prohibition to the importation of most kinds of printed cotton goods, and also upon English manufactured silk goods, upon the exportation of which a bounty of 4*s.* per pound is allowed. The contemplated tariff proposes a duty of 25 per cent. upon linens of every description, and those costing less than 25 cents the square yard to be calculated as having cost that, and 25 per cent. calculated upon that amount. In addition to which, the duty is to be calculated upon the bounty allowed of 1½*d.* per yard on all linens costing less than 18*d.* per yard. The proposed tariff also contemplates a duty of 33 per cent. upon blankets; and stuffs are considered to be included with woollens of every description, and, consequently, subject to 33 per cent. duty. The three last-mentioned articles, viz: blankets, stuffs, and linens, now pay a duty of fifteen per cent. ad valorem; and neither (excepting blankets, to a very limited extent) are manufactured in this country, and are all much used; the impolicy of raising the duties upon them can be readily judged of. Two of the articles being used, one from economy, the other from necessity, to a great extent, by the poorer class of people, the consequences of raising the duties to the rates proposed in the contemplated tariff will be to preclude the importation of many articles altogether in a fair way, and to encourage and systematize smuggling upon a scale so extensive, as seriously to affect the revenue of the country, and corrupt the morals of the people.

The facilities which our extensive seaboard and inland frontier give to the introduction of goods in an illicit manner; the temptations which the contemplated tariff offers; the large value of many articles which may be comprised in a small bulk; and the prospect of gain so great, that many individuals, who now would despise the person who would engage in such a trade, will be induced to engage it in themselves—the inducements to the engaging in the introduction of many articles, in an illegal manner, can be readily judged of, when a person smuggling 100 pounds of sewing silk or silk twist would, by avoiding the duty alone, receive a compensation of $150.

Five pieces of superfine cloth would comprise but a small bulk, and the weight would be about 150 pounds, and would contain about 100 yards, and cost about £200. The duty upon the same, according to the contemplated tariff, would be $324.

In many kinds of cambric muslins, fine fancy muslins, and manufactures of silk, the facilities and inducements to smuggling will be equally great.

It must, therefore, be obvious to every person of reflection, that, whether the contemplated tariff have for its object the increase of revenue, or the protection of our own manufactures, an adoption of it will, most assuredly, have a contrary effect.

16th Congress.] No. 595. [1st Session.

PAYMENT OF THE THREE PER CENT. STOCK AT PAR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 6, 1820.

Mr. Smith, of Maryland, from the Committee of Ways and Means, to whom was referred the memorial of William Bayard, reported:

That the memorialist states that he is a holder of the three per cent. debt of the United States, and claims payment for the same at par, to wit, for the sum expressed in the certificate, on the ground "that the act which created that stock and the six per cent. and deferred debt had pledged the proceeds of the sales of the Western land for their reimbursement;" and he alleges that the proceeds of the land which has been sold are fully adequate to the extinguishment of the whole of the debt for which it had been pledged. The committee conceived it proper to consult the Secretary of the Treasury on a subject so highly important, and submit his answer, which they pray may be received as part of their report; and they offer the following resolution for the consideration of the House, to wit:

Resolved, That the prayer of the memorialist be not granted.

Sir: Treasury Department, *May* 3, 1820.

I have the honor to return the petition of William Bayard, on behalf of himself and others, holders of the three per cent. stock of the United States.

The petitioner claims to have the proceeds of the public lands annually applied to the redemption of the three per cent. stock, after the interest and reimbursement of the six per cent. deferred stock shall be annually discharged.

This claim is founded upon the following facts and considerations: The act of the 4th of August, 1790, declares "that the proceeds of the sales which shall be made of lands in the Western territory, now belonging, or that may hereafter belong, to the United States, shall be, and are hereby, appropriated towards sinking or discharging the debts, for the payment whereof the United States now are, or by virtue of this act may be, holden; and shall be applied solely to that use, until the said debts shall be fully satisfied." All the debts of the United States existing anterior to, or which were incurred under that act, have been discharged, except a small amount of the six per cent. deferred stock, and the three per cent. stock. The payments which can be made in discharge of the six per cent. deferred stock amount to about $500,000 a year. The difference between that sum and the yearly proceeds of the public lands northwest of the river Ohio is the sum which is applicable to the redemption of the three per cent. stock, if the claim of the petitioner is well founded. It is believed that the decision of that question depends substantially upon the right of the United States to claim a credit, which shall be charged upon the fund arising from the sale of the public lands, equal to the sum which has been paid from other funds in discharge of the principal of the debt, for the redemption of which the proceeds of the public lands were appropriated by the act of the 4th of August, 1790.

The claim of the petitioner was submitted to the Commissioners of the Sinking Fund, who determined that the extent and value of the obligation which the nation had incurred by the provisions of that act could only be determined by the Congress of the United States. It may be proper to state, that, if the acts of Congress passed subsequent to the date of the act under which the claim of the petitioner has arisen can be considered decisive of that claim, it cannot be well founded. The first section of the act of the 29th of April, 1802, providing for the payment of the whole of the public debt, expressly directs that, after the whole of the public debt, except the three per cent. stock, shall be reimbursed, any balance of the sums appropriated by that act, which might remain unexpended at the end of six months after the expiration af the calendar year to which the appropriation refers, shall be carried to the surplus fund, and cease to be vested by virtue of the act. In various acts the Commissioners of the Sinking Fund have been authorized to purchase the three per cent. stock at certain fixed rates below par; and in no case has authority been given to redeem it, or to pay for it by purchase, at more than sixty-five dollars for one hundred dollars of stock.

These acts, however conclusive they may be of the impressions which existed in the minds of the members of the Legislature at the time they were passed, cannot, it is conceived, be considered as deciding the case of the petitioner. His claim must be determined by the provisions of the act of 1790, under which the three per cent. stock was issued.

It is a part of the debt, for the redemption of which the proceeds of the public lands were appropriated, and must, at some period, it is respectfully conceived, be discharged by the application of that fund to its redemption. If this conclusion be correct, the question to be decided is, whether the fund is now applicable to its redemption, or is to be applied to the repayment of the sums advanced by the United States, from other funds, in the discharge of the public debt.

If the United States are at liberty, according to the principles of law and equity, to repay themselves the sums so advanced, the redemption of the three per cent. stock must be postponed until that repayment shall be effected.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

Hon. Samuel Smith,
Chairman of the Committee of Ways and Means.

16th Congress.] No. 596. [2d Session.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE, NOVEMBER 21, 1820.

At a meeting of the citizens of Petersburg, convened at the court-house, on Friday, the 17th November, 1820, to receive the report of the committee appointed to prepare a memorial to Congress in opposition to the tariff bill, Thomas Wallace, Mayor, was appointed chairman, and John F. May, secretary.

The committee presented the following memorial, which was read and unanimously agreed to.

Resolved, That one copy be transmitted to James Barbour and James Pleasants, Senators from this State, and one to Doctor James Jones, the Representative from this district in the Congress of the United States.

The memorial of the merchants and other inhabitants of the town of Petersburg respectfully showeth:

That your memorialists are deeply impressed with the ruinous tendency of the restrictive system of commerce advocated by an association styling themselves the friends of national industry, and fully convinced that the tariff bill, presented at their suggestion, during the last session of Congress, and intended to be again brought forward at the present session, if passed, will prove highly detrimental to the commercial and agricultural interests of the nation and to our revenue, already reduced to comparative insignificance by the operation of the same system, whilst no advantages can be expected to result from the bill, in any degree counterbalancing the inevitable evils of the measure.

We believe that the prosperity and independence of nations, as of individuals, are essentially connected with an unrestricted state of commerce, securing to each the liberty of selling in the dearest market the produce of his industry, and buying in the cheapest such articles as his necessities demand.

National prosperity and national independence we consider as nothing but the aggregate of individual prosperity and independence. If individuals, restricted to a particular market for the sale of their produce and purchase of necessaries, would feel their prosperity and independence abridged, we cannot conceive how nations, where every individual is restricted on the same points, should believe their independence and prosperity promoted by those very restrictions.

The idea of forcing a people to manufacture among themselves articles which they can purchase abroad at a much lower price than they can produce them at home, we conceive to be equally repugnant to justice, to policy, and to the principles of our constitution. Such a scheme can be carried into effect only by taxing the many for the emolument of the few; by forcing multitudes from the occupations to which they have been bred, and in which they have thriven, to expend their labor and risk their capitals in projects where they have neither knowledge nor experience to guide them. The powers necessary to execute such measures we consider as too despotic to have been delegated by the American people to their Government, and such as we cannot suspect our representatives of wishing to assume, by the instrumentality of inference or construction.

The doctrine inculcated by the friends of the prohibitory system, that a nation, to accumulate wealth by commerce, must import less than it exports, is certainly erroneous. Capital exchanged for a more valuable consideration is not lost; that the importer gains, we must presume, since he desires the exchange; that the consumer gains, there can be no doubt, so long as he can procure necessaries at less expense from the importing merchant than from the home manufacturer. A few great capitalists only are disappointed. On the whole, it appears to us that the product of our exports cannot in any way be so profitably invested as in the form of imports.

The advantages of a free trade are fully demonstrated in the commercial history of the nations of Europe, from the unexampled prosperity of the Hanse Towns, under the influence of an unrestricted system of commerce, to the commercial ruin of Great Britain, under the most complete prohibitory system that has ever been devised.

In the history of this latter nation, we learn, too, that manufactures cannot be always forced; for, with all her industry, perseverance, and ingenuity, there are certain manufactures she has not been able to force to sufficient perfection to support themselves. We learn, also, that those branches of commerce, fisheries, &c. with which her Legislature has interfered the most, have generally been unproductive, and that nearly in the proportion of the fostering care extended to them; and we learn a still more instructive lesson, that a nation may become so deeply involved in the protective system, as to be unable to extricate herself, though aware of the ruin to which it leads.

The obvious tendency of this system is to destroy foreign commerce, by prohibiting our merchants from importing the products of other countries in return for the exports of ours; thus provoking them to retaliate on us as they have already done on Great Britain, by refusing to receive our produce except on such terms as we cannot afford to export it. With the destruction of foreign commerce, we expect not only the ruin of those immediately engaged in imports and exports, in the carrying trade, ship building, &c., but of almost every individual directly or indirectly concerned in commercial affairs. Nor can the fate of the agricultural interest be long protracted under the operation of such a system. Loaded with heavy internal taxes, imposed to supply the defect of the revenue formerly drawn from foreign commerce; compelled to pay double or treble prices for every necessary they purchase; excluded from a market for the produce of their own labor, the landholders must sink into poverty and insignificance. Our seamen, for want of employment at home, must emigrate to commercial countries, or resort to smuggling and piracy for support; our navy rot in our docks; our fisheries and coasting trade be left to the mercy of every invader.

How incapable a nation without foreign commerce is of protecting her coasting trade, China, the most populous country under the sun, taxed or plundered by every piratical islander on her coast, affords an impressive example.

Those who expect a home market from the establishment of manufactures can neither have calculated how many manufacturers one agriculturist can feed, nor how immense an addition to the products of our soil and the number of its cultivators half a century of unrestricted agricultural enterprise will make, by clearing the rich and extensive forests of our back country, now lying useless.

The evils of the prohibitory system are obvious, universal, and highly oppressive; its advantages limited to a few great capitalists; the ostensible reason for its introduction wholly unfounded, for our manufactures are already most amply protected; an average duty of about twenty-five per cent. on imports already exists in their favor. Freight, insurance, double commission, storage, and sundry other charges incident to shipping and transporting foreign manufactures to this country, operate as a further bounty of at least fifteen per cent. The British artisan, the most formidable rival in every market, is taxed to the amount of one-third of the whole produce of his labor: this, too, operates as a bounty of thirty-three and a third per cent. in favor of the American competitor. If we add

to this the increased value of money in this country, we may confidently assert that the advantages in favor of the American manufacturer amount to upwards of one hundred per cent.

When we find that the protective system, carried to this enormous extent, instead of producing a commensurate energy on the part of our manufacturers, has produced only louder cries for still more inordinate concessions, it is time for us to pause and consider whether the revenue wasted on this unthrifty scheme could not have been expended on something more productive.

With this view of the subject, your memorialists respectfully solicit your honorable Houses, that, instead of embracing the ruinous system recommended in the tariff bill presented at your last session, you may adopt such measures as your wisdom may suggest for disembarrassing our trade from all restraints incompatible with the increase of our revenue, and the promotion of commercial and agricultural enterprise.

Signed on behalf of the meeting.

THOS. WALLACE, *Chairman.*

J. F. MAY, *Secretary.*

To the honorable the Senate and the honorable the House of Representatives of the United States of America in Congress assembled:

The memorial of the delegates from the commercial and agricultural sections of the State of Maine, met in convention at Portland, in behalf of the great interests of this portion of the Union, beg leave respectfully to make known to your honorable body their views and sentiments in relation to the propositions made at the last session of Congress, and which, it is understood, will be renewed at the approaching session, in relation to the national revenue.

Maine is more deeply interested, in proportion to its population, in the commercial prosperity of the Union, than any other of the States. Its tonnage has been proportionally greater, and its facilities for navigation, its rivers, bays, and harbors, its opportunities for carrying on the fisheries, its immense forests of exportable lumber and ship timber, are unequalled. A vast portion of the population are devoted and habituated to commerce, to navigation, and the fisheries. Maine is, at the same time, calculated to become an agricultural State, and will be the first grazing country in America.

Under these circumstances, your memorialists cannot but feel the deepest solicitude for the prosperity of the commerce of the country. They believe, at the same time, that the vital interests of the Union depend upon it. The Federal Government was ushered into existence with almost a single eye to it. The revenue is, and must be, essentially connected with it. It has, heretofore, been believed that experience afforded the best school. In politics it has been pre-eminently so; can it be said to have failed us in regard to the commerce of the United States?

If we turn our eye to the period anterior to the commencement of the Federal Government, and compare the situation of this country with that of any period since, the contrast is immense. By what other means than imposts, growing out of a judicious regulation of commerce, could we have collected, in the short space of thirty years, three hundred and fifty millions of revenue, with but little, or indeed, comparatively, with no distress to the people, and in a manner scarcely felt or perceived by them? What distress, perplexity, and vexation would have attended the collection of such a sum by direct taxation?

We have had some little experience of the effects of this mode of raising a revenue. It is what the people in a free Government will not endure, if not unavoidable.

Your memorialists conceive that the present is not the time for a great and embarrassing change in relation to commerce. Those connected with it have, for years, been struggling against a series of untoward events, such as it could hardly be believed could be withstood. The restrictive system fell upon them with great force.

The war succeeded, and very nearly accomplished that portion of their ruin which had not before been effected. At the conclusion of peace, crippled as they were, their only alternative was to attempt to regain their hold upon commerce, in competition with a state of things as novel as it was embarrassing. They found all the world, also, at peace, and ready and determined, in a commercial warfare, to dispute every inch of ground. In this contest the commercial men of this country have been ever since engaged. It is impossible the wisdom of Congress should not have discerned the arduousness of this struggle. And it will not escape observation, at the same time, that, in the five years in which it has progressed, more than $100,000,000 of revenue have been derived from commerce alone. Your memorialists are fully aware that the community, generally, have felt the effects of the distress and embarrassment to which the mercantile class has been subjected. Whatever affects commerce will affect the community.

But the disease is necessarily the most acute and raging in the part where it first commences. Other parts of the system will, however, ultimately feel it, in a greater or less degree. Commerce is the great pillar in the temple of national prosperity; that being demolished, the superstructure will follow.

Even the present rate of duties upon importation is embarrassing to commerce and injurious to the revenue. It was the result of a state of things which had been induced by the restrictive system and the war. During that period manufactures had experienced a premature and unnatural growth. At the conclusion of the war the Government was compelled to protect them by the imposition of duties, well known at the time to be injurious to the revenue, and adding to the already appalling prospects of the merchant. The duties, in many instances, were so great as to amount to an exclusion of the article. This was the case particularly with coarse India cottons, an article of which the poorer classes made great use; and the imposition is, in effect, a tax upon them for the benefit of the manufacturer of coarse cottons. The tax or duty on these articles amounts to an average of one hundred per cent., thereby doubling the price of the article to the poor, to enable the manufacturer here to sell at a similar rate.

There are duties imposed on other articles to an exorbitant amount, which have tended to depress the commerce, the revenue, and the agriculture of the country. An enormous duty has been imposed upon spirits of all kinds and upon wines, under the idea that they were luxuries, and with a vain hope, as is believed, of discouraging intemperance. Under the idea of their being luxuries, they should be taxed to the utmost they would bear, without discouraging importation. But the idea of taxing, and thereby checking the disposition to intemperance, will always prove fallacious, so long as we allow ardent spirits to be manufactured among ourselves without any check whatever. If the duties on the rum of the West Indies, the brandy of France, and the wines of Portugal and Spain, and the islands appurtenant, had been predicated upon the single principle of raising a revenue, a vast commerce would have been open to the people of this country, which the exorbitant duty now imposed has, in a manner, cut up by the roots. Formerly, when the duties were less, the grain, which is now manufactured into whiskey, was exported to those countries; and for it the farmer then availed himself of a great price in cash, or in the necessaries of life. Now, he converts it into whiskey; too great a portion of which he, himself, is tempted to consume, to the destruction of his health and the ruin of his morals: and thus the benevolent intentions of the Legislature have been wholly frustrated, and a regulation which they intended as a blessing has proved a curse. It has now got to be fashionable in some parts of the Union to say that the production of whiskey must be encouraged, and, for that purpose, that all other

ardent spirits must be excluded, in order that agriculture may be promoted! How much better it would be to remove from the farmer all temptation to the consumption of ardent spirits, and to furnish him with a better as well as a more salutary vent for his grain!

Your memorialists have not been led to these remarks by any thing like hostility to the manufacturing interests. They are, on the contrary, decidedly in favor of all reasonable encouragement to promote, uphold, and cherish every thing of that kind.

But your memorialists had never dreamed it would ever be considered necessary or proper that all other interests should be made to yield as secondary and tributary to that alone. They are sure this was not the original design of the framers of the constitution. In that instrument we find nothing about manufactures.

They, however, have pressed into their service an elaborate essay of the celebrated Alexander Hamilton on this subject. They have adopted his principles, but disregard their application. He insisted on the encouragement of manufactures so far as might be consistent with a due regard to commerce and the collection of revenue. The duties now are nearly treble what they were when he wrote, and, on an average, higher by one hundred per cent. than he, in the height of his zeal for manufactures, ever recommended.

In the case of iron, the duty on which was not half what it now is, he recommended a diminution, under an idea that it was almost a raw material, necessary in every kind of mechanism; and the same with regard to molasses, which we could ourselves distil. At the time he wrote it was necessary to urge, with great vehemence, upon the attention of Congress, this subject of encouraging manufactures, in order to have it attended to so far as might be compatible with the other great interests of the community. But he could not have foreseen this abuse and perversion of his reasoning. He never could have imagined that the time would come when it would be deemed good policy to make the people pay from thirty to one hundred per cent. more for goods to the manufacturer than they might otherwise be bought for of the importing merchant.

Your memorialists believe the duties now imposed on foreign manufactures to be fully adequate to any reasonable demand on the part of the American manufacturer. All the cotton and woollen manufactories which have been providently established and well managed are perfectly satisfied with the present rate of duties. From these we hear no complaint; and they are considerably numerous in the Northern and Eastern States. All such as were established without judgment, without capital, and without the aid of any skill whatever, have, of course, mouldered into ruin. Such it cannot comport with the wisdom or policy of Government to attempt to revive and uphold.

Your memorialists believe that the excitement in favor of manufacturers has had its origin rather in the improvidence and rash enterprise of some of our fellow-citizens than in any well-grounded cause of complaint. It may be that between 1812 and 1815 a state of things existed which induced individuals, in great numbers even, to plunge inconsiderately into extravagant and wild schemes in relation to manufactures. But it does not follow that the Government is, at all hazards, bound to uphold, protect, and save them from ruin.

Every step which the Government might take, under such a supposed obligation, would but increase the evil, and create still new obligations predicated upon a similar unfortunate state of things. The final result would be a state and condition like that of Great Britain.

There, unfortunately, such solicitations in times past have been yielded to; and the nation now stands committed, at whatever cost, to stand by and uphold establishments which it would now gladly shake off. A glaring instance of the folly and stupidity of such engagements was but lately witnessed in that country. The merchants there petitioned for a greater freedom of trade, and complained, among other things, of being obliged to import timber from North America, stating that it could be imported from Norway at half the cost that it could from America. The ship owners who were engaged in the importation from America preferred a counter-petition, stating that, since the Government had confined the importations to timber from America, they had been at immense expense in preparing ships to bring the vast quantities from America necessary for the supply of the kingdom; that, if the trade from Norway in that article should be opened, no timber could be imported from America; and that one-half of their ships and equipments must be laid aside, as the other half would be adequate to bring the requisite amount from Norway; it being practicable to make two voyages to Norway in the time that would be requisite to perform one to America.

Thus it appeared that a vast quantity of shipping, and sailors in proportion, must be thrown out of employment, and ruined, if the British Government should not continue to compel its subjects to buy timber at twice what it would cost elsewhere.

And this is the case with an infinity of other establishments in that country. By the improvident interference of Government, establishments have been reared up and fostered, which they must uphold at every hazard, the faith of Government having been virtually pledged so to do. There is not a circumstance more alarming to your memorialists than that the manufacturers in this country are continually holding up the conduct of the British Government in this particular as affording the most perfect model for our imitation.

They are delighted with British exclusions, premiums, drawbacks, high and prohibitory duties, and the whole train of extravagant schemes, to retain the power of manufacturing exclusively for themselves, and, if possible, for the world besides.

The situation of this country is in nowise similar to that of Great Britain. We have no surplus population that cannot be retained but by such means. We have vacant territory without limit, and almost without price, inviting cultivation. There, they must manufacture or emigrate. And, notwithstanding the utmost of their exertions to find employment for their laboring poor, every seventh individual is a pauper, and dependent on charity. In this country, as yet, it is not even every hundredth individual that is a subject of charity; and many centuries may elapse before the proportion will be greater, if this manufacturing mania can be kept within bounds.

Your memorialists lament those strides on the part of manufacturers for another and more important reason. Steadiness in governmental regulations affecting the industry of the people is highly essential. There is at present a perfect acquiescence in all parts of the Union in relation to what has been done to favor manufactures, although it bears hard upon the revenue and upon commerce.

The effect of an extraordinary action is to produce reaction. If the manufacturers should now succeed, the consequence will be a deficit in the revenue. A direct tax must ensue; irritation will be produced; and, by the time the manufacturers shall have got their great establishments in operation, a new tariff will be enacted with a view to revenue solely. When the tariff was settled in 1816, the manufacturers were duly represented. The then Secretary of the Treasury was from the city of Philadelphia, and partook, it is believed, of all the feelings of the people upon this subject. At any rate, he recommended the tariff at that time with an express view to manufactures; and his recommendations, so far as it affected manufactures, in every instance it is understood, except in relation to iron, were implicitly adopted. At that time the manufacturers, excepting those of iron, were perfectly satisfied; and in 1818, at the instance of the manufacturers, the duty on iron was increased from nine to fifteen dollars per ton. They, at the same time, requested that the duty of 25 per cent. on cotton and woollen

goods, which had been limited to five years, might be made perpetual. In this, also, they were gratified. Your memorialists expected to have heard no more from the manufacturers about further protecting duties. But the stride they are now contemplating is, to your memorialists, truly astonishing. Nothing now will satisfy them short of twenty-five dollars per ton upon iron, an article necessary in every piece of mechanism; thirty-five per cent. upon printed books, by way, it may be presumed, of discouraging science; ten cents per gallon on molasses, to protect the distillers of whiskey; thirty-three and a third per cent. upon cotton and woollen goods, and so upon other manufactured articles in proportion; and, to crown all, cash payment, without credit, for duties!

Should the wisdom of your honorable body deem it expedient and proper to yield to solicitations so unreasonable, the commerce of the country must be considered as at an end, and all concerned in it as devoted to inevitable ruin. The long established habits of the country must be subverted, and a shock will be felt in the community such as will arouse from their slumbers the mass of the people, and awaken them in time, but perhaps too late, to a sense of their true interests.

Your memorialists have thus, with the characteristic frankness of fellow-citizens, intimated some of their views and feelings on this all-important subject. Their destinies are in the power of the National Government, on whose wisdom and justice they trust they can rely. It is for Congress to determine whether the great interests of the nation, on which depend its power, its glory, and its resources, shall be sacrificed to the cupidity of a handful of improvident and speculating manufacturers.

Signed by order and in behalf of the convention.

ARTHUR McLELLAN, *Chairman.*

HENRY CLARKE, *Secretary.*

PORTLAND, *October* 19, 1820.

16th CONGRESS.] **No. 597.** [2d SESSION.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE, NOVEMBER 27, 1820.

The memorial of a convention of delegates representing the merchants and others interested in commerce, assembled at Philadelphia, to the Congress of the United States:

Although much has already been addressed to your honorable body on the subject of the new tariff, yet, unless it could be said to be entirely exhausted, its pre-eminent importance may well claim still further attention from all who are interested, and may be allowed to constitute a valid excuse for those who venture once more to appear before you in the character of petitioners against its adoption.

Among the great diversity of subjects which, from time to time, have occupied our National Legislature, not one, it is believed, within the whole scope of their proceedings, has ever been agitated which involves a greater variety of interests, fiscal, moral, and political; which strikes more deeply at the very foundation of all true and enlightened policy; and which, according as it shall be ultimately settled, will be productive of more lasting, more beneficial, or more pernicious consequences. In short, this nation, through its highest public functionaries, is called upon to determine whether we will plunge still deeper into all those measures of prohibition and restrictions upon trade; of duties, premiums, and bounties; of stimulants to rear exclusive interests at the national expense, which have contributed more than any other causes to bring the greatest commercial and manufacturing empire that the world ever saw to the very verge of destruction; or, by taking warning in time, and pursuing a different course, achieve for ourselves a far higher degree of national prosperity than any people, of whom there is any record, have ever before attained. Let it not be said that we are too much inclined to magnify, beyond their just dimensions, the various objects involved in this inquiry; still less let it be said that the injuries or benefits which must necessarily result from the adoption or the rejection of the proposed tariff will not be fully equal, in process of time, to any thing which we have ventured to imagine. If the observation of Doctor Smith has been thought just, that heavy taxes upon necessaries become "a curse equal to the barrenness of the soil and the inclemency of the heavens," let it not be thought extravagant in us to assert that the additional duties required of you, operating continually upon almost all the purchases of every member in the community, although a small and insignificant sum, comparatively speaking, in each individual purchase, would amount, in a few years, to a sufficient number of millions almost entirely to alter the existing relations of society, by forcing capital out of those channels in which it is naturally inclined to flow, and alluring it into others, where, but for this legislative process, it never, perhaps, would have gone. Can this be consonant either to policy or justice? Can such a power be found, either in the constitutions or codes of any free Government upon earth, as would authorize the Legislature of such Government to say to any of the great classes into which society naturally divides itself, "thus far shalt thou go and no farther" in thy fair and honest endeavors to better thy condition? And yet, in what does such a power differ in effect from that by the operation of which any one of these classes may be fostered, cherished, and elevated at the expense of the rest, until the others, who are forced into this most unnatural state, are so ground down as to be compelled to abandon the trade, profession, or calling of their choice? Once admit that Congress *may* use the power of taxing imports *ad libitum, for any other purpose than that of revenue*, and you give them, in reality, the power to say to the citizens of these United States, You must devote yourselves to agriculture, commerce, or manufactures, not as *you* may happen to be inclined, but according to *our* sovereign will and pleasure. Let it never be forgotten that the question now about to be determined is not so much *what may be beneficial to manufacturers*, as whether Government has a right to benefit *them* to the manifest injury both of the agricultural and commercial classes; whether the constitutional provision against taxing exports can be rendered in a great measure nugatory, by diminishing, at pleasure, the value of our exportable commodities, through the instrumentality of a tax upon

imports; and, finally, whether the direction and employment of individual capital are matters to be regulated and controlled by individual choice, or by the will of the National Legislature.

If it be asked who are the rightful judges in regard to the expediency and justice of the proposed tariff, it is surely fair to answer, that the *payers*, who constitute a very large majority of the whole nation, are certainly more competent to decide than the expectant *receivers;* when the only inquiry is, how much of the money of the former shall be paid to the latter, and to what extent it shall be taken, not only without their consent, but in opposition both to their entreaties and remonstrances. This is the plain unvarnished state of the case; and, let sophists and casuists disguise it as they may, still, whenever it is contemplated, unadorned by the embellishments of geographical parties, and divested of the exaggerations of exclusive interests, it will be seen as a case where, on the one hand, *a certain portion only* of manufacturers (for very many of them are opposed to it) are importuning the Government to compel all the commercial and agricultural classes to buy their manufactures at enhanced prices or to go without; whilst, on the other hand, the sons of commerce and agriculture, almost to a man, are begging that they may not be exposed to any such exaction. It is not a boon or treasure, already in possession of the Government, of which each party is praying to have the exclusive enjoyment—for that would be a mere contest of cupidity, wherein both would be alike selfish and culpable; but it is a plain undisguised effort, on the part of certain manufacturers, either to coax or alarm our rulers into the ruinous project of coercing the farmers, planters, artisans, and merchants, into giving a much larger portion of their substance than they at present do to these manufacturers; whilst, on the part of agriculture and commerce, it is an arduous struggle to hold fast only what is already theirs, and not to be forced to part with it contrary to their inclinations. Are we, therefore, enemies to the manufacturers? Are we, consequently, (as has often been said,) selfish, unnatural, antisocial, grovelling, and ignorant, alike deaf to the voice of humanity and to the calls of patriotism? God forbid! But if we have incurred these degrading censures simply for praying that your honorable body will not put it in the power of the manufacturers to make us pay more for all which we must necessarily purchase of them than we do at present, we must still submit to be denounced.

But lest the mere pecuniary loss in our purchases alone, which we should incur from the proposed addition to the duties upon foreign commodities, should be considered the principal cause of our solicitude, we beg leave to suggest a few other considerations of far deeper interest, and of still more comprehensive character, that appear to us to forbid the adoption of the proposed measure. If it be a fixed principle that we are to rely for our revenue chiefly upon a system of duties upon imports, can any thing be more obviously necessary and proper than that such system should be both uniform and permanent? Can a single instance be cited, from the annals of any nation upon earth, where an augmentation of duties, already high, has been found to augment the national income? On the contrary, are there not many to be found wherein a diminution of duty has been immediately followed by an increase of revenue? We beg leave to quote only a few, and we will take them from the history of that country whose commercial regulations and restrictions some of our political economists have so earnestly importuned you to imitate. "Previous to 1744, the East India Company's sales of teas amounted to no more than about 600,000 pounds weight, annually, producing a revenue of about £140,000. In the early part of 1745 an act was passed by which the tea duties were greatly reduced; and in 1746 the sales amounted to nearly *two millions* of pounds weight, and the revenue to £228,000. But this unanswerable demonstration of the superior advantages resulting to the revenue itself from low duties was unable to restrain the rapacity of the Treasury. In 1748 the duties were again increased, and fluctuated between that epoch and 1784 from 64 to 119 per cent. In the last-mentioned year, however, the Government, having in vain tried every other means to prevent the smuggling and adulteration of tea, reduced the duty from 119 to 12½ per cent.; and the revenue, instead of falling off in the proportion of *one* to *ten*, owing to the increased consumption only declined in the proportion of *one* to *three*. In 1787 the duty on wine and spirits was lowered 50 per cent., but the revenue, notwithstanding, was considerably augmented. The average annual produce of the tax on coffee, for the three years previous to 1808, amounted to £166,000. In the course of that year the duty was reduced from two shillings to seven-pence the hundredweight; and the average annual produce of the reduced duty for the next three years, instead of being diminished, rose to £195,000."

These few remarkable facts serve, incontestably, to prove, more than whole libraries of theoretical reasoning could do, that the financier who calculates upon raising revenue by duties upon imports must, unavoidably, be content to make them moderate, or to lose his object. They also force upon our minds this important question: whether the deficit which occurred in our revenue last year, and the still greater one which threatens us for the present year, are not both attributable, at least in part, to the very high rates of many of our existing duties?

If the design of the proposed tariff be to force into being certain manufactures which had no previous existence here, or to foster, at the national expense, such as have been found, after sufficient trial, incapable of being otherwise supported, the hope of revenue from this source must be abandoned; for it is a physical impossibility that the two projects can be consummated together. If manufactures are to be forced, the Treasury coffers must remain empty, for any thing that the tariff can bring into them; on the contrary, if the duties upon imports are to augment the revenue, the manufacturing interest must be content to rely upon her own energies, without calling on Government to make crutches for her of both agriculture and commerce, to support that body which, in the mania of speculation, has been dieted and swelled into an unnatural growth, too unwieldy for her own natural limbs to sustain.

Let us take another view of the subject. If it has become a settled point in our policy that no justifiable means are to be neglected to render this nation a great naval power, (as essential to the Union as protective of the great and only outlet for all the agricultural products of the immense regions of the West,) it is well worthy of inquiry whether it possibly can be effected by multiplying discouragements to foreign commerce. Can our hardy, magnanimous, and dauntless seamen, whose pursuits have heretofore exposed them to the perils of every ocean, to the vicissitudes of every clime, and enured them to that constant regimen and discipline so well calculated to fit them for all the purposes of nautical life—can *such men*, with any advantage to our rising navy, be converted into a set of skulking, profligate smugglers, or of sailors confined solely to the coasting trade? Yet, that such must be the inevitable result of either destroying, or much further injuring our foreign commerce, is a consummation which appears to us as unavoidable as that death must follow the destruction of all our vital functions. Commerce is to the body politic what the circulation of the blood is to the body natural; to check either materially, is to produce disease; and to augment such check, in any great degree, is to destroy the healthful existence of both. Again: is it possible that we shall add much either to the moral or physical power of this nation by interposing legislative aids to accelerate the natural increase of that class of citizens, who, from the very nature of most of their occupations, must necessarily be brought up in a way which (to say the least of it) is surely not the most favorable either to health, to morals, or to bodily or intellectual vigor? Can it be within the scope of any rational anticipation that our manufacturers, one and all, can ever be made successful competitors to those of Sheffield, Birmingham, and Manchester, who, by means of the very system of which some of us are so exceedingly emulous, are forced to labor from fourteen to seventeen hours in the twenty-four, and to live almost exclusively on vegetable diet, in order to earn a miserable pittance of wages, scarcely sufficient to keep body and soul together? Can any the most sanguine

projector calculate on realizing any such successful rivalry, except at an expense of taxation, of national happiness, and legislative oppression, such as the citizens of the United States will never willingly incur?

In whatever way we view this subject, (and we have endeavored to bestow on it all the consideration which its great importance so justly merits,) we cannot avoid anticipating, from the success of the tariff project, irreparable injury, not only to agriculture and commerce, but to many of the mechanical trades immediately connected with and dependent upon these two great sources of the wealth and physical power of this nation. Agriculture, already bereft of half her ability to pay taxes by a combination of circumstances, among which our protecting duty system holds a prominent station, is now called upon to pay a still further tax of some ten, twenty, or thirty per cent. upon almost all her necessary purchases—at a time, too, when the existing duties have been more than doubled in value to those who receive the benefit of them, by the appreciation of money, and the depreciation of domestic provisions of every kind; a depreciation, moreover, so continued and portentous, as to threaten to terminate even the culture of several of those products which heretofore have most contributed both to our emolument and to our comforts. What is to be the consequence? Why, a rapid and appalling retrogradation throughout the community, compelling us not only to relinquish most of those embellishments of civilized life which polish and adorn the social structure, but also to bid adieu to all the fond hopes which solace the parent and animate the patriot, in regard to the progress of education, the improvement of morals, and the general diffusion of national happiness. Commerce, curtailed in all her branches by the same sinister combination of events, is required still further to furl her sails, or to spread them only to the breezes of our bays, our rivers, and our seaboard; or, if not deterred by the numerous difficulties which present themselves to her customary pursuits, she still essays to spread her canvass over the bosom of those distant seas, from navigating which she has heretofore hoped to derive a fair and honorable reward for her toils, she is told that a large portion of her now scanty profits must go to foster a new interest in our community, which it has been found upon trial cannot be gotten up without levying still heavier contributions both on agriculture and commerce. The numerous artisans, too, whose reliance for comfortable support has hitherto been placed upon the prosperity of agricultural and commercial occupations, must now be transferred to some other less precarious dependence, or their present employments exchanged for hopeless inaction. And what is the inestimable boon held out to us as a compensation for all these privations? Why, truly, an adequate *home market* for all our domestic products! That this idea is altogether fallacious, we trust can be made manifest by a very few remarks. The manufacturing establishments which, it is said, will grow out of the tariff, are to be peopled from the population already within the country, or to be supplied by foreign importations. If in the first mode, then it is obvious that, unless we suppose the intended recruits can live in their present scattered condition without food altogether, they will not, when embodied, consume so much more additional provision as to compensate for the great diminution of exports which the new tariff must necessarily occasion. It is only, then, by the importation of that class of foreigners, (the least desirable part, in general, of foreign population,) that the number of manufacturing consumers, and consequently the quantum of consumption, can be materially augmented. This is unquestionably true as to provisions. But, it will be said, our raw materials will then find so much more extensive a market than they have at present, as amply to remunerate us for all additional costs. If it were true that we had no home market at all for our agricultural products, it might become a question with some whether it would not be worth while to incur a considerable national expense with a view to create one, provided it was probable that the domestic sale for our surplus produce would then be so much greater than the foreign sale extinguished by this creation as to reimburse those at whose cost it was made for all additional expenses. But this happens not to be a fact. Your honorable body cannot be ignorant that our home market for the product of the soil, especially for cotton, is even now on the increase; that a large portion of our manufacturers claim no further protection, ask no additional duties; that the stockholders of one of the most considerable and flourishing manufactories in the United States (we mean that of Waltham, in Massachusetts,) at this time divide twelve per cent. on their capital; and that most others of any standing are known to be in a sufficiently flourishing condition to ask no aid from Government. The question, then, is simply reduced to this: shall we impose additional duties upon almost every article of foreign importation, either to gratify the sanguine expectations of those who wish to make trial of such manufactories as do not exist here at present, or to enable those who have failed, no matter from what cause, in manufacturing experiments already made in various parts of our country, to renew them at the expense of more than three-fourths of the nation? Relying as we do upon the wisdom and patriotism of our Legislature, we cannot for a moment believe that, from the freest Government upon earth, we are to expect a system of policy so repugnant to every principle of reason and justice as would be that which your honorable body has been so importunately urged to adopt. And we confidently trust that the men to whose intelligence and virtue the American people have intrusted the preservation of their dearest rights and interests are as deeply impressed as any of their constituents themselves can possibly be with the truth and importance of the following cardinal maxims in legislation:

That, if the principles both of justice and policy forbid the majority of a nation to impose any tax on the minority alone, *à fortiori* they inhibit the imposition of any tax to be levied upon the former for the sole benefit of the latter.

That, where revenue is to be derived from impost on foreign commodities, universal experience has demonstrated that moderate duties contribute much more than high ones towards the attainment of this object.

That, where such duties are imposed to foster the particular interest of any class who pay no part thereof, those duties must necessarily come out of the pockets of all the other classes in the community, and are in direct violation of that fundamental maxim "not to tax the many for the benefit of the few."

That the practice of frequently changing those revenue laws which operate as taxes upon agriculture and commerce have a much more pernicious effect upon both, but especially on the last, than permanent taxes of the highest kind, compatible with the permanent existence of those two great sources of national wealth and power.

That for Government, by legislation, to add to those casualties and uncertainties which naturally affect the profits of labor, is to infringe on the natural right which every man has to pursue any trade, profession, or calling that he pleases, and is to administer oppression instead of justice.

That, by the exercise of such a power, Governments may not only force individual capital into any channel which they please, but may either create or suppress, *ad libitum*, any particular class among the various ones into which communities are usually divided.

That the reciprocal wants of agriculture, commerce, and manufactures, with their relative capacities of supply, are sure guaranties of mutual good will and friendly offices, when left to exert their respective energies in their own way; but that the interference of Governments with their private concerns rarely fails to produce a jarring of interests, and consequent hostility both of feelings and conduct.

That the natural diversities of soils and climates, and the artificial varieties of manners, habits, and customs, are far better regulators of supply and demand than the wisest legislators can possibly contrive.

That a due proportion of heat, moisture, and the pabulum of plants will not more certainly produce a vigorous and healthful growth in the vegetable kingdom, than will the natural inclination of mankind to improve their condi-

tion produce it in the political world, if left to exert itself entirely free from all legislative restraints but such as peace, order, justice, and good morals require.

And that it may be laid down as a maxim admitting of no exception, *that national industry is invigorated by free trade, and depressed by every thing opposed to it.*

All which is most respectfully submitted.

WILLIAM BAYARD, *President of the Convention.*

JOHN VAUGHAN, *Secretary.*

PHILADELPHIA, *November* 4, 1820.

16th CONGRESS.] No. 598. [2d SESSION.

DRAWBACK SYSTEM.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, NOVEMBER 30, 1820.

Mr. BALDWIN, from the Committee of Manufactures, to whom had been referred the petitions of sundry inhabitants of Belfast in Maine, and of the merchants and others of Richmond in Virginia, reported:

That the general object of these petitions is to remonstrate against the passage of the bills which were reported to this House at their last session, to regulate the duties on imports, and for other purposes; to regulate the payment of duties on imported merchandise, and imposing a duty on sales at auction. As neither of these bills is now depending before either branch of the Legislature, but as they have been either expressly or virtually rejected, it would, in an ordinary case, be deemed a sufficient answer to the petitions to say that their object had been already accomplished. It might, too, be deemed premature, in a committee of this House, to whom these subjects had been referred at the present session, and who may feel it their duty to report on some of these bills, similar in their tendency to those of the last, to make any report on the matters embraced in these petitions, until the committee had agreed on recommending something for adoption. But there seems to the committee to be in these petitions something of a character perfectly novel, introduced in a manner, it is believed, so totally unprecedented in the legislative history of the country, as well as inconsistent with the respect due to the representatives of the nation, that it is felt to be a duty to notice them now.

In alluding to the foregoing bills, the petitioners from Belfast assert, that a repeal of the law of debenture, the abolition of drawbacks, formed a part of the system of those bills; and depict, in glowing colors, the ruinous effects on the commerce of the country which would result, though they make no direct imputation of any intention. The Richmond memorial is more explicit, as the House will observe from the following extract: "In the next place, let us inquire into the justice and policy of the prohibitory system recommended by the advocates for internal manufactures, who may be viewed, indeed, less as the advocates of manufactures than as the enemies to foreign commerce and navigation; for, to what other purpose can they have introduced the bills to repeal drawbacks on exportations, and to abolish the credits given on duties, but to assail our commerce in the most vital manner, and eventually to destroy it?"

In considering these allegations of the petition, the committee feel great regret in being compelled to say that they are utterly unsupported by fact, and contradicted by the bills referred to, so far as they relate to the subject of drawbacks. The present system of drawbacks and debenture was, in all its parts, retained in both the bills called the *tariff* and *cash payment;* and in the latter new provisions inserted, which were intended and calculated to afford new and great facilities to the re-export trade of the country. The language of both bills was clear, explicit, and, to minds disposed to examine at all, capable of no misconstruction. One bill was reported in January, the other in March last. Both were printed by the order of the House. They excited general interest throughout the nation, were published, laboriously and fully discussed; and would seem, on the subject of drawbacks, as little open to any misconception as any measures ever brought before the public. How it has happened that those who are so much alive to these measures, who indulge fears that they would prove fatal to commerce, agriculture, and revenue, should have been so profoundly ignorant of their nature, is to the committee most inconceivable. Respect for the petitioners forbids the imputation of any other motive.

It is to be expected that opinions will be variant as to the operation of important measures: friends may be too sanguine as to their good, enemies too easily alarmed about their bad effects. There must be freedom in their discussion, both as to their tendency, the principles on which they are supported, as well as the motives of their advocates. Those who are interested have a right to speak, by petition or remonstrance, to their representatives, in plain, strong, and even bold language. This right is, and ought to be, sacred in a republic, even without the guaranty of the constitution. Opposition of the most decided nature must not only be expected, but should be wished, by the friends of such measures, as the only mode by which their propriety and expediency could be in the first instance ascertained, and by which Congress would avoid the adoption of crude and ill-advised ones. As to the policy of the bills referred to, the committee forbear as well the expression of any opinion as an examination of the reasons urged against their adoption. Should it be deemed their duty to offer them, or any of them, to the House, the occasion will be fairly presented, to test the soundness of the objections urged in the petitions, with much zeal and no little feeling. But we cannot withhold the expression of our opinion, that it derogates from the respect due to this House—that, by abusing, it may impair, the sacred right of petition and remonstrance, to either ignorantly or wilfully misrepresent the proceedings of any branch of the Government. It prevents the fair and legitimate action of public opinion; deceives and misleads the people, by directing their attention from what is really proposed to be adopted to phantoms which exist only in the fears and ignorance of those who raise them. It is not for the committee to impute it as intentional; but, when misrepresentation exists and spreads, its source becomes immaterial; in its effects it equally tends to poison and inflame the minds of the people, excites causeless alarms, and creates an unfair, ungenerous hostility, which would not exist if the subject were candidly stated and fairly explained. Few cases ever occur which could more clearly show the bad consequences of this perversion

and misstatement of the proceedings of the National Legislature. The assertion by some, and the belief by many, that it was a part of the system recommended by the Committee of Manufactures at the last session, to abolish the right of debenture and the whole system of drawbacks, would naturally create great alarm in all the commercial parts of the nation. If true, it would justify their most active opposition; the friends of commerce might fairly say that its destruction was a leading, if not avowed, object; the feelings of the people would be justly roused, and conveyed to the Legislature in the strong, if not indignant, voice of those who, feeling themselves assailed in their most vital interest, would act in self-defence in repelling an injury. The House can well judge of the burst of public indignation which would have been called forth had those bills contained the provisions attributed, when their existence only in the fancy and groundless fears of the petitioners have justified them, in their own minds, in their petitions addressed to this House, in assailing the motives and intentions of one of your committees. Had the petitioners understood these bills; had they known that they did not abolish or restrict, but retained, extended, and offered new subjects to the present system of drawbacks; provided a new and more enlarged one, leaving it at the option of the merchant to avail himself of either; not prohibiting, but encouraging, the exportation of foreign produce, not by adding new, but removing existing impediments; thus, so far from destroying, aiding, and assisting this important branch of a great national interest—the committee indulge, if not the belief, at least the hope, that a tone would have been given to public feeling different from what is expressed in the spirit of these petitions. When a committee, on its responsibility to the House, recommends; when the House, on its responsibility to the nation, adopts a system which is believed to be called for by the public exigencies, it is hoped that it is not expecting too much from those who complain that they will view them as the acts, not of an individual, but of a public body of high trust, whose motives ought not to be questioned—at least not without even the color of truth; whose conduct, motives, public and recorded acts, should not be misrepresented; that it may be held responsible for its own conduct only, not for what exists not but in the minds of those who create, then so feelingly deprecate, their imaginary grievances; and that those who avail themselves of the right of petition should use no language which is not respectful, and make no imputations which are not true. If, with the means which this House has adopted to diffuse information on all interesting subjects, the measures which it proposes will not be examined or understood by those whom they affect, or, if understood, are misrepresented, the committee can recognise no right which they can thus have to publicly, and on its own records, arraign this House for what they are pleased to call schemes, projects, and state machinery; to charge a committee with being the enemies of foreign commerce, and the design to assail, in the most vital manner, and eventually to destroy it, by proposing and urging the abolition of drawbacks; a charge not only not supported, but contradicted by the bills, the progress of which, one of the petitions says, has been witnessed with much concern.

It is our duty to listen to the voice of the people; to not only adopt such measures as may promote their welfare, but to abstain from such as impair it; but they owe a duty to us, not to impute what was not proposed—not to charge us with what was not attempted, but most solemnly disclaimed and disavowed.

So far as the petitions referred to the committee relate to matters which have been, or may be, reported on by them, they will deem it a duty to bestow on them their most respectful and serious attention; but, so far as these petitions impute to this House, or its committee, a scheme, which was developed and nearly matured at the last session of Congress, a part of which was designed to repeal the law of debenture, abolish drawbacks, and destroy the foreign commerce of the country, the committee owe it to themselves and the House to express their strong disapprobation of conduct which, they hope, has been hitherto without a precedent.

They therefore recommend the adoption of the following resolution:

Resolved, That the Committee of Manufactures be discharged from the further consideration of so much of the petitions referred to them as relates to the abolition of drawbacks.

16th CONGRESS.] No. 599. [2d SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE SENATE, ON THE 5TH OF DECEMBER, 1820.

In obedience to the direction of the "Act supplementary to the act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report:

I. OF THE REVENUE.

That the nett revenue arising from imports and tonnage, internal duties, direct tax, public lands, postage, and other incidental receipts, during the year 1817, amounted to - - - $24,365,227 34

VIZ:

Customs, (see statement A,) - - - - - -	$17,524,775 15
Internal duties, - - - - - -	2,676,882 77
Direct tax, - - - - - -	1,833,737 04
Public lands, exclusive of Mississippi stock, - - -	2,015,977 00
Postage, and other incidental receipts, - - - -	313,855 38

That which accrued from the same sources during the year 1818 amounted to - 26,095,200 65

VIZ:

Customs, (see statement A,) - - - - - -	$21,828,451 48
Arrears of internal duties, - - - - -	947,946 33
Arrears of direct tax, - - - - -	263,926 01
Public lands, exclusive of Mississippi stock, - - -	2,464,527 90
Postage, dividends on bank stock, and other incidental receipts, -	590,348 93

And that which accrued from the same sources during the year 1819 amounted to -			$21,435,700 69
viz:			
Customs, (see statement A,) - - - - -	$17,116,702 96		
Arrears of internal duties, (see statement B,) - - -	227,444 01		
Arrears of direct tax, (see statement B,) - - -	80,850 61		
Public lands, exclusive of Mississippi stock, - - -	3,274,422 78		
Postage, and other incidental receipts, - - -	61,280 33		
First instalment from the Bank of the United States, and dividend on the stock in that bank, - - - - -	675,000 00		

It is ascertained that the gross amount of duties on merchandise and tonnage, which accrued during the first three quarters of the present year, exceeds $13,340,000. And the sales of public lands, during the first two quarters of the year, exceed $1,240,000.

The payments into the Treasury, during the first three quarters of the present year, are estimated to amount to - - - - - - - -			$16,819,637 49
viz:			
Customs, - - - - - -	$12,378,513 12		
Public lands, exclusive of Mississippi stock, - - -	1,124,645 32		
Arrears of internal duties, - - - - - } Arrears of direct tax, - - - - - }	104,769 20		
Incidental receipts, - - - - -	579,749 14		
Moneys received from loans, - - - - -	2,545,431 47		
Repayments, - - - - - -	86,529 24		
And the payments into the Treasury, during the fourth quarter of the present year, from the same sources, are estimated at - - - - - - - -			3,430,000 00
Making the total amount estimated to be received into the Treasury during the year 1820, -			20,249,637 49
Which, added to the balance in the Treasury on the 1st day of January last, amounting to -			2,076,607 14
Makes the aggregate amount of - - - - - -			22,326,244 63
The application of this sum for the year 1820 is estimated as follows, viz:			
To the 30th of September the payments have amounted to - -		$16,908,413 80	
viz:			
Civil, diplomatic, and miscellaneous expenses, -	$2,078,573 25		
Military service, including fortifications, ordnance, Indian Department, revolutionary and military pensions, arming the militia, and arrearages prior to the 1st of January, 1817, -	6,043,068 00		
Naval service, including the permanent appropriation for the increase of the navy, - - - -	2,946,762 00		
Public debt, including $1,142,879 55 for the redemption of the Mississippi certificates, - - - -	5,840,010 55		
During the fourth quarter it is estimated that the payments will amount to -		8,056,000 00	
viz:			
Civil, diplomatic, and miscellaneous expenses, - -	$450,000 00		
Military service, - - - - -	1,900,000 00		
Naval service, - - - - -	806,000 00		
Public debt to the 1st of January, 1821, - - -	4,900,000 00		
Making the aggregate amount of - - - - -			24,964,413 80
And leaving on the 1st of January, 1821, a balance against the Treasury estimated at			$2,638,169 17

II. OF THE PUBLIC DEBT.

The funded debt which was contracted before the year 1812, and which was unredeemed on the 1st of October, 1819, as appears by statement No. 1, amounted to - - - -			$23,668,254 71
And that contracted subsequent to the 1st day of January, 1812, and unredeemed on the 1st day of October, 1819, as appears by the same statement, amounted to - - - -			68,060,336 29
Making the aggregate amount of - - - - -			91,728,591 00
Which sum agrees with the amount as stated in the last annual report as unredeemed on the 1st day of October, 1819, excepting the sum of $63 49, which was then short estimated, and which has since been corrected by actual settlement.			
In the fourth quarter of 1819, there was added to the above sum, for Treasury notes brought into the Treasury and cancelled, the following sums, viz:			
In six per cent. stock, - - - - -	$4,152 18		
In seven per cent. stock - - - - -	10,525 00		
		14,677 18	
Making - - - - - - -			91,743,268 18
From which deduct Louisiana six per cent. stock reimbursed on the 21st of October, 1819, - - - - - -		$2,601,871 14	
And deferred stock reimbursed between the 1st of October, 1819, and 1st of January, 1820, - - - - - -		242,063 47	
			2,843,934 61
Making the public debt which was unredeemed on the 1st day of January, 1820, as per statement No. 2, amount to - - - - - - - -			88,899,333 57

From the 1st of January to the 30th of September, inclusive, there was, by funding Treasury notes and issuing three per cent. stock, for interest on the old registered debt, added to the public debt, as appears by statement No. 3, the amount of	$34,550 19	
And by the loan authorized per act of May 15, 1820,	2,545,431 47	
		$2,579,981 66
Making		91,479,315 23
From which deduct the amount of stock purchased during that period, as per statement No. 3,	$40 34	
And the estimated reimbursement of deferred stock,	253,752 78	
		253,793 12
Making, on the 1st of October, 1820, as appears by statement No. 3, the sum of		91,225,522 11
To which add, in the fourth quarter of 1820, on account of the loan of the 15th of May of the same year,		454,567 66
Making		91,680,089 77
There will be reimbursed of the principal of the deferred stock on the 1st of January, 1821,	$249,444 16	
Since the 30th of September last, the residue of the Louisiana stock has become redeemable, amounting to	2,216,408 78	
		2,465,852 94
Which, if discharged before the 1st day of January, 1821, will leave of the public debt unredeemed on that day, as estimated,		$89,214,236 38
The Treasury notes yet in circulation are estimated, as appears by statement No. 4, at		$27,656 00
The whole of the awards made by the commissioners appointed under the several acts of Congress for the indemnification of certain claimants of public lands, as appears by statement No. 6, [not communicated to Congress,] amounted to		$4,282,151 12
Of which there has been received at the General Land Office	$2,439,308 31	
And there was paid at the Treasury 66 per cent. on $1,731,635 69,	1,142,879 55	
		3,582,187 86
Leaving outstanding on the 30th September, 1820,		$699,963 26

3. *Of the estimates of the public revenue, and expenditures for the year* 1821.

In forming an estimate of the receipts into the Treasury for the year 1821, the amount of revenue bonds outstanding on the 30th day of September last, the sum due for public land, the ability and disposition of the community to purchase, and especially the quantity and quality of the land intended to be exposed at public auction in the course of the year, present the data upon which the calculations must be made. As a portion of the duties which accrue in the fourth quarter of the present year, and in the first and second quarters of the next, form a part of the receipts into the Treasury for the latter year, the amount received will exceed or fall short of the estimate by the difference between the duties which actually accrue in those quarters, and are payable within the year, and the amount at which they had been estimated.

The receipts into the Treasury may also considerably exceed or fall short of the sum estimated, in consequence of the issue of a greater or less amount of debentures payable during the year 1821 than had been estimated.

The degree of punctuality with which the revenue bonds are discharged, upon which the estimate is formed, must necessarily affect the amount that will be received into the Treasury.

If the accruing revenue of the present and two succeeding quarters should exceed that of the corresponding quarters of the present and last years; if the amount of the debentures which may be issued and made payable, so as to affect the receipts of the year, should be less than that of preceding years since the peace, compared with the gross amount of duties secured within those years, respectively; and if greater punctuality in the payment of the revenue bonds now outstanding should be observed than during the last-mentioned period, the receipts from the customs will exceed the estimates now presented; and they will fall short of it should all these contingencies be unfavorable, as has been the case during the present year.

The revenue bonds outstanding on the 30th of September last are estimated at $18,770,000. Of this sum $3,130,000 are in suit, of which about $1,250,000 will not be collected on account of the insolvency of the debtors; leaving the amount of bonds outstanding, upon which collections are to be made, estimated at $17,520,000. The amount of duties secured during the first, second, and third quarters of the year 1820, is estimated at $13,350,000; and that of the whole year may be estimated at $16,500,000. The amount of debentures outstanding on the 30th of September last, and payable during the year 1821, is estimated at $1,162,114 16, which is subject to be increased by the amount issued in the present quarter, and during the whole of the ensuing year, chargeable upon the revenue of that year. The average annual amount of debentures, bounties, and allowances, and expenses of collection chargeable upon the revenue, has been ascertained to be nearly equal to fifteen per cent. of the average annual amount of the duties upon imports and tonnage which accrued from the year 1815 to the year 1819, inclusive.

If this proportion be applied to the revenue bonds outstanding on the 30th of September last; and if the receipts from the tonnage of vessels, and upon duties secured during the present and the two succeeding quarters, are assumed to be equal to any deficiency resulting from the want of punctuality in the discharge of the outstanding bonds, the receipts into the Treasury for the year 1821, from this source of revenue, may be estimated at $14,000,000.

The receipts into the Treasury from the public land, during the first three quarters of the present year, are estimated at $1,124,645 32, and those of the entire year will probably not much exceed $1,600,000.

The receipts from that source, during the year 1821, will probably not exceed those of the present year, if no incentive to greater punctuality, or inducement to make prompt payment, should be presented to the public debtor in the course of the present session of Congress.

The balances of internal duties and direct tax, still outstanding, are so considerable as to justify an estimate of some extent in calculating the receipts of the ensuing year, if the difficulty of enforcing payment in those States where the largest amount is due were not known to be great. Under these circumstances, the receipts from that source, for the ensuing year, are estimated at $100,000.

According to the foregoing data, the receipts into the Treasury for the ensuing year may be estimated as follows: viz:

Customs, - - - - - - - -	$14,000,000	
Public lands, exclusive of Mississippi stock, - - - -	1,600,000	
Arrears of internal duties, direct tax, and incidental receipts, - -	100,000	
Third instalment from the Bank of the United States, - - -	500,000	
Bank dividends which will accrue during the year, estimated at 5 per cent., -	350,000	
Making the aggregate amount of - - - - -		$16,550,000

The appropriations for the same period are estimated as follows, viz:

1st. Civil, diplomatic, and miscellaneous, - - -	$1,769,850 04	
2d. Military Department, including fortifications, ordnance, Indian Department, military pensions, and arrearages prior to the 1st of January, 1817, - - - - - -	4,585,352 61	
3d. Naval Department, - - - - -	2,420,594 56	
Making an aggregate of - - - - -	$8,775,797 21	

But, to determine the amount of the charge upon the Treasury for the service of that year, the following additions must be made, viz:

1st. Civil, diplomatic, and miscellaneous, the sum of $1,500,000; being an amount of appropriations for the present and preceding years unexpended, and which may be expended during the year 1821; and the sum of $5,477,777 76, payable on account of the interest and reimbursement of the principal of the public debt during that year.

2d. The unexpended balances of appropriations for the War Department, under the different heads already enumerated, and which have been deducted from the estimates, or not included in them, (as in the case of revolutionary pensions, because the balance of that appropriation is estimated to be equal to the expenditure on that object during the ensuing year,) amounting, together, to $2,507,267 63; the annual appropriation of $200,000 for arming the militia; and the Indian annuities, not embraced by the estimates, amounting to $152,575.

3d. The annual appropriation of $1,000,000, for the gradual increase of the navy, which will expire in the year 1823; and an unexpended balance on the same account, which may be expended in 1821, of $1,750,000.

According to the foregoing data, the expenditure of the year 1821, and which is chargeable upon the Treasury during that year, may be estimated as follows, viz:

1st. Civil, diplomatic, and miscellaneous, - - - -	$3,269,850 04	
2d. Public debt, - - - - - -	5,477,777 76	
3d. Military Department, including fortifications, ordnance, Indian Department, military and revolutionary pensions, arrearages prior to the 1st of January, 1817, and arming the militia, and Indian annuities, - -	7,445,195 24	
4th. Navy Department, including the sum of $1,000,000 for the gradual increase of the navy, - - - - -	5,170,594 56	
Making an aggregate charge upon the Treasury, for the year 1821, of - -		$21,363,417 60
To which add the balance against the Treasury on the 1st of January, 1821, -		2,638,169 17
Making - -		$24,001,586 77

leaving a balance of $7,451,586 77 beyond the estimated means, for which provision must be made. [This balance is reduced by a subsequent estimate. See No. 605.]

To determine whether a deficiency to this or any other amount will occur in succeeding years, is extremely difficult. The data furnished by the fiscal operations of the Government since the peace must be principally relied upon in making the calculations necessary to arrive at any general result upon this subject.

It has been ascertained that the nett revenue which has accrued from imports and tonnage from the year 1815 to 1819, inclusive, has amounted to $120,260,052 46. If this be divided by the number of years in which it accrued, the result will be an average annual revenue of $24,052,000. But the revenue which accrued in 1815 greatly exceeded not only that of any year previous to the war, but that of any year since that epoch. It is also admitted that the quantity of produce on hand, at the close of the war, especially of cotton and tobacco, considerably exceeded the amount of the crop of those articles made during the preceding year. The ability of the community, therefore, to purchase an increased amount of foreign articles in the year 1815 exceeded, in a corresponding degree, that of subsequent years. It has also been ascertained that the importation of foreign articles during the present year has been considerably less than in any year since the peace. To form an estimate of the average annual revenue which may accrue from imports and tonnage during the next four years, that will approximate towards accuracy, it will be necessary to embrace in the calculation the revenue which accrued from the year 1814 to 1819, inclusive, amounting to $124,510,414 05, and that which shall have accrued in the year 1820, estimated at $14,000,000, making the aggregate sum of $138,510,414 05, which gives the sum of $19,787,202 as the average annual revenue for those seven years.

Other views, derived from the fiscal operations of the Government, will be found to accord with this result. The average product of the duties upon imports and tonnage, which accrued from the year 1801 to 1807, inclusive, may be stated at $13,640,000; and that which accrued from the former period to 1813, inclusive, amounted to the annual sum of $11,570,000. The increase of population in the United States has been estimated at thirty-four per cent. in ten years; if the increase of consumption has corresponded with that of population, the revenue of the year 1820, according to the result furnished by the first seven years, would exceed $20,000,000, and would fall but little short of $17,000,000 according to the data furnished by the whole period. During the former period, the principal States of Europe were involved in wars; which not only gave to our shipping the principal part of the carrying trade, but created an unusual demand for every article of exportation, and greatly enhanced their value.

Any estimate founded upon the average revenue of those years, the duties upon imports remaining the same, would, most probably, not be realized; but as these duties were considerably increased in 1816, the objections to such an estimate are, in some degree, diminished. From the year 1808 to 1813, inclusive, the United States were engaged in a state of commercial or actual warfare. The disadvantages to which their commerce was subjected by that warfare more than counterbalanced the peculiar advantages it enjoyed in the seven years immediately preceding. An estimate for the next four years, founded upon an average of the whole term, would more probably fall short of than exceed the sum which would be received into the Treasury, notwithstanding the duties were higher during two years of that term than at present.

In the investigation of a subject of such complexity, affecting so deeply the interest of the community, every fact and circumstance connected with it ought to be considered. Since the year 1807 new interests have arisen, which claim a prominent place in this consideration. From time immemorial, household manufactures have existed in every part of the United States. The mechanical arts, (those branches of manufacture without which society, even in a very imperfect state of civilization, could not exist,) though differing in some degree from those properly denominated household, have long existed in the United States. Since the year 1807, those branches of manufacture have been greatly extended and improved. Others have been established, and a large amount of capital has been invested in manufacturing establishments, which promise to furnish, in a short time, an ample supply of cotton and woollen manufactures, and most of those of iron, glass, and various other articles of great value.

As commerce has been properly defined to be an exchange of equivalent value, it is probable that by the failure on our part to receive from foreign nations the accustomed supply of those articles which can now be produced in our domestic establishments, the articles which they have been accustomed to receive from us will lose something of the value which they would otherwise have commanded, until new channels of intercourse shall be discovered, and different articles of merchandise shall be substituted for those formerly received.

The capacity of a nation to consume foreign articles depends upon the value of its exports, and not upon its ability to furnish every article of primary or secondary necessity. The precious metals are never imported into any country when commodities which will command a profit can be obtained for importation. Giving full weight to the fact that cotton, woollen, iron, and various other articles which are now furnished by our domestic establishments, will be hereafter received from foreign nations only to a small amount, $17,000,000 of revenue may be assumed as the minimum, and $20,000,000 as the maximum, which will be annually received from imports and tonnage during the next four years. The decrease which has occurred in the revenue in the last and present years furnishes no ground to distrust the correctness of the foregoing conclusion. The customs produced, in 1815, a nett revenue of $36,306,022 51; in 1816, $27,484,100 36; and in 1817, $17,524,775 15. This last year was considered, at the time, as the period of greatest reaction. Accordingly, in 1818 the nett revenue from the customs amounted to $21,828,451 48.

The multiplication of banks, the state of the currency, and the high price which all exportable articles commanded until the end of 1818, strongly invited to extravagance of every kind, and particularly in the consumption of foreign merchandise. The resources of individuals had been, by these seductions, in a great degree anticipated during the first years which succeeded the peace. The sudden reduction in the value of all exportable articles which occurred about the commencement of the year 1819, not only prevented in a great degree further purchases, but rendered the discharge of engagements previously contracted impracticable. The pressure thus produced upon the community reacted upon the venders of every species of merchandise, whether foreign or domestic, who, without thoroughly investigating the cause of their distress, have sought for relief in measures calculated rather to aggravate than alleviate the public embarrassment.

The issue and payment of a larger amount of debentures in the present year in proportion to the exportations of the last, the increased amount of specie and diminished amount of foreign merchandise imported during the present year, and the ready sale of foreign and domestic articles now in the market, show that the importation of foreign goods is upon the eve of being regulated by the demand for them for consumption.

It has been stated that the receipts from the public land during the year 1821 cannot be estimated at more than $1,600,000, unless some greater incentive to punctuality or inducement to make prompt payments should be offered by the measures which may be adopted in the course of the present session of Congress. The act of the 24th of April last, which abolished credit on all purchases of land, and reduced the minimum price from 200 to 125 cents per acre, furnishes, it is respectfully conceived, equitable ground for legislative interference in favor of purchasers under the ancient system. By that system, the price could be reduced to 164 cents per acre by prompt payment. If the act abolishing credit had fixed the minimum price at 164 cents instead of 125 cents, no equitable ground for legislative interference would exist. It is not contended that the vender of an article, under ordinary circumstances, does an injury to a purchaser by subsequently selling the same article to others at a lower rate. But if he has in his possession such a quantity of the article sold as to enable him for an indefinite time to determine the price of the article, he affects the interest of every previous purchaser by such reduction, who may be constrained, from any cause whatever, to sell that article. The extent of the national domain will, for ages, enable the Government to determine the price of unimproved land similarly situated. It is admitted that the Government has been induced to adopt this measure by the most grave considerations. The most prominent of these was the necessity of preventing the further increase of a debt, then about $22,000,000, strongly affecting the interests and feelings of a great number of citizens. If its increase was an object of deep solicitude, its diminution, by an act of grace, founded upon equitable principles, will be in strict accordance with the motives in which that measure originated. Difficulties may occur in adjusting the details of such a measure, unless it be presented as a simple act of grace. Under this point of view, it should be confined in its operations to the debtors of the Government for public lands, and should affect them only to the extent of the debts which they may respectively owe.

During the excessive circulation of bank notes not convertible into specie, and to which the Government, from necessity, for some time gave currency, and the high price which every description of domestic produce commanded, large quantities of public land were sold at public auction at prices greatly beyond their real value. In many instances, the first payment which the Government has received could not be obtained by the purchaser, even if he were able to convey the land in fee-simple. The propriety of legislative interference to change the relation between debtor and creditor for the benefit of either may well be questioned. Circumstances, however, may arise, which will influence an upright and benevolent creditor to relax his demands, and to grant relief to his debtor voluntarily, which he might resist as an act of power. Such is respectfully conceived to be the situation of the Government in relation to the purchasers of public lands, who, in a moment of infatuation, have engaged to pay for a portion of the national domain a sum greatly beyond its value, and which never will be paid.

In all cases of this kind, the forfeiture of the sum already advanced will inevitably occur, if relief to some extent be not granted.

In conformity with the foregoing views, the following propositions for the relief of the purchasers of public lands, and for the purpose of increasing the payments into the Treasury in the ensuing year, are respectfully submitted, viz:

1st. That every purchaser of public land be permitted, on or before the 30th of September next, to abandon any legal subdivision of his purchase, and that the payments made upon the part abandoned be applied to the discharge of the instalments due upon the remainder; the right to abandon in no case to involve any repayment by the Government to any purchaser. In all cases the part retained to be in the most compact form that the situation of the whole quantity purchased will permit.

2d. The difference between the former and present minimum price for cash payments being equal to 23.78 per cent. on the former, it is respectfully proposed, that on payment of the whole purchase money for any tract of land on or before the 30th day of September next, a deduction of 25 per cent. shall be made, and that any interest which may have accrued to the United States in such cases shall be remitted. An act of greater liberality, and which would still further increase the receipts into the Treasury during the next year, would be to allow a deduction of 37½ per cent. on all such payments, which is equal to the difference between 200 and 125 cents.

3d. That all sums which may be due by purchasers of public lands, who shall not avail themselves of the preceding conditions, shall be payable in ten equal annual instalments, without interest, provided that such payments shall be punctually made upon the several days in each successive year upon which the purchases were respectively made. Any failure in making such payment to revive the original terms and conditions of sale.

If these or analogous provisions should be adopted, the payments from the public land, during the year 1821, will be greatly increased; the debt due on that account greatly diminished; and the revenue resulting from that source acquire, in future years, a more uniform character.

If, then, it be assumed that the revenue which will accrue from the customs will be equal to the mean sum between seventeen and twenty millions of dollars, the annual revenue for the four succeeding years may be estimated as follows, viz:

Customs,	$18,500,000
Public lands,	2,500,000
Bank dividends at six per cent.,	420,000
Incidental receipts,	80,000
Making an aggregate amount of	$21,500,000

But if the annual receipts from the customs shall be estimated for the next four years at the average sum of $17,000,000, the annual revenue for that period will be equal to $20,000,000.

The annual expenditure for the same period, may be estimated as follows, viz:

Civil, diplomatic, and miscellaneous,	$2,000,000
Public debt,	5,477,000
War Department, including fortifications, ordnance, Indian Department, military and revolutionary pensions, arming the militia, and arrearages prior to the 1st of January, 1817,	5,850,000
Naval Department, including $1,000,000 for the permanent increase of the navy,	3,420,000
Making the aggregate amount of	$16,747,000

The balance of the sinking fund, after paying the interest of the funded debt, and providing for the annual reimbursement of the six per cent. deferred stock, has not, in this estimate, been considered as a charge upon the Treasury before the year 1825, as the price of the public stocks precludes the possibility of purchase within the rates prescribed by law.

This estimate is below that which is required for the year 1821, but it is believed to be less than the annual expenditure which will be required for the next four years. According to this estimate, the means will exceed the indispensable expenditure, during that period, by $3,253,000.

After the year 1823, the annual expenditure upon the navy will be diminished by $1,000,000. The expenditure of the Government after that year, including the entire appropriation for the public debt, is estimated as follows, viz:

Civil, diplomatic, and miscellaneous,	$2,000,000
Public debt,	10,000,000
Military Department, including fortifications, ordnance, Indian Department, military and revolutionary pensions, arming the militia, and arrearages prior to the 1st of January, 1817,	5,850,000
Naval Department,	2,420,000
Making the aggregate amount of	$20,270,000

which, after the year 1824, would leave an annual deficit of $270,000.

If this sum should not be met by the annual increase of revenue, resulting from the increase of population during those and succeeding years, and the increased consumption of foreign articles resulting therefrom, it may be supplied by a corresponding reduction in those items of expenditure which depend absolutely upon the will of the Legislature, unconnected with the existing laws regulating the permanent expenditure.

It is therefore respectfully submitted, that it is inexpedient to resort, at this time, to the imposition of additional taxes upon the community. The condition of the currency in several of the States of the Union furnishes strong inducements to abstain from additional taxation at this time. The obligation of the Government to receive the notes of the Bank of the United States, without reference to the place where they are payable, has given to them their universal currency. All notes issued south and west of Washington have, in consequence of the state of exchange between those places and the commercial cities to the east of this place, centred in those cities. The Bank has, consequently, found itself constrained to direct those branches to refuse to issue their notes, even upon a deposite of specie. The effect of these causes combined has been the exclusion from circulation, in all the States west and south of the seat of Government, of the notes of the Bank of the United States and its offices. In several of those States there is no sound paper circulation. To resort to internal taxation, under such circumstances, would be to require of the citizens of those States what it will be impossible for them to perform. Wherever paper circulates as money, which is not convertible into specie, it circulates to the exclusion of specie and of paper which is convertible into gold and silver coin. In all such places, the payment of direct or internal taxes in specie, or in the notes of the Bank of the United States, will be impracticable. Preliminary to a resort to internal taxation of any kind, the charter of the Bank of the United States ought to be amended so as to make the bills of all the offices of the bank, except that at the seat of Government, receivable only in the States where they are made payable, and in the States and Territories where no office is established. The effect of this modification would be to make the notes of the offices of the Bank of the United States, except the office in this District, a local currency, which

will enter and continue in the local circulation of the States in which they are issued. The notes thus issued will render the local circulation of all the States sound, and furnish to the citizens the means of discharging their contributions to the Government. This measure will also place the State institutions to the south and west of this city in a more eligible situation in relation to the offices of the Bank of the United States, by enabling them to adjust their accounts with these offices by the exchange of notes, instead of liquidating their balances by the payment of specie. Should it, however, be judged expedient by the Legislature to lay additional burdens upon the people, for the purpose of meeting the existing or any probable future deficiency, it is respectfully submitted that the importation of foreign spirits be prohibited, and that a duty upon domestic spirits, equal to the amount of that now collected upon foreign spirits, and to such deficiency, be imposed on the distillation and sale of domestic spirits. In any event, a resort to loans to the extent of the deficiency of the year 1821 will be indispensable.

Of the sum of $3,000,000, authorized by the act of the 15th May last to be raised by loan, $2,000,000 have been obtained at a premium of two per cent., upon stock bearing interest at the rate of six per cent. per annum, redeemable at the will of the Government, and $1,000,000 at par, upon stock bearing interest at the rate of five per cent. per annum, redeemable at any time after the 1st day of January, 1832. There is no just reason to doubt that any sum which may be necessary to be raised by loan, can be obtained upon terms not less favorable; but, as it is probable that the surplus of the revenue, after satisfying all demands upon the Treasury authorized by existing laws, during the years 1822, 1823, and 1824, will be equal to the redemption of any debt which may be contracted in 1821, it is respectfully submitted that the President of the United States be authorized to borrow from the Bank of the United States, or from other banks or individuals, the sum which may be necessary for the service of that year, at par, and at a rate of interest not exceeding six per cent. per annum, redeemable at the will of the Government.

All which is respectfully submitted.

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *December* 1, 1820.

[NOTE.—For the correction of errors in the preceding report, see No. 605.]

A.

A statement showing the amount of duties which accrued on merchandise, tonnage, passports, and clearances; of debentures issued on the exportation of foreign merchandise; of payments for bounties and allowances; and of expenses of collection, during the years 1817, 1818, *and* 1819.

Years.	Duties on			Debentures issued.	Bounties and allowances.	Gross revenue.	Expenses of collection.	Nett revenue.
	Merchandise.	Tonnage.	Passp'ts. &c.

GENERAL LAND OFFICE, *November* 15, 1820.

JOSIAH MEIGS, *Commissioner.*

16th Congress.] No. 600. [2d Session.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE, DECEMBER 8, 1820.

To the honorable the President and Members of the Senate of the United States of America:

The citizens of Charleston have seen, with deep regret, the efforts which were made at the last session of Congress to impose a high rate of duties on all manufactured articles imported into the United States—efforts made for the express and avowed purpose of creating, encouraging, and supporting, in this country, great manufacturing establishments; of modifying and curtailing extensively our mercantile intercourse with foreign nations; and of forcing from their present employments much of the labor and capital of our fellow-citizens.

As there is much cause to apprehend that this measure will again be presented to the consideration of Congress, your memorialists beg leave to state the reasons which have led them to view this system as one unfavorable to the general interests of the United States; as one likely to prove partial in its operations, injurious in its effects, uncertain in its results; as one which departs equally from the spirit of our constitution and the best established principles of national economy. It is a position almost too self-evident for controversy, that, in every free or well-regulated Government, labor and capital should be permitted to seek and to find their own employment. To the sagacity of individuals this trust may be safely committed. A Government can never regulate, to advantage, the employment of capital; because success in the pursuit of wealth, in every department of life, depends on local circumstances, on minute details, on personal exertions, which cannot be regulated, on causes that escape those general views which alone a Government can take of the transactions of its citizens. It is sufficient that a Government takes care that the employment of each individual shall inflict on others or on the community at large no injury, and that each shall receive equal and uniform protection; all interference beyond this is useless or pernicious. It is equally obvious that those employments of capital which are most profitable to the individual must, on a general scale, prove the most advantageous to the State. National is but the aggregate of individual wealth; whenever, therefore, capital is diverted from one employment, in which it makes a certain profit, to another, in which a smaller profit only can be obtained, the difference between these employments of capital is exactly, to the extent of that difference, an actual loss to the community. Now, whenever individuals are induced to engage in the less profitable employment by assurances of national indemnity; whenever the rest of the community are compelled to make good the losses which, by these enterprises, may be sustained, the results are not only injurious, but unjust; because, while the nation, as a whole, becomes a loser by these idle projects, the many are obliged to surrender a portion of their fair and well-earned profits to enable the few to amuse themselves unnecessarily with unprofitable speculations. But if, from the state of society, or from local circumstances, this measure should be partial in its operation; if this forced employment of capital should be confined to a particular portion of country, the injustice becomes doubly great; because it then not merely causes a transfer of property among the individuals of each particular division of territory, without affecting the general wealth of those divisions, but some entire districts are absolutely impoverished, while others are exclusively enriched.

Under all these aspects, the new tariff presented to Congress at its last session merits our disapprobation. Its avowed object is, by imposing heavy duties on the importation of foreign manufactures, to grant high bounties to all of the capital which shall be employed in manufactures in the United States; and by shackling, at the same time, and curtailing our commerce, to force, by these united measures, to the loom and the workshop much of the labor and capital which are now employed in agriculture and commerce. This is unnecessary or unwise. If labor and capital employed in manufactures will produce as much profit as in agriculture or commerce, it is unnecessary; because the cupidity and intelligence of individuals, when unrestrained in their pursuits, will soon turn them into this channel. If they will not produce as much profit, it is unwise; because labor and capital will, by these means, be forced into an unprofitable employment. Every laborer employed in unproductive occupations must become, directly or indirectly, a burden on the community. He will either become a pauper, to be supported directly by the charity of his fellow-citizens, or he must be supported indirectly, by their consenting to pay more for the products of his labor than would purchase the same products from other quarters. It is to this point that the premature establishment of manufactures will lead; and the effort now made to impose heavy duties or prohibitions on foreign manufactures is only to disguise, in this shape, the bounties we must pay to the laborers engaged in the domestic fabrication. We are aware that the employment of capital is not always determined by its absolute profit. Other circumstances have, and deserve to have, much influence on the pursuits of men. It has heretofore been said that the price of labor and provisions in this country was so high as to render the establishment of manufactures impracticable; that bounties were indispensable to give them life, and even a temporary existence. This was virtually to abandon the question, and to acknowledge that labor in other pursuits obtained a profit which could not be afforded to it in this. But a new aspect is now given to this discussion. The price of provisions, which, for many years continued unusually high, has now fallen to a level preternaturally low; labor must fall in proportion; and when these preliminary advantages are obtained, why should systems of restriction be still wanting? Why should public exertions be required to force labor into this channel? There can be but one reply, which is, that to the establishment of manufactures our state of society is still unpropitious. The surface of our vast territory is still insufficiently supplied with laborers; our forests are still uncleared; and much of our most fertile soil is still untrodden. Man—even the poor man—will not seclude himself within the walls of a manufactory while he can possibly find a maintenance in the more cheerful walks of agricultural industry. The life of the husbandman is one of comparative enjoyment. In his paths are health, and temperance, and peace, with a mind exercised and improved, and a proud spirit of independence encouraged and preserved. He looks for his subsistence not to one man, nor to a few; wherever there is earth, and air, and a soil to be cultivated, he may find employment. But the monotonous and melancholy toils of the manufacturer, confined for days and years to one spot and one unchanging occupation, contract the mind, debilitate the constitution, and render him more dependant than the laborer in any other occupation. One country in Europe bears, in this point of view, a strong resemblance to our own. Russia possesses an almost unlimited extent of fertile territory, thinly inhabited, and still offering to the husbandman unstinted occupation. In Russia, for the last forty years, (perhaps for a century past,) provisions and labor have been cheaper than in any other country in Europe; yet, in Russia, manufactures have made no permanent progress. Like ourselves, the inhabitants manufacture a few articles to which their circumstances are peculiarly favorable. During the existence of what was termed the *continental system*, efforts were made in that country to diffuse manufactures extensively; and the necessity is now imposed on the Government

of embarrassing its commerce, in order to afford some protection to the establishments which have been prematurely called into existence. But the Russians are not, and will not soon become, a manufacturing nation. The same causes appear to have produced with them and with us similar effects. The peasantry, even when unthralled by their system of vassalage, can still find subsistence by tilling the soil; and the ineffaceable love of nature, only to be overpowered in the human mind by a stern necessity, leads them to prefer the coarse and scanty enjoyments of the rustic laborer to the more dependant, though more flattering, occupation of the manufacturer. Surely the moral influence of such feelings and opinions ought not to be disregarded, nor can their political effects be overlooked in an enlightened Government. When an overflowing population shall naturally give rise to extensive manufactures, we will then rejoice in their establishment, as a means of varying the application of capital, and of giving employment to suffering industry; we will share with them equally our rights, our privileges, and our immunities: but we perceive no motive for producing artificially such a state of society. The experience of Europe teaches us that the population in great manufacturing cities is very ignorant, very immoral, very poor, and very dependant; and yet, from the facility with which, from their numbers, the workmen can combine, from their misery, and from the fluctuating nature and results of the pursuits in which they are engaged, they become the most disorderly and discontented citizens in the whole community. For such a population shall we voluntarily exchange the tillers of our soil? Shall we drive, almost with violence, our citizens from the ploughshare and the scythe? And if upon this subject we require additional cautions, let us remember how much more stable has been the power and prosperity of agricultural nations than of those founded on any other basis.

Every duty on imported commodities operates as a tax on the consumer. When these taxes are imposed only to supply the necessary wants of the Government, they are cheerfully paid; when imposed to enrich individuals, we should surely consider well on what grounds the claims of such individuals are advanced; we should inquire carefully what reciprocal benefit the public will receive. It is the interest of every member of the community to purchase the articles he may wish, or be obliged to consume, at the lowest possible price. This increases the value of his exchangeable commodities, and increases, of course, his enjoyments. Whenever this privilege is abridged, it becomes him to inquire whether, as an individual, or as a member of the community, he receives an equivalent advantage. The great plea for taxation advanced in this case is, that domestic manufactures will make us independent of foreign nations. This is certainly important in itself; but, when advanced as a ground for forcing artificially the production of every thing we want, the plea is every way fallacious. Physical independence consists in possessing those articles absolutely necessary for our existence. These we have long since enjoyed. Few nations are, from the bounty of Providence, more independent than the United States. Beyond this, the independence of the savage consists in his exemption from all wants; the independence of the civilized man, in his power of supplying and gratifying the wants of social life. Wealth to him, in this view, is independence; and wealth consists in the quantity of consumable articles he can obtain for the surplus labor or produce he may have to exchange; and this, in a great measure, depends on the liberty he possesses of exchanging those articles under the fewest restraints, and, consequently, to the greatest advantage. Whatever curtails this power lessens his wealth; whatever diminishes his wealth abridges his independence. If, under a new system, the surplus labor of an individual will procure for him but one-half of the articles of consumption which he has hitherto been accustomed to receive for the same labor, what compensation will it be to him to know that this diminished supply was produced in his own country, or even on his own farm? But if this argument is really valid, it will extend much farther than its present advocates mean to apply it. If it is necessary that a nation, to be independent, should raise within itself every article it has occasion to consume, it will be much more important to raise those of general consumption than those which may merely gratify the wants of luxury and fashion. If, therefore, we are by bounties to fill our Northern cities with manufactories to furnish articles with which we could well dispense—if this is necessary to our independence, equally so will it be to cover our pine barrens with hot-houses, to raise the sugar and coffee, the tea and pepper, and the other productions of tropical climates; to give high rewards for the manufacture of wine, and oil, and salt, and many other articles, which are daily required in our domestic consumption. Sufficient bounties will furnish us with a domestic supply of those articles, all of which are now in common use; and some, from our habits, articles almost of necessity. And when one portion of our countrymen call for bounties to create manufactures to which our state of society is unfavorable, let them act uniformly, and at the same time grant bounties to raise those articles to which our climate is unpropitious. The attempt will be equally practicable, and equally wise. In truth, if this plea is of any avail; if this absolute local independence is of real importance, it applies as strongly to sectional as to national divisions. If it is desirable that a nation should produce within itself all the articles necessary for its consumption, it is equally desirable that each division of that nation, each province or state, each district, each plantation, each farm, each individual, should equally possess this power. If every nation is dependant that is obliged to purchase the productions or manufactures of other climates or countries, every individual must be in the same degree dependant who has to purchase the products of the labor of other men. There is no distinction in the argument; there is no pause until we arrive at that state where each individual shall produce for himself every article which he may wish to consume, and must consent to want every article which he cannot raise or fabricate. This will carry us back to that condition in which the semi-barbarous people of Europe existed during the pressure of the feudal system; when almost all intercourse between individuals and nations was interdicted; when nothing was interchanged but injuries, nothing remembered but oppression and wrong. How much more simple and more wise is it for each nation to raise or manufacture those articles which are most congenial to its soil and to the habits of the people, and exchange its superfluous productions for the productions of other climates and other conditions of society; to perpetuate, if possible, amicable relations with all countries, by the firmest of all ties—reciprocal advantages; remembering always that, in proportion as this interchange is free and unrestricted, will be the mutual benefit it will confer! We acknowledge that most foreign Governments still impose great restrictions on national intercourse; that they have made great exertions and immense sacrifices to produce at home manufactures of all descriptions; great efforts to secure this species of independence: and it is really from the experience of foreign nations that we are inclined to suspect the wisdom of their practice. We have seen them impose upon themselves a population which they are obliged to support; entangle themselves in a system from which, even when their ablest statesmen deplore its effects, they cannot, without a revolution, be extricated. The very magnitude of the evil prevents a remedy. The amount of capital and the number of people engaged in an unprofitable employment may render it cruel, if not impracticable, to withdraw from it the countenance and support by which it was first encouraged. And the influence which so strong an interest, and one so easily combined, can exert over any Government, should make us in this country very cautious how we render that a claim which, at first, may be regarded as a favor. It is, in the present instance, to the extraordinary combination of interests and of exertions among a class of citizens whose pursuits are very distinct, and whose title or pretensions to support are widely different—it is to this demand for indiscriminate encouragement, that we particularly object; it is from this combined effort to force our Government from its position, that we view with apprehension and alarm the application of the united body of the manufacturers, even when advancing new, and, as we think, unreasonable claims. What administration would ever have the power or the resolution

to withdraw from them hereafter any privileges which may have once been improvidently granted. Neither should it should be forgotten how hostile to the general spirit of our constitution is every system of restriction, of monopoly, of particular privileges. It has been our boast and our highest advantage that we have been able to commence an experimental Government, liberated from all those incumbrances and embarrassments which time and circumstance, and prejudice and ignorance, have imposed on the old Governments of Europe—incumbrances which, even in an enlightened age, they cannot remove; that we have been able to bring to the test of experience the theories and speculations of the statesman and the philosopher; that we have been able to exemplify, most particularly, the advantages of unlimited freedom in the pursuits and opinions of men. Our own career has been one of unexampled prosperity; our own experience forms one of the most instructive records of history. Most unwise shall we be, if, forsaking our own doctrines, and untaught by our own lessons, we shall abandon the simple but sublime principles by which we have hitherto been guided, to adopt the temporary, fluctuating, disjointed expedients of European practice.

We regret when we are compelled to advert to local or sectional advantages, or to view our own interests as distinct from those of any other portion of our fellow-citizens; but the circumstances which have lately been forced upon our attention oblige us to view this question in relation to our own immediate interests. The Southern States are not, and cannot for a long series of years become, a manufacturing nation. We have not a population equal to the cultivation of our soil; and the insalubrity of our climate forbids the hope that this deficiency will soon, if ever, be supplied by a population of white laborers. We raise, and must continue to raise provisions, articles of the first necessity for man in every climate, and raw materials for the use and consumption of manufacturing nations. It is, therefore, peculiarly our interests that our interchange with the world should be free; that the markets for the consumption of our produce should be extended as widely as the habitations of man. It is equally our interest that the articles we are compelled to consume should be procured on the most advantageous terms. We are among the last people who should wish to restrict the freedom of commerce, or, by limiting on our part national intercourse, induce other nations to impose countervailing restrictions upon us. Let us not flatter ourselves that the statesmen of Europe will permit a system of restrictions to be partial in its operations. It is a matter almost of delicacy to touch this part of the subject; but it is idle to shut our eyes to our danger. Let us, then, examine the possible (we may say probable) effects of this system on the great staple of our country. Our cotton is now admitted into Great Britain on terms as liberal as the cotton of any foreign nation. It can be carried to her ports in our own vessels. In fact, this trade is now chiefly carried on in the vessels of the United States; and by this means some of our most important manufactures (those connected with ship building) are encouraged, and the security and reputation of our country are increased by the seamen it nurtures and protects. To this trade Great Britain consents, because to her the general commerce of the United States is highly important, and because our consumption of her manufactures offers an equivalent for the advantages we now enjoy. But let us once declare that this trade in future shall be beneficial only to ourselves; that we will take nothing from her, while we wish her still to continue the great consumer of our produce; and we may soon feel the error of such calculations. If, for instance, we should prohibit in this country the introduction of the manufactures of Great Britain, or impose on them duties amounting to a prohibition, have we no reason to apprehend that she may, on her part, prohibit totally the introduction into her ports of our cotton, our rice, and our tobacco, and turn to other quarters for the supply she may require? Brazil and the East Indies can even now furnish her with these articles in sufficient abundance, and, independent of the advantages she would derive from her general intercourse with these countries, the transportation of these very commodities would be exclusively in her own vessels, and her ship owners and her seamen would equally profit by this direction of her commerce. The new Governments, too, arising in South America, possess an immense extent of territory adapted to the production of cotton, and tobacco, and flour, and rice. All of them must at first become agricultural nations, and for a long time they will have to exchange the rude productions of their soil for the manufactures of other countries. On all sides we shall meet competitors in the consuming markets ready to avail themselves of our errors and profit by our mistakes; ready to occupy any position which we may abandon, or from which we may be driven. Nor can we doubt of this result. Have we ever found the statesmen of the civilized world insensible to the interests of their respective nations? Have we ever found them deficient in sagacity to perceive, or in promptness to meet, the hostile combinations of foreign commerce? The interchange of nations, like the intercourse of individuals, can only be maintained by mutual and reciprocal advantages; and the experience of the world appears clearly to demonstrate that the more free is that intercourse, the more unfettered the commerce and capital of any nation, the more will the pursuits of that nation become extensive and diversified, and exempt from the fluctuation and ruin which finally must attend every system established on a forced employment of capital. Against these evils the prospect is held out to us of a domestic market for the consumption of our raw materials. This prospect is certainly delusive. In the United States we could only calculate to manufacture for the supply of our own wants, and this would not consume one-half—perhaps not one-third—part of the cotton we now raise, without adverting to the other staples of the country, or without bringing into view the rapidly increasing production of our Western States. Surely we cannot expect to become exporters of manufactures when we are obliged to call for enormous duties to protect them against competition even in our own markets, and when it is acknowledged that the removal of these duties will at any moment prostrate the whole system in remediless ruin. And for this insufficient and insecure market we are called upon to invite and provoke the commercial hostility of the whole civilized world, and to expose ourselves to the risk of having our productions driven from every country where the Government may think that reciprocal advantages should form the basis of every encouraged or even tolerated commerce. The Southern States will derive no immediate advantage from this measure, even if it should prove successful; but they are urged to promote it with the hope of creating a market for their productions, which may protect them from the evils they may feel on the possible failure of all foreign markets. And for this remote and contingent benefit, for this possible supply of a possible want, they are to endure many privations, to submit to many impositions, and to jeopardize the most important and valuable interests of our country. Of the importance of our foreign commerce—of its influence on the revenue, or even on the protection of our country, it is idle to expatiate. But one view, connected intimately with the question before us, we wish to notice. Foreign commerce draws wealth from abroad, and those engaged in it may prosper, without in any degree injuring the prosperity of other portions of the community. It is, in fact, the great principle of life which gives activity and energy to all of the operations of productive industry. It ranges over the world to discover the markets in which each particular commodity can most advantageously be exchanged; and the very transportation of these commodities becomes a source of great profit, and furnishes at the same time an arm of defence, which no nation should, without very serious consideration, permit to decay.

It is easily seen and acknowledged that, by this system, our foreign commerce will be deranged and materially diminished; but no one has undertaken to predict the extent of the injury. Indeed, the combinations of commerce are rarely seen or understood even by those most deeply engaged in its operations. The exchanges that appear most simple are sometimes the result, sometimes only a term, in a series of exchanges that have been made, or are

yet to be completed in the most distant regions of the globe. The commerce that is carried on with one country is frequently dependant for its success on a commerce carried on through different channels, and under a different aspect, with some remote and unconnected nation. When we touch such a system rudely, we know not what portion may perish from our rashness or our ignorance. Surely, at a moment like the present, when the commerce of the whole world is embarrassed and debilitated, it would be most unwise to add to the inevitable evils of the hour. Let us rather fostert hat portion which remains; extend, by every possible means, its enterprises; and give new vigor to its exertions. Every interest and occupation in our country has suffered within the last two years by the rapid decrease of the circulating currency of the world, and by the fall in the price of labor and of produce, which has resulted in part from this diminished circulation, and in part from the steady continuance of peace among the civilized nations of the globe. But of the great interests of our country, no one can doubt that the mercantile has suffered most; and if bounties could be afforded to any one class of our citizens, the claims of the merchant for past losses and present embarrassments would be the strongest. Yet on this class we now wish to impose new burdens, and render more precarious the still hazardous ocean of commercial enterprise. Nor can we possibly overlook, on this occasion, that class of our citizens to whom this nation is virtually indebted for so much of its wealth and so much of its renown; nor think, without emotion, of discarding from our employment and driving into foreign service the seamen who, through so many years of discouragement, continued faithful to their country; who, in the hour of peril, have always been the foremost to rally around her banners; who, in war, have encircled her with glory, and in peace, still patient, still laborious, have quietly returned to an arduous, an unceasing, and a dangerous occupation. With such a race we wish not to part. Another evil of great magnitude presses on our attention. A duty of thirty, fifty, and one hundred per cent. is called for on all articles of foreign manufacture. This is virtually to admit that the productions of the foreign artisan can be sold in our markets at one-half or two-thirds of the price for which they can be manufactured at home. Will not the prospect, therefore, of immense profits lead to the illicit introduction of foreign manufactures—to the creation on our frontiers of an organized system of smuggling? This will be the more to be apprehended when these impositions are opposed to the general interests and wishes of the community. Public opinion will no longer, as at present, guard from violation the revenue laws of the country. Now, they are considered merely as the means of providing for the necessary support of our Government; as operating fairly, mildly, and equally on all classes of our citizens, and as preventing the imposition of more direct and more vexatious burdens. Yet, even now, intelligent men doubt whether the tariff is not, in many instances, unwisely high; and whether the temptations held out to smuggling are not greater than a prudent Government ought to offer. Under a higher tariff, the duties will be considered as partial, and for the exclusive benefit of a small portion of the nation. They will be transgressed; the revenue of the country will be injured; and the Government will be compelled to increase the severity of our penal laws, and to add enormously to the expense of guarding those laws against violation. This is not all. It is candidly admitted that this system, if adopted, will so derange and circumscribe our commerce that we shall no longer look to our custom-houses for the support of our Government. We must, as a constituent part of this plan, adopt a regular and permanent system of direct taxation. After having paid bounties innumerable for the support of manufactures, we must pay taxes to make good that revenue which those very bounties have tended to diminish. We shall have to divert to our daily support the resources which will be wanted, and should be reserved, for the hour of danger; and we shall incur unnecessarily the risk of alienating from the Government the affections of the people. We have yet to add the probability (perhaps, the certainty) that, after all, this great effort will be altogether useless. If these manufactures can only exist by excluding from our markets the productions of foreign workshops, what power, moral or physical, that we possess, can secure the exclusion? If Bonaparte, while enforcing his continental system, by the most arbitrary and sanguinary decrees, and by the efficient power of a great military despotism, could not close the continent of Europe against British manufactures; if Great Britain, with her insular situation and her multitude of ships, cannot prevent her coasts from becoming a great mart and theatre of smugglers, how can we hope, with our mild laws, to prevent intrusion on every point of our extended and unprotected shores? How can we guard the long line of our northern and northeastern frontier, even from the mid-day trespasser? Our revenue will be destroyed, our legal and honorable commerce curtailed, and the morals of our citizens vitiated by the temptations and frauds of a contraband traffic; while the manufacturers themselves may be overwhelmed by the reaction of their own system: for there can be little doubt that our country would be inundated by foreign manufactures, liberated even from the impositions, and those not light ones, which they are now compelled to pay. And, surely, when we examine the present claims advanced by the manufacturers, we should be tempted to suppose that the much which has been already granted had on all sides passed into oblivion. The tariff which now exists, and which was imposed, in most cases, for the particular benefit and under the direction of the manufacturers, is probably as high as the circumstances of the country will bear. We have already, perhaps, transgressed in their favor the limits which principle would concede. Our manufacturers are not only placed by the side of the agriculturists; they are, as far as Government bounties can operate, advanced and preferred. When has the agricultural interest called for bounties to enable it to continue a culture which has been found unprofitable? Yet this may become necessary. In Great Britain it has already occurred. The corn laws of that country now act as a bounty on agriculture. They are a necessary supplement to the manufacturing system. The Government has been compelled to adopt them, to place the farmer on a footing with the manufacturer, to whom so many bounties had previously been granted. One evil has naturally produced another. Every interest in that country now rests on an unnatural foundation, and requires artificial support; in consequence, every thing is precarious, every thing unstable. The elements of convulsion are on all sides prepared, and nothing but the power of a military Government prevents the explosion.

The only stable employments of capital, those only which can be free from incessant fluctuation, are those which arise spontaneously from the situation of a country or the state of its society. The manufactures that can only flourish during war or under impolitic restrictions—those that wither at the approach of peace or of an unshackled commerce, merit not our encouragement. Those that require no bounty will dread no competition; and the capital and the labor which are employed in them may be considered as permanently vested. If we begin once to give bounties—and the duties now proposed are but bounties in an indirect shape—let us make the system uniform and equal. Let us give bounties on the exportation of cotton and tobacco, on the exportation of rice and flour; let us give bounties on the labor that brings these commodities to our markets, and on the vessels that transport them abroad; let us, in short, give bounties to every production of domestic industry. If, from the magnitude of this effort, we recoil as from a thing impossible, we must then demand why this system should be partially adopted—why one-twentieth part of our citizens should be enriched by bounties drawn from the labor of all the remaining classes of society?

To manufactures we have no hostility; we wish to see them rise, flourish, and attain a vigorous and permanent maturity; but we wish them to advance gradually, as our wants, our means, and the state of our society shall be adapted to their establishment. We think it unwise, by precipitate measures, to force manufactures into a premature being, and then impose upon ourselves the necessity of supporting them through a precarious, a diseased, and, after all, a tem-

porary existence. To the establishment, at any cost, of manufactures, which, like the munitions of war, are necessary for our national security, we have never objected; but to an organized system for the general creation of manufactures upon speculative principles, we pointedly object. It is at the threshold we must yet pause; the steps we now take we may not be able to retrace; the pledges we now give to our citizens we may not be able to recall. When thousands, perhaps millions, of dollars shall have been invested in manufactures, with the assurance of public support and protection, we know not how, with justice, this system could be abandoned, and the property vested under such assurance be devoted to irretrievable destruction. Even if the evils attendant upon these efforts should prove in every respect pernicious, and should press sorely on every other branch of national industry, we must go on. It is impossible to point out the limits at which this system will rest. The tariff which was adopted with the approbation of the manufacturers in 1816 is now found insufficient; the tariff proposed in 1820, if it should be adopted, after having induced the investiture of additional millions of money, may be found equally unavailing. And when more capital, and a much greater proportion of our population, shall be engaged in manufactures, the influence of the wealthy and the claims and the necessities of the needy, whom we ourselves have seduced into these occupations, may force the Government, even reluctantly, and with a consciousness of its errors, into more disastrous measures—to the imposition of still higher duties, to restrictions, to prohibitions, to the necessity of lining our coasts with armed vessels and our shores with revenue officers, to the necessity of injuring the best interests of our country, and debasing the character and moral principles of a large portion of our citizens.

To manufacturers, we repeat, we have no hostility. We wish them to share in the general prosperity of our country, and repose and flourish under its liberal protection. But we perceive in them no features which would entitle them to partial favors or peculiar privileges. Against a system, therefore, designed to elevate one interest in society to an undue influence and importance; against a system intended to benefit one description of citizens at the expense of every other class; against a system calculated to aggrandize and enrich some States to the injury of others; against a system, under every aspect, partial, unequal, and unjust, we most solemnly protest.

STEPHEN ELLIOTT,
Chairman of the meeting of the citizens of Charleston.

JAMES JERVEY, *Secretary.*

16th CONGRESS.] No. 601. [2d SESSION.

BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 9, 1820.

SIR: TREASURY DEPARTMENT, *December* 7, 1820.

In obedience to a resolution of the House of Representatives of the 5th instant, directing the Secretary of the Treasury to communicate to the House "the latest return made to that Department of the general statement of the Bank of the United States and its offices of discount and deposite," I have the honor to submit the statement required.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. JOHN W. TAYLOR, *Speaker of the House of Representatives.*

General statement of the Bank of the United States and its offices of discount and deposite, at the dates specified herein.

DR.

Date.		Bills discounted on personal security.	Bills discounted on funded debt.	Bills discounted on bank stock, &c.	Domestic bills of exchange.	Treasurer of the U. States.	Overdrafts.	Debt of S. Smith and Buchanan, G. Williams and J. W. McCulloch.	Due from Bank United States and offices.	Due from State banks.	Interest and commission on loan from Baring & Co. and Hope & Co. BANK OF THE UNITED STATES, *November*, 1820.

JAMES HOUSTON, *Assistant Cashier.*

16th CONGRESS.] **No. 602.** [2d SESSION.

COMPENSATION OF OFFICERS OF THE CUSTOMS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 12, 1820.

SIR: TREASURY DEPARTMENT, *December* 8, 1820.

In obedience to a resolution of the House of Representatives of the 13th of May, 1820, directing the Secretary of the Treasury "to report to the House, at the commencement of the next session of Congress, what alterations or modifications, if any, are required in the several acts of Congress fixing the fees and emoluments of the collectors of the customs, naval officers, and surveyors of the customs; and, also, a plan for compensating such officers according to the services respectively performed by them;" I have the honor to report such changes and modifications of the emoluments of the officers described in the foregoing resolution as a due regard to the services which they respectively perform, the expenses to which they are subjected, and to other circumstances calculated

to have an influence upon a subject of this nature, appear to render necessary and just. Among these circumstances may be enumerated the expense of living, and the salubrity or unhealthiness of the climate in which they are respectively required to perform their duties.

In reducing the commissions of the large ports where surplusses have, for several years, been paid into the Treasury, regard has been had to the receipts into the Treasury for that year, which may be considered rather above than below the average annual receipts from the customs. It may be proper to observe, that the commissions are charged not only upon the gross revenue, but also upon the amount of debentures which are issued and discharged. The disposition which is inherent in human nature to acts of benevolence, and to the exercise of patronage, requires that the commissions and emoluments assigned to the collectors of the principal ports should be regulated so as to render the practice of economy necessary to secure to the officer the maximum to which he is limited. An examination of the relative expenses incurred during the year 1819, in the two principal ports of the Union, will exemplify the truth of this position.

The emoluments of the naval officers and surveyors, with but few exceptions, are inadequate to the services they are required to render. If they should be required to contribute to the expense of fuel, stationary, and office rent, incurred by the collector, each only one-fourth, relief, to some extent, would be afforded.

The act supplementary to the several acts concerning the coasting trade has considerably diminished the fees of the collectors, naval officers, and surveyors of the customs. This act took effect on the 1st day of July, 1819. The influence which it had upon the emoluments of those officers was consequently confined to the last six months of that year.

To meet any reduction which may be produced in their emoluments by the operation of this act, it is respectfully proposed that an addition of twenty-five per cent. be made to the fees now required.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

The Hon. JOHN W. TAYLOR, *Speaker of the House of Representatives.*

A statement of the revenue collected, on which commissions were allowed at the Treasury, in the year 1819, *in the several districts of the United States; showing the rate of commission and salary now received, and that which, in obedience to a resolution of the House of Representatives of May* 13, 1820, *it is proposed shall be received; and the expenditures incurred by the collectors during the same period.*

States and districts.	Collectors.	Naval officers.	Surveyors.	Present commissions.	Proposed commissions.	Amount on which commissions were allowed at the Treasury in 1819.	Emoluments.					Expenditures.					Balances in favor of the officer.
							Salary.		Fees.	Amount of commissions charged by the collectors.	Fines and penalties.	Amount.	Clerk hire.	Stationary.	Office rent and fuel.	Other official expenses.	Amount.

16th Congress.] No. 603. [2d Session.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE, DECEMBER 18, 1820.

To the Senate and House of Representatives of the United States in Congress assembled: The petition of the delegates of the United Agricultural Societies of Prince George, Sussex, Surry, Petersburg, Brunswick, Dinwiddie, and Isle of Wight, respectfully showeth:

Your petitioners, a portion of the independent agriculturists of Virginia, again present ourselves to your honorable Houses, respectfully soliciting your attention to the present state of the tariff duties, and your protection against the wild speculations and ruinous schemes of an association denominating themselves the friends of national industry.

We should not again have obtruded our opinions, still less our arguments, on the wisdom and experience of our representatives, but from a conviction that the decision of this question is of vital importance; that, by the establishment of that system of exclusion developed in the tariff bill presented at your last session, the commercial and agricultural prosperity of the nation would be completely prostrated; the whole frame of our constitution strained to accommodate this monstrous amomaly in a free Government; and, as a necessary consequence, nothing left of our boasted freedom and anticipated greatness but an empty name.

Though we do not believe that all who support this measure are aware of its consequences, yet we cannot conceal from ourselves, nor would we from our fellow-citizens, that the authors of this project contemplate nothing less than a radical change in our political institutions.

We cannot persuade ourselves that the fabricators of so formidable a machine should not have calculated both its powers and tendencies, and adjusted both to the views of its projectors. That their views are not directed solely or principally to the protection of manufactures, we are convinced, by the single fact that our manufacturers are already more than sufficiently protected.

The present tariff duties operate as a bounty of at least twenty-five per cent. in their favor. Freight, insurance, commissions, and the various other expenses of importation, cannot be estimated at less than fifteen per cent. The British manufacturer, the most formidable rival in this and every other market, is taxed by his own Government to the amount of one-third of the whole product of his industry; which also operates in favor of our manufacturers, adding thirty-three and one-third per cent. to the former amount. The extraordinary rise in the value of money in this country must also be taken into account, as it operates as a bounty in favor of our manufacturers—the increased value here enabling them to procure necessaries as well as labor for a smaller sum; while the comparatively low value of money in Europe, compelling the foreign competitor to keep up the price of his goods, enables the American to keep up his prices also, nearly to the former standard.

The aggregate of these bounties will be found considerably upwards of one hundred per cent. in favor of our manufacturers. With these facts before us, we cannot be persuaded that the protection of manufacturers is the real object of the new tariff bill. But, to come at the true design of its authors, we have only to investigate the obvious tendency of the measure. The means will generally discover the end.

The first operation of the prohibitory system will be ruinous to those immediately engaged in foreign commerce, with whom almost every individual directly concerned in any branch of trade will be more or less involved. Other nations will retaliate, by excluding our products, as we have excluded theirs. The carrying trade, of which the superiority of our vessels would, under different circumstances, always insure us a valuable portion, must cease. Ship building, after being brought to astonishing perfection, and daily becoming a more lucrative business, will be forgotten; our vessels rot in our harbors; and our seamen emigrate, or resort to piracy or smuggling, for want of honest employment. Our coasting trade and fisheries will soon be at the mercy of our enemies; for neither can be long protected by a nation without foreign commerce.

The mercantile and agricultural interests are so intimately connected, that the ruin of the farmer must follow that of the merchant in no distant succession. The diminution of revenue derived from imports and sale of public lands must be made up by heavy internal taxes—the principal weight falling, as usual, on the agriculturist; the price of almost every article he is obliged to purchase will be increased at the pleasure of the pampered monopolist, who, competition being removed, will be limited in his demands only by the measure of his own cupidity—of the latitude of which we have had a fair opportunity of judging during the late war. The quantity of produce must be reduced to the limits of home consumption, as we can no longer calculate on a market for the usual surplus among nations whose goods we refuse to take in exchange; without exchange of goods, commerce cannot exist; the value of lands, buildings, and stock will rapidly depreciate; and the owners, once the pride and strength of their country, sink into poverty and insignificance.

While our independent yeomanry are to be thus humbled, while their proud spirits are in training for the yoke, another party, less attached to the soil, and completely dependant on the bounty of Government, is to be raised to opulence and power, to be invested with exclusive privileges, more especially that of taxing their fellow-citizens at discretion; and this, as we are told, for the sake of national independence. It is more easy to see how zealously such men would support even the most obnoxious and unprincipled measures of a Government on whose breath their wealth and consequence depend, than how national independence can be promoted by the oppression of a vast majority of the people for the benefit of a small minority.

National independence has always appeared to us something very different from the oppression of the people and the creation of privileged orders. That this is the end to which the prohibitory system inevitably leads, we have no doubt; that such is the favorite object of its authors, charity may still hesitate to pronounce.

The history of any branch of the forced manufactures of Great Britain exhibits a series of oppressions so extensive in their range, so gross and revolting in their operation, as would, we believe, deter any friend of liberty or justice from repeating the experiment. We collect, also, from the same source, the uncertain issue of attempting to force manufactures; for, with all the characteristic ingenuity, patience, and industry of her artisans, backed by powers such as a free people can never delegate to their Government, or permit them to assume, we find that there are some manufactures which Great Britain has not been able to force. We note the silk manufacture, which, from the revocation of the edict of Nantz to this day, has been unproductive; while millions have been lost to the nation by excluding the silks of France and Italy, and, in return, having their manufactures excluded by those nations.

The abortive attempts repeatedly made, since the union of Great Britain and Ireland, to establish the woollen manufacture in the latter country, are worthy of consideration, as immense sums, both of English and Irish capital,

have been sunk in the undertaking; and we cannot but observe that the establishment of the same manufacture in England has been effected at a price no free people would consent to pay.

These facts would induce us to suspect that the only certain results of the system in which we are about to involve ourselves are enormous expenses and gross violation of principle.

To obviate all these difficulties, we are assured that, by the establishment of manufactures, a home market will be obtained for the whole of our produce. As this argument has been so often and so confidently reiterated, it will be necessary to ascertain its value.

If we already supply the whole people of America with as much corn, wheat, and tobacco as they can consume and export, besides a large surplus, by what operation of the new tariff bill is this surplus to be disposed of? We cannot presume that the appetites and capacities of our people will be so much increased by the operation of the shuttle or the gin as to work such a miracle.

The only solution this difficulty admits of is the one given by the advocates of the prohibitory system, to wit: that it may be made the interest of the farmer and planter to embark their capitals in manufacturing establishments; that, by thus diminishing the number of cultivators, and consequently of produce, we may get rid of our surplus *by not raising it.* Now, we really consider this as one of the most impudent proposals ever made by the most unblushing empiric to a reflecting people. The agriculturists of the United States (an immense majority of the nation) are called on not only to abandon every prospect of clearing the millions of acres of rich land in their back country, but also to abandon a part of that already in cultivation; to consent to have it made their interest to engage in manufactures, by the joint operation of exclusion from market, increased taxes, and manufacturing impositions. In plain English, the hardy, independent sons of our forests and our fields are called on to consent to be starved into weavers and button-makers. But, be it remembered, that, before this conviction of their interest has reached them, few will be found disposed to purchase lands and stock, no longer valuable; if any, it will be for a pittance, not sufficient, probably, to pay their debts.

These people would really persuade us that the cultivation of the earth is no species of industry; that all are idlers who neither weave nor spin, and may, of course, be fairly proscribed; their fields turned into deserts, that factories may be established, (those precious seminaries of spotless virtue,) where the daughters of our ruined farmers may learn industry, simplicity of manners, and purity of mind; and their sons, temperance, soberness, and chastity, as practised in the best institutions of Leeds and Manchester.

That the despotic power of driving any class of citizens from the employments of their own choice, and forcing them into others, profitable or unprofitable, congenial or uncongenial, has been delegated to the Federal Government, we can no more believe, than that the authority to divide our people (like the Hindoos) into castes has been conveyed under the form of powers to regulate trade.

After demonstrating the ruinous tendency of the prohibitory system, with respect to the agriculture, commerce, and revenue of these States, and its entire inconsistency with the spirit of our free institutions, it is scarcely necessary to dwell on more remote consequences, amongst which may be anticipated a regularly organized system of smuggling, introducing in its train fraud, perjury, the exercise of lawless force, swarms of tide-waiters and sycophants, increased governmental expenses, and an immense executive patronage.

We cannot restrain the expression of our surprise that a system, the impolicy of which has been long since demonstrated by the ablest political writers of Europe, and confirmed by the experience of the greatest commercial nations of the world, should, at this day, cost a moment's discussion in America. England confesses the ruin in which she has been involved by the pursuit of this system, and her inability to extricate herself. The commerce of Holland has been completely paralyzed by the protection afforded by their King to the manufactures of his Belgian subjects.

The idea of enriching a country by confining its whole wealth within its own limits is a mere chimera. The only use of wealth that we can conceive is, to enable its possessors to procure the necessaries and comforts of life; and, if we can procure these in greater abundance by sending a part of our wealth abroad, we increase our happiness in the same proportion, and, in effect, increase our wealth also.

So far from wishing to realize the vision of supplying all our wants by the labor and ingenuity of our own citizens, and thus being enabled to insulate ourselves from the rest of mankind, we would consider such a consummation the heaviest misfortune that could befal us.

That freedom and science can be kept alive amongst a people only by an extensive intercourse with the rest of the world, a glance at the condition of nations, ancient and modern, clearly establishes. In the whole range of history, we find those nations only enlightened, powerful, and free, who have cultivated an extensive foreign intercourse; while those whose jealous policy insulated them from the other nations of the earth have been ignorant and slavish in proportion to the degree of seclusion they have practised. Of this latter description, the Chinese, Persians, and Turks, (and, indeed, the whole of the eastern monarchies,) afford most deplorable specimens.

Considering the whole system of bounties, monopolies, and protecting duties, as tending, in all its bearings, to interrupt the prosperity, deteriorate the morals, and subvert the liberties of our citizens, we respectfully and earnestly solicit your honorable Houses to protect us from those evils, by disembarrassing every species of industry from all artificial impediments and restraints, as far as may be consistent with the production of the necessary revenue, and leaving them to the surest of all protection—their own utility, and the interest of those engaged in them.

RICHARD FIELD, *Pres't of the Delegation pro tem.*

EDMUND RUFFIN, *Secretary.*

16th CONGRESS.] **No. 604.** [2d SESSION.

REMONSTRANCE AGAINST AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE SENATE, DECEMBER 22, 1820.

CLARKSVILLE, MECKLENBURG COUNTY, VIRGINIA, *December* 7, 1820.

To the Congress of the United States: The memorial of the Roanoke Agricultural Society:

Your memorialists beg leave to represent, that the section of country in which they reside has hitherto been marked for its quiet acquiescence in the will of the constituted authorities, and a becoming obedience to their dic-

tates. Removed at a considerable distance from the sphere of political action, they have hitherto been contented to remain silent (though not uninterested) observers of public measures. The majority of the people consisting of independent husbandmen, they are willing that the affairs of Government should be left to the guidance of those to whom they have been intrusted, so long as a due regard of their rights and interests is observed. Believing that the course of public measures hitherto has, in general, been conducive to the public weal, their voice has not on any former occasion been obtruded on the ear of your honorable body. But their silence has not proceeded from a disregard or an ignorance of those rights and interests. They would consider themselves unworthy of the high political enjoyments to which they have been so long accustomed, could they contemplate with apathy the invasion of the one or a wilful neglect of the other.

The tariff bill introduced at the last session of Congress, and which, it is apprehended, may again be introduced at the present, could not fail to agitate the feelings and excite the alarm of your memorialists. In that measure they perceive a blow aimed at their welfare, which the voice of self-defence calls on them to endeavor to avert. It is deemed unnecessary to enter into details for the purpose of exposing to your honorable body the *impolicy* and *injustice* of attempting to encourage manufactures by legislative interposition. The good sense of every reflecting mind, the wisdom of statesmen, and universal experience bear decisive testimony against such interposition.

The peculiar circumstances of each country must point to the pursuits of its inhabitants. In one like ours, reaching to every clime, and embracing every soil, with a population thinly scattered over it, agriculture is the occupation to which its inhabitants naturally look. They possess sufficient intelligence to perceive the path of their interest, without having it pointed out to them by their law-makers; and so soon as it shall become their interest to betake themselves from one occupation to another, they will do so without legislative compulsion; and, until they lead the way, it will be worse than folly to force them.

It is an axiom in political economy, that when a nation can import cheaper than she can manufacture, she should not pretend to set up workshops of her own, but should rely on those of her neighbors; for nothing can be clearer than that if the same labor devoted to raising produce and exporting it for exchange will procure more in the way of manufactures than if employed in manufacturing, the fruits of the national industry will be diminished by manufacturing. Such is precisely the situation of this country. None are so ignorant as not to know that we import better and cheaper than we can manufacture ourselves. Indeed, the simple fact of the requisition of prohibitory duties speaks more than a volume on the subject. If our own manufactures were of equal quality with and cheaper than those imported, they would have nothing to fear from foreign competition; but it is because they are inferior and dearer that their sickly tone is heard praying for protection.

Your memorialists would beg leave to direct your attention to what has been said of our *protecting duties* by European politicians of great celebrity. The Edinburgh reviewers, speaking of our manufacturing interest, remark: "Had the Americans acted wisely, they would have left this new interest to defend its own resources; but, in humble imitation of the wisdom of their ancestors, they immediately set about fostering and dandling the ricketty bantling; and, to save it from the effect of foreign competition, increased the duty on imported cotton and woollen goods from 12½ to 25 per cent. This increase of duty, (or, which is the same thing, this addition of 12½ per cent. to the price of all the cotton and woollen cloths made use of by the American people,) not having been found sufficient to protect those rash and imprudent speculators who had engaged in a branch of industry which, they must have been certain, could only exist by means of a monopoly, Congress have favorably entertained a proposal for making so large an addition to the present duties as will go far to render them prohibitory. Now, we feel perfectly assured that nothing but the example of Great Britain could ever have induced the American Legislature to listen for a moment to so *monstrous* a proposal. The boundless extent of fertile and unappropriated land in that country must, for ages to come, render the raising of raw produce the most profitable species of industry in which her citizens can possibly engage; and any attempt to encourage the premature growth of manufactures, by forcing the investment of a very large proportion of the capital of the country in a less productive employment, must occasion a proportional diminution of the power to accumulate stock, and of the wealth and riches of the country."

Deeply impressed with the truth of these remarks, your memorialists are compelled to ascribe to feelings of favoritism alone the officious care which has been manifested of this "new interest." For the purpose of forcing and pampering a puny and comparatively insignificant manufacturing interest, agriculture is attempted to be grievously taxed, our revenue diminished, and commerce, in a great measure, destroyed. Thus raised, it will be like the production of a hot-bed forced out of season; its curiosity may surprise, but it can never ripen into any degree of usefulness.

But there are other considerations, connected with our political institutions and situation, which may be suggested. No condition is so well calculated to inspire feelings of freedom and independence as that of the agriculturist who cultivates his own soil; none so fitted to debase and to degrade as that of the hireling manufacturer, who depends for his sustenance on the scanty wages afforded him by his wealthy employer. To keep alive those feelings is deemed indispensable to the preservation of our republican frame of government. Every measure, then, which has a tendency to increase the number of the latter, and decrease that of the former description of population, weakens the pillars by which that frame of government is supported. To your wisdom it is left to determine whether, in the hour of impending peril, we should look for defence to the sweepings of our manufactures or to the yeomanry of our country.

Again: identity of feeling and interest is the cement of our Union. Without it, the component parts of our confederacy must hang too loosely together to withstand the jars to which it must be exposed. That identity would be destroyed by a rigid system of prohibitory duties. In the nature of man, it cannot be expected that the agricultural and commercial portions of the Union could experience any other feeling than that of the bitterest hatred towards the manufacturing interest, by whom they would be burdened to the utmost of their power to bear: they would cease to feel as members of one great family.

We have no favors to ask at the hands of Government. All we require is, to be left to ourselves and to our own resources. As we desire not to interfere with others, we hope and trust not to be interfered with.

We therefore respectfully pray that no augmentation of duties may take place which will have any other object than an increase of revenue.

THOMAS M. NELSON, *President.*

CHARLES L. WINGFIELD, *Secretary.*

16th Congress.] No. 605. [2d Session.

ERRORS IN THE ESTIMATES FOR 1821 CORRECTED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 28, 1820.

SIR: TREASURY DEPARTMENT, *December* 21, 1820.

In conformity with the provisions of the eighth section of the act of the 1st of May, 1820, entitled "An act in addition to the several acts for the establishment and regulation of the Treasury, War, and Navy Departments," statements are annexed to the estimates of the public expenditure for the year 1821, which are herewith transmitted, showing—

1. That the permanent appropriations, and those for a term of years not yet expired, amount to	$11,381,975 00
2. That, of the sums appropriated for 1820 and previous years, it is estimated that there will remain on the books of the Treasury, on the 1st of January, 1821,	6,907,619 03
3. That there will be on that day in the hands of the Treasurer, as agent of the War and Navy Departments,	927,241 29
4. That the whole amount of unexpended balances of appropriations, subject to the disposition of the Executive Government during the year 1821, is estimated at	7,834,860 32
5. That, of that sum, there will be required to defray the expenses incurred in 1820, or necessary to effect the objects for which the several appropriations were made,	3,632,659 41
6. And that there will remain unexpended, and not necessary to effect the objects for which the several appropriations were made,	4,202,200 91

As it is ascertained that the sum of $4,202,200 91, with the exception of $1,860,437 57, which has been deducted from the estimates of the War Department for 1821, and which will form a part of the expenditure of that Department during the year, will not be required, if that amount should be directed to be carried to the account of the surplus fund, the estimates for the year 1821, and the balance against the Treasury on the first day of that year, as presented in this report, will remain to be provided for.

It may be proper to observe, that all sums which will be carried to the account of the surplus fund on the 31st day of this month are not comprehended in any of the foregoing statements.

Inaccuracies having been discovered in the estimate of the probable expenditure of the year 1821, presented in the annual Treasury report of the 1st instant, resulting, principally, from the different manner of keeping the warrant and appropriation accounts in the Treasury, War, and Navy Departments, I avail myself of this occasion to correct those inaccuracies, and to present the amount of the deficiency which will have to be provided for during the ensuing year.

The receipts into the Treasury during the year 1820, and the amount remaining in the Treasury on the 1st of January of that year, were estimated in the annual report at			$22,326,244 63
The payments from the Treasury, to the 30th of September last, amounted to			16,908,413 80
Which being deducted from the aggregate amount above stated, leaves for the service of the fourth quarter			5,417,830 83
The payments made in the fourth quarter, and those which are required to complete the service of the year 1820, are as follows:			
Civil, diplomatic, and miscellaneous, already made,	$476,920 05		
And to be made,	930,293 51		
		$1,407,213 56	
Military Department, already made,	93,688 90		
And to be made,	665,164 61		
		758,853 51	
Naval Department, already made,	1,446,228 00		
And to be made,	1,110,000 00		
		2,556,228 00	
Public debt: payments already made, and to be made,		4,900,000 00	
Making the aggregate sum of			9,622,295 07
And leaving a balance against the Treasury, on the 1st January, 1821, of			$4,204,464 24

To avoid complexity, the sums estimated to be necessary to complete the service of the year 1820, or to effect the objects for which the several appropriations were made, are, in the above statement, considered a charge upon the Treasury during the fourth quarter of the year; although it is probable that a portion of those sums may not be drawn until late in the ensuing year, and, possibly, a small part not before the year 1822. In the annual report, no sum was charged upon the fourth quarter but what was understood would be drawn.

The estimate of the receipts into the Treasury during the year 1821, presented in the annual report of the Treasury, amounts to		$16,550,000 00
The estimate of the public expenditure for that year is as follows:		
Civil, diplomatic, and miscellaneous,	$1,769,850 04	
Civilizing the Indians, and Indian trade,	29,200 00	
Military Department, including fortifications, ordnance, Indian Department, revolutionary and military pensions, arming the militia, arrearages prior to 1st January, 1817, and the sum of $1,860,437 57, which has been deducted from the estimates, and is not included in the above balance against the Treasury,	6,798,515 18	

Naval Department, including the gradual increase of the navy,	$3,428,676 81		
Public debt, being the amount of principal and interest payable in the year 1821, - - -	5,477,776 76		
Amounting, together, to - - - -		$17,504,018 79	
Which presents an excess of expenditure beyond the receipts of - - -			$954,018 79
Which, added to the balance estimated against the Treasury on the 1st January, 1821, of -			4,204,464 24
Leaves to be provided for the sum of - - - - -			5,158,483 03
But the Secretary of the Navy has stated, in his letter of the 18th instant, herewith transmitted, that, of the appropriation of $1,000,000 for the gradual increase of the navy, not more than $500,000 will be required in 1821; and the residue being deducted, - - -			500,000 00
Will leave a balance against the Treasury of - - - - -			$4,658,483 03

It will be perceived that this balance is less than that presented in the annual report of the Treasury by $2,793,103 74, which amount consists—1st, of the sum which it has since been found will not be wanted for the naval service; 2d, of balances of appropriations for civil list and miscellaneous objects, which it appears, upon subsequent examination, will not be required; 3d, of an excess in the estimate of the charge for the military service, resulting from the different modes of keeping the warrant and appropriation accounts in the different Departments; and 4th, of the balance in the hands of the Treasurer on the 1st of January, 1820, as agent of the War Department, which ought to have been deducted from that charge, as it had already been drawn from the Treasury.

In determining the amount of the loan which will be necessary for the service of the year 1821, if that shall be the only mode resorted to for meeting the deficiency, it is proper to state, that, of the sum now in the Treasury, there are upwards of $600,000 of special deposite, which cannot be available during the year. The time necessary to transfer the revenue collected in the Western States, and in those bordering on the Gulf of Mexico, beyond what is expended in those States, to the places where it will be expended, may be estimated, upon an average, at six months. One-half of the sums collected in those States may, therefore, be considered through the year as in a situation not to be applicable to the demands upon the Treasury, as it will be *in transitu* between the places of collection and those of expenditure. If this amount be stated at $600,000, there will be, through the year, the sum of $1,200,000 which cannot be considered as available.

To insure the prompt discharge of all demands upon the Treasury, and to place the public credit beyond the reach of accident, the sum of $1,000,000 ought to remain in the Treasury. It is probable that, of the appropriations for 1821, nearly that amount will remain in the Treasury, or in the hands of the Treasurer, as agent, at the end of the year; but it is considered unsafe to trust to that contingency. It is, therefore, respectfully submitted that provision be made for raising the sum of $7,000,000 in aid of the funds which it is estimated will be received into the Treasury during the year 1821. If that amount should be raised by loan, the interest of the debt thus created will increase the public expenditure, and render the amount proposed to be raised indispensable.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. JOHN W. TAYLOR, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, *December* 13, 1820.

In presenting the estimates for the service of the year 1821, it is necessary, under the act of the last session, to estimate the sum remaining from former appropriations for the Navy Department which will not be required to defray expenses incurred in the present year.

To enable me to perform this duty, I have the honor to request that you will state what amount of the balance on hand of the appropriation for the gradual increase of the navy, and of the appropriation for 1821, will be required by the Department in the course of that year.

The balance now in the Treasury is estimated at $1,610,000.*

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

Hon. SMITH THOMPSON, *Secretary of the Navy.*

SIR: NAVY DEPARTMENT, *December* 18, 1820.

In reply to your letter of the 13th inst., in relation to the amount that will be required in 1821 of the balance on hand of the appropriation for the gradual increase of the navy, and of the appropriation for the same object for that year, I have the honor to transmit a copy of a letter from the Commissioners of the Navy, which contains the information required; and I would respectfully add, that it is believed there will be no necessity for equipping, during the year 1821, any of the vessels authorized to be built under the act for the gradual increase of the navy, so that it may be safely calculated that only one-half of the appropriation under that act for the ensuing year will be required.

I have the honor to be, with great respect, sir, your most obedient servant,

SMITH THOMPSON.

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

SIR: NAVY COMMISSIONERS' OFFICE, *December* 15, 1820.

The Commissioners of the Navy, in reply to the letter of the honorable the Secretary of the Treasury to you, dated 13th instant, which you were pleased to refer to this board, have the honor to state:

That if the unexpended balance of the appropriation for the gradual increase of the navy was at this time $1,610,000, and it should not be decided to equip, during the year 1821, any of the ships built under the gradual increase law, then this unexpended balance would be amply sufficient to cover all the probable expenditures during the year 1821, without the aid of any part of the appropriation for 1821. But it is understood that, of this unexpended balance, only $1,030,000 belong to the gradual increase: hence, it is probable that this unexpended balance

*Subsequent to the date of this letter, there was drawn from the Treasury $500,000 on account of the gradual increase of the navy.

and $500,000 of the appropriation for the year 1821 will be required to meet existing engagements, and enable the Department to proceed in the execution of the law of 29th April, 1816; and, if it should be determined to equip any of the ships built under this law during the year 1821, an additional sum, proportioned to the number of ships to be equipped, would be required. I have the honor to be, &c.

JOHN RODGERS.

Hon. SECRETARY OF THE NAVY.

SIR: DEPARTMENT OF WAR, *November* 14, 1820.

I herewith transmit the estimates of this Department for the year 1821, amounting to $4,585,352 61, of which $2,590,136 17 is on account of the army, including the Military Academy; $1,381,079 on account of fortifications and ordnance; $614,137 44 on account of pensions, arrearages prior to the 1st of January, 1817, and the Indian Department; and, agreeably to your request, I have annexed to the estimates the probable amount of the balances of the appropriations which will remain at the termination of this year, and may be made applicable to the service of the year 1821.

The estimate for the pay of the army is made on the supposition that the military establishment will be full; but as, in point in fact, that never is the case, and as the military establishment, including officers, will probably not much exceed ten thousand, in the aggregate, at the commencement of the next year, it is believed that the sum of $1,136,784 will be sufficient under this head for the year 1821; from which the probable balance remaining on the 1st of January next, amounting to $166,029, being deducted, will give $970,755 to be appropriated for pay.

Under the head of appropriation for forage, there will probably be a deficit of $8,973, which, added to the estimate, gives the sum of $51,573 to be appropriated for the service of the next year. It is proper to observe, that it is impossible to estimate accurately the amount under this head of disbursement, as, under the act of Congress, and the regulations of the Department, the officers have, to a limited extent, the right of drawing forage in kind, or commuting it at the rate of $8 per month for each horse; and that it is only in the latter case that it is paid out of the appropriation for forage. The expense in the former case is charged to the appropriation for the Quartermaster's Department.

The balance of the appropriation for retained bounties, &c. which will probably remain at the end of the year will about equal the estimate, and, consequently, no appropriation will be required for the next year.

Appropriations equal to the estimates will be required for subsistence to the officers and clothing for their servants.

Of the appropriation for bounties and premiums, there will be a probable balance of $52,082, which will be more than sufficient to meet the estimate for next year, and, consequently, no appropriation will be required. The large amount which will remain under this head of appropriation is principally to be accounted for by a credit amounting to $35,364 56, with which it was credited, and subsistence debited, in the settlement of the account of Robert Brent, late paymaster general of the army; the effect of which has been to increase by that amount the former, and diminish the latter appropriation.

A balance of $12,489 will probably remain of the appropriation for the contingent expenses of the recruiting service; which being deducted from the estimate for the next year, leaves $14,511 to be appropriated.

No balance will remain of the appropriation for contingences of the army.

The appropriation for subsistence, on the settlement since the last session of Congress of the accounts of Ward and Johnson, under their contract of the 20th July, 1815, and those of William T. Rathbone, under his contract of the 5th November, 1817, has become entitled to a credit of $130,205 44 against the Indian Department; which accounts, for the want of a sufficient appropriation in the latter department, remain suspended at the office of the Second Comptroller, and will require for their passage an increase of appropriation for Indian affairs equal to that amount. Of the sum thus brought to the credit of subsistence, about $65,000 will be required for the service of this year, (subsistence having been debited nearly to that amount in the settlement of other accounts;) and the remainder, viz: $65,205 44, may be considered as a balance at the end of the year, and deducted from the estimate; which will leave to be appropriated for the subsistence of the army in the year 1821 $301,304 56. Of the appropriation for clothing, a balance will remain, amounting probably to $13,162, which, deducted from the estimate, will leave $369,125 56 to be appropriated.

About $6,000 will remain unexpended of the appropriation for the Medical and Hospital Department, which, being taken from the estimate, will leave $40,527 93 to be appropriated.

In the Quartermaster's Department there will be a deficiency of about $20,000. It has been found impossible to bring the expenditure within the sum appropriated by that amount, which being added to the sum estimated will give $483,540 to be appropriated.

The expenditure under the appropriations for the Military Academy and for fortifications will about equal the appropriation.

A balance will remain of the current expenses of the Ordnance Department of about $42,671, which taken from the estimate will leave to be appropriated $57,329.

Of the appropriation for the national armories, a balance will remain of about $10,000, which will leave $350,000 to be appropriated.

The payments under the appropriation for arrearages previous to the 1st January, 1817, will about equal the appropriation.

Under the operation of the act of the 1st May last, a balance will remain of the appropriation for revolutionary pensions of $1,391,731, 13, which, it is believed, will be more than sufficient to meet the disbursements of the next year, and no appropriation will accordingly be required.

A balance of $101,068 will remain of the appropriation for invalid and commutation pensions, which deducted from the estimate will leave $213,932 to be appropriated.

The payments under the appropriation for half-pay pensions will about equal the appropriation.

The expenditure under the appropriation for Indian affairs will not equal the appropriation of the last session by a few thousand dollars; but, as that appropriation will be debited as soon as there is a sufficient appropriation by the sum of $130,205 44, as has already been stated under the head of subsistence, it will be necessary to make provision in the next year's appropriation to meet this debt. It is believed that $170,000 will be sufficient to meet the current disbursements of next year, to which add $130,205 44, and it will give $300,205 44 to be appropriated for the next year. It is proper to observe, that this debit against the Indian Department has arisen principally from provisions issued in holding Indian treaties, which, being issued by the contractors, were in the first instance paid for out of the appropriation for subsistence, but, on the settlement of their accounts, it was brought to the debit of the appropriation for Indian affairs. I have the honor to be, &c.

J. C. CALHOUN.

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

16th Congress.] No. 606. [2d Session.

STATE OF THE TREASURY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 28, 1820.

Sir: Treasury Department, *December* 28, 1820.

In reply to your letter, stating that a bill had been reported making partial appropriations for the War Department for the year 1821, and requesting to be informed whether the Treasury would be prepared to meet such payments, if authorized, I have the honor to state that the demands upon the Treasury already authorized greatly exceed the amount which is now in it. It is, however, respectfully submitted that that circumstance furnishes no ground for refusing the appropriation requested by the War Department. It would only place in the power of the Secretary of that Department to determine which of the demands upon the Treasury which he is authorized to make should be first satisfied out of the limited means which it possesses.

I remain, with respect, your most obedient servant,

WILLIAM H. CRAWFORD.

Hon. Samuel Smith, *Chairman of the Committee of Ways and Means.*

16th Congress.] No. 607. [2d Session.

REMONSTRANCE AGAINST A DUTY ON SALES AT AUCTION.

COMMUNICATED TO THE SENATE, JANUARY 4, 1821.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The memorial of the subscribers, auctioneers of the city of New York, respectfully showeth:

That your memorialists are engaged in an extensive business, whose general influence upon other branches of trade has of late become a subject of much controversy. Your honorable bodies were, at your last session, petitioned, by those who consider the interests of commerce as unfavorably affected by the great extent of auction sales, to adopt such restrictive measures as would tend to limit or suppress them. On the failure of the effort at that time, no means were left unattempted by which the discordant interests of the different classes of the community might be united in furtherance of this enterprise; and the application is now renewed, supported by more powerful influence, and urged with greater zeal.

Your memorialists respectfully disclaim the intention of urging their unimportant interests upon the attention of your honorable bodies. Their remonstrance is grounded upon principles distinct from any motives of private consideration, which, they are aware, would have but little influence on your decision. Their object in addressing you is to give such practical information as will lead to a just estimate of the nature of their business, and correct the misconceptions that may have prejudiced the inquiry.

The result of your deliberations on this important subject will materially affect the whole course of trade. A system which has gradually grown into importance; which has been improved, matured, and, they might almost say, perfected; which necessity originated, and acknowledged advantages have continued and enlarged, will be established as a safe and salutary medium of sale, or suppressed as a dangerous and pernicious agency. Your memorialists cheerfully submit their interests to the decision of your honorable bodies on the merits of this question, and would humbly suggest whether a subject of this moment should not be approached with respect and delicacy; whether it does not merit the most careful deliberation; and whether the argument and evidence that involve the interests of the whole should not outweigh the clamors of a few.

Your memorialists respectfully request the indulgent attention of your honorable bodies to a brief exposition of the general nature of their business, and of their manner of conducting it; and to the correctness of their representations they pledge their individual and collective respectability. Your honorable bodies will perceive, from this detail of their general practice, that there is nothing to warrant the charges of fraud and deception which have been urged against sales at auction, and that, in yielding to popular impressions derived from the objectionable mode of conducting the business which formerly prevailed, the opponents of the trade must have overlooked its actual importance and respectability. Were evidence necessary to disprove these calumnies, it would be found in the unlimited confidence reposed in your memorialists; and the slightest investigation would have corrected a position at variance with the very nature of the business.

Your memorialists, in the statement offered to your honorable bodies, have confined themselves to that branch of the trade which has been represented as productive of the most extensive injury—that is, the public sale of imported dry goods. Other commodities of every kind are sold under similar regulations; it would be obtrusive on your patience to particularize each.

Sales of dry goods are made at auction by the package or by the piece; and this is the only important distinction to be observed in all the varieties of the trade. Package sales, being more important in amount, and more attractive, by the assortments of merchandise they combine, excite most interest, and are attended with greatest competition. When the sale is of magnitude, it is generally advertised in the principal commercial cities, with an enumeration of the articles to be sold. Printed catalogues are prepared, specifying the term of credit, with the other conditions of sale, and detailing the contents of each package, the number of pieces, the varieties of quality, by number or otherwise, and the lengths; all of which are guarantied to the purchasers. The widths are also in some instances specified, but always with a reservation expressed in the conditions of the sale, on the printed catalogues, or published by verbal explanation, that there is on that point no warranty, except that the goods not exhibited shall correspond in this as well as in every other respect with the samples shown. This exception is made to the

general guaranty to the purchaser, as well to protect the seller from arbitrary and unreasonable claims as to establish the general rule that no description of width can be depended upon with as much security as the evidence of actual observation; it being well understood that British cotton goods are universally invoiced at more than their actual width, whether they are of the finest or most inferior quality, put up for public or private sale. The misrepresentation has become sanctioned by universal practice, and is innocent because notorious. It is no more supposed that goods invoiced as six-fourths of a yard, and measuring but a yard, will produce more in consequence of the exaggeration, than that the United States' duty will be calculated by the custom-house on the invoice width rather than upon the actual measurement.

The packages are arranged in lots corresponding with their numbers on the catalogue, and are exhibited sometimes two entire days before the sale, sometimes but one; the length of the exhibition being regulated by the magnitude of the sale. When the goods are prepared for inspection, the purchasers are invited by public notice in the papers to examine them. Where it is necessary for an advantageous examination, whole packages are opened and displayed; where it can be made with more convenience from samples, one or more pieces of each quality are exhibited; and where there are many packages exactly corresponding, one only is shown.

Pattern cards are exhibited displaying the assortment of colors, &c. The purchaser receives every information and facility that can contribute to his convenience and protect him from mistake. The goods are arranged with so much attention to the accommodation of the purchasers, that three or four hundred packages may be examined with care and accuracy in one day.

On the day of sale the purchasers assemble, each prepared with a catalogue marked with his estimate of the value of the articles wanted; a practice that not only guards the buyer against any disadvantageous excitement which competition naturally produces, and refers him to the deliberate opinion formed upon careful examination before the sale, but also promotes a general knowledge of merchandise in every variety, and creates a useful register of the fluctuations of the market, as these catalogues are generally preserved, with notes in the margin of the prices at which every article has been sold. At the commencement of the sale the conditions are recapitulated by the auctioneer, among which is a provision that no allowance will be made for damage or deficiency after the goods have left the city, (a regulation at once equitable and necessary,) as otherwise there would be no protection for the auctioneer in the settlement of his accounts, or for the seller against the fraudulent claims of strangers. This being, however, at all times a declared condition, the publicity of the rule insures the prompt examination of the goods. All merchandise sold at public auction is warranted by the auctioneer to be perfect in the manufacture, free from damage and imperfection, of the quantity specified, and of fair merchantable character, as regards the description of width and size. For this the auctioneer is held liable, as well as for every delusion calculated to deceive the senses or betray the judgment. The auctioneer is not only legally and by common practice responsible for the correctness of his merchandise, but it is deemed a point of honor and of common justice to expose every art by which the interests of the purchaser would be sacrificed; and it is no uncommon thing for the buyer to acquire the first information of fraud from the auctioneer himself. This security to the purchaser is, however, necessarily subject to limitation; and public notice is always given that claims of all kinds must be made within a specified period. Immediate redress is obtained for deficiencies and damages reported within that time. The deficiencies, being properly certified, are promptly allowed: the damages are settled by return of the goods, or by the appraisement of disinterested persons appointed by the auctioneer and the purchaser. The period established for the required report of claims is a matter of convention between the auctioneer and the buyers at the sale; it being, however, understood that errors of all kinds which arise from the neglect or inaccuracy of the seller or his agent will at any time be corrected.

The nature of this business, by which sales are effected and accounts closed with so much despatch, absolutely requires that the stipulations specified should be rigidly enforced; and those regulations cannot be deemed disadvantageous by which care, punctuality, and promptitude are promoted.

Your memorialists have entered into a more particular detail of this part of their system, because the frauds of British agents and others are alleged as the prominent objection against auction sales.

Practical evidence is not wanting that imposition is most effectually guarded against by the very means which it is said encourage and promote it. The average amount of deductions made from package sales of British dry goods, for claims of every nature, will not equal the one-sixteenth of one per cent.; and it is rarely that any other causes of complaint occur than an accidental deficiency or an unavoidable damage. Claims based upon the suspicion or the discovery of fraud are so unusual, and would tend so much to the discredit of the proprietor of the goods, that many, if not all of your memorialists, would esteem it sufficient grounds to decline the transaction of further business with the person attempting the deceit. Your honorable bodies will perceive, from this simple statement, how groundless is the charge against auction sales of encouraging deception, and that the evil which is made the basis of all the objections against them is but imaginary.

Your memorialists have detailed every part of their practice in the management of package sales which can be of any importance in establishing a correct understanding of the nature of their business. Rice sales are conducted on the same general principles, but differ in many particulars. Package sales are resorted to when entire cargoes are to be sold, or where the quantity of goods is too great to be disposed of in detail. Large assortments of merchandise are daily offered at the piece sales, where packages are opened, and the goods sold in small or large lots, as may most tend to the interest of the seller and the convenience of the purchaser. These sales are regular and systematic, being held by each auctioneer of extensive business on two or more specified days in each week, and are principally depended upon by the retailers as well as the larger dealers for their uniform supplies; they are held under the same implied regulations which govern sales by the package. Every article is opened and exhibited on shelves on the morning of the sale; a sample piece of every package, as it is offered by the auctioneer, is displayed upon a counter for examination, and several others distributed among the company in the original folds; the rest of the package, if of similar quality, is sold in order; but the same process takes place whenever any difference in value exists, or where the accommodation of the purchasers makes it necessary. Ample time is given during the sale to examine accurately every article as it is offered; and the purchaser, in every respect, is secured against error and imposition, by an open and unlimited display of the merchandise, and by the public proclamation of every circumstance known to the auctioneer which may tend to enhance or depreciate its value. Where concealment has been used by the proprietor of the goods, it is necessarily detected in their free exposure to inspection. Articles imported of a specific length, which are sold by the piece, are guarantied of the usual length. By these means the purchaser has the double advantage of being allowed in the first instance to examine minutely, and of afterwards being relieved, if he has been unwarily deceived. It is a general regulation, that claims for deductions must be made the day after the sale; but they are generally allowed if notice is given before the settlement. These precautions operate only upon obvious damage, or upon deficiencies which are evident, or might with ease have been ascertained: they are intended to guard against the neglect of the purchaser, not to protect the frauds of the seller. In cases where it can be satisfactorily proved that goods have been put up with intent to deceive, no exertion is wanting on the part of the auctioneer to remedy any injury sustained in consequence.

A credit of three, four, or six months, is usually given on sales by the piece, where the amount purchased exceeds $100, and approved security is always required by the auctioneer. Legal interest is allowed for cash payments; and men of limited means, by a combination of their purchases, secure the credit which is at all times convenient, and frequently necessary; their united responsibility being admitted for amounts for which either individual would not be accepted. When it is considered that these transactions take place daily, and that the supplies so obtained are essential to the support of numerous inferior establishments, the importance and value of the accommodation will be evident.

Your memorialists respectfully represent that the system of public sales, in theory combining advantages and facilities which establish its utility in extensive markets, is attended in practice with that despatch, accuracy, and convenience, which alone have extended its operations and confirmed its necessity. It has long been the honorable distinction of our commercial transactions, that frauds on the revenue are scarcely known; it cannot be doubted that auction sales have had an influence in establishing this character for mercantile purity, inasmuch as they encourage so strict and impartial an examination of all imported merchandise, that if imposition should elude the vigilance of custom-house officers, it cannot escape the industrious observation of a trading community, which is ever watchful to detect fraud, and prompt in proclaiming it. Let not, then, auction sales be charged with the encouragement of a species of iniquity which does not in truth exist, and which it is at least presumable they have had an influence in suppressing.

As the public revenue is guarded from injury by the intervention of auction sales, so also do the purchaser and consumer obtain, through this impartial medium, undoubted assurance of the security of their transactions. No artful mode of exhibition can be used to ensnare the inexperienced; the examination of goods is deliberate and cautious; and it is fully in the power of the buyer to protect himself against the possibility of error. He deals not, as in private contract, with one whose interest it is to deceive; his bargain is made with an unbiassed agent, whose interest it is to expose deception; and in all cases of injury he looks for redress from a disinterested source.

Goods of inferior quality, of cheap and temporary dye, of specious appearance, and slight fabric, may be collected and exhibited as evidences of deception encouraged by auction sales.

Your memorialists respectfully represent that the evidence submitted by them to your honorable bodies must, if admitted as correct, be conclusive that merchandise exhibited for public sale cannot be estimated otherwise than at its actual value; or, if its apparent value be heightened by artificial means, that the responsibility of the auctioneer is pledged for the exposure of the artifice. What is it, then, that encourages the introduction into our market of articles of worthless fabric? Undoubtedly it must be their currency with the consumer, who has no immediate and direct dealings with the auctioneer, but obtains them from the jobber, who, himself perfectly aware of their intrinsic value, promotes their importation, by being the principal agent in their distribution. Your memorialists do not, by any means, intend to repel this charge by the imputation of unworthy motives to any other class of men; they are of opinion that goods of inferior fabric are necessary for the consumption of the country, and that the prices at which they are sold universally correspond with their value. The dressing, the glazing, and decorations employed in the preparation of inferior British manufactures for this and other markets are so notorious that they do not deceive the most inexperienced. These are not new inventions; nor have the humbler classes of the community but lately learned to clothe themselves in articles of cheap but showy fabric. The custom, however, is falling into disuse, and a taste for more simple and substantial merchandise begins to prevail. As far as regards the employment of fraud in the sale of goods through the medium of auctions, it presents itself so rarely to the observation of your memorialists that they cannot but doubt its prevalence, and would rather, from their experience, esteem it a matter of congratulation that the country merchant can come into the market in the confidence of ascertained good faith and fairness, than believe there can be reason to call either in question.

Your memorialists respectfully represent that the periodical exposure of large and general assortments of merchandise at public sale must have a tendency to promote the convenience of those who resort to the great commercial marts for their supplies, while it benefits the importer by the consequent increase of competition. If distant purchasers are attracted by public notice to large and valuable sales, where they may carefully examine the assortments that are offered, effect their purchases, and accomplish all their business in so short a period; if the holders of goods may, with so much despatch and certainty, complete the sale of whole invoices, at the current market prices, with full protection against all risk, and secure the advantages of prompt remittances, accommodations and benefits must result that would at least counterbalance many evils, if, indeed, the existence of any had been proved. When new plans or principles are suggested, encouraged, and established; when men of different interests and views coincide in their adoption; when, after long and successful experiment, they are confirmed and become universal, it is a common and reasonable inference that their popularity is the result of admitted utility. On what other reasoning can it be explained, that, with a powerful interest in opposition, auctions have become, in most of our commercial cities, so considerable a medium of sale, that both classes of the mercantile community, the buyers and sellers, have united in supporting them? There can be no doubt that when public convenience no longer requires their interference, they will naturally and rapidly decline, without legislative interposition.

To those whose operations are conducted on an humble scale, the amount of whose purchases must necessarily be regulated by their daily sales, the suppression of auctions would be a fatal and distressing blow. This numerous class is dependant on public sales for their regular assortments; their responsibility, though not adequate to purchases of magnitude, is yet sufficient, by mutual union and support, for their small but frequent obligations; having an established credit, they are assisted in the advantageous employment of their small capital, while their intercourse with the auctioneer gives him that constant information which is *his* best security, and insures the prudence of *their* engagements. In common with the country merchant, they owe to auctions the advantage of procuring their supplies without the necessity of intermediate profits, which are evidently a tax upon the consumer; they buy their goods at auction, and the fifteen or twenty per cent. which would have formed the profits of an intervening class is saved to that part of the population by whom the difference would be most sensibly felt. The country merchants go into the market on the best terms; the labor and difficulty of their purchases are reduced; they select from the daily assortments their necessary and regular supply, in quantities to suit their convenience. The price of commodities is equalized between the city and country consumer, and reduced to both; and the country gains in the saving of the time, the industry, and the resources of her most valuable citizens. But it is not only in their immediate advantages that auctions are a public benefit; the influence of the great body of strangers, invited by their facilities, is profitably felt in every department of useful industry, and imparts activity and animation to every branch of trade.

If, then, the population of the country is, through auctions, supplied with comforts and necessaries at the cheapest rate; if a saving be effected in the most valuable resources of the nation, of what moment is it that a wealthy and influential class of men, who are provoked to hostility by the loss of a productive business, denounce auctions as a public calamity, and influence others to unite with them?

Your memorialists respectfully represent that it is to the influence of auction sales that our domestic manufactures owe their introduction to general notice and that encouragement and aid which has, in some measure, over-

come the prejudices that opposed their advancement; that the valuable products of native industry, which public opinion discouraged and condemned, were forced into use and estimation. To the manufacturer, the aid of the auction business, as a medium of sale, is almost indispensable. A law of our State has been obtained for their encouragement, by which the sale of domestic goods has been exempted from duty; and the great disproportion in amount between the public and private sales of our home manufactures sufficiently disproves the supposition that auctions operate to their disadvantage. Those manufacturing establishments whose operations are sustained by great resources may, perhaps, view with indifference the decision of this question; but to those of humbler means, whose business is almost exclusively transacted through the agency of auctioneers, it is of vast importance.

The small resources that would be quickly exhausted in limited enterprise are, by the aid of auctions, continued in active circulation. The distress consequent upon the failure of employment, during the tedious disposal of the merchandise and collection of the proceeds, is prevented by the promptitude of the sale and payments. The manufacturer is aided by the judgment and experience of his agent, which render his presence and attendance unnecessary; so that his goods are sold, the raw material purchased, or his funds remitted, while there is no interruption to his industry; and the time and labor are saved which would be consumed by making sales of his merchandise in detail.

It is objected against auction sales that they have produced a revolution in the commerce of the country, and originated the difficulties which it is said now oppress it. Your memorialists would respectfully urge that the decline of business may be attributed to more probable and evident causes than the extension of auction sales, which has, in fact, resulted from the same circumstances that produced the decline in our commercial prosperity, and has tended greatly to relieve the general distress. It is to the extravagant introduction of foreign fabrics after the late war, when profitable sales allured to importations far exceeding the ordinary consumption; to the fall in the cost of goods abroad, when our merchants were overburdened with a heavy stock; to the injudicious extension of business at a period of hazard and uncertainty; to the loss of several important and profitable branches of trade, which employed our ships and seamen, and enriched our merchants and our country, but of which the universal restoration of peace throughout Europe deprived us; to the extensive scale on which the precarious experiment of domestic manufactures was commenced; and to the embarrassments of a disordered exchange, that commercial distress is to be referred: and practical men are aware that the interference of auction sales alone could have prevented a more extensive ruin, by their forced distribution of goods throughout the country, at a rate which relieved our importers, though at an admitted sacrifice. Such were the causes which produced the gradual decline of our commercial prosperity, and created that reaction in our mercantile situation from whose shock we are but now recovering. But on what grounds can it be urged that the present character of our trade is ruinous? The day of commercial disaster has passed away with the extravagant enterprise that produced it; and commerce, reviving, asks but freedom from restraint and liberty of action. A safe and advantageous internal trade employs the capital and industry of one part of the mercantile community; while our foreign intercourse, established upon secure and beneficial principles, invites the enterprise of the other. The mass of old goods, the surplus of former excessive importations, has been disposed of, and a field opened for a lucrative trade. Commercial credit and confidence are established; and though our own produce but scantily rewards the labor of the husbandman, (an evil certainly not attributable to auction sales,) yet foreign manufactures and produce generally have fallen proportionably, while the improvement of our domestic exchanges denotes a composed and settled state of things.

Our importers have, during the last season, enjoyed a trade that has well rewarded their enterprise. Our market has been enlivened by strangers from every quarter of the Union, and presented a scene of activity and successful industry that sufficiently relieves auctions from the charge of having effected a ruinous change in the character of our trade.

Your memorialists are represented as holding an important and dangerous monopoly. On the contrary, it is their influence in destroying the power of monopolizing that renders them of public service. They are a barrier to that inordinate warmth of speculation which is in direct opposition to the principles of a secure and moderate trade. They prevent the involvement of capital in the attempt to engross scarce and desirable articles, and those ruinous combinations of extensive dealers which frequently distress a whole community.

From these considerations, your memorialists respectfully remonstrate against the imposition of legislative restrictions upon a business whose advantages have been carefully thrown into the shade, while none but groundless objections have been urged against it. Public sales, in their general character, are no longer the resort of the necessitous, who are compelled to the sacrifice of property by the pressure of distress. Buyer and seller now meet on neutral ground for their mutual advantage; auctions are employed as the most secure and convenient medium for the sale and purchase of merchandise at the current market rate; and any addition to the present charges, however trifling, so far from being a productive source of public revenue, would force the business into another channel, introduce the practice of selling inconsiderable samples at auction, by which the prices of large parcels at private sale would be regulated, encourage frauds on the revenue, and operate directly as a tax upon the yeomanry of the country.

All which is respectfully submitted; and your memorialists, as in duty bound, will ever pray, &c.

FRANKLIN & MINTURN, *and others.*

16th Congress.] No. 608. [2d Session.

AMENDMENTS TO THE CHARTER OF THE UNITED STATES BANK.

COMMUNICATED TO THE SENATE, JANUARY 12, 1821.

To the honorable the Speaker and Members of the House of Representatives of the United States: The memorial of the president and directors of the Bank of the United States, on the part of the stockholders of the said bank, respectfully showeth:

That the institution of which they are managers is laboring under several grievances, not only injurious to the bank, but, as they respectfully conceive, to the nation also, which call for legislative relief. Some of these arise from the original omission of appropriate legal enactments; others, from certain provisions of the charter not suited

to the condition and circumstances of the bank; and one, of a very important character, from a regulation concerning the fiscal receipts of the Government of the Union. For the remedy of these evils, the stockholders of the Bank of the United States can only look to Congress. Under the pledge of its sacred faith, and by its authority, the institution was established; and their natural refuge is, therefore, to the National Legislature for that relief and protection which the citizen has a right to claim of his Government. Of that body they know they can obtain nothing forbidden by the sound policy of the State; and could their interest dictate a request inconsistent with that policy, they would forbear to make it; but it is under a conviction of the justness and correctness of their requests, that, as citizens, and as a portion of those whose prosperity constitutes the public good, they respectfully ask the attention of Congress to the grievances under which they labor. They ask relief only if it be found to be consistent with the public welfare; and if it be, they will, they are convinced, not ask in vain; while they feel satisfied that they will be able to show to your honorable body not only that their claims are consistent with it, but that they are eminently calculated to advance and promote it.

Your petitioners are aware that strong prejudices have existed against the Bank of the United States, and certainly there has been abundant cause for more than prejudice against some of the acts which have marked the progress of the institution. But these acts have been offences not against the public or the Government, (except as it is a stockholder,) but against the innocent and undesigning stockholders, on whose behalf your petitioners now ask protection and relief. Offences of inferior turpitude and of inferior public injury, under almost all Governments, have been restrained by severe punishments. By the charter granted by the Congress of the Confederation to the Bank of North America, it was proposed to make some of these offences felony, and they were accordingly made felony by the several acts of the Legislature of Pennsylvania. But though, in the progressive experience of this institution, one example of infidelity, peculation, and fraud has produced another, and that another and another, and though it has been defrauded of millions of dollars, it is yet entirely without the preventive protection of effective and appropriate penal laws. Will it be believed, too, that these acts, so injurious to the bank—that these losses, so afflictive to the innocent and suffering stockholders, have excited against the institution the prejudices which your petitioners now so anxiously deprecate? Yet it is a truth, that those are the sole causes of which your petitioners have any knowledge. For they cannot believe that it is considered a crime (at least not in the eyes of that Legislature from whom they purchased their privileges) for the stockholders to have associated together and to have placed their property under the protection of the most solemnly considered act that has marked the existence of the Government—an act, the validity of which all political denominations of men in the country, (at long intervals of time, giving ample room for reflection and investigation,) and all departments of the Government, have repeatedly and solemnly considered and confirmed. The usefulness of the bank to the Government and to the country, its purifying effect upon and sustaining aid of the currency, its support of the public credit, and its general benign influence on the interests of every solvent man and every solvent institution in the country, if not readily acknowledged, your petitioners believe can be satisfactorily shown. But, more effectually to dissipate the public prejudices, if any remain, your petitioners entreat your honorable body to inquire who now are the persons really interested in this much injured institution? They will be found to be, with few exceptions, original subscribers, who have continued to hold their stock, alike ignorant and innocent of the frauds to which their interests were a prey; or they are unfortunate purchasers, who, deceived by the false appearances which the affairs of the institution exhibited, gave an advance of from twenty to fifty per cent. on their purchases. Among those now interested are all the classes of human helplessness; and among the funds involved in the fate of the institution are those of charity and religion to no inconsiderable amount. Of these facts your petitioners are ready to give satisfactory proof to your honorable body, and crave to be permitted to do so, if it shall be doubted or deemed material.

Under these circumstances, your petitioners will proceed succinctly to state the particular objects on which they respectfully request relief and protection from Congress.

First. The charter provides that no director, except the president, shall be eligible for more than three years in four. This provision has, in practice, been found to deny to the bank the services of those men who are best qualified to administer its affairs with safety and profit to the institution. It is a provision not contained, your petitioners believe, in the charter of any other respectable banking institution. It was not contained in the charter of the former Bank of the United States; and it would seem that the provision of the charter which forbids the re-election of more than three-fourths of the directors in office, at the time of an annual election, (to which your petitioners have no objection,) is calculated to effect all the ends of the embarrassing provision from which your petitioners now crave relief.

Second. At present there is no authority, under the laws of Congress, to punish any fraud, peculation, or violation of trust, committed by any of the officers of the bank or its offices; and, on this point, the State laws are also supposed to be deficient. Nor is there any adequate civil remedy for the bank against its faithless agents, who may, the hour before their dismissal from office, while the investigations necessary to their removal indicate to them that result, take the property of the bank from its vaults and withhold it, spend it, and, if they please, give it in payment to their other creditors, in exclusion of the bank, from which it has been thus purloined.

Third. Under the charter, it has been doubted whether the bank has power to authorize the issuing of notes not signed by the president and countersigned by the cashier. The labor and the time necessary to sign notes for the bank and all its branches are much greater than either of those officers can bestow upon that object; and hence, the bank has been unable to put in circulation a sufficient amount of notes of the smaller denominations, which the public most want, and which are best calculated to serve the interest of the bank. If authority were given to the board from time to time to appoint one or more persons to sign notes of the smaller denominations at the parent bank, under the superintendence and direction of the board and its principal officers, there would be no public risk, and it would afford all the aid which your petitioners desire on that point.

Fourth. Under the fourteenth section of the act incorporating the bank, the bills or notes of the bank originally made payable, or which shall have become payable, on demand, are made receivable in all payments to the United States, unless otherwise directed by act of Congress. Under this regulation, the power of the bank to make its capital available, either for its own profit or the public good, is greatly abridged. The sphere of its circulation is limited to those places where it is least wanted, and made to exclude those where it would be eminently useful, while the whole currency of vast sections of the country is thereby frequently greatly embarrassed.

Your petitioners forbear to enter, at this time, into a further exposition of the grounds of their application for relief on these points; but respectfully hope and request that your honorable body will so dispose of the subject as to give them an opportunity of manifesting the justice, as it regards the bank, and the policy, as it regards the public, of the relief and protection which they respectfully claim.

On behalf of the board of directors.

L. CHEVES, *President.*

Attest: THOS. WILSON, *Cashier.*

DOCUMENTS ACCOMPANYING THE MEMORIAL.

The Committee of the Bank of the United States beg leave respectfully to represent to the committees of Congress, to whom the memorial of the bank has been referred, that the directors of the bank were forbidden, by the nature of the instrument, from developing in their memorial, at length and in detail, the particulars of the grievances under which the establishment labors, or the reasons which, in their opinion, authorize and recommend the measures of relief which they seek. To supply this deficiency, the committee now desire respectfully to bring before the committees of Congress some of those details and reasons, which they will do as briefly as the nature of the subject will permit. They will notice the several points in the order in which they are stated in the memorial.

I. *The ineligibility of directors who have served three years in succession.*

On this point, the committee beg leave to consider, 1st, The evil; 2d, The relief desired; 3d, The possible objections to that relief.

1. The memorial states, very truly, that the most competent and safe men cannot generally be induced to accept seats at the respective boards of the bank and its offices. The directors of such an institution ought to be, if possible, of undoubted credit, great experience, and extensive business. Neither integrity nor abstract talent, nor both, are enough. They ought, at least a considerable portion of them, to be men extensively engaged in business, and well acquainted with men of business. Such men not only are better qualified to govern the affairs of the bank, but give to it their own business, which is valuable, not merely on account of its extent, but also on account of its character, and attract to it numerous customers like themselves; and thus secure to it, in the aggregate, business to a greater extent, and of a better character, than men of a different description can do. Not to obtain the services of such men, is to fail in managing the institution to the best advantage, and to limit its usefulness and its benefits, both public and private. But, under the existing provisions of the charter, such men decline, too generally, the station of directors of the bank and its branches, when they can (as they always can) obtain seats at the boards of respectable local banks, from which they will not be periodically removed. The reasons of their preference are obvious. It is desirable with such men always to have seats at the boards of respectable banks; and to remove them periodically is to suspend periodically the advantage which they seek. But, besides the motive of interest or convenience which may govern them, they have a much greater objection to the necessary removal required by the charter of the Bank of the United States, founded on the unpleasant feelings which it excites. The bank may succeed in a first appointment, but at the end of one year it displaces one-fourth. This offends those who see themselves removed, without admitting or believing that the preference which excludes them is just, and places them in a light of inferiority, which mortifies their pride, and often provokes their resentment; nor are these feelings assuaged or subdued by exhibiting to them the original charter, which renders it necessary. This, however, it is admitted, must be borne to meet the demands of a prudent jealousy. But the evil increases almost in geometrical proportion, as the process of exclusion annually occurs, until, at the quadrennial appointments, it ends in a state of things absolutely incompatible with the good management of the bank; for as many of the best directors who were first appointed will be retained as the law permits, and, on the fourth appointment, the whole of them will be excluded; leaving but one-fourth of the preceding board, and those who compose that small portion will have had but one year's experience. Undoubtedly the bank has succeeded, in many instances, in procuring the services of fit men, under all these difficulties; but it has been the result of good fortune, and in opposition to causes which almost necessitate a contrary effect; and it is hoped the National Legislature, in its wisdom, will not see fit to leave such great national and private interests to the sport of chance.

The committee find it quite impossible fully to express the magnitude of the practical evil, which can only be understood and felt by marking attentively the operation and progress of it. In their humble opinion, the change desired is altogether indispensable to a prosperous and safe management of the bank.

2. The relief desired is simply that length of service, which may be considered as expressive of extraordinary usefulness and capacity, shall not create ineligibility. The request does not embrace the Government directors, nor any change in the provision which excludes a numerical proportion (one-fourth) of the board of the year preceding each appointment; guards which, the committee cannot doubt, will fully carry into effect the policy and object of the Legislature on this point.

3. It is not denied, the committee believe, that the change desired is calculated to promote the interest of the stockholders. But it is alleged that banks generally, and particularly this bank, are to be viewed in the double aspect of instruments of private advantage and national good, and that it ought to be shown that the tendency of the change is not likely to be injurious in the latter view. The committee do not hesitate to admit the justice of the remarks; but they entreat that it may be considered whether both ends are not attainable by the same means, and whether the means proposed are not the most fit to accomplish both. The desire of the stockholders is to have the institution managed by the most honest and most capable men that can be procured. If this end be attained, the national object will undoubtedly be attained. That commendable jealousy which has been before alluded to may cease to be wise, if carried too far. If carried so far as to exclude the most fit men from the management of the bank and its branches, it will, undoubtedly, be carried too far. It may put the affairs of the institution into the hands of designing and unprincipled men; and, against their arts, the provision of ineligibility from length of service will be a security feebler than a cobweb. If, then, the committees of Congress shall be satisfied that the provision which renders the best men ineligible periodically is not calculated to keep the management in the hands of men of the highest integrity and capacity, it will follow that, to meet the public object, the change ought to be adopted. And as a matter of fact and experience, in the past management of the bank and its offices, it has failed to do so.

II. *The punishment of frauds upon the bank by its officers.*

On the policy and propriety of punishing, by penal enactments, frauds and peculation committed on the bank by its officers, the committee deem it unnecessary to enlarge.

III. *On the substitution of agents instead of the president and cashier, to sign the notes of the bank of the lower denominations.*

On this point, also, the committee deem it unnecessary to dwell at much length. The request now made is unlike that which was some time since made of Congress and refused. That was to delegate the authority required to the officers of the branches as well as those of the bank. The present is merely to authorize other persons than the president and cashier, who shall be, however, equally responsible agents, to act under the immediate eye of the mother bank, and only to a limited extent. It has been suggested that the authority which is desired might diminish the securities against counterfeiting. This would be true if the officers designated were to be temporary

or numerous; but the objection will be entirely removed if they be not more numerous, and be as permanent in their appointments as the officers who now discharge the same duties. All this the bank, with a view to its own interest and security, would order, should it not be prescribed by law, which, however, may be done. That the authority desired may not be misunderstood, the committee will remark, (though it is probably unnecessary,) that it is not desired that the bank shall be allowed to issue notes of lower denominations than those now authorized by the charter, nor is it desired that the substituted agents shall be allowed to sign notes of a higher denomination than $20. Indeed, the power may be limited to those of the denomination of $10 and under. Or, if it shall be deemed any additional security, or a preferable plan, to abolish entirely the authority of the president and cashier on this point, and require all the notes of the bank and its offices to be signed by the substituted agents, there can be no objection to it on the part of the bank. Under these guards, it will surely appear that there can be no objection of public policy to this request of the bank. But the grant of it is required by the public interest as well as the convenience of the bank. It will scarcely be questioned that the extension of the circulation of the notes of the Bank of the United States of the lower denominations would be a public benefit. This, however, cannot be effected, if it be required that the president and cashier shall sign each note. The duties of each of these officers, in relation to the mother bank alone, including the transfer department of the bank and the loan office, and a complicated voluminous daily correspondence, are greater than are assigned to any like officers in the United States; but when to these are added a minute and vigilant superintendence of the business, accounts, and general management of seventeen offices, the aggregate constitutes a mass of labor that can leave no time for signing notes.

IV. *Circulation of the notes of the Bank of the United States.*

No subject connected with the currency can be of more importance than the circulation of the notes of the Bank of the United States. They may be made infinitely useful in purifying, sustaining, and increasing the sound currency of the Union. But they are but partially so at present; and it is not in the power of the bank, so long as they are receivable by the Government at all points where they may be tendered, instead of being received only where they may be payable, to make them co-extensively useful with the Union. Thus, for example, the notes of the Western and Southern offices are receivable in Philadelphia, New York, Boston, &c., in payment of all debts to the Government. The bank is not bound to pay to the Government except where its notes are payable, though they may be received elsewhere; but it is bound to transfer the funds of the Government from place to place, and could only gain a little time, perhaps with inconvenience to the Government, by refusing to pay where they may be received. It has, accordingly, always (except for a moment, when the safety of the bank rendered it necessary to ask the time to which it is entitled,) paid where the notes were received, without reference to the places where they were payable. The result is very embarrassing to the bank, and frequently very distressing to the community. There are some facts which it will be proper to state, before we present a more detailed view of the evil.

The exchanges between the West and the Atlantic are always against the former, which is a large debtor habitually to the latter. The exchanges between the North and the South run for one portion of the year against the latter, and for another in its favor. When the exchanges are unfavorable to the South and West, the notes of the Southern and Western branches all pass to the North, as a substitute for exchange. They are equal to cash, or very nearly so, in all the principal cities north of the Potomac. They are so, because they are receivable in payment of duties to the Government, the portion of which payable to the north of the Potomac in any quarter of the fiscal year of 1819 was, taking that year as an example, nearly as much as the whole circulation of the Bank of the United States at the same time, and, of course, kept up a steady demand for the notes of the Southern and Western branches. The union of this demand with the course of exchanges draws the whole of the notes of the Western offices to the Atlantic, and, at particular seasons of the year, the greater part of the notes of the Southern offices to the North. The revenue collected to the South being comparatively small, there can never be any material reflux of their notes, because they will be absorbed by the Northern demand before the exchanges turn; and the balance of payments being always against the West, there is never any towards that quarter. We will now proceed to enumerate some of the evils resulting from the receipt of the notes of the bank and its branches, in this manner, and under these circumstances.

1st. It greatly deranges and distresses the money market, both of the places where the notes are received and where they are payable. The Bank at Philadelphia, and the offices at New York and Boston, did not receive less than between five and six millions of the notes of the offices south and west of them in the short period of fourteen months, exclusive of the notes of the office at Washington. These points were obliged to pay the Government the amount of these notes, and in vain sought for speedy reimbursement from the offices where they were payable. The state of the exchanges, which caused this flux of their notes, created an inability to reimburse the offices which had received them until the exchanges turned. The offices receiving them were, of necessity, obliged to curtail their business suddenly, to provide the means of paying them. Accordingly, the curtailments at Philadelphia, New York, and Boston, within the same period, amounted to upwards of four and a half millions of dollars, and exhausted almost the whole of the capital placed at these points. The capital of New York and Boston united was, at some periods, less than nothing. What distress and embarrassment must have been caused by these circumstances will easily be conceived by those who have reflected on the nature and effects of the sudden withdrawal of a large portion of the active capital of a trading community.

The evil suffered in the community where the notes were thus received and paid was not all. The offices whose notes were thus received and paid were necessarily called upon to provide the means of reimbursement, and curtailments to a corresponding amount were ordered in them, and like distress and embarrassment produced in the communities where they were located. Double the amount of the notes thus circulated was, in this way, withdrawn from use to provide for their payment. The aggregate curtailments in the fourteen months before alluded to (from 1st September, 1818, to 1st November, 1819) were upwards of ten and a half millions of dollars; and, it is confidently believed, it would not have been necessary to reduce the discounts of the bank a single cent but for this cause. When these reductions commenced, the discounts were very moderate for the capital of the bank. They did not amount to $42,000,000.

Nor is the extent of the distress and embarrassment measured by the immediate effects of the reduction of the discounts of the bank and its branches. These reductions, in their operation, throw back upon the State banks a portion of their circulation, and reduce their deposites; and they also are obliged to curtail their business, and add to the general mass of distress.

The uncertain liability of the bank and its branches, (as each is, in a certain degree, liable to pay the notes of all the rest,) and the perpetual alteration of the capital of each, by paying the notes of the others, and having its notes paid by them, put it beyond the power of calculation to determine the extent of business which can be safely done, and leave the bank to vacillate between the hazards of rashness and the fruitless results of a torpid prudence. To-day a branch shall have a million of capital, and in three months it may be without a cent.

2d. It diminishes and deranges the currency of the whole country. The bank was under the necessity, to protect itself from danger, and to avoid charging itself to an unlimited amount with the cost of adverse exchanges, to forbid the offices with which the exchanges were unfavorable to issue their notes. It, however, issued its own notes; and the offices against which the exchanges did not run issued their notes without any limit but that of the demand; yet the circulation of the bank was, by this cause, greatly decreased. Thus, for example, in the short space of five months (from the 1st April, 1819, to the 30th August, 1819) it was reduced from $6,045,428 to $3,838,386.

This, however, does not show the entire extent of the abstraction from the currency which this cause produces. Let it be supposed that the circulation of the bank is four millions of dollars, and that one-half of it has been issued by offices to the south and west, and is in use for the purposes of being remitted to the north and east. It is thereby as much taken out of the currency as if it were destroyed; and it leaves only two millions of currency furnished by the bank. But the bank will, probably, have four millions of specie in its vaults; and it cannot safely have less, under these peculiar circumstances: this sum, also, is withdrawn from circulation. Thus, the bank, not by its fault, but by the necessity which is imposed upon it, has withdrawn four millions of specie from the currency, and has given a substitute, in its notes, only to the amount of two millions. In this view, the currency has been diminished two millions. But even this is not the worst view of it. Let us suppose that the notes of the bank and its branches could not be converted into bills of exchange, (and there is no doubt, it is presumed, that, with its high credit, it could easily do what many local banks have accomplished,) it could circulate two dollars of its bills for every dollar it should have in its vaults. Then it is supposed to have four millions of dollars in its vaults, and could circulate eight millions of its notes, which would be equal to gold and silver. It then would have added four millions to the currency, while, at present, it diminishes it to the amount of two millions: making a practical difference of no less than six millions in the sound currency of the country. The view may even be extended, because the Bank of the United States could, had its capital not been deranged by this very cause, have given a greater addition to the currency with the greatest ease and safety, if a demand had existed for it, by increasing its specie. No evil can be greater than a decreasing currency. In the words of a great man, "poverty, and beggary, and sloth" follow in its train.

But this evil of a decreasing currency will not occur as a rare calamity once, perhaps, in a century; but will be renewed with every flux and reflux of the exchanges between the different portions of the country, as long as the bills of the Bank of the United States are thus receivable by the Government.

3d. It makes the necessary public burdens, in some instances, doubly oppressive. In all the States south of Virginia, and in nearly (if not all) the Western States, the Government of the United States does not expend half the revenue it collects; the surplus must be remitted to other points, where it is necessarily to be expended. This draws so much of the capital of those States from them, and adds it to the capital of another—New York, for example. This is not a subject of complaint, though it is certainly an evil. But when the revenue of New York is collected in the notes of the offices of the South and the West, perhaps to an equal amount, and drawn from the necessary currency of these portions of the country, the evil produced by the remittance of the surplus revenue becomes intolerable, because the means of making it have been taken away. The capital of these States is fettered by the necessary curtailments of their banks; their currency is diminished, and that state of things which is called a scarcity of money is produced; exchange rises, and, when the revenue is to be remitted, the means of doing it no longer exist.

These are the principal disadvantages arising from the receipt by the Government of the notes of the bank and its offices where they are not payable. There are many others, some of which are scarcely inferior in importance. Among them, none, perhaps, are more worthy of notice than the disadvantages suffered in those very particulars in which it is supposed the present practice is beneficial to the Government and the country.

The following are the advantages which have been supposed to result from the existing regulation:

1st. It is supposed that the notes form, as at present received, a currency co-extensive in its sphere with the limits of the Union.

2d. That they form a substitute for exchange, free of the usual expense.

3d. That they form a sound currency, specially calculated for the payment of debts to the Government.

1st. The notes of the bank and its offices certainly do possess, as at present received, a credit co-extensive with the limits of the Union, but they are by no means invariably of their nominal value at all times and places. From the middle of December to the middle of March or April the notes of the bank and the Northern offices will generally be at a discount in the South. And there will be many other instances of their being under their nominal value. They are, however, always only a commodity where they are not payable, and their price will depend on the quantity in market and the demand for them; the demand for them will depend on the amount of revenue payable in the place where they are held compared with the quantity in the market. They will serve no purpose of a general currency against the current of exchange; nor will they ever, under any circumstances, serve the purposes of a currency, in a correct sense, where they are not payable. They will be at par, bear a premium, or be below par, according to circumstances. Even on the spot where they are issued they will frequently bear a premium, unless they are freely issued. In Ohio, for example, they are said to have commanded fifty per cent. premium in the current money of the State. But the overruling difficulty will be that the bank, in its own defence, will not issue its notes where they are to be used as a substitute for exchange; and it is only when they can be thus advantageously used that they are supposed to serve the purpose of a general currency. But this will be more properly considered under the next head.

For one object of a general currency, (the only one for which such a currency is either desirable or practicable,) the Bank of the United States has furnished the most admirable expedient that has ever existed in any country—we mean a currency for the use of travellers. By making its five dollar bills payable at all its branches, there is no spot in the twenty-two States of the Union at which they will not be preferable to gold and silver; and there will be few places where they will not be instantly convertible into these metals. More in this way need not be done than to multiply them, which the bank will no doubt do to the extent of the demand, if the receipt of its other notes by the Government, at all points, be not allowed to continue embarrassments which may lessen or destroy its ability to do so.

2d. They do serve the purpose of exchange, and, if they can be drawn directly from the bank or its offices, they will of course be free of the usual expense of exchange. But this very rarely happens. The person who uses them as exchange has generally to pay to some low or cunning dealer in money a premium higher than a just premium on exchange in its accustomed form. And though there was, until the last twenty months, no restraint on the issue of notes by the offices, the bank, unless it choose wantonly to waste the capital of the stockholders, cannot, and will not in future, suffer its notes, under an adverse state of exchange, to be issued at one office, to create a demand at another, where money is from five to ten per cent. more valuable. This is no part of the duty of the bank, and its burdens are sufficiently great without adding to them. The bank will, with a view to its own just interests, furnish exchange, whenever and wherever it may have the ability to do so, at fair and reasonable rates.

Exchange, like all other mercantile transactions, but in a more especial degree, depends for its fair operation on an unembarrassed money market, on a well-adjusted currency, and on a state of established confidence. We have seen that the receipt by the Government of the notes of the bank and its branches where they are not payable has a powerful effect in distressing the money market, diminishing the currency, and impairing the pecuniary ability of the States from whence they are drawn to be used as a substitute for exchange; and we must therefore infer that it is a most unhappy means of supplying or facilitating exchanges. But why should the bank furnish exchange free of expense? Is not the premium of exchange as justly chargeable on the operations of commerce as any other charge? Why make the bank pay the price of exchange on the funds with which a cargo may be purchased in South Carolina or Georgia, and not the freight? Why should a desire exist—how can a desire justly exist—to throw this charge on the stockholders of the Bank of the United States, rather than on any other portion of the people? They are certainly, in a very peculiar degree, entitled to the protection of the General Government. With it the bank originated. It was in the confidence of its strength, of its faith, and of its wisdom, that the present holders subscribed for or bought the stock they hold. There was, unfortunately, gross and unprincipled gambling in the stock, but not by those who now hold it. Few of them would probably have become interested in the institution, had it not been for the high degree of confidence they placed in the management of an establishment which was under the immediate eye and protection of the Government. The present holders are either original subscribers, innocent of the frauds and speculations which have been so justly the subject of reprobation; or they are injured persons, who have given twenty, thirty, forty, and fifty per cent. advance for the stock. If this fact be doubted, let it be inquired into.

If the stock list be regarded, it will be seen that large portions of the stock are held by all the classes of human helplessness—by the aged and infirm, by the widow and the infant, and by charitable and religious institutions. Are they fit subjects to be charged with the burdens of commerce, and with the equalizing of the exchanges? The people of the United States, generally, are direct owners of one-fifth part of this stock. Is there any reason why they should bear one-fifth of this particular charge on commerce? Is this charge to be imposed on the bank, on the ground of enormous profits? That, unfortunately, cannot be pretended. The present stockholders have been heavy losers, and have had their capital diminished; while the bank has paid large pecuniary considerations for its privileges, and has rendered invaluable services to the Government. On what ground, then, it is respectfully asked, can a desire exist to heap so unreasonable a burden on this institution? But these pages are not intended to supplicate an exemption from any obligation that can be legally imposed, though it be harsh or distressing, if it have any foundation in public policy. If it have any foundation in public policy, disregard that fostering protection of the Government, which the citizen ought to be taught to expect, and which attracted, no doubt, the honest portion of the stockholders to a bank which was national, in which the Government was a partner, and in the management of which it largely participates through its directors. Spare not the fund of charity, the sacred deposite of the church, the bread of the hungry, or the pittance of the wretched. Let these hallowed funds be made to bear exclusively the burden of paying the expense of a common mercantile operation, if they can be made to serve the end; but, before this sacrifice be made, (which surely cannot be made without some compunctious visitations,) let us dispassionately inquire, can they be made to serve the purpose intended?

We have said, that if a local circulation were allowed to the bank, it would furnish exchange on fairer terms, and at a lower rate, than is now paid for its notes; that its own interest would limit it to fair and moderate premiums; and that these would be enforced by an unembarrassed money market, a well adjusted currency, and an established confidence. All this we conceive to be demonstrable. Some, however, think differently, and suppose that private competition would be unavailing against the Bank of the United States, and that it might demand exorbitant premiums; but, perceiving the evils of driving the bank out of the exchange market, and of the derangements of the money and currency, which we have pointed out, they agree that, if a maximum of exchange were established, the notes of the bank should cease to be receivable, as at present. The first answer to this suggestion is, that it is absolutely impracticable. What would be the maximum of exchange, if the peace of the country were to become doubtful, and under a great variety of other circumstances, which may be easily imagined? It is useless to multiply examples; the point is too clear to require discussion: forty and fifty per cent. have been paid in the current medium in some parts of the Western States for the notes of the branches of the Bank of the United States. If the notes of the branches had been made a local currency from their first establishment, the business of the bank would have been under control, and would, no doubt, have been so regulated as to have judiciously distributed the capital of the bank. Under such circumstances, for example, there is no doubt it would have been the interest of the bank to have sold exchange in the Western States, on the Atlantic, at a light premium, and to have received its payment by another operation of exchange on New Orleans, where the products of the Western States find their market. The premium of exchange, whatever it may at any time be, will be fixed by uncontrollable causes, which are perfectly just, and almost perfectly accurate. It must inevitably be as equitably and correctly fixed as the price of wheat, cotton, tobacco, rice, or any other commodity. It is an utter misconception of the principles of exchange to suppose that the Bank of the United States, with any capital, or any means, for terms of any material duration, could exact an unreasonable premium, *if the currency be sound.* If that be unsound, there is no basis for fair dealing, and it is idle to project remedies against unfair practices. The discerning will easily perceive, and the candid will readily admit, that the bank is more likely to suffer than gain in such a state of things; *but if the currency be sound, the rates of exchange can never be excessive*, because they can never materially, and for any considerable length of time, exceed the expense, risk, and loss of interest incurred by the transportation of specie. The person desirous of purchasing exchange will either have the specie in his hands, or will receive it on demand from some bank whose notes he holds. Who, then, will be guilty of the folly of giving much more than the expense of transportation, &c.? There will be competition, too, wherever there is gain, which will be carried on as far, and continued as long, as it continues to be gainful. It is true that exchanges between some of the States have, for a considerable time past, been very high. But wherever it was high, the currency was in a greater or less degree unsound; the banks were curtailing, and the currency decreasing. These causes could produce no other result. Had these causes not existed, the premiums of exchange would not have been high. In some places, though the banks pretended to pay specie for their notes, they evaded it in effect. Let specie be paid promptly and *bona fide* to-morrow in places where exchange is high, and the premiums of exchange will immediately fall to rates founded on the charges and risk of transporting specie, and a trifle, perhaps, beyond their aggregate. That this is an inevitable result, it is believed, has never been denied. In England, it was denied that the adverse state of exchanges which that country suffered while its notes were inconvertible depended on the suspension of cash payments; but it was never denied that, if the currency could at any time be converted into the precious metals, the rates would be governed by the cost of transportation, &c. Let the currency be sound, and the premiums of exchange must be precisely just. To attempt to equalize exchange, or to place the charge of it on any other operations than those which shall cause a demand for it, will be as impracticable as it will be unjust.

3d. The next ground on which the receipt of the notes of the Bank of the United States, at all points, is considered politic, is, that they form a sound currency, in which the revenue may be collected. Any discrimination between the currency in which the demands of the Government may be collected, and the general currency of the country, is founded on a very limited view of the subject. The Government should never wish to collect its revenue in a better currency than that which its policy provides, and its laws ordain, for the purposes of the citizen. It is a distinction that never can be made with justice. The object of the Government should always be to establish a sound currency for the general uses of society, in the advantages of which the revenue should only incidentally participate. If the Government does not insure a sound currency to its citizens, it can have no right to demand of them a sound currency. They can only pay in such currency as they are enabled to procure. The sole inquiry, then, ought to be, whether the state of the currency is benefited or injured by the present regulation. This inquiry we have sufficiently attended to already. But we will go further, and show that the advantage supposed to be gained in the collection of the revenue is not gained; that it is, on the contrary, defeated by the very regulation which is supposed to afford it. Where the notes of the Bank of the United States will circulate as a currency, they are thrown out in abundance, and, in common with other good currency, are used in payment of the revenue. But where this is the case, there is no bad currency, and they yield no great immediate and local advantage that is not afforded by other notes. They, no doubt, keep the others in the sound state in which they are found, and that is probably what was really expected when it was supposed they would enable the Government to collect its revenue in a sound currency: that construction would be most consistent with good sense and sound policy. But if the object was that they should furnish a currency in which the revenue might be collected where there was no other good currency, certainly that object is frustrated by the present regulation. In the Western States, for example, the currency is unsound, and the regulation ought to have a tendency to keep the notes of the Bank of the United States there, that the revenue might be collected in them. But the tendency of it is directly the contrary; it is to remove them to a returnless distance from the place where they are wanted.

There is a mistake on this subject, in relation to the local banks, which it may be fit to notice. It is apprehended by some, that, by rendering the circulation of the offices of the Bank of the United States in a certain degree local, it would diminish and embarrass the circulation of the local banks. If this were true, it would hardly be a sufficient reason to contravene an act of national policy, laying the claims of the Bank of the United States, merely in its corporate capacity, entirely out of the question; but the effect would be directly contrary where the regulation proposed would be at all operative. To the north of the Potomac it would have no operation at all, or none worth consideration; there, the bills of the Bank of the United States now remain, in common with the notes of the local banks, in a local circulation, without inconvenience to these banks, and with all the benefits which were expected from the establishment of the bank to the community. In the South and West, the change proposed, far from being injurious to the local banks, would be greatly beneficial. It is no doubt true, that, could they be permitted to furnish the whole circulation, and have that undisturbed by the receipts and remittances of the revenue, they would be gainers by the exclusion of the notes of the Bank of the United States; but both these advantages they cannot enjoy. If the revenue be collected exclusively in their notes, because the Bank of the United States shall be unable to issue any, they must pay the whole to that bank, as the public receiver, in specie; or it must remain their creditor, and pay the Government the amount without receiving it. There is no alternative. Not being thrown back again into circulation, the masses of their notes, thus withdrawn in the heavy collections of the Government, will not only diminish the aggregate of the general circulation, to the great injury of the country, but will, from destroying its equilibrium, and perverting the operation of its principles, actually reduce the circulation of those banks below the probable amount which they would enjoy in a joint and equally protected participation in the privilege with the Bank of the United States. This embarrassment has been felt by many of the local banks to the South, which have complained that the branches of the Bank of the United States did not issue their notes to relieve them from it; not perceiving that, had they done so, these notes would immediately have been converted into instruments of exchange, and, instead of relieving them, would have increased the evil, by adding to the embarrassments of the moneyed concerns of the community.

It is not true, as has been frequently but falsely alleged, that the Bank of the United States has any hostility to the local banks; and this committee is ready to demonstrate to the committees of Congress, if particular instances shall be stated, so as to render the subject susceptible of proof, that this is a calumny without the most slender foundation; and, on the contrary, they are ready to show signal instances in which it has fostered and sustained the local institutions. The Bank of the United States has always acted under the impression that its own prosperity was inseparably connected with the general prosperity of the country. It is needless, therefore, to say that the change proposed is not intended (while it is very obvious it will have a contrary effect) to lessen the advantages of the local institutions. Its object is to use its privileges with fair and reasonable advantage, in a manner which will not impair, but advance the public good. The regulation of which it complains is practically equivalent to an absolute prohibition to issue any notes in the Western States, and to a like prohibition to issue them to the South of the Potomac, during six months in the year, while the collection of the revenue, the convenience of all classes of the people in these quarters of the Union, and the restoration and perpetuation of a sound currency, all require them to be issued largely and diffused widely.

The remedy for all these evils is to make the notes receivable by the Government only where they are payable. To this general rule, without materially impeding the attainment of the object, there may be some exceptions. Indeed, these exceptions may even advance the general object, while they will serve other important purposes. The following may be safely allowed:

1. Let the notes of the parent bank be received every where.
2. Let the notes of the office at Washington be received every where.
3. Let all the notes of the bank and its offices be received in the States and Territories where the bank has no establishment.
4. Let the five dollar bills of the bank and all the offices be received every where.

These exceptions ought to satisfy the advocates of the present regulation, because they will much more effectually than the general rule carry their views into effect, while they will produce few or none of the evils resulting from that regulation. The privilege given to the notes of the office at Washington alone will be, in itself, a much greater advantage to the Government and its agents than all the conceivable advantages (the evils aside) of the present regulation. It will render unnecessary a direct and sudden draught of the Government funds from the places where they may have been collected, to Washington, where they will be wanted: and it will save the bank the trouble and expense, and the bank and Government the odium of the transfer. The exception of five dollar notes will confirm and enforce the existing regulation of the bank which directs the receipt and payment of notes of this denomination, as well of the bank as of the offices, at all the establishments of the bank. The proposed change rests entirely with the Government. It affects no part of the charter. The existing rule is a regulation entirely under the control of Congress. Let it, therefore, be remembered, that if the proposed change be made, and it be

found not to be useful and salutary, it may be repealed at the next, or any other session of Congress; it will confer no right upon the bank. Is it not, then, manifest that great evils exist from the present regulation? Is there any concomitant advantage, except that enjoyed by the lowest class of money-dealers? Is there any possible danger that can result from a change by way of experiment? May we not hope, then, that the experiment may be made?

Finally, the committee beg leave to remark that it is not true, as has been represented, that the bank is asking new privileges of Congress. Is it a new privilege which would remove a restraint whose operation denies to the institution the services of safe and competent managers? Is it a new privilege which would punish great crimes with adequate punishments? Is it a new privilege which would merely substitute one class of agents in the place of another for the discharge of a duty consisting entirely of manual labor? In fine, is it a new privilege to the bank for the Government not to receive its notes in a manner productive of great public evil, because it will combine a benefit to the bank with the public good? Are they not mere modifications of existing privileges, or the exclusive exercise by Government of its own rights, for the public advantage?

The statement annexed marked A will show the evil and embarrassing effects of the existing regulation, when the notes of the offices to the South and West were freely issued, on the distribution of the capital of the bank. It will appear from it, that, at the date of that statement, notwithstanding great exertions had been made to place and keep capital at Boston, the effect not only failed, but that the office at that place had less than no capital by $372,000—that is to say, that the bank was indebted to it that sum; and that the office established in the great commercial city of New York had no more than $245,000 of the immense capital of the bank.

The statement annexed marked B will show the immense amount of the branch notes which have been redeemed where they were not payable.

Accompanying this communication, the committee of Congress will also receive a list of the stockholders* of the bank on the 1st October, 1820, which will enable them to see who are now the stockholders; from which it will, it is believed, appear that they have been justly characterized by the memorial.

A.

Distribution of the capital of the Bank of the United States, May 28, 1819.

Portsmouth,	$117,678 70		Lexington,		$1,502,388 44
Providence,	335,208 54		Cincinnati,		2,400,987 30
Middletown,	255,985 11		Louisville,		1,129,009 00
New York,	245,287 81		Chilicothe,		649,858 83
Baltimore,	5,646,325 28		Pittsburg,		769,031 36
Washington,	555,737 97		Philadelphia,	$13,418,742 96	
Richmond,	1,760,502 88		Deduct this sum due to the office at Boston,	372,825 79	
Norfolk,	861,764 16				
Fayetteville,	677,963 81				13,045,917 17
Charleston,	1,935,042 35				
Savannah,	1,420,543 45				
New Orleans,	1,664,596 47				$34,973,828 63

This statement of the capital at Philadelphia is merely nominal, if considered as a capital for the proper operations of banking, as in the above sum are embraced all the property and debts due the institution, including therein the five per cent. stock which the Government subscribed, debts due by State banks, &c.

It is proper to add, that, since the date of this statement, the necessary restraint put upon the issues of the notes of the offices to the South, at seasons when the exchanges are unfavorable to them, and upon those of the West, at all seasons, the exchanges being always unfavorable to them, has enabled the bank, by great efforts and great vigilance, to place and keep adequate capitals at all points.

B.

The following sums, in branch notes, received at the Bank of the United States, have been disposed of as follows:

Offices.	Returned to offices.	Notes of offices destroyed.	Notes of offices on hand.	Total redeemed at parent bank.
Portsmouth,	25,310	100	2,775	28,185
Boston,	32,575	142,655	3,215	178,445
Providence,	21,640	570	1,780	23,990
Middletown,	42,920	920	10,885	54,225
New York,	373,490	812,330	29,240	1,215,060
Baltimore,	2,111,405	214,540	1,730	2,327,675
Washington,	3,467,370	28,375	54,885	3,550,630
Norfolk,	451,550	13,520	18,725	483,795
Richmond,	922,439	9,610	16,120	948,169
Fayetteville,	301,308	259,980	7,190	568,478
Charleston,	611,799	128,580	12,850	753,229
Savannah,	969,055	479,440	11,730	1,460,225
New Orleans,	420,115	195,010	30,040	645,165
Louisville,	27,550	222,210	94,340	344,100
Lexington,	170,280	379,500	84,800	634,580
Cincinnati,	198,000	492,540	119,010	809,550
Chilicothe,	26,000	227,360	33,850	287,210
Pittsburg,	248,750	290,790	41,410	580,950
	$10,421,556	$3,898,030	$574,075	$14,893,661

* The list is omitted.

To the foregoing amount of - - - - - - -	$14,893,661 00
there ought to be added this amount of post-notes issued by the parent bank, and destroyed, because they were used in the Southern and Western States in lieu of branch notes, - - -	5,528,981 96
Amount redeemed, - - -	$20,422,642 96

The sum thus redeemed is exclusive of considerable sums in branch notes, received at offices other than those which issued them, and which were not returned through the parent bank, but directly from the offices which redeemed them to the offices which had issued them.

JAMES HOUSTON, *Assistant Cashier.*

BANK OF THE UNITED STATES, *December* 7, 1820.

16th CONGRESS.] No. 609. [2d SESSION.

PROTECTION TO MANUFACTURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 15, 1821.

The Committee on Manufactures, to whom have been referred the various memorials praying for and remonstrating against an increase of the duties on imports, respectfully report:

That they have directed their best attention to the subjects submitted to them by the House, and feel it their duty to state their views fully and freely, so that it may be enabled to act with promptitude. It is certainly time that the propriety of extending protection to the objects now claiming it should be finally settled; the nation expects, and their interest demands it.

It is not a matter of very great consolation to the committee to know that, at the end of thirty years of its operation, this Government finds its debt increased $20,000,000, and its revenue inadequate to its expenditure; the national domain impaired, and $20,000,000 of its proceeds expended; $35,000,000 drawn from the people by internal taxation, $341,000,000 by impost, yet the public treasury dependant on loans; in profound peace, and without any national calamity, the country embarrassed with debts, and real estate under rapid depreciation; the markets of agriculture, the pursuits of manufactures, diminished and declining; commerce struggling, not to retain the carrying the produce of other countries, but our own. There is no national interest which is in a healthful, thriving condition; the nation at large is not so; the operations of the Government and individuals alike labor under difficulties which are felt by all, and for which some remedy must be discovered. It is not a common occurrence in the history of nations, that in peace the people should call on the Government to relieve their distresses; the Government reciprocate the call, by asking the people to relieve theirs; the resources of both exhausted; both marching to poverty or wealth (as opinions may vary) in the same road, on the same principles; their expenses exceeding their receipts; unable to discover, or unwilling to develop, new sources of wealth or industry; pursuing theories too far, or not far enough; too much or too little guided by the opinion of foreign authors and reviewers or domestic statesmen, (as each mind may fancy;) unmindful of the policy which has secured the great interests of other nations, or unable to devise a better for ours; too unwise to profit by the lessons of experience; too wise to need them, or unable to agree as to their dictates—we are certainly not at that point of public or private prosperity which can be a source of satisfaction. Others "rejoice at the beams of peace" which bring their attendant blessings; but, if the people of this country may judge of the five next by the five last years, war will be peace to them. Five years of peace on the continent of Europe have nearly repaired the ravages of twenty-five years of war; four years of peace in this authorized the official declaration "that but few examples have occurred of distress so general and severe as that which has been exhibited in the United States."

For the first twenty-two years we enjoyed all the advantages of peace at home, and war abroad; we prospered amidst the distresses of others. But it ought not to be said of a republic that its institutions are calculated only for a state of foreign convulsion; that it can flourish only when others suffer. Our history justifies the observation that our prosperity is in a ratio inverse to that of Europe; when it is in a state of convulsion, we rise to greatness in proportion to its throes; its repose causes a revulsion which shakes all our interests to their foundation. If it be really true that we have adapted our systems to a state of war in Europe, that they are inconsistent with the relations which flow from general peace, it behooves us to pause, and ask if this is a prudent basis for legislation? if it is not a bold and a dangerous experiment to make all our calculations on a state of things which no longer exists, and was forced and unnatural? We are too apt to think the events of our own times common ones. We become familiarized to them by their continuance, and cease to appreciate their magnitude. History has never presented to our contemplation such a succession of great events as in the last thirty years. Future generations will wonder at them, and wish they had occurred in their days. We, under whose observation they have passed, bestow less of our attention to their nature, and are not sufficiently convinced that, in proportion to their importance, their recurrence is less probable. When the fancy or pride of the historian shall have swelled them beyond truth, those which we now contemplate with so much admiration will lose their interest. An imported head of antiquity, which may have been on the shoulders of Pompey, excites more curiosity than the heads of greater men whom we have all seen: future ages will look more to that of Washington. It is not for curiosity alone we look to other ages and other countries; we eagerly search the records of ancient republics for the rules of government and the lessons of experience; we could better profit by the examination of our own; posterity will look to this for example. Other nations have followed and now profit by our political institutions, but all shun and avoid our internal policy, our principles of economy, and national interest, because our experience has proved their fallacy; our moral influence still operates every where but at home; we alone are unjust to ourselves, unwilling to profit by our own practice. The present Cortes of Spain, at the moment of assimilating their religious and political establishments to ours, evince, by their corn laws, tariff, and commercial regulations, that our history has been instructive to them; when it shall prove so to ourselves, it will not be thought unsafe or unwise to build our systems of revenue on domestic and not

foreign industry, on the foundation of our own laws, internal production and internal employment. As to stability, it is the difference between the waves and the land; as to certainty, between the return of the seasons and the fluctuations of foreign regulations; as to the means of consumption, between the steady demand for the surplus of labor and production, and the one which varies with every importation. History does not furnish another instance of a nation relying on the importation of goods as the main and almost exclusive source of revenue. It has now become more like the daring throw of desperation than the settled result of financial knowledge, or the deliberate deductions of reason. In every other nation, agriculture, manufactures, and commerce have been deemed intimately connected, each necessary to the growth and wealth of each other, all essential ingredients of national happiness; in ours, there is said to be an hostility deep, inveterate, and incurable. To every individual among us, it is the first lesson of economy to earn more than is expended, to sell more than is bought, to export more than import; yet this is said to be bad policy for a nation. It has been deemed sound policy to bottom the public resources on the consumption of the people, and that the articles of that consumption should be furnished from abroad. Thirty years of experience has tested the wisdom of our measures; they may suit a state of war, but are ruinous to us in peace. It is verily believed that the last five years of European peace have taken from the resources of the people more than was acquired in twenty-two years of European war; that, if the debts of the country were deducted from the value of the property, the nation is poorer than in 1790. If this be thought a bold assertion, the committee beg that its correctness may be decided, not by general exclamation, but by practical observation and calculation. Our population has increased nearly three-fold: have our exports increased in proportion? The following statement may not be without instruction:

Exports for the years 1790 *and* 1820.

Exports.		For 1790.	For 1820.	Increase.	Decrease.
Pot and pearl ashes,	tons,	6,280	8,625	2,345	
Beef,	barrels,	62,371	53,891	-	8,480
Flour,	barrels,	619,681	1,177,036	557,355	
Fish, dried,	quintals,	383,237	321,419	-	61,818
Fish, pickled,	barrels,	57,424	87,916	20,492	
Flaxseed,	bushels,	409,444	220,914	-	188,530
Indian corn,	bushels,	1,713,241	533,741	-	1,179,500
Pork,	barrels,	26,635	44,091	17,450	
Rice,	tierces,	73,329	71,663	-	1,666
Tobacco,	hogsheads,	101,272	83,940	-	17,332
Tar,	barrels,	51,044	38,176	-	12,868
Pitch,	barrels,	3,818	3,798	-	20
Turpentine,	barrels,	58,107	75,749	17,642	
Wheat,	bushels,	1,018,339	22,137	-	997,202

It would be descending to minuteness to pursue the comparison to all the items of our exports; the general result would not differ from this specimen. In cotton, there has been not only a prodigious increase, but as it were a new creation; the value of this article exported is to the amount of all our domestic exports as twenty-two to fifty-one. It exceeds all the other agricultural productions of the country, but can be raised only in the southern sections; to them and the nation at large it is of infinite interest; it relieves the general gloom; but to sixteen States it affords no profits, except by carrying and consumption; it furnishes no foreign market for other productions.

If the amount of exports be a test of national wealth, if agriculture be an interest worthy of national attention, this presents a serious picture of our progress: it ought to be well examined by every farmer who cannot raise cotton. So far as the exportation of domestic produce is the support of commerce, so far the picture applies, and the merchant must seriously examine it. So far as the ability to consume productions imported from foreign countries depends on the quantity of ours exported, the financier must look to the prospects of the revenue; and in its effects on all the interests of the nation, the statesman has much for contemplation. When he has compared the imports with the exports, he can well account for the following official view of our situation:

"The currency of the United States has in three years been reduced from $110,000,000 to $45,000,000. This reduction exceeds 59 per cent. of the whole circulation of 1815." "All intelligent writers upon currency agree that where it is decreasing in amount, poverty and misery must prevail. The correctness of the opinion is too manifest to require proof; the united voice of the nation attests its accuracy. As there is no recorded example in the history of nations of a reduction of the currency so rapid and so extensive, so but few examples have occurred of distress so general and so severe as that which has been exhibited in the United States." [Treasury report on the Currency, p. 496.]

Without inquiring whether the state of the currency is a cause or an effect, it is enough to know and feel the melancholy truths thus avowed. Why are these things so? The sea, the forest, the earth, yield their abundance; the labor of man is rewarded; pestilence, famine, or war commit no ravages; no calamity has visited the people; peace smiles on us; plenty blesses the land. Whence, then, this burst of universal distress? In former ages, seven years of plenty would feed seven years of famine. Plenty was a blessing, not a curse; it seems reversed in the present. Our last five years have been well favored and fat fleshed, our corn been rank and good, but our individual and national resources are "withered, thin, and blasted with the east wind;" "our full corn has become blasted, our fat kine poor and very ill favored and lean fleshed, such as we never saw before in all the land." When the bounties of Providence fail to prove beneficent in their effects, man must be perverse or Government unjust. Past the thirtieth year of our existence in the present form, approaching the fiftieth of independence, and, counting from that of its recognition, we have had fewer months of war than years of peace, yet abundance cannot relieve our wants; the market for the one, the supply of the other, are neither within the control of the people, or directed by the Government. A Government, too, of the people's choice, bound to reward filial attachment by national protection, it was not instituted—it is not supported—to suffer all the interests of the nation to be writhing under foreign policy, and, while imploring relief, to be sunk under the appalling answer of "regulate yourselves."

When Government calls on the people for revenue, they will answer "let us alone." If legislation will neither lead to wealth nor relieve from distress, it must not legislate the people out of wealth or into poverty. When plenty is attended with the effects of famine, when superfluity will not avert wants, and peace to us produces all the miseries of war to others, there must be some deep and radical error; it must be most powerful in its operation, and be inherently fixed in a system which thus involves a whole nation in general distress. History affords no example of a people impoverished while in the full fruition of health, peace, and plenty; it has fallen to the lot of ours to furnish a new item to its records. Elsewhere, an overflowing treasury indicates national prosperity; with us, the

two years of the greatest revenue have been selected as the epoch which consummated our embarrassments. There are sources of taxation which will supply the public wants from the people's surplus; those sources are traced in every country but this. Our system of revenue is founded on the markets and consumption of the country, and both are dependant on foreign power and interest. Success may justify the bold experiment at a time when moral and political principles have been deranged by a great revolution; but when pursued in a time of settled order and general repose, it savors not of wisdom or justice. It failed even in the age of wonders; it would be a new one, indeed, if it succeeded now.

It cannot be unwise or unprofitable to search for the causes which have brought the country to its present condition. The evils, being neither local nor partial, can be of no ordinary kind; their origin cannot be in the people. It could not be their intention to blast the interests of agriculture, manufactures, and commerce, for they are their own; to exhaust their public treasury, for that must tend to their oppression; it could not be in their power, if their Government was wise enough to discover the tendency, and strong enough to control their operations; and if it has not wisdom to discover or strength to direct the true interests of the nation, it cannot be such a one as its founders intended to secure to their posterity. It is a poor compliment to their wisdom as well as ours, a poor recommendation to republican forms and principles, if this Legislature cannot "provide for the common defence and promote the general welfare;" we trust it will be never said that it shall not by its efforts deserve success. If the fault is not in the people, it must be in the Government, either foreign or domestic; if foreign systems have produced these lamentable consequences, it cannot be necessary to enforce the necessity of their counteraction; if a domestic system, or the want of one, has led us to our present state, its abolition, or the adoption of a new one, is a solemn duty due to our constituents. If the majority in our councils should think that a change of policy may be dangerous, it must mean domestic; their patriotism would forbid the imputation of their being unwilling to relieve the country from the operation of foreign policy, if that should be the cause of our grievous condition. If it is not foreign, it must be domestic; and they ought to be well assured that their course is consistent with reason and sanctioned by experience. If it be true that our present legislation is calculated on a state of war in Europe, that it has then but partially succeeded, and wholly failed in peace, would seem but the natural connexion between cause and effect. The change of all the relations on which a system is built must affect the system itself; it is in vain to expect a uniformity in its operations when all the moving principles are reversed. We build our revenue on consumption, yet expect it to be permanent while consumption is in a consumption; we found the people prospered when exportation gave a market for their surplus, and look for a continuance of prosperity when the sources of it are stopped. The expenses of this Government increase with the population of the country; yet, while expenditure is on the advance revenue is on the decline. Ours is the last Government in the whole community of nations which is willing that the markets for the production, the establishments for fabrication, should be in a foreign country, under the influence of foreign Powers; we give efficient protection only to the means of distributing our wants. We seem not to follow the experience of ages, but to be making a daring effort to persevere in the assertion of principles exploded by all national practice; yet, in their application to one great and important branch of national industry, we have discovered and corrected our error (if error it may be called) before any practical injury was sustained. During five-and-twenty years we adhered to our discriminating duties on tonnage; they probably aided our commerce during the French revolution; but it was foreseen they would injure it when the occupations displaced by that event should have obtained their accustomed employment, when the interest of nations would suffer them to pursue their policy; and only fourteen days elapsed from the promulgation of our treaty of peace before we repealed our whole system of discriminating duties as to the ships of all nations who would repeal theirs. We offered reciprocity to all the world; but where reciprocity was refused, the discrimination remained; it still remains, and this Congress adheres to the same rigid course which is pursued towards American shipping. The committee deem it not improper to recommend the lesson of its own experience; it is but for this Congress to apply its own principles to another co-ordinate and equally important branch of national industry. Laws founded on war will not suit a state of peace in this more than any other. Let there be no system of restriction, but one of reciprocity—of liberal interchange; as one of the great family of nations, let our laws keep pace with theirs in liberality; let them even make the first friendly offer.

The act of March, 1815, is our own definition of free trade. It declares that reciprocity of duties is the true principle by which to ascertain whether a system is restrictive or free. This act has met with the approbation of the whole country. So far as the reciprocity has been obtained, it has aided our commerce; and all we ask of others is the adoption of this principle. But, though we repeal our laws, it is only conditional—"such repeal to take effect in favor of any foreign nation, whenever the President of the United States shall be satisfied that the discriminating or countervailing duties of such foreign nation, so far as they *operate to the disadvantage of the United States*, have been abolished." Reciprocal duties are within the spirit of this law; its policy is wise and sound; its application to the interest of agriculture and manufactures, it is believed, would relieve their distresses. That the exclusion of the productions of our soil operates to the disadvantage of the United States cannot be denied. Reciprocal duties on theirs is our practical commentary on the text. It is, then, most respectfully submitted to the House that it, at least, deserves the trial whether the same rule ought not to be applied with equal force to the raising, the making, as well as to the carrying of our articles of consumption. Year succeeds year; our troubles increase. For the five years of the new state of things, no changes have been made in our laws in relation to any concern but commerce; each year finds them worse. At the last session the attempt to effect a change was called premature; and it seems that even now the convenient season has not arrived. The measures then and now proposed are said to be ruinous to the great concerns of the country. No better or other plan is proposed for their relief, when all admit the evil; some must offer a remedy; those who object to the plans of others should present some of their own, or prove that none is necessary. If the country labors under distress, the cause should be discovered as well as the remedy. If it is not to be found in the declension of our agriculture and manufactures, then where is it? If their revival will not effect the cure, then what will? The people of this country expect that something will be done; and as the measures must originate in this House, it assigns the various subjects of consideration to the appropriate committees. No measure has yet been proposed by the Committee of Ways and Means to provide relief to the treasury, or by those on agriculture and commerce to relieve those interests. It has thus devolved on the Committee on Manufactures, not to act in concert with the other committees of this House in devising the measures which may afford, by their harmonious co-operation, equal relief to all the suffering interests of the country, but, unaided, as it were, on a forlorn hope, to look for the means of assistance to the interest peculiarly confided to their care. The committee do not shrink from the arduous duties. In their discharge they find great relief in the conviction, which results from their investigations, that there is no great interest of this nation distinct from another; that there exists among them a most intimate union, connexion, and dependance; that, in our happier days, they were as little divided as they are now in those of their despondency. If all now flourished but one, it might well be doubted if it would be proper to risk their safety, by attempting a change. But the committee think there can be no danger in moulding our system into such shape as is necessary to meet the changes in

its foundation; to apply the same principles, which have been approved of by every Congress since the peace, to all the sources of national industry. We think them the heads of tributary streams which form the great river of public prosperity. We know of no dividing ridge which prevents their union. All history, past and present; all experience, foreign and domestic; the opinion of the statesman in council, and the farmer in the field; the coincidence of national laws and national toasts, connect agriculture, manufactures, and commerce. We are not aware that this union is forbidden, or ought to be dissolved by sound legislation. Believing it exists, and is indispensable to national happiness, we beg leave to present a bill, which is the offspring of our judgment, guided by no attachment to one interest at the expense of another, by no hostility to any system, except such as "operates to the disadvantage of the United States."

If common defence requires a revenue to provide the means, that revenue should be as certain as the expenditure, permanent as the wants it is designed to meet, built on the consumption, supporting and supported by the industry of the country. If the means of consumption depend on the facilities of exchange, a market must be secured to agriculture; provisions and raw materials must have a permanent and steady demand; manufactures must exist somewhere to furnish and secure this demand, and the supply of the articles for use which commerce must distribute. Then another question occurs: Where should these means exist and be in operation? In our own country, in the hands of our own citizens, under the control of our own Government: these appear to us the essence of independence. The materials for building and equipping our ships, clothing and arming our soldiers and sailors, consuming the surplus, and supplying the wants of the people, are items in the general system of common defence and general welfare. It is time to know whether this country can or ought to command them. The effects of foreign command have been tried; it is but a common mode of coming at truth to try the domestic.

National interest and national pride have already been put to a severe test; it is yet grating to national feeling to find the benefits of our laws accruing not to our own citizens, but to a people who have no attachment to our institutions, whose interest is adverse to ours. The raising of raw materials, and their conversion into manufactures, have, in all other countries, been deemed a source of general wealth; the placing the raiser, the manufacturer, and the consumer as near to each other as possible, has been in every trial found to be the advantage of all. The supply of the want of manual by the labor of machinery is a practical remedy for a sparse population, all tending to increase the certainty and facility of exchange, which promote alike all the branches of national industry. The country is not known where commerce has not grown with manufactures, and agriculture been nourished by both. In this we have not paid as much attention to internal as external industry, yet it cannot be less important. We have built our revenue on importations, but have been indifferent about securing the means of purchasing imported articles; our custom-house credits are a bounty to the importer, yet it seems of no concern whether that importer is a resident or an alien, whether the profits of importation are scattered within the country, through the thousand channels of domestic expenditure, or sent abroad to produce the same good effects to others. If the wealth or poverty of a nation can be ascertained from its abundant or diminished currency, it becomes most interesting to know what gives it amount and activity; it must be industry, employment, and the resulting profits, of which currency is more the effect than the cause. The flood of importations has lessened their employment and the sources of gain; currency is deprived of its occupation; the pursuits of active industry, profitably employed, require some common medium to pass from hand to hand, to go the rounds of society and continue active till demand for it ceases. In its course through the great circle, the same sum may pay twenty times its amount of debts, be the foundation of twenty new contracts, furnish a market for twenty different products or employments. It thus performs, in its twenty operations, the same duties that twenty times the same would, if confined to one. As a means of paying for imports, its movement is in a straight line to the merchant as an article of remittance; it is only on its arrival in a foreign country that it travels the rounds of employment. In the interior, the dollar which reaches the store does not come back to the farmer, mechanic, or laborer; expended in a manufactory, it returns again for provisions, materials, and labor, current; while it can find employment affording and receiving it, it passes through every occupation; from the store it has but one. It is the difference between circulation and remittance, furnishing employment at home or abroad. Profits being the life of currency, currency being the criterion of general prosperity, the committee will not further examine whether it is better for the nation that those profits should accrue from domestic sources and to the residents of our country.

The estimate of the Treasury Department is, that, in three years, the currency of the country was diminished $65,000,000, counting from 1815; that this diminution has produced unexampled distress and misery. How has it produced this state of things? If the currency has been thus reduced, it has been from the want of employment. There is, perhaps, more specie in the United States than at any former period, but it is not currency while it is unemployed; when it does not pass from hand to hand, it is no more currency than an equal value of silver or gold in ingots, or the boxes or vaults of the bank which contain it. Bank notes are currency when they are current and in circulation, but while they are in the bank are no more currency than if they had not been signed. The diminution of the currency is, therefore, not owing to its extinction, but to the want of use and employment. There is now but the one duty for it to perform—remittance. There is no want of capital to enliven the pursuits of agriculture, to push manufactures into operation, or to give activity to commerce. But there is no employment; the materials of currency are abundant, but no occupation to set them in motion; $65,000,000 has been withdrawn from circulation, because there has ceased to be any cause to produce action. Coin, or bank notes, or both, are currency when current and in action; they cease to be so when there is no use for them. In 1815, the production, fabrication, and distribution of the country, kept $110,000,000 of currency in active operation; the business of the nation required it. Now it is reduced to $45,000,000, for this plain reason—the business of the country requires no more. Business has decreased 59 per cent.; embarrassment and distress have increased in the same ratio. The history of those three disastrous years will tell us the kind of business which has so decreased as to bring about such consequences. It is not the business of importation of foreign goods, for it was never so great; if they add to a nation's wealth, riches have indeed flowed over the land without stint. It is not the business of remittance; so far as that is an employment for currency, it still continues in full activity, requiring not only money, but bank stock, public stock, book debts, notes, bonds, judgments, and bankruptcies, to pay the balance against us. It is that rectilinear current which makes the merchant only the conduit to the great foreign reservoir. Unless, then, it shall be first made to appear that the state of our foreign trade is such that the balance-sheet is in favor of our merchants, that the foreign manufacturers and exporters are the debtors and not creditors of our merchants, until they send out more than they bring home, foreign importations call for more currency. If, however, on this important subject of the balance of trade, we should labor under an error, it can easily be corrected by the exhibition which every importer has it in his power to make, which would add to his credit at home and abroad, which would remove deep and dangerous delusions, quiet the public fears, and end discussions which will never cease without some practical test. It becomes here indispensable to settle it. If the balance of trade is against us, and more remittance is required, then there is one employment for currency left, and the reduction is not for the want of importations to keep it active; if, on the other hand, there are no remittances due, no employment for currency, the falling off in importa-

tions may, in such case, be put down as one leading cause of the decrease of currency and growth of public misery. It solves at once the great question: What is that employment of currency which adds to and secures general wealth, and guards against poverty—imports or exports, foreign or domestic manufactures? It is the subject on which volumes have been and will be written, public opinion and the national councils divided, and on the correctness of the decision of which all the public and private interests of this nation depend. Authors, reviewers, essayists, statesmen, and printers can never convince each other by any thing depending on reasoning. But there is one book that contains the convincing and conclusive argument which none can resist—the importer's leger. If the excess of exports over imports is the measure of a profitable trade, the merchant's leger will show it, being the only person concerned in the trade; if he pays for the goods imported, his and the country's profits are the same. Now, this book shows whether the excess of imports or of exports is the profit. If he has paid for all imports, and has a balance of goods on hand, or of money due him, the trade is profitable. To settle at once this great controversy, to take a bond on fate, to exhibit such a case as will prevent a recurrence of another attempt to induce Congress to pass a law which shall forever destroy agriculture, commerce, revenue, and all the interests of the nation, let the importers of foreign goods proudly exhibit their balances on the credit side if they exist; they must increase their credit, and will convince Congress that importations add to national and individual wealth. The committee would withdraw their recommendation of manufactures when one small item of information should be communicated. For what purpose are stocks sent to Europe? why are foreign collectors seen in our commercial cities? property sold by foreign plaintiffs and assignees, and, probably, not an instance of an importer's insolvency without foreign creditors in the schedule? If the balance is favorable, why is not opposition silenced where it is so easily done? When it is not done, the fair inference is that it cannot be done. It may, then, be taken for conceded that there is yet employment for currency in remittances, and that this has not been the source of its useful or profitable occupation.

This at once solves the great mystery, and settles the great question; it points to that use and circulation which makes the amount and activity of currency the test of general prosperity—internal, not external. It accounts for the eagerness of foreign nations, foreign artisans, merchants abroad, and foreign agents among us, to monopolize that circulation from hand to hand, through the whole round of internal commerce which gives its vigor and profits; for the willingness of all of them to leave to us the miserable and ruinous circulation of currency for remittance to them. Foreign writers and foreign statesmen may well inculcate on ours the doctrine that the excess of imports over exports is the rate of profit; their doctrines are like the profits, sound and solid to the nation that reaps the benefit. Whether it is the one which pays, or the one which receives; the one which holds the coin, or the one which hears it jingle; the one whose currency flows in a torrent-like stream beyond its jurisdiction never to return, or the one whose currency becomes a steady, gentle current, meandering through every occupation within the great circle of national industry, giving use and value to every production, floating it to every market, the state of the currency and of the nation furnishes convincing proofs. It is then no longer left to conjecture the reasons why this country flourished in war, and has become depressed in peace; why the people could then pay the Government twelve millions of internal taxes a year from sources that would not now furnish one. They had a currency; it was active, it reached every man. Manufactures flourished every where within the sphere of their operations; all the agriculture of the country flourished with them; it was depressed only in those parts of the Union beyond their influence. Profits remained where they were acquired; they were impelled out through the arteries, and returned through the veins; each occupation, being healthy and active, aided another; their united efforts were felt by the nation. Currency was confined in its course and variety only by the general mass and complication of the mutual wants of our whole population. And where manufactures are yet flourishing, the same effects are yet felt; the sphere of their action bounds the circle of circulation. Beyond that circle there is scarcely a currency left, except in the cotton-growing States; there it continues, because foreign policy and the interest of foreigners will not suffer its exclusion from a market. But to all the grain-raising States, those abounding in raw materials for manufactures, and population, fuel, and machinery to conduct them, the prospect is gloomy indeed. The fertile soil of the interior and the West produces measureless products; roads, canals, and noble rivers afford infinite means of distribution; but there is no market, no employment. Foreign systems, with unresisted, unchecked sway, have attained the command of our consumption, deny the use of our products, monopolize the profits of converting rough materials into manufactures, and would have acquired the profits of their distribution had this Government "let it alone." Foreign agriculture supplies the materials, foreign industry the labor which produces to the American people their clothing, their utensils, and means of defence against foreign aggression. American materials have no value; American labor has not employment; and the American Government has adopted no system of counteraction, no measure of resisting or defensive policy. If ever a people were groaning under a restrictive system, one of bounties, premiums, privileges, and monopolies, which denies the operation of every one principle of free trade which coerces occupation and paralyzes industry, which prohibits a foreign market to our productions, and forces every thing foreign on ours, thus depriving us of both, it is the people of whom we are the representatives, who have honored us with their confidence, and confided their interests to our patriotism. If this system was the offspring of our legislation, error of judgment might be an apology for its commencement, and a disposition to make no sudden changes for its continuance; that the moving motive for its enactment was the good of this nation; a conviction that it was the best mode of drawing, in fair exchange, the resources of others, retaining our own. But when we admit this is a foreign system, enacted by foreign Governments for the benefit of their subjects, not of our citizens—as the means by which to draw our wealth to them, and not to throw theirs to us, we have a serious account to render to a suffering people. Commerce has been rescued from the grasp of foreign usurpation by legislation—so far, at least, as granting all that has been asked. Agriculture and manufactures are struggling, unaided, under a weighty pressure; we all unite in wishing them well; many bestow their blessings, rejoice in their good prospects, feel and acknowledge their importance, glad they are doing so well, and hope they will do better. The commercial codes of Europe are, at the people's expense, laid on our tables; there is not a production of our country at which some of them are not directed; not a branch or source of national industry which they do not attempt to destroy: this is the pressure, this causes the struggle which, in every district, some of us witness; to let them alone is to leave them in a foreign grasp. Why bestow our blessings or ever breathe a wish for the success of our industry, if it is not a national contest? If it be the nation's and the people's cause, why will not the Government that has an eye to pity stretch forth its arm to save? In no small portion of the nation, oceans, roads, canals, and rivers afford little else than the means of importing and distributing foreign productions; the land, of little other use but a resting-place on which to consume them. Thus have "our soil and our seas" already been usurped from those to whose use they were designed, and to whose use it is our duty to secure them. The consummation of foreign has left no good foundation for the fear of domestic usurpation. We have told the people that reciprocal duties are no restriction—do not impair free trade. We have proclaimed it to the world that reciprocity is the basis of our legislation; that discrimination shall continue while reciprocity is refused. We have given a pledge to the nation: its principles embrace all its interests; it can be redeemed only by general and equal protection. A people struggling on the ruins of all their interests

have a right to ask, nay, to demand, much of their Government; to review its past and revise its present systems; to seriously examine whether they are built on the experience of other nations and other times, on tried, established, and practical principles, and justified by our own; whether their success does not depend on the reversal of every rule of individual economy when applied to national, in dissolving the chain which connects causes and effects; whether any thing less than a total change in all the laws of trade, the principles of intercourse, the relations of society, (we might almost say the order of nature,) can make a nation wise by the means which must make its component parts poor, when all its interests have declined, and its treasury become emptied; whether they shall be left to regulate themselves, or something done to revive and replenish. Providence has been bounteous in furnishing all the means; have we done our best in using them to secure private and public happiness? This question must be answered to the people. If any one will propose a measure in his opinion better calculated to "provide for the common defence, and promote the general welfare," he ought not to withhold it. If he has none, we most respectfully ask the House to give its sanction to the one the committee believe lays the foundation of efficient relief, and contains no principle injurious to any item of national industry.

The committee deem it unworthy of themselves to repel any suggestions of hostility to the revenue or agriculture of the country. Did it depend on their own feelings, they would deem it equally so as to commerce, if it would not be thought to indicate too much indifference to the language of the memorials submitted to their consideration. Some avowal is due to public opinion, which has, in some measure, countenanced the belief that commerce and manufactures are rival, if not hostile interests. We publicly disclaim such belief, and avow the conviction that there is a union in their true interests, and ought to be a harmony in their movements; that they are allies and friends by nature; members of the same great society; twin children of agriculture, looking to it as its source, aiding and extending it by friendly co-operation. But commerce, as the child of agriculture, the sister of manufactures, is exporting, not importing: by reversing her employment, she becomes a stranger, expatriated from her own country, naturalized in some other. Imports of articles congenial to our soil are the bane of agriculture; the employment of foreign industry on fabrics to which our own is competent, is death to manufactures; and both exhaust the national resources. No interest has felt it more severely than commerce; and convinced, by the evidence of experience, she has, in our records, entered a verdict that importation is the small, exportation the great source of her prosperity. This Congress has rendered its judgment on the verdict,* and this committee will not arrogate the power or express a wish to reverse the decision. It fully accords with our convictions of national interest and public defence. If the foreign export commerce requires further protection, by resisting foreign restriction; if it can be assisted by opening new sources, or removing obstructions from existing ones, we pledge ourselves, that though commerce may find in this House friends who can better discern, and, possessing more of their confidence, will be more enabled to co-operate with those engaged in its pursuits, none will more zealously lend their assistance than the Committee on Manufactures.

By those who will read, it shall not be said that we have not listened to and examined their remonstrances; it was our duty to well weigh their many objections, to yield to them, or attempt their refutation: in doing so, it has been not with the expectation that we could produce conviction. We are not vain enough to think that the settled opinions of those who have not formed them for their own sole guidance, but to give an impulse to others, will be changed by any efforts of ours; they are more directed to minds as yet open, as well to justisfy ourselves as to lead others to inquiry; to elicit information; to draw out the lights of experience, and appreciate the principles of political economy, as their application may best suit the interests of the country. In the conscientious discharge of our duty, we are conscious that some portion of the nation has viewed our conduct with suspicion and distrust, perhaps with a hostile feeling. Though we know that the hand of friendship, when offered by us, will be spurned, it shall never be raised for aggression; the first law of nature authorizes it for defence.

Having no predilection for foreign importations, whether of goods or opinions, we have thought it a duty to recommend the adoption of principles which have received the approbation of our best statesmen; on which this Government commenced its operations; which, when pursued, have produced prosperity; when abandoned, have left us in adversity. Disregarding theory, we have endeavored to discover facts; less anxious to be consistent with political logic than practical results; less desirous to force facts to conform to reasoning, than to apply reasoning to facts. Believing that the difficulty in the ascertainment of the true and sound principles of legislation is not in their mystery, but simplicity; in not being above, but adapted to common understandings, we have investigated the matters submitted to us under the conviction " that error hath proceeded from too great a reverence and a kind of adoration of the mind and understanding of man, by means whereof men have withdrawn themselves too much from the contemplation of nature, and the observations of experience, and have tumbled up and down in their own reason and conceits. Men sought truth in their own little worlds, and not in the great and common world; for they disdain to spell, and so, by degrees, to read in the volume of God's works; and, contrariwise, by continual meditation and agitation of wit, do urge, and, as it were, invocate their own spirits to divine and give oracles unto them, whereby they are deservedly deluded." The useful discoveries in science have been more owing to accident than the researches of philosophers. "Logic doth not pretend to invent sciences, and, therefore, we see that they who discourse of the originals and inventions of things refer them to chance, not art. You will rather believe that Prometheus first struck the flints and marvelled at the spark, than that when he first struck the flints he expected the sparks." The needle points to the pole, philosophers cannot tell why; they knew there was electricity and lightning, but could neither discover their nature nor disarm the latter of its terrors; a kite, the schoolboy's plaything, taught it to Franklin. The mind that searches to be enlightened, and would avoid benightment, will find, " the truth is, they be not the highest instances that give the securest information, as may be well expressed in the tale so common of the philosopher, that, while he gazed upwards to the stars, fell into the water; for, if he had looked down, he might have seen the stars (and kept out of the water) in the water; but looking aloft, he could not see the water in the stars. So it cometh often to pass, that mean and small things discover great better than great can discover small; and for that cause we inquire into the nature of a commonwealth, first, in a family and the simple congregations of man and wife, parent and child, master and servant, which are in every cottage. Even so, likewise, the nature of this great city of the world, and the policy thereof, must be first sought in mean concordances and low portions." Tracing, therefore, the true principles of political economy to the conduct and the interest of the individuals who compose the nation, we feel abundantly satisfied that we cannot err in their adoption.

We are obliged to trespass on the patience of the House, but hope they will not deem it a waste of time to notice the prominent objections which have been urged.

Protecting duties are unconstitutional.

One objection has been made, which, if valid, will preclude all inquiry into the policy or necessity of the proposed measures; it is, that, by the constitution, there is no power given to Congress to impose any tax or duty for

* Navigation acts.

any other than purposes of revenue. This objection has not been raised to meet a case of fancy, or one which might possibly exist; but was urged in debate during the last session, and has been renewed in various memorials presented at this, in opposition to the bill which passed this House. Being, therefore, applied to a definite measure, its validity can be examined without ranging through a variety of supposable or possible cases, or being compelled to examine whether a power which was intended to be practical—the great one on which the existence of the Government depended—might be extended to an arbitrary or illimitable extent.

The power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes," is unlimited in its extent, confined to no particular objects or purposes, and may fairly be said to be commensurate with all the objects of commercial regulation, except those embraced in the fifth clause of the ninth section of the first article of the constitution. The power to lay and collect taxes, duties, imposts, and excises, has no other limitation, except that they shall be uniform, and capitation or other direct taxes shall be laid in proportion to the census. If there are any of the powers which are confided to the General Government by general comprehensive terms, which require no latitude of construction, which were intended and ought to be supreme, they are the regulation of commerce and the imposition of taxes. To derogate from these powers; to interpolate uses, purposes, and objects, beyond which Congress should not pass; to impose constructive limitations where the constitution has given the unlimited power to act, would be as subversive of its principles and the security of the Government as to assume powers by construction where the constitution was silent, and the States had made no delegation. The uniform practice of this Government, the acquiescence by the States, would seem to leave no doubt as to the legitimate power of Congress, in the regulation of commerce, to prohibit exports by an embargo, or imports by non-intercourse laws, making the prohibition general or partial, according to the objects to be effected. Foreign vessels are excluded from the coasting trade; the ports of the United States are closed against all British vessels from the British American colonies or islands; and no foreign goods can be imported from those places, even in American vessels, unless the produce of those islands or colonies whence imported. It is unknown to the committee if the States have complained of any of these acts as usurpations, or the mercantile portion of the country have denied either the power to pass or the policy of adopting those which relate to the coasting trade or navigation. The latter operate both on navigation, produce, and manufactures, and exclude all articles. If they are constitutional, it would seem that the admission or exclusion of foreign articles was a matter in the discretion of Congress, to be exercised according to their opinion of the interest of the nation. Whether this exclusion shall be direct and absolute, or be virtually so by the imposition of high duties on tonnage or produce, will probably not be thought a constitutional question; they are but modes of effecting a given object; both are expressly given by the constitution.

In the imposition of duties, it was the early policy of our Government to discriminate between foreign and American tonnage, as well as goods imported in foreign and American vessels; light-money was imposed only on foreign. If it should be questioned whether the object was revenue or protection to our shipping by those laws, this doubt would probably not apply to the act of last session imposing a duty of eighteen dollars a ton on French shipping. This act was called for by petition from our mercantile cities, and recommended by the Executive; its avowed object was to countervail a duty on produce. If the passage of countervailing or retaliatory laws is constitutional, the committee can perceive in the constitution no selection of objects on which alone they may operate. Shipping, produce, and manufactures seem alike within our reach; either might be selected, as it might present to France reasons of greater or less weight for relaxing her system. If a high duty on the importation of her manufactures would be the most efficient and judicious measure to induce her to repeal her duty on our raw materials, our power to adopt it would seem undoubted. If the object of such duty should be the protection of cotton planters or cotton manufacturers, would it not be as legitimate as the protection of the cotton carriers? Whether it shall be extended to all, or must be confined to the one class concerned in this great national staple, is, we think, less a question of power than expediency and justice. In every act of Congress imposing duties on imports an addition of ten per cent. to the rate of duty is imposed on goods imported in foreign vessels. This discrimination is coeval with the Government; the power to make it cannot, at all events, now be questioned; yet none of the laws declare the object for which it was made, but leave it to be inferred as a matter of policy. If the Supreme Court should infer it was for revenue, or the encouragement of navigation, and declare the law valid, it is believed they would not declare it void if they could discern the encouragement of manufactures. If the act of last session, in order to counteract the French duty on cotton imported in American ships, had, instead of adding eighteen hundred per cent. to the duty on French tonnage, added it to French cotton goods, silks, wines, brandies, or other goods; if, to coerce England to repeal her orders in council, and France her decrees, instead of embargo and non-intercourse, our laws had prohibited the import of their manufactures, or imposed additional duties which would have excluded them; if, to counteract the operation of their corn laws, which directly exclude our provisions—their system of impost, which virtually excludes our wool, hemp, and flax—their system of bounties and drawbacks, which frustrates the policy of our impost, so far as it tends to the aid of our manufactures—their navigation acts, so far as their object is to exclude us from the colonial trade, Congress should think it most effectual to aim their measures more at the manufactures of England than her navigation, it could not be well contended that the constitution forbade it; for the object might be the exclusive protection of the shipping and commercial interest. Though the component members and each branch of the Government might concur in the law, there might be much diversity in the motives and objects which brought it about. The motives which would influence the members of this House might be the protection of manufactures; of the Senate, commerce; of the President, agriculture; and those objects be publicly avowed. In such a case, the Supreme Court, which must decide on the constitutionality of this law, would find it no easy task to extract the governing principle. Their difficulties would be increased, if the Secretary of the Treasury should have recommended it as a revenue bill, either by imposing high duties to increase the impost, or a prohibition of the foreign to rear up the domestic manufacture, as the subject of an excise. If revenue is the only legitimate object of taxation, prohibition, or the regulation of commerce, the validity of such a measure would depend on the opinion of the Secretary, for the three branches of Government would, unless supported by him, have passed it for unconstitutional purposes. He has recommended that, if any measure of revenue be adopted at the present session, it be the exclusion of foreign, and an excise on domestic spirits; if Congress should adopt it, it will be hard to decide whether it will most benefit the farmer who raises the grain, the distiller who manufactures it, the merchant who transports the whiskey, or the Treasury which receives the duty. The court, in deciding on the validity of such a law, must do it by certain settled principles of construction, and not their opinion of the exclusive or relative legitimacy of either object; for they, like other men, may lean more to one great national interest than another.

The whole course of our legislation for thirty years affords the highest evidence of the power of this Government to protect navigation and commerce; almost every session has presented practical proof of the conviction of Congress that it is expedient to do it. No one has been hardy enough to deny the power or the policy of encouraging agriculture. But it would seem that manufactures, which in all other countries are cherished as the most valuable offspring of human industry, have become with us a spurious progeny, born with a constitutional maledic-

tion, stern and irrevocable; they must forever be doomed to struggle under legal disabilities, so incurable as to interpose a perpetual barrier to their protection, although all the branches of Government should be convinced that their depression involves the whole country in one common calamity, which would be averted by their prosperity; that it is a lawful object in a system of revenue or commercial retaliation, to reach every other source of the wealth and power of a foreign nation except her manufactures; that it is a duty we owe to the people of this country, to extend the national guardianship over all their other interests, but to thrust this beyond the pale of the constitution and laws. If such is the imperious injunction of the constitution, the committee have not so understood it; what policy or expediency may require is one thing, what the constitution prohibits is another. That instrument designates no national interests in preference to another; excludes none, but throws all alike on the discretion of Congress; legitimate objects of national protection, if in its opinion called for by the public good. This principle gives validity to the laws giving our shipping the monopoly of the coasting trade. Bounties on fisheries, drawback of duties on foreign goods exported, tonnage on French ships, prohibiting intercourse with the British colonies, discriminating duties on tonnage and merchandise, are all constitutional acts growing out of the plenary power to regulate commerce.

It may be proper to ask of those who urge this objection to protecting duties to point out the rate of duty when revenue ceases, and protection begins to become the ruling object; to define the line which shall limit the constitutional powers of Congress, as well as to afford the means of ascertaining the object of a law, and the interest it is designed to protect. The duty on rum is at least eighty per cent. ad valorem. Is this a revenue, or a protecting duty? The duty on coarse cottons is about the same; that on teas is one hundred; on spices, about the same; on nails, sixty; gunpowder, forty; linen, fifteen. It is deemed useless to inquire whether the object in imposing these rates of duties can be so definitely ascertained as to afford any rule on which to limit our constitutional power. The duty on teas can have no other than revenue for its object; the power to impose that tax has never been questioned, for the constitution affixes no limitation to the extent or amount of a tax or duty; it only excludes one, and proposes the apportionment of others. The committee can, therefore, entertain no doubt that Congress may, in their sound discretion, impose such duties on foreign merchandise as shall advance the great interests of the nation. In expressing this opinion, they fall far short of the judicial exposition of the constitutional powers of any Government which is empowered to impose a tax and acts on legitimate objects. Had they gone so far as to say, "It is admitted that the power of taxing the people and their property is essential to the very existence of Government, and may be legitimately exercised on the objects to which it is applicable, to the utmost extent to which the Government may choose to carry it; the only security against the abuse of this power is found in the structure of the Government itself. In imposing a tax, the Legislature acts upon its constituents; this, in general, is a sufficient security against enormous and oppressive taxation. That the power to tax involves the power to destroy, is a proposition not to be denied;" the committee would but echo the solemn opinion of the supreme judicial tribunal of the Union.

Manufactures are injurious to morals, and produce pauperism.

That manufactures tend to destroy the morals of those engaged in them, is an objection which it is believed, has not arisen from the experience of their effects among us. Neither the personal knowledge of the committee, nor the information of those who have formed an opinion from their own observation, would justify the belief that this pursuit or occupation is more prejudicial to morality than any other; no reason can be discovered why it should be, and there are certainly some why it should be otherwise. If idleness is the parent of vice, employment must be the mother of virtue; poverty can be no apology for crime, where subsistence can be obtained by industry. Manufacturing establishments open sources of labor, and give employment to those who are able to earn support in no other manner; affording materials which are beyond their means to procure, and acquiring labor which can be performed by children and others incapable of the fatigues of more active and laborious occupations. It may be thought invidious to draw a comparison between the relative morality of those engaged in the various pursuits of life, and an objection ought not to have been made to any which would compel it, without strong evidence of its being justified by facts; but it has been urged by the opponents of manufactures, and the advocates of other interests, with an apparent seriousness which seems to force it upon the committee to say, that, whatever may be said of manufacturing towns, the morality of seaports is not proverbial. On whichever side the balance may be, it ought not to be forgotten that this is not pressed as an objection against commerce or its protection. If all large towns contain the haunts of vice, which are beyond the power of the magistracy to extirpate, it may not be so much attributable to the pursuits which attract a crowded population as to other causes of a general application. It is not so important to inquire what are the effects in other countries as in ours; there may be local causes, or some growing either out of the peculiar nature of foreign institutions, or the want of similar ones to ours, which may combine to produce different effects. It would not, in other cases, be deemed fair reasoning, that the opponents of manufactures should disclaim the experience and practice of other nations, as affording any evidence of its being our policy to encourage them, and yet press upon their friends an objection, which, though it may be supported by observation abroad, is certainly contradicted by experience at home. But the tendency of manufacturing establishments in other countries to promote immorality may well be questioned; for an eminent author on the police of England has proved, from official documents, that, in proportion to the population, a greater number of crimes are committed in the agricultural and commercial than in the manufacturing districts of that kingdom. If experience, therefore, is to be adopted as the test of the soundness of this objection, it will fail to support it; and it would seem to be capable of as little support by any reasons which could be drawn from the nature of the employment, the entire and constant superintendence which is necessary to the management, or the objects which draw together a dense population.

The manufactory at Waltham is said to employ two hundred and sixty persons, equal to the population of a village containing fifty families. This establishment, then, affords a fair criterion by which to test this objection; it is probably the largest in the Union. The committee are convinced that it would be doing great injustice to the proprietors and manager to indulge for a moment the belief that any of its operations have given rise to, or even color for, any imputations as to its immoral tendency; and, having no reason for thinking that other less extensive manufactories have given greater cause for this objection, we cannot refrain the expression of our belief that it has arisen from other reasons than its practical application to our establishments.

Connected with this, and equally, in our opinion, ill-founded, is the allegation that manufactures tend to increase the number of paupers. The example of England is urged with much earnestness as evidence of the fact; but we are unable to account for the increase of paupers by the increase of the means of employment. If new and additional objects of occupation are presented; if women, children, and old men can be employed in a manufactory, and employed no where else, it must decrease the number of those who cannot earn the means of subsistence. It is not the excess, but the want of employment, that makes those paupers who are not diseased, disabled, or infirm; and if the immense extent to which the manufacturing establishments of England are carried is not sufficient to prevent the extension of pauperism, it would serve to afford evidence that they had progressed, not too far, but not

far enough. There must be the requisite number for the pursuits of commerce, the labors of agriculture and manufactures, leaving a surplus of laborers unemployed. The poor taxes are large in amount, and oppressive on all classes of the community; it can be the interest of none to add to their burdens, but of all to furnish occupation to those whose labor would pay for their food. The laws of no country impose a tax for the maintenance of those who are able, and can find by their industry the means of support. It is, therefore, impossible that manufactures, which increase the employment of laborers, can add to the number of paupers. The existence of both to a great extent only proves that there may be a population so dense that the enterprise of individuals, aided by the steady policy and unceasing exertions of the Government, may not furnish such employment as will procure the necessaries of life.

In England, it may be an objection that the use of labor-saving machinery diminishes the want of manual labor. If labor by machinery supersedes labor by hands, and thus increases the burdens of the community for the support of the poor, it affords a striking illustration of the immense advantages of a policy which makes it a matter of calculation and choice to submit to the imposition of enormous poor rates. If mere manual labor would suffice for the fabrication of articles to meet the supply of the domestic and foreign market, and at prices which would exclude competition, the number of paupers might be more limited; but, if machinery is necessary to increase the quantity and diminish the price, to effect these objects, pauperism is the lesser evil, being more than balanced by the individual and national profits, by which foreign nations are indirectly compelled to pay not only the poor, but all other taxes.

But the application of the objection to this country cannot be perceived. It is a common objection to the establishment of manufactures here, that our population is not sufficient. If this be true, it affords the strongest argument in favor of the adoption of machinery, which supplies the want of population, enabling the few to do the work of many. If the poor of our country have ever had employment sufficient for their support, it is not known that a solitary fact can be produced which shows that it has been taken away by the operation of manufactures. It is a fact easy to be decided, by the observation in our large towns, whether the increase of poor taxes has been in the same ratio as manufactures. The result will probably show that the proportion is less in manufacturing towns and in the neighborhood of large establishments than elsewhere. If the objection was indeed a valid one, it would prove more than those who urge it would wish for; it would be conclusive evidence that the population of the country had attained to such a height as not only to justify the erection of extensive establishments, but that there was a surplus of labor beyond the means of its employment. If agriculture or commerce would furnish it, there could be but few paupers; if it requires the aid of manufactures, and all are insufficient, then they must be increased till they meet all the demands for labor. Until it can be made to appear that the population of towns decreases with the extension of their manufactures, and that experience demonstrates that there is a proportionate increase of poor rates, the comparison is again forced on us, and the national character of the objection may be fairly tested by estimating the relative amount of poor taxes in large commercial and other places. If the objection should prove to be well founded, it would only apply to those branches where the greatest portion of the labor is performed by machinery, as cotton and woollen; but it could not, by possibility, extend to those whose operations are almost exclusively manual, as glass, paper, cutlery, shoes, clothing, &c. The necessary consequence of the advancement of those manufactures must be the increase of industry, and the decrease of pauperism. As the objection can, therefore, only embrace, in its fullest latitude, but a few items, it is deemed unimportant; as to those, it is believed to be without foundation. The Waltham factory employing two hundred and sixty persons, it remains to be proved that its machinery deprives that number of an employment they would otherwise have from other sources.

No further protection is necessary.

If this objection is founded in fact; if it be, indeed, true that manufacturers need no further protection; that the national objects which call for their encouragement are already accomplished, the committee would deem it a truly happy consummation for the country. If this is understood to be alleged by the friends of a general and equal protection of national industry, as well as those opposed to it, it would seem that further aid would produce no benefit to the one, or injury to the other class. If the present duties have excluded foreign articles, and secured our markets to our own citizens, it cannot be perceived how higher duties can have a good or bad operation. They must have none; and thus all the interest that the proposed measures have excited, of hope on one side and fear on the other, is, that additional duties might diminish the importation of articles already excluded. If the objection is understood as coming exclusively from those opposed to the general policy of protecting duties, it presents the great question only in another form; but, if it has its origin with those interested in any particular branch of manufactures which may be now so protected as to command our market, we are bound to believe that it is intended to apply to their own appropriate branch only. It would be too serious an imputation upon their patriotism and sense of common justice to charge them with assuming to their own establishment a national character which could belong to no other, and a disposition to withhold from others a small portion of the legislative guardianship which has been so liberally imparted to them. It would be at once boldly and avowedly aiming at a monopoly, and asking Congress to be partial in their measures. It would confirm the objection, which is pressed with much zeal as well as warmth in the various memorials, that protecting duties tend to create a privileged order of great capitalists, supported at the expense of the nation. It would effectuate the objects of those who wish to impress the nation and the Government with the belief that the encouragement of manufactures is for individual emolument, and not national interest. It would sanction the principle that the powers of this Government are only to be exercised in favor of enormous money capitals, leaving humble industry to struggle, unaided, against foreign competition and domestic indifference; that the employment of machinery, and not of manual labor, was worthy of encouragement; that one item, of clothing alone, was so supremely important to the nation, that all others must be overlooked. We ought to hesitate long before we give way to a conviction that manufacturers would expose themselves to these reflections. If their opponents could wish the advocates of equal protection to descend from the high ground of national principles to private speculation; to contend for principles unjust and partial in their practical effects; and to present themselves before the National Legislature in a contest for the exclusive protection of capitalists, or of one branch of industry to the destruction of the others, no means would more readily suggest themselves than to associate, as an ally, the proprietor of some overgrown establishment, already protected by a duty of 100 per cent., to aid them by the declaration that "we want no further protection." Though the effects might be somewhat lessened by a suspicion that others than those interested alone in manufacturing interests may have furnished a part, at least, of the enormous capital, and thus be concerned in the monopoly of one article by manufacturing, and of all others by importation; yet it would, in some degree, tend to support an objection which, when fully examined, will afford a very strong reason for giving the protection called for.

Viewing it, as the committee hope they may truly do, as one of the numerous arguments against a general system, they proceed to an examination of its application to the present tariff. It would be tedious to take each

item in detail; one is selected, on which is imposed the highest ad valorem duty—coarse cottons. The nominal rate of duty on this article is 25 per cent.; the real, according to an estimate of high mercantile authority, 83. The beneficial effects of this duty to the consumer of the article are well known and universally admitted, and have been fully explained by the committee. Since the experiment has been fully and successfully tried as to one important item, why not extend it to others? Why should the duties on coarse cottons be 83 per cent.; on linens, worsteds, stockings, silk, and iron, 15—a difference of 68 per cent.? If the effects have been so salutary on coarse, why not, by an increased rate of duty, bring the finer fabrics within the operation of the same wholesome principle? Why leave glass at a rate of duty which does not equal the foreign bounty? Why make the nominal duty on cotton efficient for 83, and leave the nominal duty on paper of 30 per cent. efficient only for 15, or, at the most, for 20 per cent.? When other manufactures are placed on the same footing as cotton; when protecting duties are imposed by a principle of equality, and graduated by some settled rule; when it shall exceed the ordinary and average amount of a mere duty for revenue, and an opportunity be offered for a fair experiment of its general tendency, then may be the time to urge that, if the experiment is successful, the article wants no further protection; if it fails, that there is something of a peculiar character attached to it, which, as to any given article, prevents that connexion between causes and effects which exists as to others. The complete success as to one article is the best evidence of the good policy of extending the same rule to others; affording, at the same time, strong practical proof that, when carried to the proper extent, legislative protection to manufactures results in the reduction of the price to the consumer.

When this is the effect, the protection is to the people, not to the manufacturer; the saving of the price is the "economy to the consumer;" he is protected, by not being compelled to purchase the foreign article of an inferior quality, and at a higher price. The reduction of the present duty on cotton goods would, by destroying the domestic competition, bring the article to the same price it bore before such competition existed. From the great reduction in the price, it is evident that there must have been a great profit arising to the foreign manufacturer, or the importer, which was paid by the consumer. The article must come to him at the old price, in order to make the same profit accrue to the domestic manufacturer; if it come at a less, then the real and efficient protection is to those who buy it; they are protected from paying the higher price. The true application of this word *protection* will tend to unite opinion on this most interesting question; if it means protection to the people, to the mass of the nation, by reducing the price of the article used, and increasing the means of payment, there could be no national objection to it; as little could there be, if protection was understood to be the guarding the people against the operation of foreign laws and systems of government, associations and combinations of individuals, which tend to enhance the price, and to depreciate the means of payment. It could not then be said that no further protection was necessary, until the protection was complete; till it extended to all items where it was required. The committee wish it to be distinctly understood, that this is their definition of *protection*, and, when it is used by them, it means protection to the consumer. They disclaim that definition or application which makes it consist in protecting the manufacturer against the interest and sound policy of this country—of protecting him in speculation or monopoly, at the expense of the people, or any national interest. We recognise in the manufacturers no claims to exclusive or any other protection than what is due to others; we view them as other classes, as men engaged in other occupations and pursuits in life, entitled to protection as instruments for promoting national and general prosperity; as men by whose agency the public good and the general welfare will be advanced. If they can effect this object, and with profit to themselves, it is to us a subject of congratulation, and will become one of pride, if the measures we have devised have tended to produce it. But, if it only adds to their individual emolument, we renounce it as an object which is equally repugnant with our intentions and feelings. Believing, as we do, that "economy to the consumer" is best secured by the domestic supply of our demands, domestic manufactures are the only efficient means; as such, we think them entitled to national protection. The same principle applies to commerce and agriculture; they are but the varied means of supplying our demands, and, like manufactures, are the component parts of the great system which is necessary to secure the great object of all sound policy—"economy to the consumer."

The three great occupations in society are, agriculture to produce, manufactures to fabricate, commerce to distribute, the articles of consumption. The first and the third are admitted by all to be of infinite importance, worthy of all protection; both have received it. Sound policy has never suggested a doubt that the production and distribution should be domestic. The country, with one united voice, has declared, and yet declares, that "economy to the consumer" consists in not being dependant on foreign soil to produce, or foreign shipping to carry, the supplies of our wants. Yet it is much divided on the policy of dependance on foreign labor and foreign machinery for fabrication. This is not deemed the least important item; without it, production is useless, and, except food, no materials would exist for distribution. The manufacturers, to meet our demands, must exist somewhere; shall they be in a foreign country, or our own? is the great question. To decide this, it would seem to be sufficient to apply to this item the same reasons which have led to the unanimous conclusion in relation to the other two; or to show, by any cogent reasoning, and from clear experience, that it is safer, sounder policy, more conducive to "economy to the consumer," to place the command of that item in the hands of foreigners than our own citizens. Domestic agriculture has the command of our production; domestic shipping of our distribution; why not domestic manufactures of our fabrication? If experience has not justified the remark that the protection of agriculture and commerce has been a tax on the consumer, neither has it as to manufactures; hitherto, every result has been economy to the consumer. This Government did not say to commerce "You want no further protection," until it had attained a monopoly of the coasting trade, and nearly so of the foreign. It does not now make the remark because a few merchants, with large capitals, and by successful enterprise, can continue their operations; the old continues, and new protection is added; enough is not given till the object shall be accomplished. The object a national one—the command of our distribution—is it unreasonable that, so far as fabrication is a national object, it should be protected to consummation? It is not to draw invidious distinctions, but to show their impropriety, that it is deemed proper to observe, that, if the protection afforded to commerce has enabled those engaged in its pursuits to acquire princely fortunes; or, if they have been the consequence of their enterprise and intelligence, it has been deemed evidence of the general prosperity. The acquisitions of commerce have not been charged as "fleecing" the rest of the community; "merchants have not been designated as an organized corps, distinct from the rest of the nation, aiming at exclusive privileges at the general expense." Theirs has not been represented as an interest which, of necessity, draws a line between their emolument and the public good. If foreign nations want our produce, they will come here for it; if we want their manufactures, they will bring them to us. It is not, therefore, from necessity, but a conviction of general economy, that has led to our settled policy of giving such protection to our shipping interest as will enable it to do what is indispensable for our wants. Merchants are not considered as men who do not feel a common regard for the general welfare—so divided from the rest of the nation, that their interest is necessarily in opposition to all others.

They are not called an organized corps when they unite in petition to us to save them and their interest from foreign policy; they are not repulsed by the charge of exclusive interest, privileged orders, bounties, premiums, and monopolies. If those charges were applied to them, proof would be required of their truth; it would be illiberal to make them, unless it was clear and convincing. When they are applied to manufacturers and their petitions, common justice would dictate the same rule; that when they ask for protection against the same foreign policy, the same laws which bear with the same force on commerce and manufactures, charity should be so far extended as to admit that, however mistaken their opinion, they craved no object adverse to the interest of the country, but made it the basis of their requests. Though they may be less capable of judging than others, they may not be more selfish. Experience may be assumed to be the safest guide; it does not justify the objection that more enormous wealth has been accumulated by manufactures than agriculture or commerce, or that what has been acquired has been more at the expense of the nation. The chain of mutual interests which connects society does not separate manufactures from the common mass. The ties of mutual dependance and support, which form a nation into a family, which lead all to consider themselves as parts of a great whole, are not of necessity dissolved by their pursuits or their interest; they are of no distinct cast, and most of them are engaged in other pursuits. Manufacturing capital is made up by the acquisitions from other sources; the labor is supplied by the want of other employment; and it is believed that in this, as in all others, there is an intimate connexion with national interests. The greatest manufacturing establishments are in or near our commercial cities. Who are their proprietors? Whence is derived their capital, labor, and how far their success or decline has a correspondent bearing on the value of property or produce, the poor, the industrious, the farmer, the mechanic, and the mass of population—how far they present an interest distinct from, or connected with, those who compose the circle of society, can well be ascertained by those who represent the districts which contain them. The records of this House afford no bad criterion. The protection of manufactures, as an important item of national industry, is not asked for by manufacturers alone; a reference to the petitions will show that their numbers are few; all classes have united. It cannot, therefore, be in public opinion, or in practice, that we can discover the evidence of their being a class excluded from common feeling and general interest. So far as the opinion of petitioners is entitled to any weight, those who have called for an auction duty have given one entitled to no small respect—they require it for the protection of commerce, manufactures, and agriculture. A reference to those petitions, to the various occupations of those who have signed them, will not fall far short of conclusive proof that, in practice as well as in principle, there is such a connexion between the three great branches of national industry—production, fabrication, and distribution—as all to require protection, and to be capable of receiving it by the same act of legislation. But though we cannot but think that the union of all classes of citizens in favor of the protection of these three greatest interests is strong evidence that there is no discordance between them, it must not be understood as implying that no such discordance does exist, because the measure required for the protection of one is called for only by those engaged in its appropriate and peculiar pursuits. Those through whose direct interest a national injury is inflicted feel it the soonest, and must be the first to complain; the inquiry should be, not who complain, but is the injury sustained? must it be redressed? and by what means? If protection is required, it should be to the extent of the injury; and, if no further protection is wanted, it must be because the injury has been redressed, the cause which produced become inoperative, and a sufficient guard supplied to prevent its recurrence. What has been done, is not an inquiry dictated by national feeling, but the good or bad effects it has produced; what ought yet to be done can then easily be ascertained—it is by selecting the legitimate objects of protection, and making that protection effectual. If economy to the consumer and defence to the nation are already secured, it cannot be necessary, and may be unwise, to proceed further: the situation of the country affords the best means of deciding. Protection is not asked against our own Government, or the interest of our own citizens, but against foreign. Freedom of trade and occupations consists in the perfect liberty of pursuit, without any legislative partiality or preference; to be governed entirely by mutual or general interest. That freedom is destroyed by foreign as well as domestic legislation and interference. If there was neither, there would be nothing to protect against; industry would be left free to select its application; a pressure, which bears upon it with a given weight, must be balanced with an equivalent protection before it can become free. That there is this foreign pressure is admitted; its extent cannot be estimated, for it is made up by a complex and intricate system of policy, that varies in its application to different objects. Being more versed in that of England than other countries, it is selected as an illustration; and, being bound by our convention with her to impose on her products no higher duties than on those of other nations, they must be uniform; but as our greater portion of manufactures is imported thence, our duties should rather be imposed with a reference to the pressure of the system which bears on the greater, and not on the lesser portion of our importations.

A bounty or an excise drawback is a direct pressure to the nominal amount; it is the difference in the price of the article to the British or the American consumer. The English Government makes it dearer to their own people than ours by the amount of the drawback and bounty; a barrel of beer drank in England costs three dollars more than if exported to France and drank there, (deducting charges of exportation and freight.) When a code gives a direct bounty, the effect can be measured; but the indirect drawbacks and bounties have a more serious effect. Taking the amount of taxation in England to be at any rate, say thirty per cent. of the income of all the property and all the products of the kingdom, and it is so apportioned as to leave those products and occupations untaxed which are for the supply of articles for a foreign market, and a double amount on such as must be consumed at home: for example, if, instead of an excise of thirty per cent. on cotton, woollen, linen, iron, glass, hardware, crockery, none is imposed on these manufactures, and sixty per cent. is imposed on spirits, malt liquors, paper, &c., the sum of taxation is the same. Thirty per cent. is paid in the aggregate, and should be added to the cost of manufacturing. On the article which pays none, this thirty per cent. is a bounty, and the effects to us are the same; it is an exemption from taxation, a real drawback. When, then, a comparison is made between the expenses of manufacturing here and there, the average rate of taxation must be allowed for, not its particular apportionment. Does, then, this system operate as a pressure on our industry, or to its aid? If the effects of bounties, drawbacks, or exemptions were to add to the resources of this nation, and diminish those of England, it is difficult to assign the reason for its continuance. We risk much by acting on the belief that the Government of that nation does not understand its interest; a simple calculation will settle the question. Take any given article of manufacture; compare it with the value of the raw material required to make it; the difference of the price is made up of the labor bestowed upon it and the subsistence of the laborers. Iron ore will not pay freight; it has then no value, unless in a country where iron is made; a ton of bar iron, worth one hundred dollars, derives all its value from labor and subsistence; it gives a new market for so much of industry and the products of agriculture; and as much as this market is worth to the nation, so much is every ton of iron worth in clear profits when it can be exported, and those profits drawn from another country. Such a bounty is then given, as, being less than the profits accruing by the making of iron, will make its export a profit. It is not credible that a bounty greater than the general profits accruing would be given by any Government not mad. The nation, then, who buys the iron pays the profit, and not the nation that, by paying the bounty, secures the profit. If clay, and sand, and ore, can be turned into money by such means as

bounties, drawbacks, exemptions, as will still leave a profit, it is easy to see that the profits accrue to those whose otherwise worthless products become valuable, and not to those whose products remain by these means forever worthless.

If the profits derived by the various interests in England were not more than a penny-halfpenny a yard on coarse linen, or twenty-five shillings a hundred on glass, the Government would not pay that bounty; if a profit remains, it is paid by those who buy their linen and glass. If, by means of those bounties, &c., they draw these profits to themselves from us, and leave our ores, sand, clay, of no use; deprive the farmer of the market for subsistence to the laborer, who would otherwise be employed in manufactures, then it becomes the duty of our Government, by a resisting defensive system, to protect our raw materials, labor, and provisions, to give to our citizens the profits of converting them into articles for use. That duty is of the most inoperative kind, if all the occupations of the country are now unprofitable. The farmer raises more than he can sell; he has no inducement to raise more; the country can derive no benefit from increasing a surplus now unproductive. There is labor enough in the country for all the profitable pursuits of agriculture, and to manufacture all the articles for our consumption; all the raw materials are in abundance, or may be made so. Protection should end, then, only after securing employment from all.

That the increase of duties will lead to smuggling.

This is an objection depending so much on opinion, that it is difficult either to support or rebut it by facts. If its existence to any great extent was known, the records of our custom-houses and courts would afford official evidence; but, unlike other crimes, the extent of this can only be ascertained by detection; it may prevail to a very considerable degree, yet the evidence of it be beyond the means of procurement. While, therefore, it cannot be reasonable to ask for the most definite proof from those who urge it, it may not be too much to expect that the objection would be supported by strong reasoning and probable inferences. The suggestion ought not to be listened to with too much readiness, as it imparts a severe reflection on the character of our countrymen, and holds out the Government as unable to enforce the payment of a duty imposed for revenue or policy. Judging from the uniform practice of Congress, it seems that the fear of smuggling has not deterred them from increasing the duties for the aid of the revenue. When additional sums have been required, additional duties have been imposed, and always, it is believed, with the desired effect. At the commencement of the late war, the duties on imports were doubled, certainly not with a view to the protection of manufactures, when the war precluded foreign competition, and the law was limited to one year after the conclusion of the peace,* but solely for revenue. The war duties continued until the 1st of July, 1816, a period of near eighteen months after the peace; they were, on an average, much higher than those proposed in the bill of last session, and afforded a fair criterion by which to judge of the tendency of high duties to increase smuggling.

The committee have not perceived, in any of the memorials which dwell on this objection, the period which elapsed from the conclusion of the peace and the commencement of the present tariff, selected as one which exhibited evidence of the increase of smuggling. These memorials are from gentlemen of great mercantile experience, guided by their own and the observation of others; if they have not been led to select this period in our financial history as the era of smuggling, it is a fair inference that, in their opinion, none has existed. That inference is much strengthened when we find them unwilling or unable to point out in our tariff an article the revenue on which has been diminished by the increase of duty, but compelled to resort to the example of a foreign Government, to overlook the experience of our own, in order to procure proof of their suggestion. In selecting the articles of tea and coffee as those which were dangerous to tax high, it was most prudent for them to refer to the British tariff and not to ours;† as the one may support, but the other directly contradicts their supposition. The selection of a foreign precedent is at best presumptive evidence that no domestic one would confirm their position. Until that presumption is rebutted, and evidence adduced more satisfactory to the mind than the uniform and successful practice of the Government, the official documents from the Treasury, and the inferences which irresistibly follow known facts, the committee must think this objection founded more in conjecture than fact.

The annexed statement will very clearly show that the amount of importations and revenue is not in an inverse ratio to the rate of duty. An inspection of the existing tariff conclusively shows that the highest duties are those imposed for revenue merely, with some few exceptions; the difference between those imposed on teas, spices, wines, and spirits, and on manufactured articles generally, is very great: on mace it is one dollar a pound, on bar iron seven mills and a half; on teas averaged $32\frac{3}{10}$ cents per pound, equal to 100 per cent. ad valorem; on linen and worsteds 15 per cent; on manufactures, the same duty is imposed on the coarse and bulky as the fine, on articles of necessity as luxury; blankets and silks at 15. Smuggling would never have entered into the minds of the Legislature, in such an apportionment of impost; mace is easier smuggled than bar iron, teas than blankets; yet on these high-taxed articles the fear of smuggling does not seem to dwell; it rests only on manufactures. So far as protecting duties have been raised to the height of revenue ones, it seems to have justified no such fears. Coarse cottons are at 83; it is admitted that this article is nearly, if not quite, excluded; it is, of course, not smuggled. It may then be fairly inferred that the duty on other manufactures, equally bulky and not more valuable, might, with equal safety, be advanced to this extent; if less bulky and more costly, to fall proportionally short of amount could not be an unsafe standard; or, if this is thought too high, the average duties of 1815 and the first half of 1816 cannot be objected to. Assuming either as the basis, and comparing them with the bill of last session, the committee entertain a confident conviction that it would be entirely unaffected by this objection. It is, indeed, incredible that a duty of 25 per cent. on crates, glass, iron, linen, hardware, cutlery, &c. could furnish inducements to smuggling, which are not even alleged to exist as to articles of more value and charged with a higher rate of duty. Such belief could not, in the minds of those who entertain the fear, amount to conviction, since they have not selected an item from our tariff, or appealed to a fact in the history of this country. Again: it may be remarked that, when the experience of other countries is not supported by ours, it is not sound reasoning to urge the propriety of basing our legislation on a state of things which does not exist here. It is well known that, in proportion to the amount of imports, there is more smuggling on our northern and southern frontiers than on the seacoast; the rate of duty being the same, it must be owing to other causes. Separated from the dominions of foreign Powers by narrow seas, rivers, or territorial lines, facilities are afforded to the illicit introduction of merchandise which are not within the reach of those who must cross an ocean in a large and valuable vessel; whose arrival, destination, and departure, are notorious, and announced in numberless papers, and watched by revenue cutters. The vigilance of our officers, aided by all the efforts of individuals, is wholly incompetent to watch an immense frontier, most of it a wilderness. He would surely be an unwise statesman who, because there were found examples of smuggling there, would change a fiscal or political system to meet such cases, which will exist, not only while there are high duties, but while there are any. The same obvious reasons will apply to England, or any other European nation; and these may be the

* Afterwards extended to the 30th June, 1816. † Memorial of a convention of delegates in Philadelphia.

causes which have led to the selection of an example from abroad. There, smuggling is not carried on in sea vessels which are entered at the custom-houses, but in boats which pass in the night. The Isle of Man was a principal scene for illicit trade; since its sovereignty has been purchased by the Crown, it has ceased. The contiguity to foreign nations affording means of unlawful communication, is the principal source of this danger. It is not carried on by merchant vessels fit to navigate the ocean, and cannot prevail to a great extent here. It cannot be the meaning of the memorialists, that the merchants of our country would engage in, or countenance, this illicit and immoral traffic; no others would have the means of doing it, especially when doubly watched by a class of men who have paid the duties on their own importations, and do not want intelligence to discern their interest, or vigilance to guard against all attacks open or covert.

A tax on the many a bounty to the few.

Of the numerous objections which are urged against the proposed measure, there is none which carries with it more plausibility, till examined, or would be more conclusive, if true. The committee most freely admit, that, if a general system for the protection of manufactures is necessarily a permanent tax on the community for the mere benefit of those engaged in them, it must be radically wrong, and partially so, as the same effect follows the encouragement of particular branches. Disclaiming the word *bounties* as wholly inapplicable to any part of the bill, they are willing to test it by the principles laid down by its active and intelligent opponents. "There is, however, an argument in favor of encouraging particular employments by bounties and taxes, which merits a different consideration. It has been justly urged that there may be occupations peculiarly adapted to our situation and character, and which, if once established, might be carried on better here than elsewhere, so as to afford their productions at a cheaper rate than is now paid for them; and yet habit and indolence, and the natural attachment of men to the pursuits in which they have been educated, and the immediate expense of commencing the business, and the want of that skill which only time and experience can give, and a doubt how soon or how certainly the profit may be realized, may deter individuals from engaging in those occupations, and induce them to persist in others less profitable to themselves and the public; and that if these difficulties can be overcome by a present tax, which will be more than compensated by the reduction of prices hereafter, it is good policy and economy to impose it. On this principle, encouragement has always been given by our Government to particular pursuits, and it should always be given to the full extent that this principle will warrant. By its adoption, the whole subject is made a mere question of economy—of economy to consumers, who are all the people; and it becomes our duty to study not how to make manufactures dear, but how to make them, on the whole, cheap and abundant. The best, and perhaps the only mode of doing it, is to promote competition at the lowest prices."*

A general acquiescence in these sentiments would leave for our consideration only the question of their application. In ascertaining the most effectual means of promoting national industry, it is truly gratifying to find both sides starting on the same principles; this gives them a stability which saves the trouble of examining their soundness. It would be indeed useless; for who will deny that "economy to the consumer" should be the guiding maxim for individuals and legislators? The meaning of the term cannot be misunderstood. Economy, whether individual or political, is probably not a very complicated science, when studied not by theory and speculative reasoning, but the book of practical life and experience. Principles, to be correct, must be drawn from practical observation more than reasoning; if to be applied to theory, they may be drawn from the same source; but, if intended for universal practice, they should flow from the lessons of experience. Practical economy to the consumer teaches him to procure what he wants at the cheapest rate, and that mode is cheapest by which he can buy with the least labor and expense. The price of an article is not its nominal rate in dollars, but in the quantity of a given article which will procure it. Assuming any sum as the standard price of any article, the great question for the consumer is, how to obtain it on the best terms; how to exchange his own surplus productions for those he needs to most advantage; to select the objects on which he may employ his own industry so as to realize the greatest production. If the mere transfer of the same labor from one object to another will enable him to attain his ends, it is his interest to do it. If, for the reasons stated in the above extract, and the powerful ones which result from the policy of foreign Governments, such transfer becomes useless or impracticable, the interference of a Government which would remove these difficulties is not coercive on its own citizens, but becomes auxiliary to their wishes and interest. If a foreign Government allow an enormous bounty on a manufacture, the raw material of which is excluded by law, or duty, or the difficulties and expense of its transportation, and thus break down all domestic competition in the supply of an article of which every consumer would furnish the rough material, it would not be an arbitrary measure if Government should create the competition, transfer the manufactory to its own jurisdiction, and thus give the consumer an option of paying for it with the produce he could easiest raise and most conveniently spare. A farmer, in devising the means of clothing his family, will at once inquire into the most economical means of doing it. He has on hand a surplus of grain, wool, flax. The stores in his neighborhood groan with imported goods from England. But the merchant cannot export grain, flax, or wool. England excludes them; she has enough of her own; and as we purchase our buttons, woollens, and linens from, her there is no resource but to purchase on credit. If a manufactory were within his reach, he could exchange the material for the manufacture; this affords him the only means of exchange or sale. If there were no manufactories, and Government would build them up by imposing duties on foreign fabrics, such duties would not be a tax on the farmer, but an efficient bounty, by giving a value to his otherwise useless products. It will scarcely be contended by those who so loudly protest against a forced transfer of occupations, that the farmer may turn spinner, weaver, bleacher, dyer, fuller, &c. His occupation is the extraction of the produce of the earth, and he has a right to ask of the Government that they adopt such a system as shall make it most valuable.

Competition is the security of the consumer against imposition in what he buys, and of a market for what he has to spare. If the articles of consumption are supplied by importation, the competition is confined to three classes—the foreign manufacturer and exporter and the American importer; theirs is a struggle for the sale of the manufacture, which can only diminish the price; but as the provisions and the raw materials raised by the mass of consumers are prohibited, there can be no competition for their purchase. But to the farmer this reduction of price produces no benefit. Price is composed of two items—the rate of the thing sold, and the rate of the thing received in payment. Economy to the consumer is the low rate of one, the high of the other. The competition for provisions and wool being now entirely domestic, the price is necessarily limited to the home consumption, and cannot be affected by the price of foreign importations, but only by a diminution of the quantity. If the price of the finest British broad-cloth was reduced to eight dollars a yard, it would, at the present price of wheat, cost the farmer sixteen bushels a yard—of wool, sixteen pounds; if the cloth should rise to sixteen dollars a yard, wheat would not rise to one a bushel, and wool to one dollar a pound, unless the domestic demand increased in the same proportion: this would be impossible, unless accompanied with a proportionate increase of domestic manufactures.

* Report of the Boston committee.

If all our supply was by imports, their price could have no bearing on the price of domestic articles, which would not be received in exchange. Can it be doubted that the system which insures this exchange is true economy? If our woollens are made at home, the price of the fabric will be governed by the price of materials; the rates are immaterial; one pays for the other; competition will regulate them by a just standard. The tax on the importation becomes a mutual benefit; it operates not to force the farmer from his occupation, but to secure him the choice of products, by rearing up new establishments, to furnish him with a market for his raw materials, say of wool, flax, and hemp. By abstaining from the imposition of such duties on the foreign as would open our markets to the domestic products of those articles, the farmer is, in effect, forced from his occupation, and prevented from raising them. Foreign bounties produce the precise effect which is so much dreaded from our laws; foreign restrictive systems virtually compel our farmers to confine their labor not to what they can produce with the greatest ease and profit, but what suits their Government to receive, thus effectually preventing the consumer from consulting his economy, he is obliged to look to foreign laws to know what productions he shall raise to supply his family with food and raiment, utensils and furniture.

That system of dealing among the members of the same community is the best which produces such exchange that the wants of the one may be supplied by the surplus of the other. If our habits of intercourse with other nations have kept off the adoption of the system of exchange among ourselves, and those nations will not agree to its adoption; if, in consequence, we look round this country, and find that the aggregate means to supply the wants of all are most abundant if properly distributed, yet there is general distress, because the surplus of one article cannot supply the deficiency of another, it cannot be an unwise or an oppressive regulation of Government which would at least remove foreign restraints and interference, so as to leave our citizens in the uninterrupted selection of their pursuits and modes of employment. It cannot be sound policy to suffer them to remain under this external coercion, and influenced by the fear of a restrictive system, adopted by a paternal Government of our own choice, yet submit to one imposed on us by one between whom and this people there can be no common tie. To guard the consumer against the maker and seller of an article, competition is most effectual. If it be safe to have it confined to foreign and mercantile, it may be equally so to have it domestic and manufacturing. Those who prefer the former will protest against protecting duties; the second will advocate them; and others so apportion them as to enable both to come into the market on equal terms. If the commerce of the world was free, a low rate of duty would suffice; while it is restricted, there must be as much tax as will counterbalance foreign interference, and afford the opportunity of exchange. Whether the rate of duties, so low as to leave the supply of our consumption at the command of one class, so high as to throw it into the hands of another, or the medium between revenue and prohibition ascending to the one or descending to the other point, as the economy and interest of the consumer may require, can better be settled by experience than reasoning, it is believed that acknowledged facts leave no room to doubt. The duty on coarse cottons being prohibitory, the supply is now entirely domestic; the quality is better than the imported, and the price to the consumer reduced more than forty per cent. The protecting duty is, then, no tax on the many—no bounty to the few. But the additional forty per cent., allowing nothing for the quality, was a direct tax on the whole community for the benefit of the importer. The amount of this tax paid and bounty will appear from a statement furnished from a report which dwells much on this objection to manufactures.*

"From the most accurate information, founded chiefly on official documents, it appears that, from the year 1800 to the year 1812, both inclusive, the duties received on the importation of the coarse cottons of India amounted to more than $3,936,000." During the first four years of this period the duties were twelve and a half per cent.; the last eight, the Mediterranean fund added made them fifteen, averaging about seven dollars of goods to one of duty, equal to - - - - - - - $27,552,000

The same number of yards of the same goods of American manufacture would cost forty per cent. less, equal to - - - - - - 11,020,800

Leaving the price of the domestic at - - - - - $16,531,200

Thus the imported article costing $27,552,000, the domestic $16,531,200, the difference, $11,020,800, has been paid by the people; deducting duties, $3,936,000, leaves $7,084,800, paid by the consumer to the merchant, more than would have purchased the same quantity from the manufacturers—a tax of $545,000 a year. This presents a practical illustration of the objection now under consideration—the tax on the many, the bounty to the few. But the few were not manufacturers; the premium was not paid to them. If such have been the salutary effects of the high duty on cottons, it ought to be a most instructive lesson, and induce us to extend the same protection to other articles of clothing.

This is not a solitary instance in the experience of the country; the same effect has been produced by high duties on nails, gunpowder, and every high taxed article of manufactures; and it is believed that there is no instance of the increase of the price of any article the high duties on which have secured our market to our own manufacturers. Had there been any, it would probably not have escaped the attention of those who so zealously oppose the increase of duties. In tracing the progress of manufactures in other countries, it is universally true that the nation which has the materials, and manufactures for itself, can undersell others; and hence, our best and greatest statesmen have laid it down as a maxim, that domestic competition will always tend to the reduction of the price—a maxim not only consistent with reason, but supported by fact and experience. It is not, therefore, without some surprise, that it should be so generally alleged, by the opponents of protecting duties, that they are a tax on the many to enrich the few. It may comport with the theory of foreign writers on political economy, but the allegation has not grown from experience here, or elsewhere, but is contradicted by uniform and admitted facts. Manufactures are not the work of yesterday; their tendency is not for the first time to be now ascertained; enough has been seen and witnessed in the past, to afford a guide for the future; and if there is safety in any path, it is that which has been lighted by the practice and experience of years in this country, and almost centuries in others. It, is indeed, not easily conceived that duties short of prohibitory can easily operate as a bounty to the manufacturer; if the price of the article advances with the duty, it still leaves the same profit to the importer. Duties are no burden to him; he obtains a credit equal to what he allows, and the amount of the duty is an addition to his capital. The manufacturer can derive no benefit from a duty, unless it checks or excludes the foreign importation; while imported goods meet him in the market, the price is indifferent to him; be it high or low, it excludes him from the competition, while the importer can have a profit. The duty begins only to operate in favor of the manufacturer when the quantity of the foreign production comes to be diminished; if it remains the same, it adds only to the amount of revenue. The ad valorem duty of thirty per cent. on paper and cut glass is no bounty to the owners of paper mills and glass works, while foreigners supply us; if it excluded paper and glass, and the proprietors exacted from the consumers, so that the market price of paper and glass would advance to the same amount, importations would be resumed and continued until the prices were reduced below competition. High prices would create an

* Boston Report.

tempt it; the interest, therefore, of manufacturers would impel them not to expose their establishments to continual fluctuations, by the ebbs and flows of imports. An absolute prohibition might enable them to exact from the community; time will ascertain the point at which the rate of duties might amount to it; but it is difficult to conceive that mere rates of duties, which do not exceed those imposed on articles taxed purely for revenue, can prove dangerous or injurious to the consumer; and, with such duties, no other mode can be discerned by which the domestic market can be secured but low prices. The reverse of the proposition is undoubtedly true: low duties could not take the market from domestic goods, unless the imported were cheaper. On what other reason to account for the exclusion of coarse cottons, the committee are unable to imagine. If the eighty per cent. duty was a bounty to the manufacturer, it must be by adding that amount to the price of his cloth; the foreign, if of the same quality, would command the same price. Reason and experience alike assign the true cause—the diminution of price. There may be a period between the imposition of a new duty and the domestic supply of our market that may be one of high prices; but "if these difficulties can be overcome by a present tax, which will be more than compensated by the reduction of prices hereafter, it is good policy and economy to impose it." True legislation is not ephemeral; it looks beyond the present to the future, laying the foundations of national policy commensurate with all the great interests of the country; it will build up a system, not of temporary, but permanent protection; it will not be retarded, or withheld, from a fear that a monopoly of either domestic manufacturing or domestic navigation will tax the many, give a bounty to the few, or raise up a privileged order, dangerous to the liberties, or injurious to the welfare of the people.

A restrictive system.

It is said that this country is about adopting a restrictive system, when others are desirious of abandoning it, and their best statesmen are convinced of its bad policy. When terms are used as weapons, it may be useful to inquire into their meaning and application; the same measures may acquire a good or bad character, as they may be called parts of a system of revenue or restriction. Impost, as a means of taxing the consumption of the country for the support of Government, and prohibition, for the purpose of creating and maturing the subjects of an excise, are fiscal measures, acknowledgedly proper to meet the exigencies of the nation. The Secretary of the Treasury has recommended that if any revenue law be passed for the aid of our finances, it be one of the latter description—a prohibition of foreign, an excise on domestic spirits. No complaints have been heard against the proposition, and perhaps none would be heard if it had embraced iron, glass, paper, cottons, or woollens. Though the direct tendency would be to give the monopoly of the home market to the domestic manufacturer, yet, emanating from the Treasury, the same fearful consequences are not anticipated as if it could be traced to a different source, and its leading motive the promotion of other objects. The resources of the treasury have failed: it is of no importance to the people whether there is a prohibition of foreign, and an excise on domestic manufactures, for the purpose of filling the treasury, and, by consequence, sustaining manufactures; or, for the purpose of fostering manufactures, and, by consequence, filling the treasury; both objects are accomplished: which is direct and which consequental is immaterial for any other purpose than giving a name to the measure—fiscal in the one case, restrictive in the other. This consideration must not leave our minds when we review the systems of other Governments. At first view, they seem illiberal, and dictated by a jealous spirit of rivalship and monopoly; but, taking England as an example, and asking ourselves by what other means she could, from a small population, extract as large a revenue as would keep in operation the immense machinery of her mighty empire, we must admire it as a masterly effort of human policy. With less than double our number, she meets an expenditure of £50,000,000 by the receipts of her treasury. Her corn laws, her revenue and commercial systems, tend to the same great object. The former is the basis of the land and income tax; the latter of excise and customs. It is not so much from a system of hostility to others, but of self-defence to herself. This is evinced by her warehousing system, displaying a liberality worthy of our imitation. It is scarcely credible that her statesmen are willing to abandon those systems which have been maturing for ages, for others yet unknown and untried. The source of her revenue is now dependant, not on the fluctuations of imports, but the income, the property, as well as the consumption of the country; though each source may be extended to its maximum, none can be abandoned; and it may not be very uncharitable to believe the contrary opinions which many have expressed may be intended for exportation, with the benefit of drawback and custom bounty.

The example of other nations furnishes no exceptions to these remarks. The code of France, adopted at a late date, furnishes no evidence of a disposition to an abandonment of the same policy. She persists in the discrimination of the duty on produce imported in French and foreign ships, and, in a spirit of defiance, gives a bounty on South American cotton. Spain, at the moment of throwing off a despotic, and assuming a representative Government, has passed a corn law, and prohibited the importation of soap into her colonies. It would be a severe reflection by one Congress on another to charge the spirit which led to the adoption of these measures as flowing from jealousy and illiberality, and not a conviction of national interest. It would be a severe and serious reflection on ourselves, who, in the navigation acts of last session, extended to prohibition and non-intercourse the principle of what, when applied to manufactures, is called the restrictive system, but the character of which, in our opinion, does not depend on its application. Whether these measures are considered as commencing anew, or only following up the old system of discrimination adopted at an early period of our Government, whether retaliatory, aggressive, or defensive, does not depend on the selection of objects for its operation. The shipping, produce, or manufactures of foreign nations are their assailable interests. We choose the one which will best insure our objects of coercion. Those laws embraced all the objects, yet they passed one branch of Congress with unanimity, and the other without discussion. It is thought unnecessary to press on the same Congress the unfairness of opposing or condemning the same principle, merely because of its application to different national interests. With France, the contest was, whose shipping should carry to her our cotton, rice, and tobacco, and bring back to us her manufactures, wines, and spirits; with England, who should take to her colonies our timber, provisions, and live stock, and bring to us their various productions. If the mere carrying back and forth was worthy of a contest of legislation, and justified prohibition, non-importation, and non-intercourse, it was because it gave a value to the materials for ship building, labor in the construction, and employment to seamen in their navigation—objects, it is admitted, imperiously calling for a national movement to coerce their completion. But, though truly national, these objects embrace but a small portion of our population; extend to but a comparatively limited extent of territory; the benefits resulting are not alike extended to the mass of the nation. The number of carriers, compared to the consumers, is insignificant. To the latter it is infinitely more important that a market should be found for their provisions, the raw materials for manufactures. They cannot feel that it is not a wise policy in this nation to induce others to receive such articles as it is the interest of ours to export, but only that our ships may carry such as their policy may admit. The interest of the contest to a majority of the people, if their productions are excluded, at all events, is small; it makes no difference in the price. As little does it concern them who carries foreign manufactures to our market; it does not vary the demand for grain or materials. A single ship may bring a cargo worth more than

the annual labor of a thousand men, yet not affording an item for exchange. To whom that ship belongs, is not the all-important question, where built, or how navigated; but what additional value its contents afford to the productions of our soil, the fruits of our labor. A few ships would suffice for the importation of the manufactures we consume, forming a small item in our navigation. The transportation of our surplus and now useless produce would present one far greater.

The carrying of all our exports and imports would not furnish a market for one-fourth of the materials, or employment to one-fourth of the labor, required to make the articles of our consumption. Yet it would seem that, while the policy of protecting, and even forcing, the one interest has been coeval with this Government, sanctioned by general acquiescence, continued to the present session, and persistance in it recommended, the same policy, as applicable to other greater and more general interests, is reprobated as destructive to the prosperity of the nation. It is well known that, if success attend our attempts to effect a reciprocity of duties and regulations as to the ships and their cargoes, whether of our own or other nations, it will give to ours nearly a monopoly of transportation, and prevent competition. While this reciprocity is refused, we enforce a restrictive system, because France and England refuse admission to our shipping on equal terms. Equal justice would require that we apply the same system to their manufactures, while our provisions and raw materials are excluded. The expectation that either will give up one provision in their code is as reasonable as that they would abandon another. If they would cling the longest to any, and give it up the last, it might be their navigation. There can be no difference in principle between aiming at the repeal of their corn laws or their navigation acts. We ought not to be governed in our choice by the particular interest it might most affect, but the greatest national good it would produce. In adopting this as the criterion, it may deserve the inquiry whether, if the only great interest, or the only favored one of England, was manufacturing, it would be thought unwise or unjust in our national councils to endeavor to build up our own, either in retaliation or self-defence. If it would, then strong reasons indeed must exist for the constant, strenuous, and almost unanimous efforts to rear up and cherish our navigation. The measure so much complained of proposed no prohibition, bounty, or premium; the highest rates of duties on manufactured goods did not amount to the existing one on cotton; articles which interfered with our most important manufactures were classed lower than the most important items of consumption, and merely for revenue. It asked for no prohibition of intercourse to counteract foreign bounties, duties, or restrictions; it excluded no article of produce or manufacture, unless by its tendency to promote domestic competition, which, by affording a market for the raw material, enabled, and, by improving the quality and reducing the price, induced, the consumer to prefer the domestic to the foreign. Yet it has been, is, and will be, called a restrictive measure, illiberal in its design, ruinous in its tendency, oppressive in its operation, partial and unjust in its very nature and original conception, as an attempt to wrest the soil and the seas from those to whose use God had given them; "a measure which would doom the merchants to poverty, prohibiting their ordinary and honorable pursuits, presenting a horrid picture of prospective misery;" "striking deeply at the foundations of all true and enlightened policy;" "plunging deeper into measures of prohibition, restrictions on trade, premiums, bounties, and stimulants to rear exclusive interest at the national expense;" "an undisguised effort to coax or alarm our rulers into the ruinous project of coercing the farmers, planters, artisans, and merchants; to make crutches of agriculture and commerce, to support a body which, in the mania of speculation, has been dieted and swelled into an unnatural growth, too unwieldy for her limbs to sustain;" "to convert our seamen into skulking, profligate smugglers, at an expense of taxation, national happiness, and legislative oppression;" "the vote of this House viewed with astonishment and concern; the reasons for it, a repetition of trite and exploded doctrines;" a "triumph of passion and interest over reason and justice;" "political quackery, which proposes to legislate a nation into wealth and prosperity;" "a call for a most onerous tax, with no view to national defence, (for this is not pretended by its candid admirers,) but merely to take some millions of dollars annually from the pockets of the agriculturists and merchants, to give as a bounty to manufacturers."

This is the character given to this measure; these are the motives ascribed for its passage, in the memorials addressed to us; if with justice, then there is much of our past and some of our present policy to condemn in relation to other subjects and other interests. Measures purely restrictive, and strictly prohibitory, have been prayed for by those who now so oppose this; with what consistency or regard to general interests, alike, opinions may vary. When they apply strong language, like the foregoing, to this proposed bill, to those who advocated and the body which passed it, they must have forgotten that the war duties were higher than those now so much deprecated; that they continued for eighteen months after the peace, and did not produce the fearful, dreadful consequences predicted from this. Those duties being imposed for revenue, and not followed by such effects, if those now proposed will produce them, it must follow that, not the provisions or enactments of a law, but the motives and objects of those who bring it forward, give it its character and control its operation; that prohibition and excise, if recommended from the Treasury, may be salutary; if asked for by farmers and distillers, ruinous and oppressive. Had the French tonnage duty, the non-importation and non-intercourse with the British islands and colonies been petitioned for by manufacturers, those measures must have injured and destroyed; as merchants prayed for them, they have benefited and saved commerce. Had the bounty on Brazil cotton followed the passage of the tariff, it would have been a curse; as it is consequent on the navigation acts, planters will view it as a blessing. Ought it not rather to be viewed as a solemn warning, a lesson of instruction, to teach us that, if we expect by our legislation to change the policy of other nations, it is safer to select new points of attack than to persist in one which has already more seriously endangered our remaining staple export than could have been foreseen? Is the allowance of this bounty a practical illustration of the explosion of all restrictions on trade, the adoption of liberal principles and free trade?

It cannot well be considered as a part of a system of restriction, that, in providing for the public expenditure, an excise on any articles of consumption should be adopted. In selecting for taxation objects which will bear it, they must be those which are permanent, not fluctuating. It may be necessary to create some, and to give stability to others. If the exclusion of foreign competition is necessary to effect this, it becomes a measure of revenue and not restriction—of internal, not external policy; affording no just ground of complaint to foreigners, as they have no right to judge of our domestic legislation. To our own citizens it becomes a measure of restriction or benefit, according to its operation. In the present state of foreign markets, the exclusion of foreign spirits would open a domestic market for our grain, which in vain seeks one abroad. It cannot be called illiberal in us, but called for by self-defence. We may have as little cause to complain of their exclusion, as it results from a calculation of interest; our excise on domestic spirits becomes a mere matter of revenue, to supply the impost on imported spirits. Thus there may be mutual prohibitions, dictated by national interests, and yet consistent with the principles of free trade. In apportioning our imposts, for the united purposes of supplying the treasury, giving a value to our productions, and employment to the labor of the nation, it well cannot, and ought not, to be called a system of restriction, unless, in its operation on foreign nations, or our own people, it extends beyond those objects, to individual or general oppression. If, in its details, the proposed bill contains features of this description, they are certainly objectionable, and the committee would be unwilling they should be retained; but, as they are unable to perceive them, as none of the memorialists have pointed them out, but confined their objections to general allegations, we must be allowed

to believe that none of its provisions extend beyond the dictates of sound policy, and are undeserving of the strong epithets which have been so liberally applied to them.

Destroy revenue.

It is a very common objection that this bill will destroy the revenue, and make a resort to direct taxation inevitable. If this was an evil which would never befal the country under the present system, and would be a consequence of a new one, there might be much weight in the suggestion. But it must be recollected, that if we have not hitherto, and do not now, resort to direct and internal taxation, it is not because our revenue is sufficient to meet our expenditure; the aid of loans is indispensable. Internal taxation is now avoided only by borrowing, not because our other means are abundant; these loans are not in anticipation of the receipt of taxes already imposed, or merely temporary until an efficient system shall come into active operation, but made on the general credit of the nation, without any definite and certain provision for their repayment. If it can be called one, then our present system is not impost, but impost and loans; every change in the tariff, let the effects be as they may, can only change the proportions of the two items. Admitting it may become loans and impost by the new, it is not certain that it may not by the old. If it is not unwise or unsound policy to resort to the general credit of the nation in time of profound peace, no possible bad consequences can follow the adoption of the proposed plan. It is only the difference between the people paying as they go, and paying interest; for the people must pay in the end. Loans are not revenue, and are to the nation what a judgment and mortgage are to an individual, binding the person, personal property, and soil. If loans are ever to be paid, and interest is not to be a perpetual tax on the country, we have already as much debt to redeem as the present generation is able to pay; the burden must be removed by us, or left as a legacy to posterity. If loans are injudicious, then other means must be resorted to to supply the deficiency in the treasury; those means are, an increase of the impost and tonnage duties, or internal and direct taxes. If the former is the most eligible mode, then the bill of last session becomes necessary for revenue, and is free from the objection now urged; if it fails in this object, it must be because the present tariff is as high as the country can bear; in other words, because impost cannot be made efficient. If this is already so certain and clear that it is useless to even try the experiment, another mode becomes indispensable, and must be adopted immediately. What is that other mode? Direct taxes, excise, &c. It is conceived hardly necessary to examine into the expediency or justice of assessing on the real estate of the people a sum sufficient to meet the deficit of the treasury, as it is believed to be within the personal knowledge of every member of this House that the farmers and landholders are unable to pay a tax on their lands. The depression of agricultural produce, the depreciation in the price of real property which is universal, the state of the currency, the want of a circulating medium, and the means of procuring it, forbid the hope that this would be an available mode. In the present embarrassment which pervades the whole country, it would be unjust and oppressive; the people have not the means or the ability; an attempt to coerce them would throw the Government into unnecessary expense, or enable them and speculators to purchase the fee simple of our soil. In this situation of the country, the committee would express their decided opinion that the imposition of this tax would produce evils of the most serious and alarming nature, and be equally repugnant to the wishes of the Legislature and the interest of the nation.

In looking around for other objects of direct taxation, none can be discovered which could materially relieve the public embarrassments. Excise seems to be the only expedient. Excise is, as well as impost, a tax on the consumption of the country; one operates on the imported, the other on the domestic article; the difference is in name, not substance; it is in both a duty laid—an assessment made on the value, weight, dimensions, or quantity of an article imported from abroad, or made at home. The term *excise* is with some an odious one, implying compulsion to pay it; while *impost* is said to be a voluntary tax; but it is surely as easy to abstain from the use of domestic spirits, and thus avoid the payment of an excise, as from the use of foreign spirits, and thus avoid an impost. Those who will use spirits must pay one or the other; and if the amount of the assessment on both is the same, it makes the same addition to the price, and, in either case, operates with as much compulsion. An impost on woollen or cotton goods to those who choose to wear them is an addition to the price—a tax; if they wear them, they must pay it; an excise is no more compulsory, and ought to be no more odious or unpopular. There is great magic in names and words. Finance and revenue are said to be sciences; darkness conceals their principles; political and mental research is necessary to understand them; there is this veil which conceals them from common and simple observation, which can only be raised by those initiated in their mysteries. Hence has arisen the delusion which presents commerce as the principal source of revenue. This delusion would be effectually dissipated, if a few plain practical considerations were bestowed upon it; but it continues, not because it is so difficult, but so easy to remove it. There are no truths, either in science or common life, so difficult to inculcate and enforce observance as plain and simple ones; when they are applied to the great operations of Government they are doubted, because it is a common belief that great machinery can only be put and kept in motion by great principles, above common comprehension; hence they are not examined. From the want of this examination has arisen the common accepted opinion that excise is an oppressive, impost a mild mode of taxation. Had it changed, and applied the word *impost* to domestic articles, *excise* and *external taxation* to foreign, the popularity of the two modes of taxation would have been transposed; for their operation on the people is the same. A moment's reflection will bring about the conviction, that a dollar impost, or a dollar excise, on a yard of cloth, which is in both cases added to the price, is of no further importance to the one who buys it than in paying it in the one case to the man who imports, and in the other to the man who makes it. To the Government it is the same, as the same amount is received into the treasury; whether derived from the one source or the other, it is alike revenue. This revenue is in neither case paid by commerce or manufactures; the tax is on the article, not on the carrier or the maker. Commerce is the means by which the foreign article, manufactures the means by which the domestic article is furnished to the consumer or purchaser, who pays the tax; when he buys the goods, he pays the revenue. If the articles could not be sold, none would be imported by the merchant, or made by the manufacturer; the Government would receive no revenue.

Impost being a tax on consumption and not on commerce, consumption and not commerce furnishes the revenue: so of excise; it is consumption, not manufactures. Both the merchant and manufacturer make the tax an article of merchandise, by adding it to the cost, and apportioning the profit on their aggregate expenditure. The consumer will purchase from the one or the other, as he can best and easiest pay, or most profitably exchange. The present state of the country offers a decided preference. The merchant cannot purchase or receive in exchange the provisions or raw materials of the farmer; their importation is prohibited in the country whence he imports his goods. But the manufacturer wants provisions for his laborers, and materials for his establishment: he can purchase or exchange. When grain can be exchanged for spirits, it pays the tax to the Government and the price to the distiller; it is, therefore, an easier and cheaper mode of discharging the portion of the burdens of Government, which every man must pay, than by being compelled to turn his grain into money at any price which a bad market

would afford. If, therefore, the operation of the proposed tariff would be to substitute excise for impost, as the principal source of revenue, it would be a most salutary effect to the mass of consumers, who would thus be enabled to pay in kind, and by exchange, what they must, by the other mode, pay in money. To accomplish this, there must be subjects for the operation of an excise; while foreign productions supply the consumption of the country, there will be no domestic ones on which to impose an excise; or, if an impost should create such a consumption as would divide the market, an excise on the domestic article would render the impost on the foreign no discrimination, and enable it to supersede the domestic in the market. The domestic market must be secured to the domestic production; then it can pay an excise, and render the revenues of the Government permanent and certain as the consumption of the country. A sudden change in systems of taxation creates revulsions injurious to established interests; it should be so gradual as to give time to the business of the country to direct its operations in conformity to the new measures. This is best done by such a revision of the tariff as will make the most from items for revenue, and to enable those of manufacture to progress to such a state as to meet the demand. If the proposed tariff has not this tendency, it is not because the most assiduous exertions of the committee have not been directed to those objects.

The important inquiry now presents itself, will such a change be injurious to the revenue, or is it necessary for its preservation and increase?

The official documents before us present the alarming facts, that, besides the absorption of the balance of the sinking fund, the deficits of the last and present year amount to nearly $10,000,000; that the revenue from the customs for the "last three years has rapidly decreased, and those of the last are less than any preceding one since the peace." As the consumption of the country is the source of the customs, it is thus rendered certain that it does not keep pace, but diminishes, with the increase of the population of the country; one principal reason must have occurred to the personal observation of every member of this House in his district—the means of purchasing imported articles have become, and are becoming, lessened. A hope is, indeed, left us, that we may anticipate more from the future than we have realized from the past and present; but we are left without any certainty of the means by which the future consumption of foreign goods may be increased beyond the present, or any assurance that it will not be less. In trusting to estimates and conjectures, and by basing our legislation on them as facts and certainties, we make ourselves responsible for their correctness, if they prove delusive; and yet we shall, by implicitly confiding in them, have persisted in a system injurious, and retarded the adoption of one beneficial to the national revenue, interest, and credit. The responsibility may be unpleasant, for we shall have avoided the course to which facts, experience, and perhaps policy, pointed, and followed that to which we had been allured by expectation and hope. If the resources of the country, if the means of purchasing the materials which can be exchanged, have become diminished, it is not by any calamity of a general nature at home, or any unexpected events abroad. Many think it has resulted from trusting to external, and not to internal sources of revenue, from not securing our market to our own productions; if they are mistaken in the reasons, they are not in the fact. The revenue has been insufficient, and is yet so. Will it not then become prudent to adopt our measures on the belief that it will continue so under the operation of existing measures, and in the existing state of things? There is, at least, safety in this course; no change is even conjectured till 1822, and then may not be very sudden, or to an amount greater than will be required to redeem the public credit. In 1825 $18,000,000 of public debt becomes due, and it is not probable that the revenues of the intermediate period will more than meet the expenditure, the loans of the last and present years, and that instalment of the public debt. There is no danger that too much money will flow from the present system of revenue to the Treasury; but there is much danger that there will not be enough to meet the demands. A prudent, safe, and sound policy would then seem to dictate the propriety of providing for a contingency, which, if not certain, is highly probable; and not trust implicitly to one which is barely possible, and which must take effect, or the whole country present one general distress, heightened by the loss of national credit, the destruction of public confidence, and justly ascribable to our want of foresight, possibly to the pride of opinion.

It may happen to the best administered Governments that their settled course of policy may be defeated by unexpected, untoward events. Our fiscal embarrassments cannot be traced to such a source; if they could, then temporary expedients would become justifiable, till a settled order of things were restored. But, if the calculations which have led ours to adopt imposts as the almost exclusive source of revenue have been that a general war in Europe would secure such a price to our produce as to furnish the means of an indefinite consumption of foreign goods; if our reasons for now adopting no other system arise from the expectation that another great convulsion will happen, it will have presented a bold experiment, which nothing but success could justify. It is building the support of the Government not on the resources of the nation, but the fluctuating policy of foreign Powers, which will not be conformed to meet the demands of our treasury, or the interest of this people. The experiment was made on a forced and unnatural state of things; settled order has now returned; and we must increase the present, afford new means for the consumption of foreign goods, or base our revenue on the domestic. The latter is no new or untried measure; it has succeeded, by developing and retaining the resources of the country, enabling them to supply the deficiencies of the treasury.

A reduction of the existing duties has been suggested as a mode of increasing the revenue. It is not perceived how this consequence would follow; though the price of the articles consumed would be lessened, the quantity consumed must increase in a ratio greater than the price decreased, or it could not produce a greater revenue. It could not add to the means of the consumer to purchase the greater quantity; it would open no new market for the exchange of the products of his labor or soil. And, if it is dangerous to now raise the duties to a rate preparatory for an excise, by creating too sudden a revulsion, it would be still more so if the point of depression should be made still lower, and it shall hereafter be found necessary to resort to the proposed bill. One thing must not be forgotten: admitting that the increase on the tariff will impair the revenue, it will only be in consequence of the substitution of the domestic for the foreign supply for consumption; if, from both sources, the aggregate amount of consumption remains the same, it only requires the substitution of an excise to produce to the Government the same revenue with the same exaction from the people. The only possible inconvenience must arise from the refusal of the Legislature to impose the excise, or the people to pay it. The objection, therefore, should not come from either of these sources, that the revenue will be destroyed. They must make impost efficient, or try new sources; if they will cling alone to this, let them make the most of it; not, when its incompetency is publicly and officially acknowledged, object to any alteration extending or reducing it: if it has failed in its present shape, to give it another; if the modification the committee recommend is wrong, to offer one which will be right. When the expenses of a Government exceed its income, there is a responsibility somewhere; expenses must be reduced, or income raised. If all the expenses are necessary, then it is as necessary to make provision to meet them, unless the inconvenience to the people in providing the means to meet such expenses is greater than the good which is derived from the objects to which the money is applied; in that case they become secondary, and must be dispensed with. If all our present expenditure is required for the common defence and general welfare of the nation, the common defence and general welfare become secondary objects, unless they justify the means of defraying it, and must be sacrificed by the refusal or neglect to do it.

If the expense is neither to be brought within the income, nor the income raised to the expense, it must be bad policy in one aspect or the other. If the retention of the army, navy, and civil list is connected with the system of common defence, the means of their support is the essential part of the same system; the friends of the one cannot be the enemies to the other; if the means are not worth providing for, the establishments are not worth their cost. Important as are our army, navy, and the other machinery of the nation, there is yet one item more important, more to be cherished, as the great means of public defence, the vital principle which infuses life and imparts vigor to all others—public credit. Armies, navies, and civil lists cannot create or preserve that; it is the effect of wise policy, prudent councils, and sound legislation. Credit can create the other instruments for defence; it is the moving, the inspiring cause, which gives efficient impulse to national movements; the extent of its creative preserving powers is bounded only by the emergencies of the nation, but it should be guarded with a watchful eye; our only resource in time of war, it should not be exhausted in time of peace; with it, all the great defences of the country are broken down. If in peace it be prudent to provide for war; if this be the maxim which convinces us of the policy of retaining an army and building a navy to defend the country, the same policy will dictate the ruinous consequences of destroying the only efficient source of their support. If our calculations are founded on the belief that war is a calamity too distant to be guarded against, then there can exist no stronger reasons for providing force than for retaining credit. Credit is a fund on which this nation may largely draw, but it is a fund not yet untouched; if it accepts the bill now drawn upon it for $7,000,000, it will have advanced nearly $100,000,000. The war drafts will soon arrive at maturity, and no provision is made for their redemption. Credit rests on confidence; it will have but slender support if we commence another war with this heavy load. The means of payment will soon be called for; the public lands are probably pledged already for their full value; and the customs are inadequate to the ordinary expenses. No permanent fund for the payment of the interest; no source to which we can look for the redemption of the principal of the public debt—these will be sufficient clogs on loans which may be required in times of danger and trouble; they ought not to be increased by additional ones in ordinary and peaceful times. It is far from the wish of the committee to draw a cloud over the bright scenes of the late war; but it cannot derogate from the glory they imparted to the country to remind the House of the instructive lessons it afforded. We commenced it with a national debt of $45,000,000; the country less embarrassed than at present. With what difficulty, at what sacrifices, loans were obtained, it is unnecessary to examine; to sustain public credit unimpaired ceased to be an exertion; any efforts made were to prevent its extinction. The known fruitlessness of the attempt forbade the Government to even ask the nominal value for the evidences of public debt; the first great inquiry was, if they could be sold at all; the last, at what depreciation. Happier results cannot be expected, if, with diminished resources and a more than doubled debt, we commence another war without a permanent source of revenue. Public credit does not fall in the mere ratio of the increase of the public debt; its decline will become more rapid as the means of sustaining it are neglected or denied; lenders will look to the security for the punctual payment of the interest, and the eventual payment of the principal; the value of that security will depend not on general, indefinite, though positive assurances, but the permanent efficient measures which will insure the redemption of our plighted faith. As the amount of the debt is in a greater or less proportion to our efficient resources; as our foreign relations may present a more or less pacific aspect; as our domestic policy may more or less tend to impair our institutions, to strengthen or weaken the common bond which alone makes us great; as the history of our past legislation shall give confidence to the existing, or justify the demand for new pledges for the future, so will the solidity of this great national defence be secured or impaired. Entertaining these views, deeply impressed with their intimate connexion with the general welfare, it will not be expected that the committee will further pursue the inquiry whether it is wise or safe to supply the deficit by loans; that they can hesitate in believing that it should be a resort only after the failure of all other means; and that the time when old sources of revenue fail is the proper period for laying the foundations of new. It can only be found in some species of taxation: that it is not in the present tariff is admitted; that it could not be in a reduced one, is certain; it must be in an increased one, excise, or direct taxes. If an increased tariff will afford the remedy, it removes the revenue objection, and presents conclusive arguments for its adoption; if it fails of this effect, and excise shall become indispensable, the measure is still necessary to so far reduce foreign imports as to give the market to the home products, to enable them to become commensurate with the demands of the country, to supply its consumption, and be thus reared up as the effective subjects of excise, by a gradual and not a sudden and radical operation. Viewed thus, it may be defended and justified as a mere measure of revenue, and ought to lose none of its importance or value because it combines the protection of national resources and industry; tending to retain within this country its currency and profits; giving to this, and not to another nation, the benefits of the circulation of the one and the expenditure of the other.

Ruin commerce.

When a measure is recommended for adoption, which contains not only general provisions, but a variety of details, which are alleged to bear with peculiar and *intentional* oppression upon a highly respectable and useful portion of the nation; when their memorials on our table attribute the tendency and the *design* of that measure to be the destruction of a great national interest which affords them the means of employment and support, it should be deemed incumbent on those who make to support these charges. When it had ceased to be the act or project of individuals, by its adoption by the representatives of the people, it ought then at least to be thought to have emanated from a conviction of public duty; if the result of errors, that they were those of judgment; motives and intentions might have been spared. However little it may have been deserved by others, charity should have extended to the representatives of five of the greatest commercial cities in the Union, some of whom assisted in devising, and all of whom concurred in the passage of the measure, the want of a design to destroy the interest confided to them. If the motives ascribed are discernible in any feature of the bill with such clearness as authorizes the imputation, it is the least favor that can be granted to those who disclaim and do not feel conscious of having indulged a feeling of hostility to any interest, and at least profess the desire to promote the general good, that such particular features should be designated; it may serve as a friendly admonition by which to avoid future errors; a willingness to retract them might follow from the conviction of their existence, and reputation be restored by repentance.

The committee thus publicly declare, that if the proposed tariff had, in their opinion, partaken of the character imputed to it, it would not have received their sanction; this House certainly would withhold theirs. Those on whom these direful evils have been impending possess both intelligence and industry to trace their sources in the particular parts of the bill; it ought to have been expected from their candor that, when they knew of their existence and inevitable consequences, which are so deeply deplored and so feelingly portrayed, they would not have confined themselves to general remarks. It was not enough to complain that agriculture, commerce, and revenue would be destroyed; how it would have been done should have been explained. High duties have been tried on various articles; their practical operation cannot be unknown; the benefits of experience should have been

imparted to us. General objections can be made by any one not versed in the operations of commerce or finance; but to ascertain whether they are founded in fact, and apply to a definite proposition, can best be decided by the observation and practical knowledge of men whose pursuits lead and peculiarly qualify them to judge of the effects of legislation on their occupations and interest. On this subject, more than perhaps any other, the fairest opportunity of judging has been presented. This bill is not bottomed on any new policy; the encouragement of manufactures is no uncommon subject of discussion. We have a right, nay, may be bound, to presume that the tariff which would authorize such strong objections, and must produce such fearful consequences, has *been well and thoroughly examined;* that when it has assumed such importance as to call the notice of conventions from States, of committees, and delegates, selected for their intelligence, to represent the great interests about to be prostrated, and by their exertions "diffuse such information as may tend to make its consequences rightly and generally understood," to urge to an enlightened Legislature reasons which should withdraw their sanctions from a measure which one branch had adopted, they would be drawn from the bill, apply to its provisions, and be the most forcible which could be selected: it is a fair inference that those which have not been deemed important have been omitted, and that the objectionable character is to be tested by those which have been pressed.

Those which relate to commerce are the following general ones: "Its avowed object is to direct and control the occupations of men, by granting special privileges to those engaged in particular pursuits." The committee are not aware by whom such avowal was made; they have searched the bill in vain for the evidence of it, and cannot see it in its provision, still less do they recognise the existence of the object in their own minds.

"This tariff would impose on certain foreign manufactures duties professedly and effectually prohibitory; and the question involved in its adoption is not whether the consumer of those goods shall pay a higher price for them, but whether he shall be prevented from purchasing them at all." Conjecture must be allowed a wide range before it could alight upon the tariff intended for this remark. It is not the one which the committee had the honor of presenting to the House; that contained no prohibition. The highest ad valorem duty was forty per cent., and few, if any, specific ones were higher; that tariff prohibited no one from purchasing if he would pay the price. If the certain manufactures prohibited, and the goods which were forbidden to be purchased, had been particularly designated, it would have furnished a clue for our researches; without that aid, our labors would be useless. "A system of restriction so unequal, so repugnant to all sound theory." In its application to commerce, this term is believed to have received no definite construction by its common acceptation among merchants; in extracting it from our laws, it may be found rather more applicable to tonnage duties, professedly, effectually, and practically prohibitory; to the occlusion of our ports to shipping or produce of a certain national or local description; to non-importation, non-intercourse, than to impost for revenue or the protection of national interests. Until either commercial or legal usage shall have embraced those objects in the definition, we cannot think that they necessarily constitute a restrictive system. The committee forbear from noticing another objection to this bill in its bearing on commerce;* like the others noticed, its want of application is a sufficient answer.

"We cannot afford to export our productions to other countries, unless we will take what they give us in return."

It is with much pleasure that the committee have an opportunity of examining one objection which may have some connexion with the general principles of the bill. It is among its first objects to check the importation of foreign goods to an extent that will give some protection to our products. If the natural effect of this will be to injure our foreign market more than to benefit the domestic, it becomes a duty to so modify and vary it as to impose less duties on such foreign products as insure a demand for ours; but when this object can be accomplished without disturbing other parts of the system of the bill which are essential for national purposes, it becomes no less a duty to retain those than to expunge the others. No particular provision, no item, has been designated, except food and materials for manufactures. The application of this objection thus specified to the proposed bill will, we think, furnish a satisfactory answer. Our importation of manufactures is from Europe and the East Indies. To the latter, it is believed, we export no provisions. Their importation is absolutely prohibited by England, France, and Spain; and it is not known that any considerable quantity is required by other European nations. The European and India markets, then, cannot be rendered worse for our food, unless there can be some measure more rigid than exclusion. Our only market is the colonies and islands of those Powers, from which we import but few, if any, articles of manufacture; the duties on their produce are necessary for revenue. And it is here proper to remark, that, though there is a great falling off in the ad valorem duties, the amount of revenue from specific duties has diminished in a very trifling extent. The duties on colonial produce from the East and West Indies are among the highest in our present tariff; that they will bear it, is evidenced from the amount of their consumption, and the almost uniform revenue produced; that they will bear the proposed addition, cannot well be doubted; and, if necessary for revenue, we cannot suppose that any class of the community, especially the mercantile, would object. High duties on produce which we must consume are paid by ourselves, and not those from whom we purchase; it cannot, therefore, induce them to refuse to receive our produce in exchange. At all events, the objection, if allowed its whole force, can only apply to the increased duties on West India produce, not to those on the manufactures of Europe or India. If the state of the treasury would justify it, the committee might yield to the modification, without impairing the general system of the bill. It would afford much gratification if those who press the objection would, at the same time, express their willingness to withdraw it from those parts of the new tariff to which the reason is wholly inapplicable. The committee would, in such event, be happy to meet this spirit of concession and mutual conciliation, and carry it to any general and detailed provision of the bill, (although they might well doubt whether an objection was founded in fact or in reason, and that it might be contradicted by both,) to which any specific objection has been made, and is applicable by fair mercantile or legal construction, provided the remaining parts might be adopted by general concurrence. This would smooth a course of legislation, and save the country the agitation which has been caused by almost classing the nation into parties on this subject, by general questions of comparative interests, by exciting fears and magnifying dangers which cannot grow out of any measure proposed for adoption, if examined, discussed, and modified in a spirit of generous and national feeling.

When one portion of the nation asks a great deal from its representatives, and are convinced that it is all reasonable and required for the general welfare; when one House of Congress, in their sound, and, we must be allowed to say, sober discretion, and not from the "ardor of the moment," have felt it a public duty to grant them a part, it certainly affords some presumption in favor of its policy. If another portion of the community objects to the whole, to any interference at all, they should give the best of reasons, which will extend to all; when none exist or are offered affecting parts, that those parts should be retained they cannot complain who are allowed the benefit of all their suggestions, founded on intelligible and tangible grounds. Where the public opinion is at all divided, each should, in deference and respect to even the erroneous opinions of others, yield a part; each acts from the purest

*Drawbacks.

impressions; each feels itself right; but both are wrong, if one decides on the principles and motives of the other, and each is believed. It will be the work of time to bring about the happy event when all will think, that, though one party may ask too much, it is entitled to something; when the other party objects to all, they may be unreasonable in some things. But the memorials before us afford at least one pleasing indication of the hope that this time may arrive. One of them,* in a spirit of candor and liberality highly worthy of praise and imitation in these times of general agitation, admits that the encouragement of the "manufacture of such articles as are the production of our own soil, for the purpose of turning our industry to the best account, and of procuring the means of defence," avowing themselves the "friends of internal manufactures as a means of fostering national industry, and, therefore, avowing that they ought to be fostered as far as they can be without injury to other branches of industry, would most gladly suggest any thing which might conduce to that end, without being highly injurious to the revenue, destructive to the interests of commerce, and oppressive on the great body of the people." The committee would deem it unworthy of themselves to withhold their entire assent to these principles—to ask their measures to be tested by any other. If they could be presumptuous enough to ask this House to violate them, the effort would recoil on themselves. May we not, then, justly expect and hope that the attempts of others may be equally unavailing? We ask not that they should react, only that they may not be operative or effectual. Applying, then, this criterion to this bill, it has been seen that it can have no unfavorable effect on the exportation of provisions. Raw materials are the remaining item of objections. The principal articles of manufacture on which the additional duties were imposed are, iron, glass, hemp and cordage, paper, linen, silks, woollens, cottons.

The raw materials of iron and glass will not bear the expense of transportation; commerce can give them no value abroad. We have an infinite abundance; it can only be made valuable by manufacturing at home; of hemp and flax we have none to export, and are obliged to import to meet the limited demand of our present manufactures; both are subject, when dressed, to an almost prohibitory duty in England; flax £9 0*s.* 8*d.*, say $40 per cwt.; hemp £4, say $18 per cwt.; in the stem, undressed, both are too bulky for exportation. Cordage we import; it is subject in England to a duty of $4 per cwt. Of rags, the raw material of paper, we import large quantities, and, it is believed export none, as the country does not afford our papermakers a sufficient supply. Rags, in the present and proposed tariffs, are duty free. So far, then, as applies to the material, commerce gains by the manufacture of this article. The same remark applies to raw silk: we have none for exportation; there is a duty on the importation of 15 per cent. ad valorem in the present tariff; the new one makes it duty free.

Wool is subject to a duty of six-pence sterling per pound in England, say twelve cents; it excludes all coarse kinds. Wool is probably less an article of export now than of import; there is no supply beyond the demand; immense numbers of sheep have been killed, because there was no market for their fleeces. The new tariff would not, therefore, deprive commerce of this material for export.

Cotton.—Commerce has no other interest in this article than as a carrier; but, whether in this capacity, or as the guardian of agriculture, she protests against the increase of duty on cotton goods, it surely cannot extend to the coarse fabrics of India. Commerce, as a great national interest, is of infinite importance as the means of encouraging the first of manufactures—ship building, affording a nursery by the employment of seamen, providing for the naval defence of the nation, and for efficient attack. These furnish strong motives for its encouragement; for protection from foreign as well as domestic assailments. Commerce is not that selfish, sordid interest, which looks only to the profit of the individuals concerned in its pursuits, alive only to the means by which they can draw from the consumer the greatest difference between the price which an article costs and that which can be received for it. It raises its views to general national objects, and watches its peculiar interests only as component items in the great work of public prosperity. In the application of these observations to the coarse cottons of India, it will be at once evident that the objections in the various memorials were not, and could not have been, intended to embrace this item. (It is, indeed, referred to in one, but must have been with an exclusive aspect to revenue.) India cottons are not made from American wool, or paid for by American produce. No ships are built, no seamen employed to carry our productions to the British East Indies. Our exports in 1819 were $24,914; in 1820, $5,700. The exclusion of their cottons cannot, then, affect agriculture which raises, or commerce that carries, either the materials or other produce which pays for the manufacture; and thus one important item in the new tariff remains clear of these objections. As to the increased duties on European cottons, of eight per cent., it should be considered that, since the present tariff was adopted, France, by her new tariff, has imposed a duty equal to about twenty per cent. ad valorem on cotton wool, and England about eight or ten. The reasons ought, therefore, to be of the strongest kind, which would show the injurious effect of a corresponding duty on their manufactures. It must be extremely difficult to prove that an addition of thirty-three per cent. on the present duty could produce worse effects on commerce than the addition of one hundred has already produced. Though, till 1812, the permanent duties on cotton goods were twelve and a half per cent. ad valorem, and since that time they have been twenty-five, this duplication has not been injurious to commerce. It is a fact, almost too familiar to be stated, that we have not since exported less cotton than before; American shipping has not carried a less proportion; England has not purchased less. If the additional duty on cotton goods so far promotes the growth of our manufactures as materially to diminish the foreign, it would, in the same proportion, increase the domestic demand; the only difference it could make to commerce would be in the transportation of the cotton from the place of growth to the nearer or more distant place of manufacture; a difference too trifling to at all endanger, or materially injure, the commercial interest.

There is one definite and specific objection which deserves serious consideration. It is said the enormous tax proposed on hemp and iron would strike a severe blow at our freedom and independence; "that the imposition of new and heavy burdens on our shipping would tend to give the British the monopoly of our trade, and to make them our sole carriers." If this duty is of that character, and will produce such effect, it ought to be abandoned. The following calculation will show the operation of this tax.

The additional duty on iron is ten dollars a ton; if four tons are required for every one hundred tons of shipping, the difference would be forty cents on a ton.

The additional duty on hemp is twenty dollars a ton; if four and a half tons of cordage are required for every one hundred tons of shipping, the difference would be —— on a ton.

We are not left to conjecture to know what has been and will be the practical effect on ship building by the increase of duties on these articles. In 1810 and 1811, the duty on iron was seventeen and a half per cent. ad valorem; on hemp, one dollar per cwt. New vessels built in 1810, 127,575 tons; in 1811, 146,691. In 1812, the duty on iron was raised to thirty-two and a half per cent. ad valorem, and hemp to two dollars per cwt. The period of the war can furnish no criterion. In 1815, new vessels built, 154,624 tons; in 1816, 131,667. In the last part of the last year iron was nine dollars the ton, and hemp thirty. In 1817, new vessels built, ——— tons; in 1818, 82,421; in July of that year, iron was raised to fifteen dollars a ton; in 1819, new vessels, 79,819 tons.

*From Richmond.

The original duties on iron were five per cent. ad valorem; on hemp, sixty cents per cwt.; in the increase from those rates to thirty-two and a half on one, and two dollars on the other, it will not be asserted that there was a corresponding decrease in ship building; and the above data conclusively show that the proposed rate would not have that effect. So slight an addition to the expense would not destroy the competition between ours and foreign shipping; it does not hang by so slender a thread. In noticing this objection, it will be perceived that the full weight of it has been allowed for; but the committee must not be understood as admitting for any other than the purpose of illustration that the increase of duty would be a permanent increase of price. The negative of that proposition is proved by the history of all the items in our tariff, when the domestic has superseded the foreign supply, and fair scope afforded for domestic competition.

The House will excuse the committee in remarking that it is a source of great felicitation to them to find that, after the most thorough examination and critical review which has been had on this bill, and, perhaps, not with the most preconceived disposition to approve, the most objectionable items, those which have alone been thought deserving of specification, should so little justify the severe animadversions which have been so liberally bestowed. It is a most pleasing proof that where there is a disposition there is also the power of so shaping the legislation of the country that the interest of one class can be essentially promoted without injury to another.

If, in the various memorials on this subject, there should be found any thing like general allegations of the ruin of commerce, the impoverishment of merchants, the destruction of navigation, and foreign monopoly, it must not be expected that much time will be thrown away in meeting suggestions which can as easily be made, and urged with feeling and eloquence on public measures which are beneficial to commerce, as those which are injurious. Our own history teaches us that the merits of a system cannot be fairly tested by the plaudits or remonstrances of the interest on which it appropriately bears, though it might be fairly inferred that none could better judge of the tendency of a measure than those whom it most affects; who, having often asked, and uniformly obtained, legislative aid, could duly appreciate its policy; yet, when we refer to the discriminating duties on tonnage, we are compelled to doubt the correctness of the inference. This system was adopted in 1790, to aid the commerce of this country; the consequences are well known. In 1802, during the temporary peace in Europe, the British Government was desirous that all countervailing duties on British and American tonnage should be mutually abolished. When it was ascertained that this Government was disposed to accede to the measure, the table of this House was loaded with remonstrances against it. A reference to the records will show whether the same fearful and dreadful evils were not then predicted and deprecated; whether the commerce of the country was not then alleged to be in the most imminent danger; and the progress of the measure effectually defeated by the strong and simultaneous movements of the whole mercantile community. The new tariff did not excite more alarm and fear; a comparison of the memorials will decide. In the next peace which followed, (1815,) our Government acceded to the principle; its effects on our commerce have been most salutary. Now this Congress, receiving its impulse from public policy, has been urged by mercantile memorials, praying for measures to coerce France in relation to the trade with her and England to her colonies, to adopt the system so much dreaded in 1802, so beneficial in 1815, so much pressed in 1818 and 1819, and so unattainable in 1820. It may not be thought disrespectful to observe, that, if the measures of last session could be recalled, there would be some doubt of their adoption at this; that those who asked for them are now convinced that the interest most to be served has been but little, if any, advanced; and that, if national feeling did not forbid the retrogression, national interest would sanction it. With such an example before us, may it not, without being illiberal, be prudent to doubt whether memorials are the safest guides to sound policy; whether those who should be best enabled to judge may not sometimes be too much drawn from reasoning and calculation, from experience to the indulgence of feeling and groundless alarm; whether the vacillation which we discern in the retrospect may not be renewed in the prospective; and whether, like the repeal of the discriminating system of tonnage, it may not be the fate of the new tariff, after being decried as baleful in principle, and destructive in its practice, to be yet hailed as auspicious? To properly estimate its bearings on commerce, the causes of the rise and decline of that interest must be traced; that it has not been from the export of our own productions, or the importations of manufactures, the official history of its progress conclusively shows that it has not ebbed and flowed with the price or quantity of domestic exports or foreign imports. But the exportation of foreign produce, the carrying trade, the war in Europe, left us without competition; peace has overwhelmed us with it. While the war continued, all nations profited by our commerce; since the other has returned, they can profit by their own. Two items of colonial produce required in their transportation more tonnage and seamen than all the imported manufactures consumed in the United States. Of sugar, there was exported, in 1806, 145,630,000 pounds; in 1807, 143,119,000; of coffee, in 1806, 47,000,000; in 1807, 24,122,000 pounds; in 1819, of sugar, 11,267,000 pounds; of coffee, 8,570,000; in 1820, sugar, 31,388,000; coffee, 11,656,000. In 1806, of our two great domestic staples the following quantities were exported: cotton, 35,657,000 pounds; flour, 156,544,000; in 1819, cotton, 87,996,000; flour, 150,000,000; in 1806, aggregate of sugar and coffee, 192,630,000; cotton and flour, 192,201,000; in 1819, sugar and coffee, 19,842,000; cotton and flour, 237,996,000; aggregate of both in 1806, 384,831,000; in 1819, 257,838,000—a falling off in the foreign exports of 126,993,000; an increase of domestic of 45,366,000. The state of commerce in the two years will show the kind of employment which is necessary for its support. It is not for the committee to pursue this subject into detail; but it would have been very instructive if some calculations had been made to show how far the commerce of the country depended on the mere importation of foreign manufactures, how many tons of shipping are employed, and how many seamen, in bringing the whole supply of cottons, woollens, silks, iron, hardware, crates, glass, paper, hemp, and other articles of consumption, which are made from raw materials, which are, or may be, produced from our soil; whether the transportation from one part of the country to another of materials to supply our manufactories, and of manufactures back to the raiser of the materials, and the export of manufactures, might not employ as much shipping and as many seamen as the importation alone of foreign supply. Except of cotton, foreign manufactures afford freight but in the return voyage; requiring none of our materials, or compelled to use those of their own country, they afford no outward freight. During peace in Europe, the fate of our foreign commerce is fixed. We have in vain, and shall in vain, continue to endeavor to force for our shipping the colonial trade. Foreign nations must, and will, protect their own, with a resolution proportioned to their estimate of its national importance. It is with as much reluctance that they will abandon the interest of their navigation, as we of ours. In the contest, it is believed that we have suffered much, and may suffer more; and the most sanguine dare not even predict success. Commerce must, like other interests, yield to foreign competition, backed by an unyielding policy of legislation, which, having built on its commerce an immense system of revenue, is bound in self-defence to reciprocate the support it receives. If foreign nations would permit the consumption of our provisions and materials, and the carrying of them in our own shipping, it might afford some indication of the restoration of our commerce. The new corn law of Spain, the exclusion of our soap, the French bounty on South American cotton, tell us emphatically that this is not the era of that extent of liberal principles which, because it may be morally right, will restore us a monopoly we once enjoyed, not from their good will, but necessities. Now they will submit to privations and positive losses, by forcing the importation

of an article on which we now mainly depend; and this not to counteract a restrictive system on our part, but to continue one on theirs. If the pursuits of the committee in private life have not enabled them to draw, in relation to commerce, just deductions from either reasoning or facts, they feel confident that they cannot err in passing their opinion on the conduct of this Government, called for by the petitions, and sanctioned by the approbation, of the mercantile community, and adopted, not in the darkness of former years, but in the light of the last.

Our present commercial and legislative contest with France and England is to secure to our commerce the export, not the import trade of the country. Those nations do not deny to our shipping the exportation of their manufactures, or produce, on equal terms with their own. That, as a source of commerce, is unrestrained; their duties are not on exports, or on vessels arriving in ballast. It would be a strange policy to discourage or embarrass the exportation of surplus productions, and a truly unaccountable contest, if it was merely or mainly whose navigation should take them to market. A market must be the first great object; the mode of reaching it secondary. Our object is not the exclusion of French manufactures; we impose no additional duty on them by the late law; its operation is to prohibit their introduction in French ships. We submit to the loss of carrying them in our own. Being willing to abandon this branch of commerce, it is deemed conclusive evidence of the general conviction that its importance is secondary. The worst effect of the new tariff could produce no more fearful results; for it must be equal, with American commerce, whether no manufactures are imported, or none in American ships. Merchants willingly embrace the latter alternative to effectuate the greater object, the one which is the foundation, the sustenance of commerce—exportation, not importation. In thus estimating their relative importance, it is a great relief to be furnished with a practical acknowledged standard; no longer left to search for one by conjecture or mere reasoning. This enables us to speak with certainty that this bill, in its worst aspect, bears only on the unimportant operations of commerce. Whether it will injure it at all or not remains to be examined. It must be remembered that there is an internal as well as external commerce: one we now and can forever monopolize; the other is subject to continual competition: one is as permanent as our Government; the other as much swelled to an unnatural size by war as it is emaciated in peace, forever fluctuating with foreign policy, which we cannot control: one limited in its extent by foreign wants, looking only to countries which, having perhaps arrived at their maximum of population and resources, can furnish no new market or increased demand;* the other drawn to a mighty empire, with a population of various habits and pursuits, embracing all the varieties of the temperate climates, fitted to the supply of all our wants; fertile in resources as yet not tried or developed; in itself a continent, destined to open new, and capable of furnishing boundless employment to industry and enterprise. As the best portion of foreign commerce has passed into other hands; as it is now irreclaimable, and can never be certain and uniform, it would be a reasonable hope that there would be a common effort to increase and enlarge the sphere of domestic. It has been as yet untried. It is not prudent to so far decide on the consequences of the attempt as to pronounce it not deserving the experiment. If the same zeal was displayed in discovering new as in the retention of old subjects of commerce, and the effort failed, experience would guide us to the wisest measures. While there is a refusal to appeal to this unerring standard, and we are determined to trust only to preconceived opinions, (the result of habit, and possibly prejudice,) we can never avail ourselves of the example of others, and will afford none for ourselves. In other countries, of limited extent, internal commerce has not been deemed unimportant; it has not been found unproductive of employment, of wealth, or injurious to national interests. Ours is a union of confederated nations; if the intercourse between them is commerce, it may, from its great distance, the variety of its products, and articles of exchange, be called foreign commerce. The extent of water communication between the remoter parts is equal to the space which separates us from Europe and the West Indies. As a material for commerce, there can be discerned no difference between the sugar of Louisiana and of Cuba; the lead of Missouri or of England. Nature has not denied to the immense region watered by the Mississippi, the Ohio, and the lakes, the means of ship building, or the supply of cargoes. Man refuses them a market, because he looks only abroad. If one portion of our country can furnish articles for the supply of another; if the vehicles of transportation, the employment of men, and the distance are the same, foreign can present no preference over domestic commerce, as a national interest. It cannot be that habit, or the laws of nature, have infused into commerce such a spirit that it can only exist by foreign action; its solid interest is not in the ephemeral magnitude of its operations, but their certainty and uniformity. It has suffered more from fluctuation than want of employment. While it acts abroad, its movements are among rivals and enemies, not protected by the paternal guardianship, but checked and thwarted by the jealousy and hostility of the Government under whose influence it must, and against whose policy it may operate. In seeking domestic sources, its course is among friends, divided only by mutual interests; between nations united by the common bond of feeling and power, and under the protection of a Government which, supported by the affections, aims, in return, to provide for the good of all. If considerations growing out of these reflections do not carry conviction, may they not awaken attention and lead to inquiry, so far as to justify one fair experiment? If it should appear that a partial trial has been made, and with success; if there are any of our towns whose trade and tonnage have remained unimpaired by the general pressure, where the growth of domestic has exceeded the decline of foreign commerce, it cannot be uninstructive to search for the causes, or unwise to profit by the example.

As the importation of foreign manufactures might become lessened, it cannot be doubted that the increased internal communication would balance the loss to commerce; it would be more in raw materials, which are not now exported, and, being more bulky than the manufacture, would require more tonnage in their transportation. When the value and weight of the manufactures we import from Europe and the East Indies are compared with our articles of export, it will be apparent that a small amount of tonnage is required for the carrying of goods in a finished state; and that there must be more domestic commerce in collecting the materials and distributing, than there is now of foreign in merely importing the manufacture.

It is not believed to be a rule growing out of the course of trade, or inferible from experience, that the foreign demand for any of our products depends on what we receive in return. Such a rule would necessarily limit commerce to exchange, and none would be carried on where there was only the payment of money by one party, the purchase of goods by the other; there could be no balances of trade. There is no friendship in trade; demand is limited by wants and the means of payment; exchange is the most desired; but when that fails, money and credit will be given. The official statements of our commerce with the East Indies and other countries abundantly prove that we do not refuse to purchase manufactures from those who will not purchase our articles. Though our means of importing from England are diminished in consequence of her corn laws, duties, and prohibitions, *there does not seem to be the less inclination to purchase her manufactures.* Though we are her best customers, no part of her system is relaxed in our favor. She takes from us only what is for her interest, and necessary for her wants.

* The amount of our exports of domestic productions in 1790 and 1791, before the European wars, affords some specific and satisfactory rule by which to test the foreign demand in peace. The prospects for commerce, agriculture, and revenue can, by this comparison, be safely estimated. Those who are willing to trust all to hope should, at least, be called on to show that there are now any markets for our produce which were not open to us in 1790, and that the demand has or will increase.

France does not exclude our cotton, or we her manufactures. Intercourse among nations must be regulated by interest, not feeling; those we deal with take from us what they want, while we supply them on the best terms; their laws do not bend because we receive payment in their products. We do not deal only with those who buy from us, nor is that a rule by which we apportion duties on imports. The duties on Madeira wine, and silks from China, strikingly illustrate this principle. The official tables, the history of our commerce, and all its experience, concur in the proof that the refusal by one nation to receive what it does not want will not prevent another from furnishing what it does, while it possesses means. It must, therefore, be made apparent, that our refusal to import will deprive the two nations with whom we principally deal of the means of purchasing from us; that it must not only turn the balance of trade with England in our favor, but to such an extent that she could not pay it, before the objection can have any weight. If this would be the effect of the new tariff, it might not be a very effectual mode of defeating it by urging such objections on this Legislature. The usage of all trade proves that what is wanted will be bought while it can be procured by exchange, money, or credit; the seller will not receive what he cannot use or sell; the buyer, in such case, and not the seller, must submit to terms. He cannot force his produce into market against the laws of the place or the interest of the seller.

It has been thought the fairest mode to meet these objections to the full extent to which they have been urged, and not to limit our views to their application to the bill the committee have felt it their duty to report. Its provisions do not tend to destroy the importation of all manufactures; it only progresses towards a system which, if judicious and healthful to the country, can be built upon, and made the foundation of others; it is not that rapid stride which can shake any interest to its destruction; if it is wrong, it will cause no sudden convulsion in retracing its errors. It falls as far short of the expectation of one part of the country, as it exceeds the wishes of another; it is the duty of both to yield a part, and becomes ours to listen to both. The committee are aware that the subject submitted to them has excited much sensibility; that their views have been, and will be, misunderstood, is to be expected; when their acts excite, professions will not allay opposition and alarm; it would have better suited their feelings had it been referred to them in terms of less censure and reproach, but it cannot affect their consciousness of having faithfully discharged a public duty; can never prevent them from imparting to one great national interest such degree of protection as comports with the general welfare; and will never lead them to devise injury to another which is intimately connected with the wealth and glory of our common country. We will not stop here, and content ourselves with the mere disclaiming hostility to commerce. If we understand what it is, if we are not radically mistaken in ascribing its former prosperity to exportation, and its present depression to the want of it, there cannot be an interest which more imperiously calls for legislation and national support. Such an interest is not local, or confined to those engaged in its pursuits; it pervades the whole country, and reaches every occupation; it carries our produce and manufactures to every accessible market; it creates and secures employment for all our industry, and, in the import and export of foreign articles, earns the freight of our shipping, the wages of our seamen, and acquires a profit to the employer, which is drawn from others to us. If this is foreign commerce, it is no less a favorite with us than manufactures; if they can be separated, we will not say it may not be more so—the extent of the market it would furnish might be the criterion. If our existing laws impose any restrictions on it, none would more willingly aid in their removal; it should be as free as air, and not be burdened even for revenue. If it has passed, or is passing, into the hands of foreigners, we would be happy to have within our cognizance the means of averting the evil; equally so in devising the best mode of enlarging and extending the sphere of its operations, under the control of our own citizens.

Destroy agriculture.

There can be no measure of sound policy which impairs the interests or checks the pursuits of agriculture: the committee, therefore, do not inquire into the expediency or justice of sacrificing agriculture to manufactures; they will confine themselves to the question, whether this bill, or the system for which it lays the foundation, tends to aid the latter at the expense of the former. Agreeing in this principle with its opponents, the solution of the question depends more on fact than reasoning.

It contains no direct tax, duty, or assessment on the products or occupations of agriculture; it touches nothing of domestic origin: to this there must be general assent. If it imposes a duty on articles other than manufactures, it is solely for revenue, which all admit is wanted, and which the opponents of the bill say is raised by impost from the farmer with less inconvenience than any other mode. If the additional revenue thus raised, to supply a deficit occasioned by its decrease on articles of manufacture, does not increase the aggregate amount of revenue, then are no new burdens imposed on the community; it is only a new apportionment, which becomes more or less grievous as articles of manufactures are more or less, in comparison with others, necessaries of life. He who consumes imported articles pays a tax; there is none on domestic: if, by its substitution for foreign, there is a loss of revenue, which is added to the duty on some other, it is a gain or a loss, as he consumes the one or the other article. The poor farmer, who has substituted rye for coffee, would be a gainer by an increased tax on that, and a reduced one on iron and clothing; to the one who preferred coffee, the amount of tax would be the same. Admitting that, by the mass of the nation, the consumption of coffee would be the same with a higher as the lower duty, and the reduced price on iron and clothing enable them, with the same means, to pay the advanced price on this, then, in a national point of view, the only question would be, whether it bears hardest on those best or least able to bear it. This would depend on a comparison of the articles affected—which were necessaries and which luxuries. In classing them generally, they are dye-woods, dye-stuffs, drugs, clothing, furniture, utensils and instruments of occupation, on the one hand; groceries on the other. In applying this discrimination to the two classes, and the items of each, it will not be found that the rates of duty are peculiarly onerous to the poor or the cultivator of the soil. Where it may be thought to exist, allowance must be made for the small bulk or weight when compared with the value of the article as a temptation to smuggling. It is conceived, therefore, that the relative rates of duties afford no color for the imputation of hostility to agriculture.

But the great objection to the bill—the one which is pressed in all the memorials as the foundation of all the opposition—is, that the increase of the duty is, of course, an increase of the price to the consumer. This is admitted to be true as to those articles the sole supply of which is by importation, but no further. Even here the increased price accrues to the public treasury; it cannot go to the manufacturer till he brings his products to market and sale. Before he can profit by the rise, he must check the foreign competition by acquiring a part of the supply or custom. He cannot do this by exacting a higher price, unless the quality of his goods is proportionately better; he must sell as cheap, and furnish articles of as good a quality, or he cannot begin his operations; they can be continued by no other means. If he puts down foreign competition, and monopolizes the market, it must be by making better or selling cheaper, and by such an amount as will equal the freight and importer's profit; for importations will continue while the article will yield either. If the market should be divided between the foreign and domestic supply, it would keep both at the same price, and, while this continued, operate as a tax to the consumer;

it would be temporary or not, as the country would afford the means of furnishing a sufficient amount for the demand: if it would, and the price afford a profit to the maker, the competition must cease, by reducing it so as to exclude the foreign; if the country could not produce enough, the policy of imposing more than a revenue duty might well be questioned. But true "economy to the consumer" would be a permanent reduction by a mere temporary increase of the price. There can, then, be but one class of manufactures a high duty on which can tend to the benefit of the manufacturer at the expense of the consumer—those of which a competent supply cannot be furnished from our own resources. If such are discernible in the proposed measure, it ought not to be an object to retain them for the mere emolument of the manufacturer. The great articles of consumption are such as can be supplied from our own soil, and by the employment of our own labor and machinery. It is a fact, which cannot be too often repeated, which has been verified by every experiment, confirmed on every trial, that, when the domestic market has been secured to the domestic manufacturer, domestic competition has reduced the price to the consumer. Every family in the country which consumes coarse cotton goods is now deriving a direct and positive advantage from the highest duty on any manufactured article in the present tariff; it is of a better quality and at a cheaper rate than the article was before imported. No theory, no argument, can reason away this fact; it carries conviction to the understanding; the price, the quality, is practical economy, political as well as personal; a saving to the nation and the individual. It is not a solitary item in our experience; nails, gunpowder, umbrellas, cotton and wool cards, present the same results. The purchaser finds these articles at a reduced price, without asking the cause. He may be an active, a conscientious opponent to the encouragement of domestic manufactures; may have heard the charge of there being a "tax on the many, a bounty to the few," repeated so often, that it becomes impressed on his belief, while, at the same moment, he is deriving a pecuniary gain from their success, after they have attained the height of their efforts, the command of the consumption. Thousands are reaping the profits of a competition among manufacturers to acquire employment by a cheap and good supply, while they are laboring under the imputation of conspiring to oppress; as to many items, of which they cannot furnish a full supply, they are enabled to check foreign exaction, and, without duly appreciating it, the country is deriving great benefits from their enterprise.

There would seem to be no reasons for apprehending different results from the further extension of the same principles which have hitherto produced these general effects; if there are the same materials and skill which can be applied to the finer fabrics, there can be no more danger in their exclusion than the coarse. Cotton, as an item of clothing, is as much a necessary of life, and gunpowder of defence, as any other; daily and profitable experience teaches us that we are secured from imposition by leaving the supply of these articles in the hands of our countrymen; there may be as much safety in giving them that of woollens and iron.

The experiment has never yet failed, and those who wish it tried on new objects believe it never will. Those who doubt or fear its success should at least be willing that new subjects should be brought to the test of the principle. Without some act of legislation the country must be forever divided in opinion, and her councils agitated by petitions praying for, and remonstrances protesting against, a measure. If it was the introduction of a new feature into our code, it might well be left to the deductions of reasoning; being but the application of an old and original one, coeval with our first act of fiscal legislation, the lights of experience come fairly to its aid. When facts are admitted, and reasons may exist in favor of a proposition, the opposition to it ought not to rest on reasoning and assertion only; some one fact or instance should be required to do away the conviction which has been caused by many. Admitting that, on this great question of the encouragement of manufactures, the arguments tending to prove that there will be a consequent reduction of price are balanced by those which are offered to show that they will be increased, and the mind thus left in doubt, and it cannot be expected that any further admission can be made; admitting that a uniform series of experiments had been successfully tried for thirty years, and all resulted in the decrease of the price of the article, protected by an increased or high duty, it would be strange to contend that this should not turn the scale. In the numerous memorials on this subject, our researches have not enabled us to discover one case mentioned which has supported the objection; we have been furnished with none from any other source of information, and must, therefore, believe there is none. On other subjects, it is conceded that experience affords the safest guides; no good reason appears why we should exclude it from the investigation of this: when it shall sanction this objection, its full weight ought to be allowed; until this is given to it, while it contradicts it, we cannot yield to its force. It may not be considered unfair to make a reciprocal application of this rule: if the uniform consequence of giving the domestic manufacturer the command of our market, by the imposition of high duties on foreign products, had been to increase the price to the consumer, and he, grown rich by a tax on the country, would be thought to present himself before Congress with poor claims to furnish him with the means of increasing the tax, under the name of protection to him, it would be a conclusive answer—experience is against you. May not the same answer be given to this objection? It is supported by nothing but itself. Hitherto, the profit of the manufacturer has been a saving to the nation; no reasons have been given why it may not be so for the future; it is time enough to give way to the objection when there shall be the same weight of facts to support that there exist to remove it. Let the cupidity of manufacturers be what it may, it can never be gratified when there is no prohibition; foreign supplies must be an effectual security to the consumer, if domestic competition is not; it has never failed: for when a people, so eagle-eyed as ours, are at liberty to select the occupation of their labor, capital, and skill, discern that inordinate or unusual profits accrue to any particular manufacture, the same self-interest which looks to its own gratification will direct their application to the same object, and thus reduce the profits to what is a reasonable compensation. The danger of prohibition is thus averted. If there is reasonable ground to apprehend that this competition may not be an effectual check, prohibition may be avoided, unless required as the foundation of an excise. Where the object is merely protection, a high duty will suffice; the increase of price can never be beyond the duty; according to its rate, it might support an excise on the article protected. It is confidently thought that, even allowing to this objection its possible application, the proposed addition of duties does not throw the consumer into the power of the manufacturer. Very far short of prohibition, the bill does not come in the way of an argument which would appear to apply, if at all, to a system not to be found in any duty proposed. There must have been some misapprehension on this subject; the measure so much deprecated is one which it is said will destroy alike revenue, commerce, agricultural and mechanical labors; the objection cannot be good as to all, and, in part at least, must defeat itself. The average rates of the ad valorem duties are about twenty-eight per cent.; now, if this destroys commerce, by withdrawing materials for carrying, and revenue, by stopping importations, the evil must stop here, and cannot reach the farmer. If the price rises in proportion to the duty, the merchant can still afford to import; the Government will still receive tax. It can only be by a fall in the price that commerce and revenue suffer; it must bring the article cheaper to the consumer; if smuggled, it must reduce the price, as it then comes to him duty free; by all these operations the farmer gains. That an argument intended for a prohibition must be fallacious as to a moderate or (if it must be called so) a high duty, is evident from these and other reflections, which will occur to every mind, unless the mode of paying the manufacturer is more oppressive than the merchant.

This is an important inquiry. The mode, the means of payment, constitutes the real price of an article purchased. If a bushel of wheat will buy a yard of linen, it may be supposed an equivalent exchange, and each article worth, say one dollar; it remains equal while the merchant will take wheat at one dollar; when he receives it at fifty cents, either linen has risen, or wheat fallen, one-half—of no consequence which; it requires two bushels of wheat to purchase one yard of linen. A few years since it was the reverse; one bushel of wheat would buy two yards of linen. Comparing the prices of the two periods with the means of payment, linen has become increased four-fold, as it takes now as much wheat to buy one yard as it did formerly to buy four; linen is therefore four times as dear. Cloth sold five years ago at twelve dollars per yard; six bushels of wheat or six pounds of fine wool would pay for it; now it requires twenty-four bushels of the one, and twenty-four pounds of the other. To keep up the uniformity of price, and bring these articles as cheap to the farmer, linen should be reduced to twenty-five cents and superfine cloth to three dollars a yard. The farmer being able to buy cheapest when he can pay the easiest, he must ask who will give him the greatest quantity of what he wants for the smallest quantity of what he can spare.

The foreign manufacturer of linen and woollen is prevented from purchasing flour, flax, or wool; the importing merchant cannot pay in those articles, and cannot receive them from the farmer in payment for the goods. If the farmer buys them, they afford no additional demand for his produce; he, at all events, cannot be benefited by the foreign manufacturer, or domestic importer or retailer, because neither afford him a good or bad market; they give him none at all; nothing can be received but his money. To whom must he look for that? Evidently to other sources; to some other foreign or domestic market. He then becomes indebted to those other sources for his means of paying for these foreign manufactures, not to the manufacturers or the sellers of them. These remarks will apply to all other articles for which the farmer cannot pay in produce. When foreign manufacturers, from compulsion or interest, will not take the provisions or raw materials from the consumer, the latter can claim no benefit from them. If he must in some other way obtain the money to pay for them, he can be in no worse situation if he buys them from the domestic than the foreign maker, so far, at least, as respects the means of paying him in products which he either will not or cannot receive. The full force of this remark will apply to the great bulk of foreign manufactures of every nation, and the agricultural productions of the Northern and Middle States. It is as correct in reasoning as it is true in fact, that the latter will not pay for the former. The gross produce of farms will not now purchase clothing, groceries, and utensils necessary for supporting the families of the farmer, raising the produce of the farms, and carrying it to market. Their surplusses of one article, or various articles, will not enable them to supply the deficiency of another; one thing will not enable them to buy another; one will not pay for another; his own products are useless; those of others are beyond his reach. The obvious remedy, then, is to enable him to sell what he can spare, to buy what he wants. If foreign artisans will not give him broad-cloth for wool, linen for flax, or either for flour, and the domestic artisan will, then one great object is accomplished; he has a market; he can exchange; one article will buy another at some rate of exchange; what that rate may be, will depend on mutual wants and mutual interest. The farmer is no longer compelled to seek a money market; he has one for exchange; his product becomes as necessary to supply the wants of the manufacturer as theirs to him, and each has a custom for his surplus. The great chain which forms the circle of society is composed of separate links, each link a distinct occupation—we may suppose a hundred. Take one hundred men, each pursuing a different calling, and separated from others; each deals with the other; one's surplus meets his neighbor's wants; the price is indifferent; relatively, it must be equal; one buys and pays for another; each having ninety-nine customers, is secured in employment, and a market for the fruits of his industry; it is permanent, and cannot fluctuate by any foreign action. This circle is independent, perfectly secured from imposition; for as each must have the products of the others, he cannot add to the price of his, without paying more for that which he must purchase; the price of one article must regulate the value of another. If, in this state of things, it should be found out that a foreign supply of the same articles, which are thus furnished from these one hundred different occupations, could be procured from the merchant at one-half the nominal rate of that which had been fixed on by common consent, and each should decide on purchasing the imported article, then each must lose his ninety-nine customers. The merchant will not exchange, but requires money. Where is it to be procured? None can sell his products at half their value, because all have lost their market. There can be no exchange, and no means of raising money to purchase. It becomes an easy question to decide which is "economy to the consumer," which is cheapest.

This comparison may illustrate the operations of society; they are all governed and controlled by mutual dependance and support; all tending to enhance individual and promote public prosperity; they are the same. The nation differs from the village only in extent, both being composed of individuals, and must partake of the qualities and character of its component parts; their interest must be national. In testing these principles by practical operation, in taking the above comparison to the actual pursuits of life, it will be found that the facility of exchange is the great ingredient in the prosperity of agriculture; the contraction of our wants, the extension of the means of supplying them, depend on the activity of this principle. In tracing its effects on the cultivators of the soil, there has resulted a general assent to this position: that the farmer who has the greatest means of exchange is the most prosperous, the less dependant on others, the more free to direct his labor to the most profitable production; the more he manufactures in his own family, the better security for a good and against a bad market. In accounting for the different appearance of two adjoining farms, their comparative state of cultivation, improvement, repair, and production, as well as the relative appearance of comfort and enjoyment, it is no bad criterion to examine the clothing of the owners and their families; their domestic or foreign origin will explain the appearance of the farms. But there is one rule which is unerring—the merchant's leger: the balance on the debtor or credit side is the true touchstone of agricultural prosperity; why not of national? No instance can probably be adduced of a farmer being injured by manufacturing for the use of his family; of the value of his produce or land being depressed by the establishment of manufactures in his neighborhood, or raised by their destruction; of the increase of the wealth, prosperity, or business of a town in an increased ratio to its industry; of national power, resources, and independence being endangered or impaired by the command of its own consumption and means of defence.

Manufactures increase the objects and facilitate the means of exchange. To individuals they afford a nearer and more accessible market, not liable to interruption by war or foreign policy. Roads, rivers, canals, oceans, are but highways to market, the conduits to exchange, the paths by which we send away what we can spare, and bring back what we want. The shorter, the less dangerous the path; the less the expense of travelling, the quicker the return; the more certain the exchange, the better for the producer and the consumer; the more direct the exchange, the smaller the number of intermediate agents who are employed between the two classes, and who must all have their profits, the greater is the amount received to both on the article exchanged. The raiser of flax wants the manufacture, the maker of linen wants the raw material. If they reside near each other, the farmer takes his flax to the manufactory, and brings home his linen: no third person being employed, each receives the full value of his article; the farmer receives the full amount of whatever the flax is worth to the manufacturer; he the full value of what the linen is worth to the farmer. If the manufactory is in a foreign country, the farmer exchanges his flax with the domestic retailer, he remits it to the importer, he to the foreign exporter, he to the manufacturer, who

receives it with all the intermediate charges and profits taken from its value to him. He sends back the linen, through the hands of the exporter, to the importer; he to the retailer; and it comes to the farmer with all their deductions. He then receives as much less linen in exchange for his flax as is equal to the expense of sending his flax to the manufactory and bringing back the linen in exchange. He and the manufacturer are both taxed to the amount of the charges and profits of the double transportation, which would be saved to both if the exchange was made on the spot. The nearer, then, that they can be made to approach each other, the better for both. It increases the means and lessens the expenses of exchange. If it would produce this effect when the raw material will purchase the manufacture at any price, it would be of much greater advantage when it will not be received at all. How, then, a linen manufacture can injure the farmer, cannot be perceived; or what more injury could result from his contiguity to those of woollen, paper, iron, glass, or earthenware. They must bring his provisions, materials, ores, minerals, fuel, and a vast variety of small items from his farm which cannot be exported, and are of no value when confined to a distant market, to a domestic one, which will afford him all he wants in exchange. Such have been the effects in all parts of this country. Wherever there is an opportunity of making the experiment, it would seem impossible to be otherwise; whether it is the mill which grinds his wheat, or the mill which spins his flax, wool, hemp, or cotton, it is the same thing to him as to the quantity of the manufacture he can receive for his raw material. Each is equally affected by the distance and expenses of transportation, which lessen their value.

The manufactories of France and England, united, do not furnish a market for one pound of our flour, wool, flax, or hemp. The manufactories in Oneida county, New York, consume annually, it is said, $110,000 of agricultural productions, which are excluded from use by those who sell us manufactures to the amount of more than forty millions a year; and the few manufactories in the United States consume more of our bread-stuffs than the continent of Europe and the East Indies: for the farmers of this country must know that the market for their produce is not in the countries whence they import their manufactures. It has been the policy of the Government to tax at a high rate the produce of our good customers, and the produce of our bad ones at a low rate; and, strange as it may seem, this policy has never been deemed injurious to agriculture. When a high duty is imposed on the good customers of our agriculturists, there is no complaint from them, or those who are so alive to their interest. The island of Madeira consumed, the last year, of our produce $233,928, British East Indies $5,740. The duty on Madeira wine is one dollar per gallon, on fine muslins from Calcutta twenty-five per cent. These cases are selected for illustration. The statistical tables of our commerce with other countries all tend to give the same practical answer to a different opinion, and to show its entire futility.

The course of trade and all experience prove, beyond a doubt, that the market for our produce does not depend on what we receive in return, and that the market for their manufactures afforded by our policy yields us no equivalent. If the committee are mistaken in this deduction from facts, some reason must be given for the state of our trade with foreign nations. We believe there can be no mystery in its operations, and that ordinary minds can comprehend them. Until better evidence than Treasury documents and general experience be offered, the mind can come to no other conclusions than these:

That foreign nations are governed by their interest and policy in permitting the importation of our produce, excluding, or taxing it.

That they will buy what they do want, and will not buy what they do not want.

That their laws form a system of general policy from which they will neither be driven nor persuaded by any means which our Government has yet attempted. If, therefore, it is sound policy to look alone to a foreign market for our agricultural productions, (and one must be found by legislation,) there is but one mode left—aim at their manufactures. Our market cannot be worse than it is; therefore we lose nothing—it may become better. It is not possible that the establishment of manufactures among us can deprive us of the European demand of what we now export, which is neither bread-stuff nor raw materials: they exclude these from choice, and take others from necessity. Thus far, then, the farmer is safe. But fears are entertained that the remaining exports may be excluded if we impose additional duties on imported manufactures. Cotton being now our grand staple, it must be important to ascertain the effects on this.

It will be at once evident that, as to the quantity consumed, it is the same whether worked up at home or abroad; if the amount exported becomes lessened by the amount required to make as much cloth as will supply our market, the same amount is retained at home. The cotton planter, then, cannot lose by this effect. Will it affect the price of what is used in our manufactories? As the purchase must precede the manufacture; as there would be a competition in the first instance between two sets of purchasers and consumers, the foreign and domestic; as it must end in the ascendancy of the one or the other, the gainer must pay as much for the raw material as the loser. If he is overbid, he could not procure the raw material while another will give a better price; he cannot continue his ascendancy if he refuses the terms the other offers. As the raw material is indispensable, the raiser of it must profit in every possible event; as the market of the manufactured article can only be secured by the one who commands the material, his interest must, of necessity, be an effectual protection to the planter. Will the price of what is exported be diminished? If this country can produce a quantity sufficient for both the foreign and domestic demand, and no more, then it must be wanted somewhere, and all that is wanted will be bought at a fair price: if less is produced than might be wanted, the price must rise; if more, it must fall. But, on this subject, time is thrown away on conjecture. It is well known that this country can produce more cotton than will meet all demands; that the foreign market is completely gorged, and the prices rapidly declining. In the foreign market we have much competition; it is not extending with our means of supply, but contracting; the reasons for creating and extending a domestic one would, to the interest of the planter, seem imperious. Will foreign nations change their policy, and impose additional burdens on the importation of our cotton? This affords room for conjecture. There are no arguments so difficult to answer as general ones, which cannot be located, which will not be specified, and, from their nature, have their origin not in fact, but fancy; their want of weight in every other analogous case will, not prevent their being pressed in a new one. If those who urge them will agree that their validity shall be tested by any known rule, resulting from our legislative or commercial experience, there would be some means of ending the discussion. It is hoped that the light which practice has shed on the other subjects of legislation may not be lost on this. If facts tend to one conclusion, it must be taken to be the just one, unless reason absolutely rejects it.

If England wants our cotton, she will take it, and, in proportion to the extent of that want, will receive it on terms more or less favorable; taking it while it is her interest, and no longer. So far as our supply of her market depends on the ordinary rules of trade, it has been considered, and has no bearing on the present view of the subject. The question is, whether her Government will depart from interest to considerations of policy, and adopt a retaliatory measure. She has not done it in consequence of our exclusion of the coarse cottons from her East India colonies; she did not do it when we, in 1812, doubled the duties on all cotton and woollen goods—her two favorite manufactures; we cannot perceive why she should do it if the proposed increase be made. Her corn laws do not relax or extend in rigor according to the ebbs and flows in our tariff. The imposition of our war duties did not

occasion the exclusion of our raw materials; their abolition did not give them a better market. The flourishing state of our manufactures in 1815 and 1816 did not produce any new measure of retaliation or policy; their depression since has not brought about the repeal of any old one. Our free intercourse with her colonies did not affect her navigation acts; our non-intercourse now does not make them more rigid. The immense amount of her manufactures which we purchase, failing to produce any feeling of peculiar friendship beyond her interest, it is hard to believe that the diminution of the amount will create a spirit of hostility adverse to her interest. Fully convinced that her future course of policy will be guided by the principles of the past, and seeing in that no indications of the course apprehended, we do not think there can be any reasonable fears. Unwilling to pursue this investigation into detail, we close it by remarking, that thus far the cotton planter has benefited by high duties on cotton; the East Indies has afforded him no market; the exclusion of the fabrics of that country has certainly opened a new market, and as certainly it has not impaired the European, for that is glutted. If the exclusion should be extended to all India cottons and nankeens, this new market would be increased, and, probably, to a greater extent than the interest of any European nation would permit it to diminish theirs. As an agricultural objection, therefore, it seems entitled to less weight from the raiser of cotton than any other; for though the East Indies afford a very bad and small market for other productions, they still take some; but of cotton they do not, and never will, take any.

If it be impracticable to legislate a nation into wealth, and impolitic to attempt it, it does not follow that it may not be preserved from poverty; if neither object is attainable, it is not perceived that Government can be of any use to the people: if its operations can tend neither to preserve nor increase the fruits of their labor, we are at a loss to know the legitimate objects of legislation. To what object ought all national machinery to tend, but the common defence and general welfare of the people? If this does not consist in increasing their resources, as well as preventing their extinction, we must pursue this subject no further till better informed.

The encouragement of manufactures is called coercion—a forcing from one occupation to another. Like the other objections, the best answer seems to this is, its want of application in fact. During the late war, manufactures flourished; farmers were not then forced from their occupations. The planter of the South was not prevented from raising cotton; he had no foreign market, but he had a domestic one. But he felt the practical difference between a market at home and one abroad; the land transportation from the place of production to the place of manufacture, and back again, taught him how much of the value of the raw material, to him, was diminished by the intermediate expenses. Had their manufactories been at home, had the same persons who then established them at the North commenced and completed them to the South, it would have been called no forcing of occupation, no tax on agriculture. One pound of cotton will now pay for one yard of cotton cloth; when it shall appear that, before the establishment of our cotton manufactories, or since their decline, a pound of cotton has produced more to the raiser, it will be time to answer any additional objections of this kind. Generally speaking, as there were no manufactories in the Southern States, their existence in the Northern and Middle could not have forced them from their occupations, unless the current of emigration *from the South to the North* should have been the fact from which this objection has been raised. In Kentucky there were manufactories to a great extent; the farmers in their neighborhood, and those who represent them, can say whether they are now more prosperous; whether they have now a greater freedom in the selection of their pursuits, or profit in following them. If the same question were put to the farmers in the Northern and Middle States; if any member of this House, who represents them, were asked if he could point out an instance of even an individual farmer who was against his will forced to abandon his soil, and go to a manufactory for employment, the force of this objection can be tested by the application of theory to practice. It may be asserted with truth, that, wherever the principle has been fairly tried, it has been found that the interest of the farmer and manufacturer has been completely identified; one rises and falls with the other. This is verified not only by personal observation, but attested in the most impressive manner by the petitions presented to the present Congress. Last year thousands of farmers asked you for protection to manufactures; they were from States in all of which their practical effects had been seen and felt for years. With all the efforts used to excite opposition and alarm during the present year, it is a remarkable fact, that, in the whole scope of country from Maryland to New Hampshire, a solitary petition, memorial, or remonstrance of farmers, has not been offered in opposition to the proposed tariff. Those which have been presented are from parts of the country where manufactures never were in operation, and where no correct opinion could be formed of their effects. So far, then, as respects farmers, this is the result: when their opinion has been founded in fact, it is favorable to manufactures; when from theory only, it is unfavorable. There are memorials, it is true, from another class, who, in the name and for the protection of the farmers, decry the ruinous effects of this measure on agriculture. It is not yet known that farmers have not discernment to know, and spirit to complain of their grievances; they have shown it, and asked for a measure like this. When as numerous petitions from them (not from others in their name) shall ask for its rejection, then, petitions being balanced, the question may be settled by general principles of policy.

The war duties forced no man from his employment, but gave him security in its pursuit, opened new sources, gave the means of selecting the most profitable, most suited to inclination, habit, and capacity. The war built up establishments which were rapidly developing the resources and employing all the industry of the nation. The peace, and the repeal of the war duties, prostrated those establishments, and forced the mechanic, the artisan, from an occupation to which he was led by education, habit, and interest, and in which he felt his best security to be the policy of the Government coinciding with the general interest of the people. If complaints of forcing from profitable to ruinous occupations are just from any one class, they must come from those who are practically and virtually forced by the policy of the Government to abandon their trade and occupation. Give a mechanic appropriate employment, he acquires wealth for himself, and adds to the interest of others; drive him to the soil for support, he makes a bad farmer: he may raise enough to feed, but cannot clothe his family. If any of us have seen the instances in actual life of mechanics forced, from the want of employment, to turn farmers, and been enabled to compare their relative situations in both occupations, we can duly estimate the consequences.

If farmers can be considered as a distinct class of society, and their interest separated from the rest of the nation, it is very certain that it cannot be promoted by increasing the number of those who engage in its pursuits; it increases the competition, and diminishes the profits of the productions. To the nation, it is not so important that their pursuits should be productive of amount as value, extensive as profitable. The great object is to afford a market, and give a value to what is raised. We abound in provisions and raw materials; more is now produced than can be consumed or sold; to increase the quantity is only a loss to the raiser; it can give no new value to what he now has, or what he may acquire; it can give him no profit. To the Government it can give no revenue, for it does not increase his means of consuming articles of foreign production; and from no other source of taxation does it leave a surplus that can be spared from the wants of the farmer to the calls of the treasury. Who, then, can be interested in the mere increase of agricultural products, which want a market abroad and value at home? The definition and application to agriculture of the terms *coercion*, *restriction*, and *forcing of occupations*, is now practically understood by all those who will look to the state of the country. Where there is no prohibition, duty, or bounty

on imports or exports, shipping or tonnage—occupations, trade, and commerce are free. Whether these clogs are imposed by our own or a foreign Government, is immaterial; so far as they extend, they prevent the people from the perfect freedom of choice of occupation, employment, and production; and that freedom can only be restored by the removal of these clogs. Whether the character of the proposed bill has been fairly judged of, will become apparent. The clogs on our agricultural products are not on their export; there is perfect freedom in raising and shipping them, but the corn laws of England, France, and Spain prevent their consumption; when they reach their shores, free trade ends. The worst effect of domestic coercion would be to prevent their production or exportation; foreign coercion becomes as effectual when it accomplishes the same object, by rendering production and exportation unavailing; the privilege of raising is a useless one, when there is a prohibition to sell or to use. It cannot be less grating to national feeling that it is the act of a foreign Government. The duty of forty cents a pound on our dressed flax is no less a prohibition to our farmer to raise any more than suffices for his wants than if a positive law forbade it; the bounty on linen is as effectual a check on the making of it here as a domestic excise. The operation of a foreign system, which excludes our productions and forces theirs on us, is the practical restraint on agriculture, the essence of a system of restriction under which the whole country now labors; which, when imposed by a foreign Government, seems to be more admired than dreaded by those who, speaking in the name, assume the protection of farmers. Every farm in this nation will produce flax, yet we do not export a pound; foreign Governments refuse it a market. We do not make our own linen; they give a bounty on theirs, to prevent us from making it. They thus, by legislation, force us from the market, acquire its command; the farmer is prevented from raising flax, and, forced to another product, he tries wool, hemp, bread-stuffs; they are also excluded: he is not left free to sell to the people of England, or they to buy what they want. He is virtually bound to raise only what their Government will permit him to dispose of; his freedom of occupation is gone; it is controlled by a foreign Power; directed by their policy, he is driven to the pursuit which best meets their views, and most promotes the interests of its subjects. The coercion rests not here; it not only forces ours out, but thrusts their productions in, and the domestic market is thus taken from the farmer. When national policy and individual association combine to prevent our manufacturers from affording the home market to the farmer, and succeed in the object, coercion becomes complete. How far the Middle and Western States are now from suffering under the full scope of a foreign restrictive policy, the condition of the farmers will best testify. If the North is saved, it is by manufactures; if the South is yet free, it is because the great manufacturing nations find it their interest, and not against their policy, to permit the consumption of their staples. It would, perhaps, not be a useless inquiry to ask whether their demand and price are increasing? The state of the country fully justifies this remark: foreign policy has forced from employment our agriculture, manufactures, and commerce; each interest is low, each complaining; with the infinite capacity to produce, fabricate, and distribute, the power has become useless, without the means of using it; our industry has become paralyzed by the employment of foreign, which has been forced on us by a persevering, unyielding course of legislation by other nations. Now, when our citizens ask of their own representatives to counteract foreign laws, systems, and combinations, and, if not to retaliate, at least to compel them to restore to us a freedom they have taken away or destroyed—the freedom of production and exchange—that, if the monopoly of our market is to be given by legislation, it shall be such as flows from a conviction of its tendency to promote our interest, and, enacted by our representatives, not such as it may please a foreign legislator or monarch to prescribe to us; how far the increased duties proposed will tend to more or less balance the foreign coercion which now bears grievously on all the country; how far it is defensive or offensive; how far it accords with or contradicts the policy which this Government has adopted in relation to other interests, the House must determine.

There is no portion of the community more injuriously affected by changes in the policy of a country than the farmers; none have suffered more seriously by the repeal of the duties imposed during the war; none felt more practically the dependance on a foreign market for their means of exchange. While they were at his door, the price of goods did not affect him; produce and goods rose together; the same quantity of one would still buy the same amount of the other. Now the scene is changed; goods remain at their old prices, but it takes three or four times the quantity of produce to purchase the same amount. It is often mentioned, as a symptom of better times, "goods are looking up." This may be, by some, deemed an indication of returning prosperity; but, however it may be to others, to the farmer it is ominous of despair; his produce is looking down. When goods look one way, and grain another, the farmer must look to some new mode of turning his grain into something which will produce him his necessaries. While every change depresses domestic, and swells the price of foreign products, he feels coercion, and what it is to be forced, not from his occupation, but from all the comforts it once produced him. Till goods fall as much as grain, or grain rises to the price of goods, the farmer pays two or three hundred per cent. more for them, though they may be quoted at the old nominal rates. He who, in other times, could pay for his iron by produce, or the use of his teams when their labor was not required on his farm, can now estimate the difference between buying at the forge or at the store. When iron was at a duty of 32½ per cent. personal observation did not cause the objection that it forced the farmer from his occupation, or made it less profitable; when, by the existing tariff, it was reduced from 30 per cent. to $9 per ton, it neither gave new employment nor increased profits to agriculture. In extending the observation to all other articles of which our country furnishes the raw material, or which, when made at home, could be paid for in provisions, it is thought to be fully justified by the melancholy experience of the last four years. It has pointed out to the farmer in what true economy consists; it has taught him what is cheap and what is dear; the difference between having his market at his door, or transferred to a foreign country. The books of the merchants, the dockets of justices and courts, tell a story that all can understand. It was not so when manufactures flourished; it cannot continue so when they revive. The farmer will be the first to profit by the change; his is the first interest that should excite our attention: though we may not legislate him into wealth, we may save him from the danger which hangs over him. While we refuse to counteract the coercion of foreign legislation, we do not make his occupations free by removing foreign restraints on his market, or give him an equivalent by securing him a new one. It is said, this new market cannot be afforded; that the farmer now feeds all our population, and can feed no more in any event. If this remark were true to its full extent, it could only apply to provisions. The production of raw materials, which have now no value; the extraction of ores and minerals from the earth, which now will not pay the expense; the supply of fuel, which is now useless; the increased demand for potash and dye-stuffs, for the various small items of the produce of a farm, which, though not necessaries, are comforts, and may add very importantly to the farmer's market, as the same population has greater means of payment—all tend to enlarge his means of exchange, his sources of occupation. The mere necessaries of life are few in number and low in value; their production is not the most profitable employment of agriculture; it is, perhaps, the most expensive. The garden, the orchard, the dairy and poultry yard, the sty and the stall, are matters of no little importance; they afford more profit and require less labor than the grain field. The market for their production depends not on the mere amount of population, but the means of that population to extend their purchases beyond necessaries to comforts and luxuries. The supply of these is the farmer's profit; the raising of them employs the labor and attention of children, (who are of no use in a field,) by

occupations in which are combined health, pleasure, economy, and industry. If foreign bounties and duties were removed or counteracted, the culture of flax, hemp, and wool would be no less honorable or useful pursuits of agriculture than grain; and there is one raw material for the culture of which this country is well adapted, in which is only required the attention of children to enable *insects* to labor for the emolument of the farmer—raw silk. These are all new sources of wealth, by the establishment of manufactures, though the population is the same. There is another: the mechanics, who are, for want of employment, now compelled to procure a scanty subsistence by the cultivation of the soil, without means to purchase, or stock or knowledge to cultivate, a farm; who add nothing to their own or the wealth of society; who have nothing to spare for the support of Government; forming no part of the solid yeomanry of the country, who, identified with its soil and strength, may be truly called "the salt of the earth;" but a miserable tenantry or mere occupants, who, having been forced by foreign policy from the occupations for which they are fitted, are now only waiting for some act of this Government which will enable them to resume them—the number of these is not small, and each one of these and their families will become new customers to the farmers. Foreign artisans must not be overlooked: foreign capital will flow to us in no small current; foreign owners and foreign artisans, who are now waiting to see in our legislation some assurance of permanent policy. They are a valuable, useful class of citizens abroad, and, so far as our observation extends, we should do them injustice in witholding the expression of our opinion that they are distinguished for their public spirit, their good conduct, and devotion to the true interests of their adopted country.

There is one other aid to agriculture which must be admitted to be a natural consequence of the establishment of domestic manufactures. Whatever the market of the farmer may be, it will be permanent; co-extensive with the consumption of the country, it will expand with its increase. He will know to what objects to apply his labor and skill; the demand will be steady; he can vary his culture to meet the varying wants of society; he will look alone to his own Government, to his own representatives, for the rules of policy which may have a bearing on his occupations; which can be affected only by those who are united alike with him in their devotion to the common interest of their own common country; whose pursuits will intermingle with his, forming the common mass of national industry, from which no just Government can withhold its protection.

With the notice of one other objection the committee will close their remarks, with not less relief to themselves than to the House.

If manufactures will produce these effects, why are they not established? If the foreign article can be undersold, why is it not done without the aid of legislation? We answer, because the effects of foreign legislation cannot be removed by individual exertion or enterprise. Whatever may be done here by our citizens, to acquire the command of our consumption, is equalled by foreign individuals to retain it; each feel the advantages, know the profits, and make equal exertions. The superior numbers and greater wealth of foreign capitalists are, of themselves, formidable obstacles; but, when backed by the policy and wealth of a nation, by their laws and systems, the competition becomes unequal. To restore the balance, to make the competition a fair one between individuals, the weight of one Government must be taken from the one scale, or balanced by the same weight of another Government in the other. We might here ask, if this would insure the desired protection, why withhold it?

When business has for years taken an established course, it is no easy matter to divert it. The progress of our manufactures was slow till the late war. The consequent diminution of imports, and the duplication of the permanent duties, gave them a powerful impulse; they were rapidly advancing to meet the full demands of the consumers. The revulsion caused by the present modification of the tariff has been in force ever since. If it has been beneficial to the country, then let it continue; but if injurious, let it be stopped; legislation caused, and alone can cure it. The war duties were not imposed for the protection of manufactures, and repealed when the object was found unattainable or prejudicial. They were imposed for revenue—the object was effected; they protected manufactures—the country prospered; an excise was built on manufactures—the support was mutual. The Government wanted revenue, and obtained it; it now wants it, and, the same means in their power; why, then, not resort to them—if for no other, at least the same reasons as before? It ought not to make revenue the less acceptable because it encourages domestic industry.

If the enterprise and capital of individuals were competent to the object, it must be the work of time; before it arrives, the public resources will require new means of supply: it then becomes the duty of Congress to hasten the time, and this for its own protection and support. But, if it should be true that, in the present state of the world, no new manufactory can be successfully established without legislative aid, (that it is true, is proved by the experience of all manufacturing nations, confirmed by our own, and it has by one of our greatest statesmen been declared to be a maxim of universal application,) the fact once established, it would be in other subjects deemed superfluous to assign the reasons, (for the want of reasons cannot do away facts;) but it being required on this subject that no proposition can be made out from fact and experience alone, it is better to meet than evade the requisition. A most obvious reason occurs at once, that a new manufacture can only attain success by excluding an old one, which is in possession of the market; without the aid of a law on either side, or the competition of any capital, except of the individuals who are struggling for the market, the one who can make it the interest of the consumer to purchase from him must prevail, if the capital of both is equal; if it is unequal, the greatest will eventually prevail. The competition is not for the momentary, but the permanent command of the market; the losses, during the temporary contest, will be refunded by the future profits when the market is secured. Who then can hold out the longest becomes the question. This is at once settled, when a Government bounty comes in aid of the one set. An excise drawback, or a custom bounty, is a contribution from the public funds in aid of individual enterprise to acquire or retain the supply of a foreign market; it is not merely an addition to the capital of the individual, but a gratuitous donation to him. Competition must cease between them, unless one individual has funds equal not only to the other, but to his Government likewise. Hence, no new establishment, which diverts employment from an old one, can, under such circumstances, succeed. It will be an ungenerous objection to say that our Government is not bound to furnish capital to manufacturers; that is not asked or expected. But, it is understood that, in answering the objection now under consideration, it is taken for granted that manufactures, once established, are of advantage to the country at large; and that the question is, whether Government should interfere to aid them in their infancy, or whether such interference is necessary? If this question be answered *yes*, then it be hoped that it will not be contended that it is generous or just to withhold that interference on account of the capital of the persons concerned; that moderate capital, skill, industry, and enterprise, must be suffered to sink under the foreign action brought to bear upon it; nothing be thought worthy of legislative aid but immense capitals, which require less in proportion to their amount. While on this subject, it would be proper to remark, that, before this objection should have any influence on us, some standard should be fixed, some sum named by law, which should be deemed as bringing the proprietors within the policy of protection. Manufacturers would then know that if they invested to that amount, they could compete with the foreigner. It is not so important what sum should be named, as that some should be fixed upon; it is believed that a republican Legislature would not require an amount beyond the means of their constituents to procure. If it was more consistent with theirs, and the principles and practice of the

Government, to graduate the protection in the ratio of the wealth of those who asked it, that would be more just than to refuse it wholly to the middling class. If the nation at large will be benefited by protection to manufacturers, it is no answer to say their capital is not sufficient. We must say what is sufficient; till that is done, the answer will not be accepted, for it affords no rule, no security; it means any thing, it means nothing; it becomes mockery. If manufactures are a national interest, and justify protection, there cannot be a better rule, more equal and fair, than to require, as a preliminary to protection, the investment of the same amount of capital as by our uniform legislation for thirty years has been required of another co-ordinate interest—commerce. Equal justice to all makes it our duty to make the comparison; it is done with no unfriendly or invidious feeling, but merely to remind the House that want of capital has never excluded the merchant from the pale of protection; if he had enough to commence his operations, those operations have been protected from foreign aggression. It is believed that the capital invested in manufactures has been equal to the investments in commercial pursuits, in proportion to the amount of business done, and, including the credits at the custom-house, that commerce has been conducted more on credit than manufactures.

A linen or glass manufactory is about to be established in our country; there is capital to erect the buildings, purchase the machinery, and stock to commence; the proprietors meet at once competition from the following sources: foreign manufacturers, foreign exporters, American importers, American retailers, and a foreign Government. The American manufacturer stands alone; he asks for a fair chance, fair play. Willing to take a contest against equal force, but unable to contend against numbers, wealth, and power, he calls on his Government to equalize the competition; to make it individual; to impose on the importation a duty equal to the premium which the foreign exporter receives from his Government, for the express purpose of breaking down the competition. A custom bounty, or excise drawback, is not to give the command of the home consumption; that is done by prohibition and duty; it is to force and command the foreign. The bounty or drawback does not make glass or linen cheaper to the people of England; it is to prevent us from using our raw materials; to compel us to use theirs; to employ their labor, and give a value to their industry. The American manufacturer is the only person who can obstruct their policy; if he can be broken down, the American people must depend on England for a market as well as for the articles of their consumption. It would not be unreasonable to call on this Government to give them duties beyond the bounty. If the duty is 25, and the bounty 25, there is no protection except of a negative kind; the bounty received from one Government equals the duty imposed by the other: yet even this meets with objections; it is called a restrictive system. In the case of glass, the oppression on our manufacturer is still greater: the custom bounty, or excise drawback, is equal to 28 cents a pound; yet the proposed import duty of 10 cents a pound has not (except in one memorial, to the liberal principles of which the committee must again give their approbation*) been exempted from the general and heavy charges made against the new tariff. Unless manufactures are to be proscribed; if those engaged in their pursuits, and to whose benefit they tend, are to be thus abandoned; if the unequal and (in part) unnatural anti-national pressure under which they labor is to be increased by a foreign Government, and ours stands neutral—it may be asked, for what Government is instituted? where are the benefits imparted to them? The farmer has the raw material, the artisan the capital and skill; but they cannot use it. If on the faith of a revenue system the capital is invested, the labor of years is lost by a reduction of duties below the amount of foreign bounties and drawbacks. It is not the manufacturers alone who suffer; they alone, it must be remembered, are the class of men who can ever interpose between the importer and consumer; put them down, the agriculture of the country is completely dependant on foreign Powers. Such is our present situation; the people of this nation cannot believe it is their interest to remain so; they support the Government, and ask protection. The committee think it their duty not to withhold it, and to afford it to such extent as will give a fair opportunity of bringing into active and useful operation all the resources of the country; to give a market and a value to all the products of our soil; to counteract foreign legislation, so far as it bears on the industry of our own people, by directing its pursuits and occupations to subserve the policy and interest of other nations.

If it should be remarked that the proposed bill falls short of the principles on which it is founded, it must not be alleged as evidence of a want of confidence in their correctness, but of the deference which is felt and paid to the opinions of those who differ from us in their views, equally conscientious with ourselves; it was due to all the members of this House to convince them that our convictions are so decided and deliberate that we would be content for the present to lay a proper foundation, leaving it to experience to direct what should be built upon it: if insecure, the more easily removed; if the substantial basis of national industry, the easier to finish the structure.

STATEMENTS ACCOMPANYING THE REPORT.

Fifteen per cent. articles.

Agates, adianthum, agaric, almond paste, ambra liquida, aloes, annatto, angelica, amber, antimony, argol, ambergris, anniseed, oil of anniseed, aquafortis, aquaregis, arrowroot, powder of arrowroot, arsenic, assafœtida, asphaltum, alkalies.

Bacon or hams, bricks and tiles, balls, washballs, barley, beans, borax, coral beads, glass beads, beads of other sorts, jesuit's bark, red bark, Carthagena bark, balm of Gilead, bandstring, twine and cord, bezoar stones, bladders, beef, butter, berries, burr-stones, (wrought,) blacking, bronze figures, castings, bones, busts, blankets.

Combs of tortoise-shell, combs of ivory, combs of horn, camphor refined and crude, coral, cantharides, cochineal, calamus, Columbo root, cremor tartar, charts, chalk, chamomile flowers, castor, caviare, civet, China root, citron, cobalt, clocks and time-pieces.

Dates, dressing-boxes, drawings.

Elephants' teeth, emeralds, engravings, essences.

Feathers for beds, frankincense, flax, flour, frames for pictures, looking glasses, &c., filberts.

Galls, glauber salts, gentian root, ginseng, gems, galbanum, gamboge, gums, (all sorts but Arabic and Senegal, as copal, ammoniacum, tragacanth, guaiacum,) granilla, grapes, grain of all sorts.

Hair, hellebore, hoofs, hops, horns and horntips, hardware of mixed materials.

Ivory, ipecacuanha, jalap, juniper berries, instruments, philosophical, surgical, &c.

Black lead, litharge, liquorice, lemons, limes, lampblack, linens.

Malt, manna, flackey, ditto sorts, maps, marble, and marble ornaments.

Mixed materials a great variety. The difficulty of ascertaining which is the material of chief value is generally settled by affixing the duty of the lowest component item to the whole article, as silk and cotton, cotton and linen, &c.

Nuts.

Opium, castor oil, otto of roses, oranges.

*Richmond.

Painters' colors, paintings on glass, other paintings, philosophical apparatus, pink root, pencils, pens, pictures, pitch, (Burgundy,) pitch, (other sorts,) platting, bast, chip, straw, and hair, for hats or bonnets, pomatum, potatoes, prints and drawings, pork, prunello shoes.

Quicksilver, quills.

Radix, rhubarb, roco, rugs.

Silks of all kinds, saffron, sal ammoniac, safflower, sago, seeds, senna, shellack, shumack, sal gem, sal limonum, sal prunelle, sal succini, snake root, squills, seeds, statues, sculpture, salep, spikenard, sponge, starch.

Telescopes and all eye glasses, talc, tamarinds, tortoise-shell, terre japonica, tinfoil, toys, tapioca, tumerick, tooth powder.

Black varnish, bright varnish, verdigris, verdeter, English and China vermilion, vellum, Roman vitriol, vinegar.

Wax, sealing, &c., whalebone, wool, worsted or stuff goods.

General table exhibiting a view of the present tariff as to the duties on manufactures, materials, and groceries, showing the difference between what may be called protecting and what revenue duties, and those proposed by the bill now reported.

Proposed,	-	-	35	

NOTE.—In the above table the calculation of the specific duties, estimated as ad valorem, is taken from a pamphlet published at Boston. The difficulty of ascertaining the price of foreign articles is very great. The prices in this table are from prices current of the present year; they afford no certain rule by which to estimate the duty, as different articles are imported at different rates of profit. Among the mercantile writers on this subject there seems a very great difference of opinion. The above rates are taken from the pamphlet alluded to, not so much from a certainty of its accuracy, as because it is the only one which gives any general calculations.

Fullers' press papers are sold by the pound, generally at 20 cts.	-	-	06			

Of sheathing paper, and paper used by sugar refiners, I have not a perfect knowledge of the value, but suppose it to sell for about eight cents per pound.

Common wrapping paper is sold by the ream, and at different prices, according to size, such as cap, pot, crown, demy, royal, super-royal, &c. &c., and I think is in value from six to eight cents per pound.

Tissue paper is a kind of light paper used for covering copper plates in books, and is commonly made on medium sized moulds, to weigh about six pounds per ream, and is worth about six dollars per ream, in consequence of its being in part made out of new stuff.

The article of hanging paper, or stamped paper, is now made in the United States to a sufficient extent to supply the demand, and yet great quantities are imported, the prices of which vary according to pattern and richness of color.

* Super royal printing paper is seldom or never made finer than No. 4.

Statement of exports the produce and manufacture of the United States, commencing the 1st day of October, 1818 and 1819, and ending the 30th September, 1819 and 1820; also, for the years 1790 and 1791.

RECAPITULATION.

7,069,618 gallons from domestic materials, at 20 cents per gallon, is	- - -		$1,413,923 60
3,217,061 gallons from domestic materials, at 25 cents per gallon, is	- - -		804,265 25
862,490 gallons from foreign materials, at 20 cents per gallon, is	- - -		172,498 00
11,149,169 gallons spirits distilled in 1815, amounting to	- - - -		2,390,686 85
Add amount which accrued on the capacity of stills, viz: From domestic materials,		$750,503 22	
From foreign materials,		91,616 59	
			842,119 81
			$3,232,806 66

NOTE.—The law laying the duty on the gallon took effect on the 1st February, 1815, and ceased on the 30th June, 1816. The above table comprehends a year of that time, viz: from 1st February, 1815, to 1st February, 1816.

To the honorable the Senate and House of Representatives of the United States: The memorial of the chamber of commerce of the city of New York respectfully shows:

That your memorialists view with much alarm the renewal of an attempt to repeal the acts making discrimination between American and foreign duties on imports and tonnage, and pray leave to submit to the consideration of Congress the following objections: *First.* It will diminish the revenue to an amount which, taking past years as the guide, would not be less than $450,000 per annum. *Secondly.* It will essentially injure the commerce of the United States, as its effects will be, by opening the market for freight to the lowest bidder, to shift the carrying trade from the hands of our own merchants into those of foreigners. This, your memorialists believe, will appear from the following considerations:

First. Foreigners build their vessels much cheaper than we can do. From actual calculation, it is found that a vessel built of European oak, and equal to those built of our live oak, (which, besides, is nearly exhausted,) costs, when equipped for sea, at the rate of $36¼ per ton; and, if built in Finland, of their fir, of which they have abundance, equal in duration to our common oak, and fitted for sea in the same manner, she will cost at the rate of $19 per ton; while the American vessel, built of our common oak, and not so well equipped, will cost at the rate of from $40 to $45 per ton; but if built of live oak and cedar, she will cost at the rate of from $50 to $55 per ton.

Secondly. The materials composing equipment, such as iron, hemp, sailcloth, &c., are all cheaper abroad than they are here, and the price of labor for working them is supposed to be fifty per cent. less there than in the United States.

Thirdly. Foreigners navigate cheaper, seamen's wages are lower, and many of their crews consist of apprentices without wages. The apprentice act of Great Britain renders it incumbent on every owner or master of a vessel to take with him a certain number of apprentices; and this they find so advantageous that they frequently double or treble that number, more especially vessels from the north of England. Every merchant engaged in commerce knows that the Hollanders, Hamburghers, Danes, Swedes, &c. man their vessels with a still greater proportion of apprentices; and in the cheapness of their living, clothing, &c. they have a very material advantage over the vessels of the United States.

Thus it appears that foreigners can build cheaper, equip cheaper, and sail their vessels cheaper, than we can; and it may be added, that Europeans are generally satisfied with a less gain than the American merchant can afford to receive.

Lastly. Although it has been said that for us to meet the advance on the part of Great Britain, and to repeal our countervailing acts, would place the two nations on an equal footing, yet your memorialists conceive that, while Great Britain retains her present navigation act, this would be very wide of the truth. We, on our part, should thus permit Great Britain to bring hither not only goods the growth or manufacture of that country, but of all others; while, on her part, by the navigation act we have just referred to, we shall be expressly confined to the carriage of goods the growth or manufacture of the United States. To this may be added, that British vessels would then bring a cargo from their own country to this, take a freight here to their colonies where our vessels are not admitted, and from thence a third freight home: making thus three freights in one voyage. The value of the importation cargoes is so much greater than the value of our exportation dutiable cargoes, that the extra duties paid by the foreigner are in many cases equal, and in some cases more than equal to the whole freight; so that the acts which are now proposed to be abolished operate nearly as a prohibition to the foreigner, and leave us, in a measure, without competitors in our own markets. After all that has been said, it hardly needs to be added, that if our ports are thrown open to foreign on the same terms with our own vessels, as by this repeal is contemplated, (for it is in vain to attempt to confine the measure to the British,) they will crowd our wharves, underbid our freight, monopolize the markets, and leave the American vessels idly to rot in our docks. Your memorialists have therefore no hesitation in declaring that, in their opinion, this measure will be a fatal blow to the American carrying trade. It would be easy to show, in the detail, that this would, in its consequences, prove extremely injurious to the agricultural and the mechanical classes of our citizens; a few general observations only will be indulged.

First. As to the agricultural. Although, generally speaking, freight is paid by the consumer, and therefore it may be said it is immaterial to the farmer how high or how low it may be, yet this is not the case when the demand ceases or slackens; it then falls back on the husbandman. But to transfer our carrying trade to foreigners will be to lessen very much the chance of the demand.

The active enterprise of the American merchant is constantly looking abroad to every part of the world for a market; and if it is any where to be found, or if there is only a reasonable presumption that it may be found, the farmer meets with a ready vent for his produce. Perhaps the calculations of the merchant may be disappointed, and he even ruined; yet the misfortune reaches not the farmer; he has the same benefit of a good market: but should the American vessels once disappear, he must then be entirely at the mercy of chance adventures for a market; and when the demand is not very great, the price of the freight will be deducted from the article itself. All this must necessarily tend essentially to lessen the value of the farmer's produce.

Secondly. As to the mechanical. That numerous class of mechanics who are connected with ship-building, the carpenter, the blacksmith, the sailmaker, the ropemaker, &c., &c., will of course be deprived of employment; their labor will be neither wanted nor paid for.

To conclude: our ships being thus banished from our shores, we shall no longer furnish a nursery for our seamen, but that valuable class of citizens will be driven to seek for their bread in other countries; and in any future European wars which may happen, and which are constantly liable to happen, we shall find ourselves without sea-

men or ships, to avail ourselves of that neutral position which reflection and experience equally warrant us in calculating upon as one of the blessings allied to our remote and secure situation.

On the whole, your memorialists cannot refrain from expressing the belief with which they are strongly impressed, that to repeal the discriminating laws, which have operated so happily to increase our navigation and commerce, would be a measure highly prejudicial to various and important interests in the community, detrimental to the revenues of the country, and, in a national point of view, extremely impolitic. They therefore pray that the repeal may not take place.

JOHN MURRAY.

J. W. LAWRENCE, *Secretary.*

NEW YORK, *January* 15, 1803.

Importations of goods from Europe paying ad valorem duties.

1816.	In American vessels, - - - - -	$83,676,283 = 83.67	per cent.

	In foreign vessels, - - - - -	688,195 = .6

To the Senate and House of Representatives of the United States in Congress assembled: The memorial of the chamber of commerce of the city of New York respectfully showeth:

That your memorialists have witnessed, with feelings of deep concern, the consequences resulting to the shipping interest of the United States from the discriminating duties established in France on the staple products of this country.

At the period of their imposition, and for a considerable time subsequent to the late war in Europe, the trade carried on by French vessels with the United States was chiefly confined to New Orleans and other southern ports, whose productions constitute the principal exports from this country to France, whilst their interest in shipping is very limited; so that the effects of the enormous discriminating duties payable on the importations into France of cotton and tobacco, in transferring to French vessels the carrying trade to that country, were not immediately perceived or felt by the ship owners or merchants in this quarter of the Union. But the severe losses sustained by those who employed our vessels in that trade have since led to an investigation of their causes, and created a universal feeling of the injury and injustice to which our flag is subjected.

In giving to this subject the attention which its importance demands, your memorialists find that the foreign tonnage duty and light money payable in the United States are very nearly equal to the foreign tonnage duty and port charges in France, and may therefore be considered as regulated upon the principle of a just and fair reciprocity; whilst the discriminating duties imposed on the importation of merchandise operate on the shipping interests of the two countries in a manner altogether disproportionate and unequal.

The foreign or discriminating duties paid by American vessels importing the following articles into France, are: $1\frac{1}{2}$ cent per pound (French weight) on cotton; $1\frac{1}{8}$ cent per pound on tobacco; 55 cents per 100 pounds on potashes; which extra duties exceed the whole freight now paid for the transportation of those articles from the United States, whether in French or in American bottoms.

The present rates of freight, in French vessels, are about $1\frac{1}{8}$ cent per pound for cotton; $\frac{3}{4}$ cent per pound for tobacco; $\frac{1}{2}$ cent per pound for potashes; and, in American vessels, about one-third below these rates; making the difference of duty by a French vessel exceed the gross amount of freight by an American vessel at least one-third.

To form an estimate of the practical result of these regulations, it will be assumed that a vessel of 300 register tons burthen will carry 560,000 pounds weight of tobacco; the difference of duty on which, at $1\frac{1}{8}$ cent per pound, would be - - - - - - $6,300

Which is equivalent to *twenty-one* dollars per register ton.

Or, in a vessel of the same description, carrying 280,000 pounds weight of cotton, and 220,000 pounds of potashes, the difference of duty, estimated at $1\frac{1}{2}$ cent on the cotton, is - - 4,200

And that on the potashes, at 55 cents per 100 lbs., is - - - - 1,210

Would be, together, - - $5,410

Which is equivalent to *eighteen* dollars per register ton.

The discriminating duties chargeable on the three articles above enumerated, which constitute the bulk of our exports to France, form an aggregate much greater than the foreign duty of ten per cent. payable in the United States would amount to, if calculated on the whole importations from France. And the experience of the last two years confirms, (what, indeed, is sufficiently obvious from the preceding statement,) that a perseverance in the present regulations of our intercourse with France must operate to exclude American vessels from all participation in the carrying trade connected with it.

Your memorialists, in earnestly soliciting that the attention of your honorable body may be engaged in devising some remedy for an evil so serious and alarming, beg leave to suggest their conviction of the utter inefficacy of any system of countervailing discriminating duties to be levied on the importations into the United States of French merchandise, inasmuch as the articles which would be the necessary objects of such duties bear no proportion in their bulk, and in the price of their transportation, to those which form our exports to France. And the course of the colonial trade, moreover, enables French vessels to avoid the inconveniences of performing the voyage across the Atlantic in ballast, by taking a freight from the ports of France to those of her colonies, and then turning their

course advantageously to our ports, either in ballast, or with colonial produce; whilst our vessels, generally, return direct from France in ballast, or only with inconsiderable ladings.

To exhibit in its proper light the importance of the subject under consideration, it will be necessary not only to advert to the actual amount of tonnage employed in the transportation of our produce to France compared with the aggregate tonnage employed in foreign trade generally, but also to take into view their future relative proportions when our trade to France shall have received all the extension of which it is susceptible, by the progressive increase in the cultivation of our southern products, and when our shipping shall have experienced the reduction it is to suffer by the effects of the further development of the actual state of our foreign commerce.

It would be superfluous to enter into details to show how extensively, and almost entirely, all the sources of that commerce are cut off. It is a lamentable fact, that more than half the number of vessels lately arrived in this from foreign ports are dismantled, from the absolute absence of any advantageous object of commercial pursuit. And this state of commerce seems the natural and necessary result of the new order of things which has prevailed since the pacification of Europe. Every restraint that lately shackled the navigation of the principal maritime nations of Europe has been removed, whilst the general trade and navigation of those States are, at the same time, regulated with a studious regard to the interests of their own subjects. So that the United States have not only ceased to be the carriers for Europe, but are deprived of the means of entering into a fair competition in the transportation to foreign countries of the principal products of their own soil.

It would seem obvious that, during the continuance of a state of peace in Europe, the great elements of our commerce in that quarter of the globe will be confined to the exchange of our products for such articles of foreign production as may be required for home consumption.

The quantity of American cotton, tobacco, potashes, and other staples, now consumed in France, cannot be correctly stated by your memorialists, but they presume it to be equal to a fourth of the whole quantity exported to Europe.

The aggregate tonnage employed last year in the direct trade from the United States to France is estimated at fifty thousand tons; in addition to which, an indirect trade of considerable extent has been carried on by the circuitous channel of England. (The saving on the duties, by reshipping our cotton and tobacco thence to France, in French vessels, instead of shipping them direct from the United States, in American vessels, being more than equivalent to the extra freight and charges attending the additional voyage.)

If we limit our views of this carrying trade to the employment of fifty thousand tons of shipping, the freight out and home, calculated at twenty dollars per ton, amounts to one million of dollars; which sum, if gained by our vessels, might justly be considered as so much capital added annually to the stock of national wealth.

However small the nett profit may be to the ship owners on this amount of freight, the disbursements for the equipment, and the wages for the navigation of the vessels, would be left at home; and, together with the employment it would require of so large a body of seamen, would materially conduce to create and maintain the elements necessary to advance our commercial and naval interests.

The act of Congress offering to foreign nations the means of a free intercourse with this country, on terms of perfect reciprocity, has not, as is believed by your memorialists, been found as beneficial in its operation as was justly to have been expected.

Those nations whose acceptance of the invitation it held forth might subserve the views and interests of the United States are found to remain passive; while Holland, Sweden, Prussia, and the Hanseatic Towns, adopting the principle of reciprocity, secure to themselves an important exemption in our ports, without affording any privilege in theirs not before enjoyed by the United States, and, in fact, gratuitously granted to every other nation.

Until lately, we found some advantages in our commercial relations with the possessions of the King of the Netherlands, by participating in the trade to the colony of Java; but now heavy discriminating duties are laid to confine all the advantages of that trade to Dutch vessels. Your memorialists do not notice this circumstance as requiring the application of any remedies within the purview of this memorial, but to show the progressive extension on the part of the European Powers of a system of absolute colonial monopoly, and to evince the necessity of devising means to counteract the growth of that system, by some vigorous effort on the part of our Government.

Louisiana was acquired by the United States in her colonial state, and the monopoly of her extended and growing trade would be more valuable than that of any two colonies whatever. And the Floridas, if they pass from their present abandoned and miserable condition to be integral parts of the Union, cannot fail, by the quickening influence of our free institutions, to open vast resources of trade, and may add to the list of our present exports even the articles of sugar and coffee, hitherto deemed exclusively colonial.

The liberal policy of the United States, in opening to all nations a free trade to the vast marts of their colonial acquisitions ought, it would seem, to entitle them to some corresponding privileges from those nations, at least, who participate largely in the benefits of that trade. But no such reciprocation has been experienced; nor, as the result of gratuitous concession, is it to be expected.

In reference to the oppressive discriminating duties on the importation of American products into France, which it is the principal object of the present memorial to bring under the notice of Government, your memorialists take leave most respectfully to suggest, that they can devise no expedient more likely to produce a favorable change in the present system of the French Government, nor better calculated to enable the citizens of the United States successfully to resist it, if persevered in, than the imposition of a heavy tonnage duty; and, at the same time, no measure appears to your memorialists so consistent with the general policy of the United States.

Referring to the statement already made, exhibiting the effects of the discriminating duties in France on cotton, tobacco, and potashes, considered as a tonnage duty on American vessels, your memorialists leave to the superior wisdom of Congress to determine, on a full consideration of all the circumstances connected with the case, what tonnage duty should now be imposed, so as to make this a fair and effective countervailing measure.

Your memorialists, considering, moreover, that some new provision is necessary in order to render beneficially operative the act of Congress which offers to foreign nations the means of commercial intercourse upon the principle of reciprocity, respectfully suggest that this duty should be made to apply to all nations which shall not adopt that principle.

A general regulation of this nature, whilst it would violate neither the letter nor spirit of our treaties with France, appears to be equally expedient in reference to other nations. Spain, for instance, besides imposing, as is believed, discriminating duties on the articles of our exports imported into the mother country, exacts most excessive extra duties on provisions imported by American vessels into her colonies. Among others, that on the article of flour amounts in Cuba to $3 37½ per barrel. The regulations of trade in the ports of the Spanish colonies are such as not to place the intercourse with them under any of the restrictions contained in the navigation act; and thus, whilst this trade remains open to both nations, the discriminating duties imposed in those colonies must operate to transfer it altogether to Spanish vessels, as soon as their flag can navigate securely.

Your memorialists are persuaded that a measure like the one proposed could produce no injurious effects upon the agricultural and commercial interests of the United States, by abridging in foreign markets the sale of their produce. The prohibitory regulations of different Governments prove that the *want* of our provisions is the only security we now enjoy for their admission into foreign ports; and wherever this want exists they will continue to be received, direct, or by intermediate ports.

The principal articles exported to France are so essential to the supply of her manufactories that they cannot be dispensed with: so that, if a system of commercial regulations could be supposed to exist, operating to prevent a direct exportation of those articles to that country, its whole supplies of cotton and tobacco must be derived through the circuitous channel of England, (as has been partially practised for the last two years,) or through some of the neighboring ports of the continent; and, in either case, we should at least partake in the advantages of their transportation across the Atlantic.

The right of the citizens of the United States to participate, on equal terms, in the advantages to be derived from their commercial intercourse with foreign nations, appears to your memorialists to be indisputable. And they appeal with confidence to Congress for such interference on their behalf as the public policy may justify. Although it may be questionable, in a case like the present, whether it would comport with the dignity of the nation to offer any considerations to foreign Powers in order to obtain a just reciprocity of commercial benefits, yet your memorialists take leave to suggest the expediency of holding out to France some further encouragements to the consumption in the United States of French wines and silk manufactures. Encouragements of this nature, if not required as an inducement to France to place the regulations of her trade with this country on a more equal and just footing, may possibly be used to obtain some relaxation in her colonial restrictions, and induce the repeal of the late order directed to the national tobacco manufactory in France, which restricts the employment of the foreign growth of that article to the proportion of one-sixth part for five-sixths parts of domestic growth.

It is true, in reference to the article of wines, (the duty on which is now sufficiently reduced,) the United States could, in the way of inducement to France, only assure to her the continuance of that reduction. But, in regard to silk manufactures, the imposition of additional duties on the same articles imported from China might be adopted as a measure of reciprocal advantage.

It would certainly be of great importance to France to check the immense importations from China of silk goods in imitation of French fabrics. And, considering the heavy drains of specie from the United States, which are caused by the prosecution of the trade to China, it would at least be equally advantageous to us to receive the same articles from countries where they can be obtained in exchange for our own products.

Your memorialists are anxious to maintain the national prosperity, and would discredit the unreasonable clamor of desponding and embarrassed traders; but the foreign commerce of this country, at the present period, is so rapidly declining, and its shipping interest so particularly depressed, that they feel themselves constrained to declare their firm conviction, that both must dwindle into comparative insignificance, unless the measures of foreign Governments, operating to deprive this country of an equitable participation in the benefits of its commercial intercourse with them, shall be promptly met and counteracted.

Under a deep impression that the prosperity of the nation is intimately connected with the prosperity of its commerce, and that the rising hopes of its future naval power are essentially dependant on the maintenance of its navigation, your memorialists have thought it a duty they owe to the community to submit these considerations to the wisdom of Congress; humbly praying that they will afford such relief in the premises as the nature of the case may require.

WM. BAYARD, *President.*

JOHN PINTARD, *Secretary.*

A statement of the comparative extent and value of the manufactories of Pittsburg and vicinity, in the years 1815 *and* 1819, *viz:*

Manufactories.	Number of hands employed in 1815.	Value of the manufactures in 1815.	Number of hands employed in 1819.	Value of the manufactures in 1819.
Steam engine factories,	290	$300,000	24	$40,000
Foundries and iron castings,	163	190,000	40	80,000
Iron and nail factories,	65	241,200	30	40,500
Blacksmiths and whitesmiths,	90	90,000	39	40,000
Glass manufactories and glass cutting,*	169	235,000	40	35,100
Hat manufactories,	69	122,000	30	50,200
Woollen factories and hosiery,	63	48,500	16	16,150
Saddlers,	68	90,100	28	36,000
Breweries,	28	91,050	18	35,000
White and red lead factories,	25	110,000	9	35,000
Tobacconists,	48	45,850	27	27,550
Brass foundries,	35	49,633	12	11,700
Ropemaking,	18	30,000	15	15,000
Saddletree factories,	28	29,000	12	14,000
Tin factories and coppersmiths,	100	200,000	40	45,000
Chair factories and cabinet making,	66	90,000	40	24,500
Silver plating,	30	32,450	8	8,500
Cotton factories,	42	42,000		
Plane making,	20	25,000	10	9,500
Wire weaving,	10	12,000	7	6,000
Wire making,	8	21,000		
Button making,	6	6,250	3	2,100

* On flint glass alone the reduction has been $75,000.

STATEMENT—Continued.

Manufactories.	Number of hands employed in 1815.	Value of the manufactures in 1815.	Number of hands employed in 1819.	Value of the manufactures in 1819.
Umbrella making,	2	$1,600		
Piano-forte making,	4	2,000	1	$700
Tailors,	66	65,000	29	28,500
Shoemakers,	140	125,500	50	49,000
Patent balances, scales, and steelyards,	10	10,000	4	3,500
Yellow queensware,	9	10,000		
Pipe making,	3	1,800		
Linen factory,	20	25,000		
Wagon making and wheelwrights,	40	40,000	20	18,500
Paper making,	50	40,000	30	30,000
Auger makers, bellows makers, brush makers, cotton spinners, weavers, curriers, cutlers, locksmiths, spinning machine makers, tanners, tallow chandlers, pattern makers, silversmiths, gunsmiths, and soap boilers,	175	195,000	90	130,000
	1,960	$2,617,833	672	$832,000

Questions addressed by the Committee on Manufactures to the Mercantile Society of New York, with their answers.

THE NEW TARIFF BILL.

You will recollect that the tenth section was stricken out, and the ninth so modified as to be unobjectionable.

Question 1st. State the *items* on which you think so high a duty was proposed as would lead to smuggling.

Answer. Smuggling cannot be carried to any extent except on our frontiers, and, generally speaking, there would be but little difference there, whether the duty was 15 or 40 per cent. Those who are most conversant with our revenue laws know that the difficulties attending smuggling from on shipboard are so great that the gain would not justify the risk. European and Indian ships and cargoes are so valuable, that, supposing character in no way affected, the owners would never jeopardize them for the sake of clandestinely introducing a small part; to thus introduce any considerable part would be impracticable, without the connivance of the officers of the customs.

Under the duties of 1815 and 1816, the whole amount smuggled from on shipboard in our commercial towns did not probably amount to a twentieth of one per cent. on the cargoes imported. Watches, jewelry, laces, and sewing silks are the principal articles that are and would continue to be smuggled, because their bulk is so trifling that they are imported by passengers and others, and not entered on the manifest; therefore the vigilance of the officers cannot, in all cases, prevent their being landed without paying the duties. As such goods so introduced must almost necessarily be sold by auction, any saving in the duty might be met by an equivalent auction duty.

Question 2d. Enumerate those which you think would amount to a prohibition.

Answer. Article 5th will amount to a prohibition of all kinds of paper, except colored and stained paper and paper hangings; all kinds of hats, except leghorn straw. It will probably ultimately amount to a prohibition of prunello and silk shoes, flint, cut, and window glass, slates and tiles for building, common corks, salted fish, and inferior kinds of gunpowder.

Question 3d. Generally, would the rates of duty proposed diminish or increase the revenue? in other words, would the increased duties equal the diminished importation? If you think it would, state the items specifically.

Answer. The proposed tariff, if adopted, would, in our opinion, diminish the revenue. The articles enumerated in the answer to the 16th question are all now recollected that will bear an increase of duty without injury to the revenue.

Question 4th. Are there any general provisions in this bill that would have an injurious effect on the revenue or on commerce? If so, specify them. This does not refer to the rate of duties.

Answer. In the 5th article of the tariff bill, "*allowances or discounts*" ought to be stricken out, as they throw insurmountable difficulties in the way of many descriptions of goods.

Question 5th. What is the cost of a British ship of, say 300 tons; what of an American of the same force and burden; and, generally, the difference in the price of shipping by the ton in each country, completely equipped?

Answer. A British ship of 300 tons, equipped for sea, will cost $24,000, or $80 per ton; an American ship, of the same quality, will cost $18,000, or $60 per ton.

Question 6th. The quantity of iron and cordage to the 100 tons of shipping?

Answer. It will require 4 tons of iron, 1,500 pounds of copper bolts, 4½ tons cordage, and 20 bolts of duck, to the 100 tons.

Question 7th. Would the proposed increase of duty on iron, hemp, and cordage have the effect of inducing the merchants to build their vessels abroad, or of giving foreign a preference over our own shipping?

Answer. As to American merchants building vessels in foreign countries, it is out of the question; for, by our navigation laws, American papers could not be obtained for them. Foreign vessels would not have a preference in our ports over American built vessels, unless at a reduction in freight of 25 per cent., or advantages equivalent, at the port of destination, as is now the case with French and other foreign vessels taking cargoes for France.

Question 8th. State the price of the following articles in 1811, or any other year or years before the war, which will present a fair average of their price in the years of a flourishing commerce: coarse cottons, umbrellas, nails, gunpowder, playing cards, carriages, cabinet wares, wafers, hats, &c., boots and shoes, and any other manufactured articles which were formerly imported, but are now, in a great measure, if not wholly, made in the United States; the present prices of the same articles; the relative quality of the imported and domestic articles.

Answer. Common coarse cottons, such as are manufactured in the United States, may be fairly stated to be 50 per cent. lower than in 1811, and are much superior to the piece goods of similar description from Calcutta.

Cabinet wares are greatly superior, and full 25 per cent. lower.
Gunpowder, ditto, 25 to 50 per cent. lower.
Umbrellas, ditto, 33⅓ per cent. lower.
Carriages, ditto, 50 per cent. lower.
Hats, ditto, 25 per cent. lower.
Boots and shoes, ditto, 20 per cent. lower.

Silver ware is now made in this country as cheap as in London, and is 12½ per cent. lower than in 1811.

Question 9th. Where the domestic has superseded the foreign supply of our market, state the general effect it has produced as to price and quality, and whether it has resulted in the benefit or injury of the consumer.

Answer. As far as our own information has given us an opportunity of judging, the consumer is supplied with a better article for the same price; it is particularly so with coarse cottons, hats, boots and shoes, cabinet wares, carriages, fancy chairs, looking-glass and picture frames, silver plate, andirons, brass head shovels and tongs, grates for burning coals, gold leaf, woollen sattinets, cut nails, fancy mock tortoise-shell and fine ivory combs, rifle guns, cut tacks and brads, and tin wares.

Question 10th. Taking the article of cotton as an example, and supposing coarse cotton goods are excluded, have the effects been injurious to commerce? Is there as much tonnage, and are there as many seamen, employed in the transportation of the raw material and the manufactured article coastwise, as there would be in the importation of the foreign manufacture and the exportation of as much cotton as would make the goods we import from Europe? If more or less, state the difference.

Answer. The exportation of the raw material to Europe, and the importation of the article when manufactured, would give employment to a greater number of seamen, and more tons of shipping, than the transportation of the same raw materials and manufactured articles coastwise. So far as relates to a prohibition of India cottons, (manufactured,) our commerce has no doubt been benefited, because it could only be employed in bringing an article manufactured from a raw material of foreign growth; whereas, the raw material of which the substitute is made, as well as the manufactured article, are both transported coastwise, and give employment to more shipping, and a greater number of seamen, than the importation of India manufactured cottons could possibly do. It would take five cargoes of unmanufactured cotton to make one of manufactured goods.

Question 11th. Take a given number of tons of shipping, say 100,000, in the East India trade: what would be the number of seamen employed; what number would be employed in the European trade, the same number of tons; same in the West Indian; the same in the coasting trade?

Answer. Take 100,000 tons of shipping in the East India trade, the number of seamen employed would be one man to twenty tons, equal to 5,000 men; the same number of tons in the European trade, one man to twenty-three tons, equal to 4,347; in the West India trade, same number of tons, one man to twenty tons, equal to 5,000; in the coasting trade, same number of tons, one man to fifteen tons, equal to 6,666 men.

Question 12th. Does the consumption of cotton in the American manufactories diminish the price of what is exported to Europe; in other words, are or can the fruits of cotton manufactories be injurious to those who raise this article?

Answer. The consumption of cotton at home increases the price to the growers. The demand in this market for home consumption is generally considered to keep the price from one to two cents per pound higher than it would otherwise be.

Question 13th. Generally speaking, do you think there would be as much employment for our shipping and seamen in the transportation of raw materials and manufactures coastwise as in their exportation and importation? This must be understood as applying generally to our articles of consumption.

Answer. The kind of foreign trade here named employs more tonnage, and probably more seamen, than the coasting trade would, in exchanging the same amount of articles.

Question 14th. Except cotton, how much tonnage is employed in the transportation to other countries of the raw material of the manufactures which we import?

Answer. We know of no raw material, of any magnitude, excepting cotton, the production of this country, which is exported, and returned in a manufactured state.

Question 15th. State your opinion of the probable operation of this bill on commerce; if injurious, point out, specifically, the objections. Would it decrease our tonnage or number of seamen? Would it diminish the price of any of our articles of export? if so, state of what. Is the price of these articles and their demand abroad regulated by the wants of other nations, or by the amount of manufactures we receive in exchange? State not only your opinion, but experience, and the information of others that is to be relied upon, if no general revision of the tariff should be proposed.

Answer. We think, generally, it will not be prejudicial to commerce; it would not diminish the value of any article of domestic produce exported; the price of our articles abroad, and the demand for them, is regulated by the wants of other nations, and not by what we in return receive for them.

Question 16th. State the articles on which an additional duty might be laid for the purposes of revenue, without injury to commerce, and the amount of such additional duty.

Answer. The following articles may be raised from their present rate of duty to that annexed to each article, for the purpose of revenue, and would not diminish the importation or consumption.

Linen goods to	25 per cent.
Silk goods manufactured in China and other places beyond the Cape of Good Hope,	35 "
Silk goods from France and other places, except beyond the Cape of Good Hope,	25 "
All staple and fancy hardwares under 25 per cent. to be raised	25 "
China and earthen wares,	35 "
Ale and porter, in bottles or casks,	25 cents per gallon.
Almonds,	4 cents per pound.
Cassia, from China,	10 "
Cocoa,	3 "
Coffee,	6 "
Cotton,	6 "
Hemp,	$2 00 per cwt.
Iron, in pigs,	75 "
Iron castings,	$1 50 "
Sewing silks and twists, of silk and worsted,	1 50 per pound.
Nutmegs,	75 per pound.
Segars,	5 00 per thousand.

Linseed oil,	25 cents per gallon.
Blankets,	25 per cent.
Bombazetts and stuff goods,	25 "
Worsted and cotton hosiery,	25 "
Buttons of all kinds, and moulds,	25 "
Lace goods,	15 "
Clocks and time-pieces,	35 "

Question 17th. Have you any reason to believe, that from the 1st March, 1815, to the 1st July, 1816, there was more smuggling than at any former or subsequent period? If so, state them specifically.

Answer. It is not believed that smuggling of any consequence is carried on now, or was at any other period since the restrictive measures, and then the places were mostly confined to the eastern lines, and along the river St. Lawrence. From the 1st March, 1815, to 1st July, 1816, goods commanded a ready and profitable sale; therefore the inducement was less. The evils of the auction system can here be introduced with much propriety, as through that channel almost all the smuggled goods introduced during the restrictive measures were scattered. It was well understood at that time that the amount which was introduced and sold at auctions was for account of the smugglers; the facility to spread the goods prevents in a great degree the possibility of detection; the auctioneer is not bound to ascertain how the parties came by the property, whether stolen or otherwise.

Question 18th. State your opinion of the propriety of the following regulations: appraisers to examine each package imported; surveyor of the port to examine each package exported for drawback; whenever a manifest is required by the existing law to be verified before the American consul at the place of exportation, all goods to be entered in a manifest of the place of export, (same as in the coasting trade,) to be verified before the American consul, if any; if none, before the collector, or other officer having the superintendence of the customs.

Answer. Collectors should be instructed to *designate particularly* the packages to be sent to the public store from each invoice, for examination. It would be well if it were the surveyor's duty to examine every package exported for drawback.

Question 19th. What is the value of a full cargo of woollen and cotton goods assorted for our market; of silks and linens from Europe; of silks and nankeens from China; of cottons and muslin shawls from Calcutta; of glass-ware and crates from Europe?

Answer. This question can only be answered by application to the Secretary of the Treasury, or applying at the custom-house.

Question 20th. What number of vessels are employed in the direct trade with England (say American vessels) from the port of New York, and the usual number of seamen in each?

Answer. We refer you to the Secretary of the Treasury; we are unable to answer it.

CASH PAYMENT BILL.

Question 1st. Should there be any reduction of the present credits?

Answer. Yes.

Question 2d. If any, state what. Examine the bill of last session. There are three parts to this bill:

1. The abolition of credits on deposite, for six months, on some articles, and diminishing them on others.
2. New system of drawbacks.
3. The deposite, till payment of duties.

Point out the alterations under each item.

Question 3d. What, in your opinion, will be the effect of such a system as is proposed by this bill on the general commerce of this country?

Question 4th. How will it affect the commerce in the hands of the American merchant?

Answer to 2d, 3d, and 4th questions. A reduction of credits on goods to three and six months, with increased caution in taking the bonds at the custom-house, would have on the general interests of the country a beneficial effect; we believe that it would be productive of much benefit to the treasury, and likewise to the mercantile concerns of the country, and not injurious to the interests of any class of citizens, not even excepting those who are the immediate objects of the munificence of Government. The reduction of credits would tend greatly to discourage importations on foreign account, and give the command of the American markets to our own citizens, and it would also tend greatly to check speculations.

Question 5th. Can any auction bill be efficient with the present credits? What is, in your opinion, the difference between the expenses of an American merchant resident in New York, who sells $100,000 a year, and a foreign consignor who ships them to an agent in New York, say an auctioneer?

Answer. A duty of ten per cent. on sales at auction would be efficient, without any alteration in credits; but should an alteration be made by reducing the credits, the effect of that act, without the duty on auction sales, would be offering a premium or bounty on the capital of the auctioneer, and thereby add to the existing evil. After carefully estimating the difference in the expenses attending the sale of $100,000 made by an auctioneer for account of a foreign consignor, and the same amount sold by an American merchant at private sale, our opinion is, that the foreign consignor has the advantage over the American merchant from 7½ to 10 per cent.

Question 6th. What is the average difference in the quality of *consigned* and *order* goods? What difference in measurement?

Answer. The difference in quality of goods consigned or ordered for auction, and those ordered by the regular merchant of character, taking the difference of quality and measurement into estimation, a less sum than 7½ to 10 per cent. cannot be named; it is often much more than that.

Question 7th. If you think the bill of last session goes too far, what would you say to the old credits of the year 1790?

	Months.
West Indies,	4
Madeira wine,	12
Teas from China,	12
All other,	6

Answer. As it respects the payment in cash for the greater part of the duties, there exists a great variety of opinions; many are for cash payments, many for reducing the credits, and many for their remaining as they now are. Our opinion is, that cash payments would be inexpedient, as an entire new system in drawbacks and collection of the duties must be adopted, which would create great difficulty, and would be extremely embarrassing to the

merchant. By shortening the credits, the present system of collecting might be continued, and the effect would be that Government would lose nothing compared with what they have lost by the long credits now given. It would have the further effect of reducing the general and pernicious system of long credits among merchants, which all practical commercial men admit to be necessary, to place business upon a sure and solid basis.

We see no propriety in making a distinction in credits on goods from different countries. Why should the merchant engaged in the East India trade, who is the overgrown capitalist, have the extended credit of twelve months on his duties, the amount of which on one cargo furnishes nearly a sufficient capital for completing another voyage, before his bonds are payable? His goods imported are generally of the most ready sale, and considered almost a circulating medium; his sales are through the auctioneer, for cash or approved paper, which he anticipates without any difficulty.

Madeira wines are mostly imported by our wealthy merchants.

We therefore recommend that the credits on duties be reduced to three and six months from every quarter of the world.

Question 8th. Would a diminution of credits tend to throw too great a proportion of our foreign commerce into the hands of capitalists? Discriminate under the following heads the kind of trade which is carried on by men of small and large capital:

Importations from the East Indies; importations from Europe; importations from the West Indies.

State the average value of a cargo from Canton, of silks, teas, nankeens, china, &c.; from Calcutta, of piece goods, &c.; from East Indies, of mauds of pepper, spices, sugar, coffee, &c.; from West Indies, of rum, sugar, coffee, molasses, pimento, and fruit; from Spanish main, of wood, dye-stuffs, hides, &c.; from Europe, an average cargo from England, from France, from the Straits and Levant, and from other parts of the continent of Europe.

Of the above cargoes, which sell at the shortest credit?

Which branch of the above trade would be most affected by prompt payment of duties?

Which have afforded the greatest and most certain profits?

Which is carried on most by credit in proportion to the amount of importation—European, East or West Indian?

By *credit* is meant not only purchases abroad on credit, but loans or other credit at home.

Answer. In the present state of commerce, and the abundance of money in almost every seaport town of consequence in the country, we believe that the effect of shortening the credit on duties would by no means tend to give large capitalists an extraordinary advantage over those of smaller capital, or more than they now enjoy; and the reason is very obvious: security must be given for the payment of the duties, and, upon the same security, the money might with equal facility be realized from the banks or individuals. Those engaged in the East India and China trade are generally considered the greatest capitalists. They would be most affected by shortening the credit on duties, because their credits for duties are longer than on importations from any other part of the globe, and the duties bear a greater proportion to the actual cost of the goods than from any other quarter.

Importations from Europe, especially what little has been done of late on American account, is not confined to large capitalists, and those from the West Indies are mostly on consignment for foreign account; the productions from the latter are sold on the shortest credit.

The other inquiries can only be answered from official documents and records of the custom-house.

AUCTION BILL.

Question 1st. What alterations would be proper in the auction bill, as reported last winter? Examine them in detail.

Answer. An alteration would be proper requiring auctioneers to pay the same duty on all the private sales as on the public sales which they may effect, as they are now by law compelled to do in the State of New York.

Question 2d. Would you recommend the same duty on domestic as on foreign articles of manufacture?

Answer. It is deemed of great importance that the duty should be the same on domestic as on foreign articles.

Question 3d. Should there be a discrimination in the duty on manufactured goods, and on what are generally called groceries, as sugar, tea, coffee, spirits, wine, and drugs?

Answer. There should be no difference between the duty on groceries and other goods sold at auction.

Question 4th. Amount of auction sales in New York?

Answer. The proportion of goods sold by auction in 1820 was greater than in any previous year. The amount of those sales, owing to the low prices of goods, may be less than in some previous years; it cannot be ascertained till the annual return of the Comptroller of the State is made, in February.

Question 5th. Importations on foreign account, for 1820, campared with those on American?

Answer. From information and inquiries, which are deemed satisfactory, from two-thirds to three-fourths of the *whole quantity* of goods imported in 1820 from Europe and the West Indies were imported on foreign account. From England, Scotland, and Ireland, there were imported of dry goods 23,606 packages;

Which were on domestic account, - - - - - -	4,932
On foreign account, - - - - - -	18,674
Total, -	23,606

16th Congress.] No. 610. [2d Session.

THE MINT.

COMMUNICATED TO THE SENATE, JANUARY 18, 1821.

SIR: TREASURY DEPARTMENT, *January* 17, 1821.

In obedience to the act entitled "An act regulating the currency within the United States of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France and five-franc pieces," passed the 29th day of April, 1816, I have the honor to transmit, herewith, a report of the Director of the Mint, giving the result of sundry assays made in pursuance of instructions from this Department.

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

SIR: MINT OF THE UNITED STATES, *January* 13, 1821.

Agreeably to your general instructions, I have caused assays to be made of the several species of foreign silver coins still current by law in the United States.

As foreign gold coins have all ceased to be a legal currency, their annual assays, it is presumed, may be discontinued.

The assayer's report is as follows:

	oz.	dwts.
No. 1. Made of three French crowns of different dates,	10	19
No. 2. Made of three five-franc pieces,	10	16
No. 3. Made of three Spanish dollars,	10	15½

	Cents.
From the above report it appears that the intrinsic value of French crowns is, per ounce,	117 873/891
Five-franc pieces,	116 324/891
Spanish dollars,	116 84/891

I have the honor to be, &c.

R. PATTERSON.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

16th Congress.] No. 611. [2d Session.

APPROPRIATION ACCOUNTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 18, 1821.

SIR: TREASURY DEPARTMENT, *January* 18, 1821.

In reply to your letter of yesterday, which has been received this morning, I have the honor to state that on the books of the Register an account is opened for every appropriation, which remains open until the sum appropriated is drawn, or the balance undrawn is carried to the account of the surplus fund. If that fund did not exist, the account could not be closed when the whole sum appropriated was not necessary to the object.

If there was not in the Treasury, subject to the disposition of the War Department, a sum equal to the balances declared by that Department unnecessary to defray the expenses of 1820, the repayment of the sums into the Treasury, by the Treasurer as agent, which are to be carried to the account of the surplus fund, would increase the means of the Treasury to the amount of the difference between those sums, if the amount of such difference was in the hands of the Treasurer as agent. For example, the sum proposed to be carried to the surplus fund being $1,875,437 57, if there was but $1,000,000 in the Treasury to the credit of the War Department, $875,437 57 would be repaid into the Treasury; as that sum must have been charged upon it, its repayment would increase the means of the Treasury by that amount. But, in the actual state of the appropriation for the War Department, no such effect will be produced; as there was standing to the credit of that Department, on the 1st day of this month, $2,525,562 18. The transfer of the sum of $1,875,437 57 will still leave on the books of the Treasury, to the credit of the War Department, $665,164 61; which, with the sum in the hands of the Treasurer, on the 1st of this month, constitutes the means of that Department for meeting the expenses incurred in 1820, and to be incurred to complete the object of the appropriations.

The difference between the amount of the items embraced by the bill and the sum of $1,860,437 57 consists of the sum of $15,000, being the amount of retained bounty, per diem allowance, travelling, pay, and subsistence of discharged soldiers, which was not included in the above sum of $1,860,437 57.

The balances in the hands of the Treasurer, as agent of the War and Navy Departments, shall be furnished as soon as they can be obtained from the Second Comptroller. The balance, as stated by the Treasurer, could be given this day, but that may be inaccurate.

I remain your most obedient servant,

WM. H. CRAWFORD.

Hon. S. SMITH, *Chairman of the Committee of Ways and Means.*

16th CONGRESS.] No. 612. [2d SESSION.

BANKS IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE SENATE, JANUARY 26, 1821.

SIR: TREASURY DEPARTMENT, *January* 24, 1821.

In obedience to a resolution of the Senate of the 16th instant, directing "the Secretary of the Treasury to lay before the Senate the latest statements he may have received showing the state of the several incorporated banks in the District of Columbia," I have the honor to transmit the accompanying statements, which are copies of the latest that have been received at this Department, and which include all the incorporated banks in the District of Columbia, except the Franklin Bank of Alexandria; that bank having rendered no statement of the kind required since that laid before Congress at the last session.

It may be proper to observe, that only a part of these statements had been rendered previously to the resolution of the Senate; and that, of the remainder, the last has just been received.

I have the honor to be, very respectfully, sir, your obedient servant.

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

State of the Bank of Washington, December 31, 1820.

16th Congress.] No. 613. [2d Session.

OBJECTIONS TO AN INCREASE OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 2, 1821.

Mr. FORREST made the following report:

The Committee on Agriculture, to whom was referred the memorial of the delegates of the United Agricultural Societies of Prince George, Sussex, Surry, Petersburg, Brunswick, Dinwiddie, and Isle of Wight, [see No. 570,] have had the same under consideration, and have agreed to the following report:

The committee consider it as a duty which they owe to the object of their institution, to the importance of the subjects referred to in the memorial, to the character of the memorialists themselves, and to the threatened interests of agriculture, to present a full, candid, and impartial statement of the views which they entertain of the policy of increasing the duties established by the present tariff.

Believing, as they do, that the agriculturists, as the most numerous portion of the community, are more deeply interested than any other class in the decision of this question, and that they must necessarily continue to be so for many ages to come, they conceive that no apology will be required if they enter somewhat at large into the investigation of those principles which the policy involves. Nor will such a course be deemed incompatible with the object for which the committee was originally created, which they suppose was not so much to devise and propose plans for the positive encouragement of agriculture, as, by a vigilant exercise of their functions, to guard its political interests from encroachment.

The committee regard the question presented by the proposed tariff as one of the most important that has ever been offered to the consideration of Congress. Important, however, as this question is, when considered in reference to the change which any farther restrictions on trade must produce in our foreign relations, it is yet more important when viewed in reference to those which it would effect in the subsisting relations of the several classes of the community; for, even if the favorite, though impracticable and useless object of the friends of the restrictive system could be realized—that of raising the prices of *all* commodities, although it would then no longer be a question as to the degree of intercourse we should maintain with other countries, but there would be no intercourse at all, (for commerce never goes in quest of dear commodities,) and the sources of wealth, intelligence, and improvement, derivable from an intercourse with the rest of the world, would be entirely destroyed—yet this evil, great as it is, would be inconsiderable in comparison with those which the system would produce on our domestic prosperity and happiness; in other words, its financial would be less injurious than its political consequences.

There are obviously two leading points of view in which this, as well as other restrictive systems, may be considered—its effect to increase or diminish the national wealth, and its tendency to promote independence and happiness. These views, though necessarily, in some degree, blended with each other, are, in many important particulars, distinct. But, before the committee enter into an examination of the system, they will notice briefly some of the arguments which have been employed to recommend it, which they believe have only an incidental and collateral connexion with the subject, but which have been so much relied on by the advocates of the system that they cannot with propriety be overlooked.

Among the most prominent of these is the argument derived from the productive power of manufacturing in comparison with agricultural and commercial industry, and the inducements which the quick returns of the home trade, the relative increase of population in Europe and America, the local advantages we possess, in having at our command all the chief materials for manufacturing, the obstacles which the restrictions of other nations oppose to an intercourse with them, and many other propitious circumstances, hold out to the capitalist to embark in manufactures. It will not now be attempted to claim any pre-eminence for agriculture and commerce over manufactures, or for one kind of trade over another. The latest and most judicious speculations on this subject tend to show that if there be any difference at all, it is much less than has been imagined; but it will merely be observed that all those arguments which go to show the favorable circumstances under which manufactures may be commenced, and the disadvantages under which they must be procured from abroad, so far from being auxiliary to the system, tend directly to impeach it; for the question is, not the desirableness of manufactures, but the expediency and legality of the means of promoting them; whether, in order to establish them, we must not part with something still more desirable. Now, all those arguments which go to prove that we can do without the aid of the law, are arguments against the interference of the law. If the times and circumstances have a natural tendency to promote the objects desired, why should we seek to obtain them prematurely, and by oppressive means? Such arguments are undoubtedly proper when employed to persuade the capitalist voluntarily to engage in manufactures; but they are absolutely preposterous when used to induce the Government to assist him, by taxing the rest of the community.

Another argument has been founded on the necessity or propriety of giving relief to those manufacturers who were induced, by the state of things growing out of the late war and the measures that preceded it, to vest their capital in manufactures, and who, it is alleged, have suffered since the return of peace for want of sufficient protection. This claim is not considered as well founded, because it is derived from the asseverations of the manufacturers themselves that those persons were generally compelled, in consequence of their heavy losses, to sell out their establishments, at a considerable sacrifice, so that their present proprietors must now hold them under extremely advantageous circumstances, and the proposed relief would not reach its intended objects. But, independently of this, the principle itself is too capacious to be admissible. It amounts to this: that Government is bound to indemnify its citizens for all losses that can be remotely connected with its necessary acts, though they have been produced chiefly by their own voluntary agency. Such a principle would furnish just as good a claim for relief to the farmer and merchant as to the manufacturer. The diminished price of agricultural produce during the war would be as good a reason for relieving the agriculturist, as the diminished price of manufactured produce on the return of peace would be for relieving the manufacturer. Even, therefore, if it could be made to appear that an improvident spirit of speculation had no share in producing the distresses of the manufacturers, that the other classes of the community did not equally participate in them, and that relief would reach the true sufferers, it would be inexpedient to grant it, to say nothing at this time of the right of the Government thus to relieve one class by taking the means from another.

An argument which is not deemed by the committee as material in the investigation of this question, but which has been perhaps more universally relied on than almost any other, is this: it is admitted that the system of free trade would be the best, provided other nations would pursue it; but it is said, if they will not buy of us, so neither should we buy of them, but should meet regulation by regulation, restriction by restriction. It is difficult to say

whether this argument is addressed to our interest or to our honor, or whether it is addressed to either; for it is neither proposed, by the adoption of the restrictive system; on our part, to compel foreign nations to abandon it, nor is it proposed to retaliate their injuries with a view of punishing them for their alleged offence. Indeed, so far from its being contemplated by the manufacturers to coerce other nations to relinquish their restrictions, it can scarcely be doubted that such an event would occasion great regret, because it would take away one of the principal arguments on which they have relied for the adoption of their policy, whilst other considerations which recommend it to them would remain. But in whatever the advice "not to buy of foreigners unless they will buy of us" may have originated, it is evidently worse than useless. How is it possible that we should buy of them unless they buy of us? The very word *buy* implies that something is given in exchange for that which is received; and what is giving in exchange but *buying*? That foreigners do not admit our products on the same terms that we admit theirs, does not render it less true that in our intercourse with them there is a complete exchange of equivalents. Undoubtedly, the foreign system is injurious to us, and it is certainly not less so to themselves. Every retaliatory measure on either side injures both, unless it has the effect of making the other party recede, and even then the injury suffered by the retaliating party is not necessarily counterbalanced by the good received; but to adopt restrictions with any other view than to force other nations to abandon them, is a course for which no apology can be offered. As long as capital continues to be employed in the foreign trade, it can only be because it is more profitably employed than it could be if it were withdrawn. It would be very unwise, because a portion of our capital is not so advantageously employed as it might be under possible circumstances, to make it less so than it is; because we cannot make things better, to make them worse. Besides, the refusal of foreigners to receive our raw produce is to the injury of the agriculturist, not of the manufacturer. The object of the system, therefore, should be to redress the grievances of the former, not those of the latter. But the agriculturist declares that he does not ask the assistance of the Government; that all he requires is to be let alone; and that it is absolutely unjust to make an actual grievance the pretext for imposing on him additional burdens. There appears to be less excuse for this system on the score of honor than on that of interest; yet the appeal to honor is one of the favorite topics of the friends of restriction. National honor is too often made to usurp the empire of reason and justice, and to decide controversies where it has no jurisdiction; and on no occasion have its just prerogatives been more prostituted and abused than when it has been made to extend over the province of trade and commerce, which, though they should always be guided by individual honor, and indeed can only be sustained by a strict adherence to its principles, renounce all other authority but that of interest in questions of their extent or direction. When the honor of the nation is really involved, the agriculturists will be among the last to abandon it. National, like individual honor, is not averse to interest, but is identified with it. National, like individual honor, is reputation, and reputation is power; it is safety in peace and strength in war. But when the honor of an individual or a nation is assailed, it is by the violation of some indisputable right which authorizes the assailed party to demand redress, and, if it is not rendered, to punish the assailant. But can it be pretended that any indisputable right of this nation would be violated by the refusal of foreigners to receive our surplus produce? Is it not the undoubted right of every nation to adopt whatever municipal regulations it believes necessary for its own internal administration? As well might it be said that an individual would compromise his honor by agreeing to purchase an article of his neighbor, because this neighbor refused to receive that which he produced in return, but required him first to commute it into money. Honor has nothing to do with this matter; it is regulated, as it ought to be, solely by convenience. But it must be again repeated, that it is incorrect, in point of fact, to say that foreigners do not purchase of us to the same extent that we purchase of them, because it is impossible. "*There can be no buying without an equal selling.*" If we have had occasionally to pay them a balance in money, it is no more than they have often had to do to us; and if it always happened that we had to pay some nations a balance in money, it would not alter the case; for, before we can purchase the products of any nation with money, we must previously have purchased that money of other nations with our products. Our most invaluable trade with the East Indies is entirely carried on with money.

Another argument has been founded on the encouragement which it is alleged has been given by Congress to agriculture and commerce, and which, it is urged, affords an equitable claim for encouragement to manufactures. It will hardly be asserted that agriculture and commerce have received greater aids from Government than manufactures. With respect to agriculture, it is not admitted that Government has rendered it any service whatever; and it is moreover believed that it cannot render it any service, unless it be to remove the restrictions which oppress it. With regard to commerce, it is alleged that it has been encouraged in two ways—by a navy, and by a system of commercial regulations. It is apprehended that the true and legitimate purpose of a navy is the national defence; but if the navy can be considered, in any degree, as intended to protect commerce, it is evidently intended to protect it, not against competition, but against violence; and there can be no doubt that the navy, and the army too, would be employed to protect manufactures, if they were assailed by violence. Even in this point of view, it is not believed to be the true policy of this nation to create an immense overgrown navy for the protection of our commerce in distant seas, but to confine it to such limits, when it shall be deemed to have attained them, as is compatible with the national defence. Whether those regulations and acts which were intended to encourage the commerce and navigation of the country involve a departure from the maxims of letting things alone, and of not taxing one class for the support of another, the committee are not called on now to decide; but, passing over the argument for the navigation laws, that they were intended to be subservient to national defence, by creating a nursery for our seamen, and regarding them purely as commercial regulations, the encouragement they are designed to afford to commerce and navigation differs, both in nature and degree, from that which has been already given, and which it is proposed still further to extend to manufactures. A nation adopting a restrictive system, with a view of coercing another nation to abandon it, is very different from its adopting it as a permanent part of its policy, under the delusive idea of promoting national wealth and independence. It proposes only to forego present for the sake of future and greater advantages. Undoubtedly, even in this case, it should be certain that the means selected will insure success; that success will pay for the sacrifices made to obtain it; and that it can be obtained in no better way. How far the navigation laws will fulfil these conditions, time will fully decide.

It has also been urged, that when a nation has peculiar advantages for particular manufactures, and is ripe for them in every respect but that of skill, the Government should afford such protection as will procure that skill. The propriety of the proposed tariff does not depend on the truth of this position; for, in the production of many of the articles on which it is proposed to increase the duties, we already equal other nations in skill, and, in others, the duties are more than sufficient to obtain it. But, it is asked, where is the propriety of the distinction which would make the nation pay for a deficiency in skill more than in any thing else? The only ground on which any one would think of justifying the policy which would make either an individual or a nation the purchaser of this skill, or of any other requisite, would be, that the temporary loss occasioned by the purchase would be repaid when it was completely acquired. But does this prove that the nation should be the purchaser? Is it not more consistent with justice that the capitalist, who is to derive the benefit of the acquisition, should make the

sacrifices necessary to obtain it? If his capital is insufficient, the nation might as well be expected to supply that, as to supply the skill it employs.

The foregoing are some of the principal arguments which have been resorted to in support of the manufacturing system, and which the committee think have little to do with the real merits of the question. It is not a complete enumeration of all of that description, and it is hoped that no excuse is necessary for not attempting to achieve such an enumeration. They therefore approach, with satisfaction, what they consider as the true question involved in the proposed alteration of the tariff; namely, *will the national wealth be augmented or diminished; and, if it will be diminished, are there any advantages which will compensate for the sacrifice?* And they will undertake to show, not only that the *necessary* effect of such an alteration is to *diminish*, both *immediately* and *ultimately*, the national wealth, but that, so far from there being any compensatory circumstances, it is even more objectionable in other points of view than as a question of loss or gain; and that the *distribution* of the wealth of the nation which it will effect will be more injurious than the *diminution*.

The committee have endeavored to divest the subject of all extraneous considerations, with a view of giving to their arguments a greater degree of precision; and they conceive that, if the positions they have assumed can be clearly established, by a fair deduction from the most indisputable principles, they will save themselves the necessity of replying in detail to a multiplicity of irrelevant arguments which have been employed in defence of the restrictive system.

The first view of the subject, that which relates to the national wealth, presents a question strictly of political economy. The second, that connected with our independence and happiness, is partly a question of political economy and partly one of general policy. The committee will not, at the expense of precision and force, encumber their arguments with numerous statistical facts and arithmetical calculations. Such calculations often have a tendency to mislead instead of to instruct; and the facts which are best established have, after all, to be explained by the application of general principles. It is pre-eminently the case in the controversy between the manufacturers and their opponents, that the *data* which they have respectively relied on for the support of their opinions have always been considered, by the opposite party, either as proving nothing, or as proving directly the reverse of what was intended. This can only be accounted for by the supposition that the general principles of one or the other party, which they apply to the explanation of these *data*, are erroneous. It will be attempted to show that the principles on which the restrictive system is opposed are not liable to this charge; and that the soundest and most incontrovertible maxims of political economy—maxims derived from the impartial observation of facts, from accurate analysis, and from long and diversified experience—warrant this opposition in its greatest extent. They are aware that those who appeal to general principles render themselves liable to the charge of theory, by those who lay claim to exclusive practical knowledge; and, as there has been a good deal of unmeaning declamation against the opponents of the manufacturing system on this common-place, they will very briefly examine its justice. Theory is not the opposite of experience, for it may be strictly deduced from experience. It is nothing more than a system of general rules, founded on the observation of particular facts, or it is such a system founded on hypothesis. In the one case, it is true; in the other, it is generally false. But this character of truth or falsehood is not peculiar to theory; it belongs equally to practice. Practice may be true or false; that is, it may be sound or unsound, good or bad; but all good practice must be founded on true theory. It is not enough, then, to say that an opinion or a system is a theory; it must be proved that it is a false theory; that it is not the rigorous result of an attentive examination of facts. And, in attempting to prove it, it will not suffice to oppose to it a single repugnant fact or doubtful experiment, or even many such facts and experiments, without showing in what respects they are incompatible with the theory; where the error lies; in what its falsehood consists. The committee must, however, be permitted to observe, that the charge of theory comes with but little propriety from the manufacturers. Their notions of a home market, balance of trade, national industry, and their doctrines generally, involve theories which are not only not founded in facts, or even plausible hypotheses, but are in direct opposition to all experience. But to come at once to the subject.

The first position that it will be attempted to prove is, that the *necessary* effect of an increase of duties is to diminish, both *immediately* and *ultimately*, the amount of national wealth. The *loss*, however, of the nation, the *loss* of those who *pay* the duties, and the *gain* of those who *receive* them, do not always correspond, but vary with particular circumstances. In what manner this loss and gain are distributed in society will be best illustrated by an example. If, for instance, a community of four persons were engaged in an occupation which enabled them to realize *six per cent.* on *equal* capitals, and three of them were to give the fourth *one per cent.*, or *one-third of one per cent.* each, to enable him to carry on an employment in which, *unassisted*, he could only make *five per cent.*, it is evident that the *loss* of the contributors would be *one per cent.*, and that it would be exactly the *loss* of the community, whilst the *gain* of the receiver would be nothing; and unless that part of his profits, which he received from the others was as productively employed as it was by them, he might be a loser, and thus still further augment the loss of the community. But this is a case that would not be apt to occur. The fourth individual must have something more than *six per cent.*, which he already made, to induce him to abandon his old occupation, and pursue a new one—say *seven per cent.* In this case, the others would have to pay him *two-thirds of one per cent.* each. It is obvious, now, that the *loss* of the contributors would be *two per cent.*, that the *gain* of the receiver would be *one per cent.*, and that it would correspond with the *loss* of the community, which would also be *one per cent.*, or the difference between the productive value of his old and new employment. If this bounty were given to induce an individual to continue an occupation in which he was already engaged, then, although the contributor would *lose* all he paid, and the receiver would *gain* it, the community would lose nothing, as there would only be a transfer of wealth from one to another. This, however, would not be the case with a manufacture thus continued by a bounty. There would be an immediate loss, occasioned by the increased cost of consumption; nor would it be possible to make one employment so much more profitable than another, without its attracting capital from that other; and this would be the source of innumerable other losses, hereafter to be noticed. In the case that has been stated, it is clear that the *loss* of the contributors is exactly *what they pay;* the *gain* of the receiver is their *loss*, *less* the *difference* between the productive value of his old and new employment, and the loss of the community is precisely *this difference*. In manufactures, such would be the operation of a duty that was prohibitory; a duty that was merely protective would permit a portion of the commodities consumed to be bought of foreigners, and thus a part of it would go into the treasury. This would not vary the proportion of the loss and gain of the contributors and receivers, but would, in some degree, increase the loss of the community, as composed of both, as this portion of the duty would be less productively employed by the Government than it would have been had it remained in the hands of either of the parties. This does not prove that prohibitory are better than protecting duties. There are other consequences which make duties injurious in proportion to their amount. All these observations may be applied (*mutatis mutandis*) to the consumers, the manufacturers, and the nation, under the protecting-duty system. Two descriptions of persons would derive the benefit; a few who continue their old employments, and a great many who engage in new ones. In both cases, the loss of the consumer is what he pays, and is unredeemed by any circum-

stances whatever. In the first case, the loss of the nation arises from the increased cost of consumption; in the second, it arises from this cause, and the diminished productive value of the new employments of society. In the first case, the gain of the manufacturer is the loss of the consumer, *less* the increased cost of his own consumption; in the second, it is this loss diminished by the same cause, and the diminished productive value of his labor. But, besides these direct losses, there are others indirect and collateral, which are, however, not less inevitable; losses which affect the consumers, and, in some degree, ultimately reach the manufacturers themselves.

Whenever one employment becomes more profitable than another, capital will desert the less for the more profitable. Every such change, however, is attended with the loss generally of the whole of the fixed, and a portion of the circulating capital of the deserted occupation. But it is easy to perceive that a duty on a single article may occasion the loss of several such capitals. If, for example, by a duty on foreign boots and shoes, we prevent a certain quantity from being brought into the country, we immediately destroy the market for the commodities which were given in exchange for them; and if this is a manufactured article, we then destroy the market for the agricultural product, which constitutes its basis; so that the loss falls ultimately on agriculture. Now, if the agriculturists who are thus thrown out of employment become boot and shoemakers, there would be the loss of only one capital; but if, as is more probable, they should apply themselves to some other branch of agricultural industry, as being more analogous to their recent occupation, and, for the same reason, the additional boots and shoes required were made by labor and capital taken from the saddle and harness business, there would be the loss of two capitals. It is not difficult to perceive that the loss might be extended to a greater number. Perhaps it may be said that this loss would be repaired by the superior profits of the new employment; but this would not be the case. The new employments, except those which were the objects of the bounty, would be less profitable than the old ones. If they were equally so, there would still be the loss of the whole of the fixed capital, which would be entirely sunk. The committee have already noticed that cause of loss which arises from a diminution of skill, and the other facilities of production. This great and inevitable source of loss is embraced in what has been said of the diminished productive powers of the new employments of the community. They have also noticed that source of loss which arises from the unproductive employment of that portion of the duty which is paid into the treasury, and which, if it remained in the hands of individuals, would be devoted to reproduction, and augment the national wealth. As, however, we must have revenue, this loss is only to be objected to when duties are excessive. But there is another source of loss in the constant tendency of the system to diminish production, and, of course, accumulation. The increased cost of consumption, however, which is one of the means by which this effect is produced, will affect chiefly the laboring classes and the raisers of raw produce. Every thing on which the wages of labor are expended, except the products of agriculture, will rise in price; but labor itself cannot rise, and may fall, for the demand for labor created by the new employments will be more than supplied by that thrown out of the old ones; and thus the comforts of the laborer, who will have to purchase dearer articles with smaller means, will be materially impaired. It is thought, too, that the value of money must be proportionally higher in a country which pursues this system; and this is another circumstance which must injuriously affect the wages of labor. In the infancy of manufactures, too, the coarser kinds being first produced, the tax is chiefly borne by the poor who consume them. This evil is increased, too, by the manner in which the duties are adjusted on the finer and coarser manufactures; for, in the present, as well as in the proposed tariff, the duties are much higher on the latter than on the former. On coarse and on fine cottons, for example, there is a difference of not less than 23 or 25 per cent. in favor of the latter; on common glass tumblers, and on cut glass tumblers and decanters, a difference of from 27 to 39 per cent. in favor of the cut glass. The duty on molasses and on brown sugar, if the proposed tariff is adopted, will be about 100 per cent. on the cost; on salt 120 per cent., and on many other articles, consumed chiefly by the poor, the duties will be oppressively heavy. It has been estimated, by a very intelligent writer, that the duties which would be paid under this new tariff, by the great body of the people, would not average less than 75 per cent. on articles of necessity; whilst the duties on articles of luxury, used by the rich, would not amount to more than 30 per cent. To tax the poor for the benefit of the poor would be bad enough; but to tax them for the benefit of the rich is intolerable. This oppressive operation of the system on the poorer and laboring class is one of its least pleasing effects, and, when we consider their relative number to the capitalists, it is one of the most alarming; for, independently of its political consequences, nothing can be more unfavorable to accumulation than inequality of wealth. There is always proportionally less of the income of the wealthy devoted to reproduction, because there is more of it expended on factitious wants; on those luxuries which have, besides, the pernicious effect of producing imitation on the part of the poor, and of bringing in their train the extravagant expenditure of the Government, which, it is well known, when it once begins, never stops.

Diminished consumption must necessarily diminish production; but it is diminished in another way, and that is by the decreased price of agricultural produce. This effect of the system is inevitable; yet, strange to tell, the increased price of agricultural produce has been one of those delusive promises made use of to recommend it; and, still stranger to tell, one that a great many have believed in. The home market has been talked of, and its mysterious virtues have been highly extolled, though no one has shown the fashion of operating of this wonder-working agent. The following considerations, it is believed, will show how completely fallacious are the expectations of any benefit from such a source. If the price of commodities is regulated by the relations of supply and demand, (and their market price undoubtedly is,) then, provided the number of consumers in the country remain the same after the adoption of the system as before, inasmuch as we shall be deprived of the foreign market to the same extent that we cease to purchase, (for foreigners cannot buy of us unless we buy of them,) the relation of the supply to the demand must be increased; consequently, there can be no rise of price, but there must be a fall. But we are told that foreigners are to be attracted hither by this system. Although it can scarcely be imagined, in any event, that as many would be attracted hither as we supply abroad, let us admit that this might be the case; then the relation of supply and demand would be unaltered, and, consequently, prices cannot rise, but must remain stationary. The only conceivable mode by which the relation of supply and demand could be altered, would be by a portion of the persons who were employed in agriculture leaving it to engage in manufactures. It might readily be conceded that, if the same quantity of manufactures could be consumed in the country after the adoption of the system as was consumed before, as, from diminished skill, a greater number of hands would be required to produce them, the consumers of agricultural produce would be multiplied; but we have already seen that this could not be the case, because the cost of consumption would be vastly increased, and the means diminished. But the committee deny, distinctly, that any such change in the relation of supply and demand could be produced by an increase of duties; or, if it could, that those duties could have the effect to raise the price of one kind of agricultural produce but at the expense of another, or to raise the price of any kind permanently at all. Suppose, for instance, a duty is laid on the raw cotton of other countries; it is evident that, if it has the effect to diminish the quantity imported, it must destroy the market for the commodities with which it was purchased. Let us admit that its immediate effect would be to enhance the price of raw and of manufactured cotton, (and if it would, it must be enhanced to all its consumers; to the manufacturer himself, so far as he is a consumer, and even to the

planter, who is, however, made to pay back on the fabric what the manufacturer advanced on the raw article, the market price of commodities is increased by increased demand or diminished supply; their natural price can only be increased in consequence of its becoming necessary to bestow on them an additional quantity of labor. Now, it is evident, that, in a country where lands of the first quality are not all in cultivation, the additional quantity required to satisfy the demand would be produced almost immediately, and that the price could not be permanently increased; and, if it were increased, it must be observed, that it would be at the expense of that agricultural product which has been displaced. It would be produced, too, without the necessity of resorting to poorer lands, so that the cost of production remaining the same, there would be no increase of its natural price. Indeed, is it not obvious that, if labor is made to leave agriculture for manufactures, the poorest lands will be deserted first, and that the cost of production, therefore, instead of being increased, would be lessened? This, perhaps, might be an advantage, provided the labor and capital taken from agriculture were, independently of the bounties they receive, as productively employed as they were before; but this, it has already been shown, would not be the case. Even if the products of that labor and capital, in consequence of the bounties paid on them, and the increased cost of consumption, had a greater exchangeable value, it is not the exchangeable value of the products of a country which constitutes its wealth, but their quantity and utility. But, even if it were admitted that poorer lands would have to be resorted to in order to produce the additional supply, it is maintained that, with respect to those commodities that go abroad in the great marts of the world, and there come into competition with similar commodities of other countries, it is not the cost of production here, but in that country where they are produced with the greatest quantity of labor, that regulates their natural price. It will no doubt be said, if such is the effect of competition to reduce the price of agricultural products, why will it not reduce the price of manufactured produce? For this obvious reason: that the field of production is limited in the one, and is unlimited in the other; that the cost of production cannot be increased in the one, and may be vastly increased in the other. As the expectation that domestic manufactures will be reduced, by competition, to an equality of price with foreign manufactures, has been held out to allay our apprehensions of this system, it may not be improper to examine on what it is founded. It is denied that competition can produce a permanent diminution of price. It may undoubtedly reduce the market price for a time, but it cannot reduce the natural price; and the former cannot permanently remain below the latter. Competition may produce a glut in the market, and thus bring prices so low as not to repay the expense of production; but it is evident that this state of things must be temporary; there must be some profit, or the business cannot be carried on. It is the increased facility in producing an article which alone can diminish the price. Domestic will never be sold lower than foreign manufactures until we equal foreigners in skill, and in all those circumstances which enter into the cost of production. When we equal them in these respects, (as we probably will after a long series of years,) we may, indeed, then undersell them, by the difference in the cost of transportation. But what shall we gain by this? It will not even pay for the destruction of the capital employed in the transportation; never will it compensate for that waste of income and of capital, and the other incalculable losses which will ensue from the system. The whole of this reasoning will doubtless be controverted by the declaration of the fact that cotton goods are now lower in this country than they were before the present tariff was adopted. Here, as in many other instances, we agree in the fact, but differ in the principles by which it must be explained. The manufacturers ascribe it to competition; their opponents ascribe it to the fall in the price of the raw material and of labor, to greater facility in production, and to the general stagnation of trade; and this reasoning is corroborated by the fact that the fall in this article has been general all over the world. Still, the ratio of the fall in this country and in England being about the same, and the duty nearly or quite prohibitory, English cottons cannot be imported. If the duty was taken off, or even considerably diminished, we should undoubtedly see that coarse cottons would be still lower than they are at this time. As to the assertion that the price of raw cotton in this country is kept up one or two cents higher in consequence of the competition of the American with the English manufacturers, it is totally gratuitous. It is utterly useless to talk of underselling foreigners until we can produce the article at less cost; the thing is impossible. Nor is it desirable that we should ever undersell foreign manufacturers; for, in order to do so, we must not only equal them in skill, machinery, ingenuity, industry, &c., but we must equal them in human degradation and wretchedness. We must drive our laborers from the fields, from the beauties and bounties of nature, to those dismal and demoralizing abodes, where they sink into hopeless stupidity and penury, or where want goads ingenuity to reluctant exertion for a scanty subsistence, and where the health and morals frequently become victims to hard and untimely labor, and the imperious laws of poverty and hunger.

Another source of loss is in the tendency of this system to drive commercial capital abroad, and this it will much more probably do than attract manufacturing capital hither, as well from the superior facility of its removal, as from the distrust which the system is calculated to produce in the equity of the Government and the stability of its policy; to which, perhaps, may be added the inducements afforded by the vast fields of industry which the enlightened policy of other nations will probably, at no very distant period, open to commercial enterprise. It is believed that the prevalence of sound principles of political economy, and the light of returning reason, have produced a disposition in all the commercial nations of the world to restore the system of free trade, and that they are only prevented from returning to it at once by the consideration that the sudden abandonment of a system so interwoven with all the interests of society must necessarily be productive of great immediate mischief; a consideration which should teach us the propriety of serious deliberation before we adopt it—the more particularly so, as the expediency of making it permanent is made to depend on the contingency of other nations continuing it. A still more alarming effect of this system will be to drive population and capital from one State to another. The poorer agriculturists of the Atlantic States will be compelled, by the increased cost of consumption, and the diminished price of produce, to go to the West in search of more fertile lands; whilst capitalists will go to those States where manufactures are best established and most flourish. And shall we submit to this unlawful effect of this system without calling in question the policy which produces it? The committee are disposed to do more—to call in question the authority and power of the General Government to enforce a system which can thus aggrandize one State and ruin another.

A still further source of loss is in the effect of this system to drive capital from one kind of manufactures to another. The manufactures that languish will be deserted for those that flourish, or they must be continually bolstered up by new protection. Indeed, even the manufactures that are best established must be sustained in this way, if, as is very possible, by the invention of new machinery, or by any other means which will diminish the cost of production, foreigners can come again into the market, and, in spite of the duties, undersell the American manufacturer. This is one of the most vexatious effects of the system. It will never be done with; but new exactions will be perpetually made.

It has been contended that the arguments which go to show the impropriety of extending manufactures are merely theoretical, and that they are refuted by experience. It is said that England has pursued the restrictive system; that England is wealthy and prosperous; and, therefore, that the tendency of the system is to promote

wealth and prosperity. The committee cannot, however, help thinking that it is rather an unfortunate specimen of practical reasoning, when an effect is gratuitously assigned to a cause, without any attempt to show their connexion, and where many other causes are operating better calculated to produce the effect. England is wealthy and powerful; but she is not prosperous in consequence of this system, but in spite of it. She is wealthy and powerful in consequence of the indomitable energies of her genius, her enterprise, and her comparatively free institutions. The English system is not the result of foresight, as has been imagined; and if it were, it is pretty well understood by what kind of foresight the affairs of nations are generally governed. It is the result of compromise between the avarice of individuals and the needy ambition of the Government. The privileged orders of that country have always been enabled to make successful encroachments on the rights of the people, by bribing the cupidity of the Government with a share of the spoil. This is the kind of foresight which has produced the British system—that system which is now held up for our admiration and imitation. But experience, as well as theory, contradicts the conclusions in favor of restriction. The success of the Dutch policy refutes the idea that restrictions have produced the grandeur of Britain. The following judicious remarks, extracted from an excellent treatise on this subject, show the prosperity which flows from an opposite policy:

"Notwithstanding the immense losses which the Dutch nation sustained for upwards of twenty years, by British captures, French exactions, and the almost entire prostration of commerce, yet their trade, and with it their national importance, appear to have become equal, or nearly equal, to what they were before the war of 1793. Their capital city, Amsterdam, has again become the chief mart of Europe. If the policy of any of the European nations is proper to be imitated by the United States, why is not the example of the United Provinces, as regards their fiscal concerns, as worthy of imitation as that of England? At least, seeing that in Holland her citizens have, for the most part, been left to themselves in the direction of their industry, ought we not to pause before we decide that an opposite system will promote and extend the prosperity of our citizens? How little the Dutch commercial policy has been directed by the protecting system may appear by the low duties on the following articles, most of which come in competition with their own produce and manufactures, viz:

Arms, fire,	10 per ct.
Baskets,	15 per ct.
Butter,	½ ct. per lb.
Books, bound,	5 per ct.
unbound,	3 per ct.
Bristles and brushes,	10 per ct.
Blankets,	10 per ct.
Cheese, foreign,	80 cts. per 100 lbs.
Cordage,	2 dol. per 100 lbs.
Carriages, new,	10 per ct.
Clocks,	10 per ct.
Copper manufactures,	10 per ct.
Candles, tallow,	2½ cts. per lb.
Clothes, ready made,	10 per ct.
Cotton,	16 cts. per 100 lbs.
manufactures,	30 flor. per 100 lbs.
about	2 to 3 cts. per yd.
Cloths, woollen, and other manufactures, wool and worsted,	8 per ct.
Linens, unbleached,	2 per ct.
bleached,	4 per ct.
Sail cloth,	2 per ct.
Sugar, raw or clayed,	12 cts. per 100 lbs.
refined,	4 cts. per lb.
Sealing wax,	10 per ct.
Spirits pay no duty, but an excise, which for common proof (probably our 3d proof) is	28 cts. per gal.
Spirits, highest proof,	42 cts. per gal.
Wine of all kinds,	16 cts. per gal.
Tobacco, manufactured, snuffs, &c.,	8 per cent.
Toys, turnery, manufactures of wood and leather, necklaces, looking-glasses, trunks, snuff and tobacco boxes, fans, with a great variety of similar articles,	6 per ct.
Foreign vessels.	
Teas, Bohea and Congou,	$3 20 per 100 lbs.
Other,	6 40 per 100 lbs.
Dutch vessels.	
Teas, Bohea and Congou,	$1 00 per 100 lbs.
Other,	2 00 per 100 lbs.

"This extract is from the tariff of Dutch duties for the year 1816, every article of which, with very few exceptions, is rated about in proportion to those quoted above. Most of them, as is well known, are manufactured or produced in Holland, especially butter and cheese, of which the amount of exports, some years since, was, to the best of my recollection, about three millions sterling. Their sugar refineries are only protected by a duty of four cents a pound, yet Ricardo affirms that, in his time, (about forty years since,) there were one hundred refineries, which manufactured one hundred thousand hogsheads of sugar. Tobacco is very extensively manufactured in Holland. Gin, as every one knows, is one of their great staples. This wise nation seems to have thought that goodness of quality and cheapness of price were surer foundations for national industry to rest on than protecting duties."

The invariable tendency of low duties to increase consumption, and, of course, production, is another argument from experience. Both in England and France this effect has frequently been observed at various epochs of their history. The following statement, extracted from a British journal, will suffice to place this subject in a strong point of view: "In 1744 the East India Company's sales of teas amounted to about 600,000 pounds annually, producing a revenue of about £140,000 sterling. Early in 1745 the tea duties were greatly reduced, and in 1746 the sales amounted to 2,000,000 pounds, and the revenue to £228,000. In 1748, however, the duties were again increased, and fluctuated between that epoch and 1784 from 64 to 119 per cent. In the last mentioned year, however, the Government, having in vain tried every other means to prevent the smuggling and adulteration of tea, reduced the duty from 119 to 12½ per cent.; and the revenue, instead of falling off in the proportion of one to ten, owing to the increased consumption only declined in the proportion of one to three." Similar experiments, with regard to wine and coffee, give the same results. The reason is obvious: every diminution of a duty on an article brings it within

the range of consumption of some who could not afford to consume it before, whilst every increase has a contrary effect. To adjust the duties, generally, so as to produce the greatest possible revenue, is a matter which requires great skill and experience. Although we have made no such decisive experiments as the British, (for the effect of the imposition and repeal of the double duties, owing to the period when they operated, proves nothing,) there is still reason to believe that the operation of the present duties, on many articles, has been to diminish consumption and revenue. It is difficult to make the proper allowances for the effect of the rapid increase of population in this country; but the fact that revenue has not increased in the same ratio with the duties and population is considered as decisive proof that the duties on many important articles must be too high. Indeed, it is generally admitted, by the most intelligent and practical men, that they are so.

Now, the general principles from which the committee have reasoned are either true or false. If they are false, it will be easy to show wherein the fallacy lies. If they are true, it will be necessary to show that there is something peculiar in the situation of the United States which makes an exception to their general operation. If there is nothing peculiar in our situation, then these principles must stand immoveable. The most extraordinary argument that has been used to justify the system is the great and universal distresses of the country. But in this there is nothing peculiar; it is almost universal. But even if it were true that we are the only people in this state of distress, it would remain to be proved that this system furnishes the remedy for the disease. So far from this being the case, it is believed to be one of its causes. Undoubtedly, a great proportion of our distress may be ascribed to the cessation of those convulsions in Europe, which, throwing a vast deal of the trade of the world into our hands, enabled us to reach an extraordinary pitch of prosperity in a short time. But it should not, therefore, be supposed that there have been no internal causes of this distress. To say nothing of the contributions levied on the nation, by funding and banking, the restrictions which preceded the war, the war itself, though a just and necessary measure, and the subsequent prosecution of the restrictive system, had a share in producing the general distress. The revenue from the imposts gives us some idea of the tax which the system imposes on us; but we cannot form an adequate idea of it, unless we could ascertain the quantity of domestic manufactures consumed in the country, and the average of the duties paid on them. There are no means by which this can be ascertained with precision, but we may form a rough estimate of it from a few items. Supposing there are forty or fifty millions of yards of domestic cottons consumed in the United States annually, the consumers may be supposed to pay on them at least $2,000,000. As much more is probably paid on woollens, (and it is probably not an exaggeration to say that the tax paid on domestic articles, which goes to the manufacturers, is fully equal to one-half of the average duties on imports;) this is the direct loss; to which must be added the indirect and collateral losses that it has been attempted to be shown result from the system. When we superadd this to the other causes that have been indicated, can our distresses any longer present a mystery? And is it not more natural to ascribe them to these obvious, undeniable, and constantly operating causes, than to look for those causes in futurity? Is it not reversing the usual order of things, to attempt to explain a past or existing effect, by imputing it to what has *not* been done, instead of what *has* been done? Is it not contrary to reason to tell us that the remedy for evils which have arisen from taxation is further taxation? It is much more rational to remedy the evil by removing the cause. This we can certainly do, partially, if not wholly. We can remove some, if not all of the causes. We can gradually get rid of all those burdens which have had so great a share in producing the present calamitous state of things. This is all that we can do; the rest must be left to time. If it be true that the duties on importations have diminished consumption, they must have had the same effect on production; and their diminution would increase both. In the present depressed price of all the great staples of agriculture, what can be so likely to relieve the agriculturist as to open a market for his produce? And what will be so apt to do this as to increase the demand for them, by diminishing the prices of the commodities that are exchanged for them? It is said that nations now produce these staples of agriculture themselves, and would not take them from us. To a certain extent they do; and this has been occasioned partly by our own policy, as in the instance of the island of Madeira, which, in consequence of our excluding her wines by heavy duties, procures the corn she once bought of us from other countries. But how is it that nations now make their own bread-stuffs? In England, for example, they have resorted to their fourth and fifth rates of land. Now, would not any circumstance which would increase the demand for those articles which they produced with greater facility than corn be an inducement to withdraw capital from the raising of the latter to apply it to the former? This reasoning will apply to every country. Open a market for their products; they will then make that which they make at least cost, and purchase with it, of other countries, what they can only make at a greater cost. If it be said that a relaxation on the part of one nation will not, perhaps, produce a correspondent relaxation on the part of another, it will still be beneficial, unless by continuing restriction you can coerce other nations to abandon it—the only pretext, as has been already said, under which the countervailing policy can claim even plausibility. As long as the absurd doctrine prevails that it is the interest of a nation to countervail every restriction of another nation, there never can be a relaxation, or a return to the free system; the warfare of nations will be interminable. The truth is, if restriction on the part of one country injures another, to retaliate makes it worse, unless it drives the other from its policy. The most probable way of producing an abandonment of the restrictive system by other nations is to tempt them by relaxation; if it does not produce reciprocity, it at least benefits both, as retaliation injures both. It is evident that there has been a great change in public opinion throughout the whole civilized world, in favor of freedom of commerce; and, though Governments are always the last to abandon antiquated errors, sentiments favorable to free trade have been avowed even by them, and they have not been altogether unaccompanied by acts. It is not to be expected that countries like England, which have pursued the restrictive system so long, could get rid of it but very gradually. She has, however, shown some wish to do this, by the abandonment of some of her restrictions on her trade with Sweden and Norway; and it is understood that both France and herself have, even before our navigation acts, manifested a willingness to put our trade with them on a more favorable footing. In Spain, the Cortes have (unwisely, indeed,) imitated England in their corn law and other restrictive measures; but, in general, their regulations are more favorable to trade than they were under the old Government. The monopolies on tobacco, salt, quicksilver, lead, powder, sulphur, &c. have been abolished; the first allowed to be imported, and the others exported at moderate duties. Prior to the revolution, the importation of tobacco was prohibited; the King had the monopoly, and sold it at three dollars and seventy cents per pound. By the new tariff, after March next it will be charged with a duty of only thirty-five maravedis, about eight and a quarter cents per pound, which will enable the people of Spain to procure it very cheap, and thus occasion a large demand for it. They have abolished the Cinco Gremios and Philippine companies, on the ground that their privileges were incompatible with free government, and have, with some modifications, re-established the tariff of 1816, which was the first evidence of liberal policy that Spain ever gave.

But if we cannot, consistently with our interests, begin the system of relaxation, let us at all events refrain from further restrictions, which may tempt all other nations to retaliate, as they are now doing in the British province of New Brunswick, under the pretext of our navigation act, and thus place ourselves and the world at a still greater distance from each other, and from the restoration of commercial freedom.

The committee are of opinion that, so far from there being any thing peculiar in the situation of the United States, which renders the general principles they have advanced inapplicable, there are peculiar circumstances which make them apply with more force than to the nations of Europe. It will be recollected that, in a former part of their observations, it was attempted to be proved that, in a country where lands of the first quality are still out of cultivation, and are abundant, a system of duties cannot raise the price of one agricultural product but at the expense of another, and cannot raise the price of any kind permanently at all. But this is not the case in such a country as England. Where the field of production is limited, supply cannot keep pace with demand. In England, therefore, the agriculturists may obtain some compensation for the taxes they have to pay the manufacturers, and, in turn, receive taxes from them. But, in this country, the sole benefit is on one side; the agriculturist has no compensation; it is out of the power of the Legislature to do any thing for him, but to refrain from oppressing him.

Again: Europe is more dependant on us than we are on her; because we furnish her with necessaries, and she furnishes us with luxuries; because her means of producing those necessaries which she possesses will be daily diminished, and her dependance on this country will be increased, unless we force her to find out another to furnish her with food, and take off her surplus population.

In the next place, we are not yet so deeply involved in the restrictive policy as to prevent us from getting rid of it without mischief, as we shall be if we go a few steps further. There are many other peculiar circumstances which forbid our resort to the British policy, but the most important belong to the other branch of the subject proposed to be discussed.

The committee regard the principles they have appealed to as irrefragable. They are not to be refuted by the charge of theory, by the cry that we are supporting foreigners, or by the doctrines of the home market and the balance of trade. What is this balance of trade? Certainly it is not a very creditable mode of gaining; but is it not evident that, if we cannot pay for what we buy, it is clear gain; and that, if our citizens wish to buy again on these terms, it is unnecessary for the Government to interfere, as foreigners will refuse to sell? If we *can* pay for what we buy, it is all well and good; if we can pay only at a sacrifice, then we will cease to trade. The whole of this fallacy proceeds from that fatal error in political economy, that the commodity called money is regulated by different laws from all other commodities; or from that no less fatal error, which springs, perhaps, from the first, that a nation must sell more than it buys in order to become rich. Now, the very reverse of this is true; for, although in one sense commerce is an exchange of equivalents, what each party receives must be worth more than what it parts with, or neither is benefited. A nation buying more than it sells is supposed to be the same with its spending more than it makes; but the cases are not alike. What it sells is surplus, and what it buys is surplus; surely it cannot be a matter of regret when the latter is worth more than the former, and when there is an excess to devote to reproduction. It could hardly have been imagined that, in the nineteenth century, in a country whose Government is bottomed on the principle that the people are capable of seeing their own interests, it could have been thought necessary for the Legislature to interfere, to prevent the merchants of the country from buying more than they ought to buy. What reason there was for this interposition is shown by the subjoined facts. In 1818, the exportation of cotton goods from Great Britain to the United States amounted to £2,432,301; in 1819, it amounted only to £1,109,138; being a falling off of £1,323,163. The exports of glass, earthenware, hardware, cutlery, in 1818, were £971,285; in 1819, only £546,741. The amount of woollen goods, in 1818, was £3,160,406; in 1819, it dwindled down to £1,703,024. In all the great leading branches of manufactures there was a falling off in the exports to the United States of a full half in the amount, as compared with the year before, and of above £3,500,000 as compared with the average of exports during the last three years.

A case has been proposed as a very strong one, which is this: Suppose that all the various employments of capital are on the lowest level which will continue them. In this state of things one class is entirely thrown out of employment by foreign competition. They must either be protected or must be ruined; and this, it is said, is the actual condition of the United States. It is divided into two classes, one of which has no employment, and the other barely enough. Without stopping to inquire whether it be possible for such a case to exist, it will merely be observed, that if it did it would be improper to give the required protection. If the one class has barely such profits as will continue them in employment, they have nothing to spare. If they have any thing to spare, it is proof that their employment is not so full as to preclude new capital, which is contrary to the supposition. The one can only be raised up by the other being put down. Nor is the case different whether the classes which have employment make small or great profits. That which is employed can only be employed at their expense. In both cases it is unjust; in the latter unnecessary, as great profits will furnish the employment required.

It is not believed that any circumstances exist which will justify the United States in adopting the proposed system. No writer of any reputation ever contended that such a system was compatible with the greatest extension of the national wealth. Even Mr. Hamilton, its great advocate, admitted that if the system of perfect liberty and free trade were the prevailing system of nations, they might attain a greater pitch of wealth and prosperity. It has been attempted to be shown that this limitation to his proposition is founded in a fallacious view of the subject. To propose to increase the wealth of the nation by increasing its taxes is enough to revolt the understandings of ordinary men; yet it seems that a mode of doing this has been discovered, and that the whole mystery lies in calling that which was before called tax—tariff. In the opinion of the committee it is the worst kind of tax, carried to the extent that is proposed; and it would be much better to raise a sum of money by direct taxes at once, and distribute it in bounties among the manufacturers. We should then escape at least some of the oppressive effects of the system.

The chief recommendation of this system has been supposed to be its tendency to promote domestic independence and happiness. This leads the committee to the second view which they proposed to take of the subject. This is a view which belongs not merely to the political economist, but also to the statesman. The political economist concerns himself only with the manner in which wealth is produced, distributed, and consumed, with a view to its augmentation. The statesman regards this also, but he sometimes sees the necessity of sacrificing a portion of the national wealth in order to attain objects still more desirable; and no objects would appear better to justify such a sacrifice than the promotion of national independence, happiness, and security. It will be attempted to show that the system will be more objectionable in this point of view than in any other.

The observations the committee have already made on the effect of the system to diminish the national wealth serve to establish this position. If such really is the consequence, this alone is an unanswerable argument against the supposed effect of the system to render us independent of foreign Powers. If this general position be correct, it is useless to enter into any details to prove that the revenue must be diminished; for whatever diminishes that on which the revenue acts—the general wealth—must diminish the revenue itself, or else increase the burden of taxation. Even if we could preserve entire the capital of the country, and employ the same number of hands, as they would be less productively employed, there would be less nett revenue, less of that great agent which has been said to be the first, second, and third requisite in war. Now, it is not the gross amount of its capital, but its nett revenue, which a nation employs to defend itself. If men and ships could be multiplied by a magic wand,

you could not add one soldier to your army, or one vessel to your navy, without an addition to your nett revenue. If the income of the nation is destroyed, we must still have revenue; and how shall we get it but by taxing capital? Indeed, where will be our boasted advantages over other nations with regard to taxation, if the proposed tariff be adopted? If we add twenty-five per cent. to the duties, and then have to raise the same amount of revenue by direct taxes, or by an excise on manufactures, (and in the latter case we should have to pay the duties twice,) we at once add one hundred and fifty per cent. to our taxes; that is, every man who before paid a dollar will now have to pay two dollars and fifty cents; and, if we take into consideration the increased value of money, more, if estimated by the price of corn, than a hundred and fifty per cent., every man who before paid a dollar will have to pay six dollars and twenty-five cents. It would appear that the appreciation of money ought to affect all articles equally; but, in point of fact, it is known, that whilst grain has fallen more than one hundred and fifty per cent., and the other staples of agriculture considerably, the fall in manufactured products is comparatively small, so that it is quite immaterial whether it is from the appreciation of money, or from external and domestic causes, the ability of the agriculturist to pay taxes will be diminished by the tariff fully in the proportion stated, and the argument against imposing them is not the less strong. Is it possible that they can submit to this intolerable load of taxation without making every lawful attempt to oppose it? Is it possible for them to believe for a moment that this increase of taxation is the remedy for their distresses?

It is not designed by the committee to claim any preference for agriculture and commerce over manufactures. They mutually depend on each other; their interests are not adverse; and, if not equally productive, they are all equally necessary to society. But, whilst the political economist might regard it as a matter of indifference in what proportion the three great classes are distributed in society, the statesman and patriot could scarcely hesitate to wish that the agricultural class should greatly predominate. The agricultural state is more favorable than any other to the improvement of the physical and moral powers of man. Whilst an agricultural nation will be as powerful as others, it will be more virtuous and happy. It is in this state that the body is invigorated by healthful exercises; that the mind is ennobled by the freedom and independence of rural life; and that man feels the true dignity of his nature. Who would think of comparing the brave, hardy, and independent yeomen of this, or any country, to the miserable, half-starved, ricketty population of an English cotton factory? Who would compare the hardy mountaineer who pursues the deer, or slays the buffalo, their equal in swiftness and in strength, to the poor, decrepit, emaciated creature who has been all his life engaged in the same dull, stupifying routine of drawing out a ten yard thread, or manufacturing the eighteenth part of a pin? Yet it has been attempted to be proved that there is more vice among the agriculturists than among the manufacturers, because Colquhoun, a writer who is the partisan of the latter, has asserted that more crimes are committed in some of the agricultural than in some of the manufacturing districts of England; whilst the just answer to the argument implied in this statement has been overlooked, that, where it has happened at all, it has been owing to the laborers, from want of employment, being thrown back from the manufacturing towns, which have converted them from healthy and well disposed children to weakly and depraved adults, on the country from which they originally came.

But if we are agricultural, we must also be commercial; and commerce, it is said, produces more wars than it pays for. If this be true at all, it can only be true of commerce pursued under the dark influence of the restrictive system. Commerce, free and unfettered, so far from being the cause of wars, would be the source of wealth, power, and prosperity, and a bond which would bind in peace and harmony the universal society of nations. And it is not an unreasonable expectation that this is the kind of commerce that will be pursued, whenever nations are governed by enlightened rulers, or rather when they assume the right of governing themselves. The whole civilized world is now essentially commercial. From the period that commerce first emancipated the nations of Europe from feudal vassalage, its march has been steady, progressive, and rapid. It has been the great agent by which the treasures of the earth and the collected wisdom of mankind have been spread throughout the world, and the source of the prosperity and grandeur of empires. To attempt to impede its progress is to disregard the spirit of the times and the admonitions of experience. It is as useless as to oppose the march of the human mind towards freedom, knowledge, and happiness, or to contend against the irreversible decrees of nature. Nations have become acquainted with each other, and with the advantages which they may derive from liberal intercourse; and laws are not strong enough to keep them asunder. They can only vex and disturb their intercourse; they cannot prevent it. It is the interest of every nation to pursue commerce, but peculiarly so of the United States and of every free Government. It is equally important to us, whether we consider it as the basis of our navy, or as the grand instrument for the extension of science, social feelings, and freedom throughout the world.

To pursue the subject: If we give to manufactures all the activity which they must derive from the agricultural and commercial classes being taxed to support them, we must, in time, become exporters of manufactures. When this takes place, will we not be exposed to all and greater inconveniences than we now are, from the refusal of foreigners to receive our raw produce? Which, indeed, would be most apt to suffer from vicissitudes in the affairs of the country—a nation engaged in producing the first necessaries of life, or one engaged in producing luxuries, or only a secondary sort of necessaries?—one employed in producing commodities subject to the caprices of taste and fashion, or one employed in producing those which are essential to human existence?—one pursuing occupations which can be changed with facility, or one pursuing those which can be changed only with great difficulty and loss? What, it is asked, would have been the situation of England—where would have been her independence—if Napoleon had succeeded in carrying into effect his continental system? And now, since this system has been partially adopted by the continental nations of Europe, and by ourselves, is not this destruction of the markets for her manufactures, next to taxation, the principal cause of the distresses of that nation?

It is urged that a nation should have in time of war the necessaries which will enable it to carry on a war: and so it should; but the proposed tariff goes infinitely beyond this point. It is believed that the manufactures of all the necessaries of war are now perfectly established in this country. Coarse clothing, and arms, and ammunition are not considered as requiring further support. The inquiry now making, in connexion with the census, will prove that we have almost every necessary in great abundance. It must be recollected, too, that in a future war, unless by our policy we destroy the navy, our commerce will not be so entirely kept down, even if that war be with England. Our navy is now strong enough to prevent the coast from being blockaded, and we shall be enabled to maintain an intercourse with the nations with whom we are not at war. But, it is asked, even if we could not get some of the necessaries we required, does any one seriously believe that the *result* of any war would be affected by such privations? and if they only affect some of its details, delay a march, or even increase the general mass of suffering, what is this compared with the wide-spread and endless calamities that this system would give rise to? Should our policy be adapted to peace or to war—to the rule or the exception? Undoubtedly, in time of peace we should prepare for war; but let us not make this preparation at so great an expense that its exhausting operation will incapacitate instead of fit us for war.

The demoralizing effects of this system, its tendency to impair the principles of honor and honesty in society, and to give rise to fraud, to smuggling, and to all the low artifices and depravity which are inseparable from all

arbitrary legislation, and thus to force upon us a sanguinary code of revenue laws, utterly incompatible with the free and humane principles of our Government, are too obvious, and have been too fully exposed, to require further comment from the committee.

If these are the disastrous effects of this system, what will be thought of those which our free institutions themselves must experience from this unwarrantable interference of the General Government with the rights of private property? an interference which may render nugatory the whole frame of civil polity which the States have adopted for the preservation of their institutions and the promotion of their happiness, and which may, ultimately, break down and destroy the very barriers which secure their rights and sovereignty. The blessings of a free Government are so great, and the evils of an arbitrary one so grievous, that we cannot be too careful to preserve the one when we have it, or to avoid the other. It would therefore appear, that whenever a new measure is proposed, the first inquiry of every citizen of a republic should be, what will be its effects on our institutions? Yet, as obvious as is the truth of this observation, it is somewhat remarkable, that in all that has been so ingeniously written and spoken on the subject of banking, and funding, and manufacturing, they have scarcely ever been considered in their effects on our institutions, but merely in reference to their financial and pecuniary operations. Our legislators and writers have, for the most part, viewed these subjects as political arithmeticians rather than as statesmen.

If the view that has been taken of the manufacturing system be correct, it must not only *diminish* the amount of national wealth, but must distribute it very unequally. This is by far the worst effect of the two. It taxes one class for the support of another, and, what is worse, taxes the poor for the sake of the rich. It thus produces that inequality which is the bane of republics; for it is, in fact, the influence of the few, or, in other words, aristocracy.

Now, though no just Government will interfere, by sumptuary laws, to restrain the acquisition of wealth, and thereby prevent inequality, so neither will any just Government, by fostering particular interests at the expense of others, promote inequality. This is the opposite and the worst extreme of sumptuary laws. Nor is the inequality which is produced by the interference of the law by any means as harmless as that which results from different dispositions and different capacities in human beings. Whilst the one may act as a salutary stimulus to industry, and its worst consequences are continually neutralized by the alienation and division of property, the other, by creating distrust in the Government, produces despair and depresses industry; and the dread of retributive justice, which always accompanies wealth unjustly acquired, so far from giving rise to division of property, inevitably leads to concentration and primogeniture, to legal safeguards, corporations, charters, monopolies, and privileged orders. The fear that the law which has given may also take away produces the necessity of usurping the law-making power. An alliance between the privileged classes is the inevitable consequence; hence a new accumulation of powers, new pretexts, and new means of oppressing the people. The Government must be rewarded for its protection by an increase of power, patronage, salaries, taxes, and a diminution of responsibility. The various departments of the Government will no longer move in their appointed spheres, but usurp each other's authority. The State sovereignties will be merged in the General Government, and the legislative authority in the executive. Such is the natural consequence of creating separate interests by law; such is the effect of that inequality which is produced by the interference of the law with individual wealth; such the process by which free Governments are metamorphosed into aristocracies. It is remarkable, that, although the fundamental maxim of our Government is that the people are capable of self-government, our Legislatures often practically deny it. They place too much reliance on the efficacy of technical rules and artificial restraints. Legislators consider themselves as the rulers, not the agents of the people; as their guardians, not their attorneys. The disregard of that fundamental maxim, that there is an inherent disposition in man to improve his condition, and sagacity to perceive the means, is believed to be the source of innumerable errors in legislation, and particularly of that which dictates the usurpation of the right to direct individual wealth.

It is not to be wondered at that the advocates for the supremacy of the General Government should defend a policy which is calculated to aggrandize it, by creating a new class of dependants; but it is greatly to be wondered at that the friends of State rights should ever have defended it; it can only be because they have not fully perceived this certain consequence. It is believed that no candid mind can fail to perceive that the effect of the manufacturing and its kindred systems will be to transfer a great portion of the wealth of the agriculturists to the other classes. If wealth is thus transferred, so are the means of education, of knowledge, and, consequently, of power. This is a subject which demands the serious attention of every agriculturist in the Union. The evil is augmented, too, by the heavy duty on books, which bears with peculiar hardship on the agriculturist, who does not enjoy, as the merchant, the manufacturer, and the mechanic, the advantage of the public libraries of the cities. The material with which they cultivate the earth, and that with which they cultivate the mind, are alike under the interdiction of this system.

The great influence which the manufacturers, scattered as they will be over the whole face of the country, must acquire, will leave the agriculturists little hope that if they once assent to their system it will ever be revoked. Among the means by which their influence in the Government must be increased, the facility which they must derive from our popular modes of election, of directing the suffrages of the persons they employ, is not the least worthy of consideration. This apprehension is not diminished by the consideration that their dependants, as we are told, will consist principally of foreigners. As much as we respect that class of people, and as willing as we always are to afford them an asylum in our free and happy land, it is not believed that our legislation could derive much improvement from the counsels of the cotton weavers of Manchester and the blacksmiths of Birmingham. They have imbibed their political notions under a Government too dissimilar to ours to be useful citizens in the capacity of legislators.

The committee have already adverted to the effect of the system to drive population and capital from one State to another, and to aggrandize the General Government at the expense of the States. Now, it must occur to every impartial mind, that, if there be any force at all in these observations, the right of the General Government to adopt such a system must be more than questionable. Passing over those constitutional objections which admit of being urged with great force, that Congress cannot lay taxes but for the purpose of revenue, and that this system is equally incompatible with that part of the constitution which prescribes uniformity of imposts, and with that which forbids taxes on exportation, they will appeal only to that sacred spirit of justice which we all equally venerate, and the authority of which we equally acknowledge; and they ask, in the name of that justice, whether it is possible to believe that the Congress of the United States can, without violating every principle on which our republican system is founded, tax one class of the community for the support of another? whether they can debar a man the use of the faculties he has derived from nature? compel him to abandon an occupation to which he has devoted his life, and which he understands, and to pursue another which he does not understand? whether it can take away the fruits of one man's industry, earned by the sweat of his brow, and bestow them on another who has not earned them? No Legislature, much less a limited one, has any such right. Those who become parties to Government cannot be supposed to agree to any other exactions than such as are necessary to defray its just expenses, and to preserve public order and morals. Even, therefore, if it could be made to appear that the effect

of the system would be to augment the whole wealth of the nation, this object could not justify a Legislature in taxing particular classes, without their consent, for the benefit of the whole. The object of government is to secure men in the exercise of their faculties, not to restrain or direct them; to secure them in the full and free enjoyment and control of their property, and not to distribute and regulate it by its own arbitrary will. It never could have entered into the contemplation of the States, when they agreed to the constitution, that the General Government had a right, by its legislation, to change their mutual relations towards each other; to enrich one, and impoverish another; to strengthen one, and weaken another; and to impair, and perhaps ultimately destroy, the wealth, freedom, and happiness of them all. Let it not be thought that this is the language of hyperbole. The committee speak of the natural tendency of the system. No one knows how far, in conjunction with its kindred systems, it may stop short of these consequences; no one knows how far it may go beyond them. Our only safety is in arresting it now, when almost every circumstance is unfavorable to its adoption. There never was a time when there was less apology for it. The adoption of it by the continental nations of Europe will enable us to obtain some benefit by abstaining from it—will diminish the advantages of our manufacturing, and increase those of our tilling the earth. The unparalleled distresses of the country, of which agriculture experiences by far the heaviest portion; the increased facility of manufacturing, without artificial aid, from the fall in the price of labor and materials—every circumstance opposes this policy, and recommends a contrary one.

The people of these States, like the three great occupations that employ them, are united by the strongest ties of reciprocal interest. They feel a just pride in the inheritance bequeathed to them by their ancestors, their common freedom and glory; and they equally appreciate the blessings which they derive from that union, which is the result of their mutual exertions, and which it is mutually their interest to preserve. But these blessings must be seriously impaired without the cultivation of good will, and the undeviating exercise of justice towards each other. It is by this means only that the temple of our Union can be cemented and consolidated, and that we can preserve it from the fate which the dissoluble fabrics of other Governments have shared. The committee believe that nothing can have a greater tendency to diminish our confidence in the Government of the Union, and to impair our affection for it, than all those measures which distribute its advantages partially and unequally. They believe that such will pre-eminently be the effect of the manufacturing system as proposed by the tariff bill that has been reported, and they fear that this is only the commencement of the system; not that they attribute any unfriendly designs or impure motives to its friends, but that the same reasoning which has begun the policy will dictate its continuance; and that the unsuccessful issue of every effort will be an argument, not for abandoning it, but for making a new attempt.

The committee are fully aware of the great importance of certainty and stability in the regulations of trade, and of the tendency of constant fluctuations to impair that confidence which is necessary to the activity and success of commercial operations; but it is desirable that agriculture should experience at least some of the benefits of those changes which our present system seems destined to undergo. Believing, however, as the committee do, that the proper object of a system of duties is revenue, they regard the revision of the tariff as being strictly the province of the Committee of Ways and Means. With these impressions, and representing, as they do, only one of the great interests of the community, they forbear to propose any positive measures which might seriously and extensively affect them all. They have freely expressed their own sentiments on the important subject referred to them, and they believe those of the great majority of the agriculturists throughout the country. In conformity with these sentiments, they offer the following resolution:

Resolved, That the increase of the duties proposed in the bill entitled "A bill to regulate the duties on imports, and for other purposes," reported by the Committee on Manufactures, is incompatible with the interests of agriculture and of the community generally, and ought not to be adopted.

16th CONGRESS.] **No. 614.** [2d SESSION.

RELATIVE VALUE OF GOLD AND SILVER COINS OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 2, 1821.

Mr. WHITMAN made the following report:

The Select Committee, who were directed to inquire into the expediency of increasing the relative value of gold hereafter to be coined at the Mint, have attended to that subject, and beg leave respectfully to report:

That they are of opinion the value of American gold, compared with silver, ought to be somewhat higher than by law at present established. On inquiry, they find that gold coins, both foreign and of the United States, have, in a great measure, disappeared; and, from the best calculation that can be made, there is reason to apprehend they will be wholly banished from circulation; and it ought not to be a matter of surprise, under our present regulations, that this should be the case.

There remains no longer any doubt that the gold coins of the United States are, by our laws, rated at a value lower than in almost any other country in comparison with that of silver. This occasions the gold to be constantly selected, when it can be obtained, in preference to silver, whenever required for remittance from this to foreign countries; and, at the same time, prevents those who have occasion to remit to the United States from doing it in gold. Hence, there is a continual and steady drain of that metal from this country, without any correspondent return, which must continue while there remains any of it among us. The importations of it will be confined to small quantities, and from countries from which nothing better can be obtained.

There have been coined at the Mint of the United States nearly $6,000,000 in gold. It is doubtful whether any considerable portion of it can at this time be found within the United States. It is ascertained in one of our principal commercial cities, quite in the vicinity of the Mint, that the gold coin, in an office of discount and deposite of the Bank of the United States, there located, in November, 1819, amounted to $165,000, and the silver coin to $118,000; that since that time the silver coin has increased to $700,000, while the gold coin has diminished to the sum of $1,200, $100 only of which is American. And it is stated that the vaults of the State

banks in the same city, having a capital, in the aggregate, as is believed, of nearly $8,000,000, exhibit a similar result. It is scarcely to be doubted that, on examination in the other commercial cities, similar additional proof would be furnished.

It now becomes a question of serious import, to be decided by this nation, whether a gold currency be at all desirable, or whether it should wholly give place to silver. By some a silver currency is deemed the most eligible; they contend that our circulating metallic currency should be ponderous, and inconvenient of transmission; that it would, in such case, remain in the country and be stationary.

On the other hand, it is believed by your committee that a more portable currency may be, on many accounts, (and in many instances must be,) much more convenient, and in some cases absolutely necessary. It cannot be denied that the lighter and smaller the currency, in proportion to its value, the greater will be the accommodation in the negotiations between the great extremes of the Union. In proportion to this facility, the price of exchange will be lessened; commercial transactions would thus be carried on at an enhanced profit to all concerned. Moreover, in time of war, it will never fail to become requisite to make use of specie in payments and remittances; and these will be demanded, almost exclusively, at the extreme borders and frontiers of the Union. In such case, gold furnishes a medium which will not only be light and convenient, but which can be transmitted with secrecy, thereby avoiding the risks incident to war and commotion. Those who carry their recollections back to the incidents of the late war cannot fail of being forcibly impressed with this idea.

Our empire is widely extended, and becoming more so, and, at the same time, sparsely settled. The transmission of large sums, especially in time of war, if in ponderous silver, must be extremely inconvenient, and oftentimes attended with great danger. It would seem, therefore, that, as currency, the gold coin has, in this country, manifest advantages over that of silver.

But there is another particular not unworthy of consideration. We have before stated that the gold coins are worth, in foreign countries, more, in comparison with silver, than in our own. The average of this increased value is believed to exceed six-tenths of a dollar in every fifteen dollars. In Spain and Portugal three half-eagles are worth sixteen dollars; in Cuba, seventeen; in the West Indies, generally, sixteen; in England, fifteen and one-fifth; in Holland, fifteen; and in France, fifteen and a half. These calculations may not be precisely as stated, but are believed to be nearly accurate.

In the United States, before the establishment of the present Government, it has heretofore been ascertained by a committee of Congress that, by custom, the value of gold had been considered as equivalent to about fifteen and six-tenths of its weight in silver. This, without doubt, arose from finding this to be the average of the different values affixed to the gold in different foreign countries.

Why it was thought proper, on establishing the Mint of the United States, to reduce this value to fifteen for one, it is not now material to inquire. It is sufficient to know, from unhappy experience, that its tendency is to rid us of a gold currency, and leave us nothing but silver.

The merchants, if they have occasion to import specie, and cannot obtain silver, are compelled to import gold at a loss of from two to ten per cent. If they have a remittance to make, they will, if possible, exchange silver for gold, as thereby they will gain from two to ten per cent. according to the value of gold in the country to which the remittance is to be made.

An occurrence strikingly illustrative upon this point is stated in an elaborate report of a former committee on the subject of the currency, to which your committee would beg leave to refer, as affording much useful information on this subject generally. The Bank of the United States entered into a contract with Messrs. Baring & Co. of London for the supply of two millions of dollars in specie, in equal parts, as near as might be practicable, of gold and silver, at the American standard. The amount was accordingly furnished, but not a dollar of it in gold, although gold is the currency of Great Britain, and silver is admissible there, as a tender, in but very small sums.

It will of course be objected, that, if we should now render gold four per cent. better, we shall thereby put into the hands of its present holders a clear nett gain to that amount, provided they hold it with an intent to use it in this country, But it is not perceived how this will injure the public or individuals. And it will not be regretted by the benevolent that individuals should be benefited, if no one be injured. If, however, individual wealth be a public blessing, all will be benefited. At any rate, this is an incident utterly unavoidable, to a certain extent, in this case. It must be submitted to, as otherwise a positive national evil of great magnitude, as your committee deem it, must be encountered.

It will, moreover, be objected, that speculators will take advantage of the unwary, and, ere they will have been apprized of the increased value of their gold, will have purchased it of them at the former rate. This, however, your committee believe, will, in a great measure, be counteracted by a provision in the bill, accompanying this report, that the coin, at its increased value, shall not be a legal tender until the 1st of July next. In this way, those who would buy it with a view to speculation would sustain a loss of interest amounting to nearly or quite as much as would otherwise be gained by the purchase.

If it be expedient to adopt the measure in contemplation, the present is the moment when it can and ought to be done. The longer we continue under the present regulation, the worse will be our condition, and the greater the injury we shall have sustained.

Your committee, therefore, in conformity with the foregoing sentiments, ask leave to report a bill.

16th Congress.] **No. 615.** [2d Session.

DRAWBACK.

COMMUNICATED TO THE SENATE, FEBRUARY 5, 1821.

Mr. Sanford, from the Committee on Finance, made the following report:

The Committee on Finance submit to the Senate their report upon the petition of John Lowden.

The petitioner imported certain merchandise from England into Charleston, in South Carolina, and the duties accruing upon the importation were paid. He afterwards exported the same merchandise to Liverpool, in England, for the benefit of drawback. On the 24th April, 1818, he gave the requisite bond, with condition that the certifi-

cates and proofs required by law to show the landing of the merchandise at a foreign port should be produced within one year. The merchandise was landed at Liverpool, but no certificate or proof of the fact was produced within the year; and the proofs required by law have never been produced. The bond was paid to the collector on the 24th of April, 1819. The petitioner alleges that the bankruptcy of the consignee in Liverpool was the cause of the failure to furnish the requisite proofs in time; and that he did not know that further time could have been obtained for producing his proofs. He now presents to the Senate certain proofs of the landing at Liverpool, and he prays that the drawback of duties may be refunded to him.

The bankruptcy or negligence of the consignee in England affords no reason for relief.

If a longer period than one year was requisite in this case for producing the proofs of landing in a foreign country, the Comptroller of the Treasury had ample power to extend the time. The petitioner made no application to the Comptroller to prolong the term for producing the proofs. If he did not know that further time might have been obtained, his ignorance upon that point is not a sufficient excuse. The petitioner, like all others, is bound to know the law of the country, and to observe it. The loss which he has sustained might have been averted by ordinary diligence, either in his agents in England, or on his own part in this country.

Though this merchandise has really been exported to a foreign country, yet public policy requires that the laws concerning drawbacks should be enforced. The loss of the petitioner has resulted from his own negligence, or that of his agent; and no precedent could be so dangerous as that which should relax these regulations of revenue merely because an exporter and his agent have neglected to attend to their own business.

The following resolution is proposed:

Resolved, That the prayer of the petitioner be not granted.

16th Congress.] **No. 616.** [2d Session.

THE REVENUE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 6, 1821.

Mr. Smith, of Maryland, from the Committee of Ways and Means, to whom were referred three resolutions of the 3d instant, requiring of the committee to inquire and report "whether, in their opinion, the permanent revenue is adequate to the expenses of the Government;" "whether any measures are necessary to increase the revenue, and, if so, to report those measures;" and "to inquire into the expediency of prohibiting, or imposing additional duties on, the importation of foreign spirits, and imposing an excise on domestic distilled spirits," reported:

That they have had these important subjects under their consideration, and have obtained from the several Departments all the information which the officers at their head could furnish; yet, such are the difficulties that present themselves, that they enter into the discussion and the statements necessary to elucidate the subject with great diffidence. They may differ in opinion with gentlemen for whose talents they have the highest respect, and in whose integrity they have unbounded confidence; the subject is one, however, on which the best friends may fairly differ in opinion.

Is the permanent revenue adequate to the expenses of the Government?

The revenue is mainly bottomed on the duties arising on the importations of foreign goods; it is, therefore, dependant on fortuitous circumstances, which cannot easily be foreseen, and which may tend to its increase or decrease; there are some, however, which can, in a degree, be appreciated. The tariff of 1816 was expected to operate a loss to the revenue, by giving what was considered at the time sufficient encouragement to the manufactures of the country. A variety of causes, arising out of excessive and ruinous importations, and the time required for diverting one channel of commerce or supplies into another, has, until lately, prevented the effect from being materially felt. The operation of that tariff is now beginning to be known, and the effect on the revenue is believed to be considerable; its extent is, however, not completely developed. Its operation on a few of the principal articles may afford some idea of the increase of our manufactures, and the consequent decrease of the revenue resulting from the duties on the importation of such articles.

The tariff of 1816 increased the duty on brown sugar about 20 per cent., and gave a protecting duty to that article of 3 cents per pound. No material decrease has, as yet, resulted to the revenue therefrom. The tariff was enacted during the existence of the excise on domestic distilled spirits, and an additional duty was imposed for the protection of the domestic article. The excise on imported spirits was repealed; the duty was continued; and the duty on foreign spirits exceeds, at this time, the whole value of the domestic; the average duty on the imported being 43 cents per gallon, when the value in the market of the domestic does not exceed 33 cents the gallon. This has tended, it is believed, to decrease the consumption of foreign spirits, and, of course, the amount of the revenue. In 1818, the nett revenue from imported spirits, after deducting the debentures, amounted to $2,646,186, and in 1819 to $1,959,125.

The tariff of 1816 raised the duties on cotton and woollen cloths from 12½ per cent., the duty imposed prior to the late war, to 25 per cent., and it valued all cotton cloths under a cost of 25 cents the square yard (although some cost as low as 6 cents) as if they had actually cost 25 cents, and charged the duty thereon accordingly. The result has been, that cotton goods imported from India, under a cost of 25 cents the square yard, pay a duty exceeding 60 per cent. on the average cost of those heretofore imported from that country, and above 40 per cent. on the average cost of similar goods when imported from Europe. The operation has had a salutary effect on our infant manufactures of cotton, which begins to be understood by the manufacturers. The importations from India of such cottons as are under a cost of 25 cents the square yard have almost ceased *for consumption*, and those from Europe have decreased, it is believed, to a considerable extent. The coarse cottons of our domestic manufactures have entered, it is believed, into the consumption of the nation, nearly equal to the wants of the people. The increase of our woollen manufactures has afforded a considerable quantity of woollen cloths for consumption, but we have no information on which to form a decided opinion as to its extent. Other important articles of domestic manufacture are silently entering into competition with those heretofore imported from foreign nations. These

circumstances, added to the distresses of the people, and to the price of our exports, being such as in a great degree to affect the means of paying for imports, make it extremely difficult to form a correct estimate of the revenue which may arise hereafter from duties on imports, estimated on that which had been received in former years.

With these views, which the committee have deemed it proper to submit, they proceed to answer the first resolution.

They are of opinion "*that the revenue which will be received in the present year will be adequate to the expenses of the Government;*" and, should no change take place, the revenue will, in their opinion, during the years 1822, 1823, and 1824, be not only equal to the expenses of Government, but afford such a surplus, applicable to the payment of the loan of the last year, and any that may be authorized for this year, as will, before the 1st day of January, 1825, fully repay the amount borrowed. The House will remember that, as the appropriation bills have not passed, the real or true expenses of Government cannot be correctly stated. The committee are compelled, therefore, to bottom their statement on the estimated expenses, as submitted to Congress, which will, it is confidently believed, be reduced at least one and a half million of dollars.

It is now reduced to a certainty that the actual receipts from the customs into the Treasury, during the year 1820, has been $15,005,328, which amount, it is humbly conceived, may be safely relied on as the receipts for the present year. The committee are of opinion that the receipts of 1821 (from that source) will exceed that amount. They form that opinion from the following circumstances, to wit: the bonds for duties in the Treasury amounted, on the 1st day of October, 1820, to nearly the same sum as those in the Treasury on the 1st of October, 1819; that from those of 1819 an extraordinary deduction was made by the more than common amount of debentures issued on the reshipment of goods during that year; that a similar amount of drawbacks, it is believed, will not occur during the present year, and, of course, that the revenue from imports will be greater in 1821 than that of 1820; and in this opinion they are confirmed by the following view of the customs for the present year:

Bonds in the Treasury on the 1st of October, 1820,		$18,770,000
From which must be deducted—		
Bonds irrecoverable,	$1,250,000	
Bonds in suit, which may not be received during the present year,	750,000	
Bonds paid in fourth quarter of 1820,	2,626,815	
Debentures actually issued, prior to the 1st October, on those bonds,	1,163,000	
Debentures which may be issued on the same, estimated at	637,000	
		6,426,815
Estimated nett proceeds from those bonds,		12,343,185
Add thereto the amount of receipts into the Treasury from bonds taken during the last quarter of the year 1820, and taken, or to be taken, during the two succeeding quarters of 1821, which, bottomed on the receipts into the Treasury for actual receipts from bonds taken during the fourth quarter of 1819, and the first and second quarters of 1820, are estimated to give, for the present year, the sum of		4,437,205
		$16,780,390

The committee have submitted the preceding view of the customs for 1821 for the consideration of the House, but would not be willing to pledge themselves for the result. The items they believe to be correct; and the present appearance of our commerce, becoming less unfavorable, warrants them in the belief that the revenue from customs for 1821 will not be less than sixteen millions of dollars. They, however, deem it more safe to assume the receipts of the present on that of the preceding year, and therefore submit the following statement:

Estimated receipts for 1821.

Customs received in the first, second, and third quarters of 1820, (see Secretary's report,)		$12,378,513
Customs received in the fourth quarter,		2,626,815
A statement from the Treasury to your committee, assumed as the receipt for 1821,		15,005,328
Land, agreeably to the report of the Secretary of the Treasury,		1,600,000
Internal taxes, by same,		100,000
Bank dividend, by same,		350,000
Post Office and incidental receipts may be estimated at		100,000
		17,155,328

Estimated expenditures. (*See Treasury report of December* 4, 1820.)

Civil,	$1,769,850	
Civilizing Indians,	29,200	
Military Department,	6,798,515	
Naval Department,	2,928,676	
Public debt, principal and interest, for 1821,	5,477,776	
		17,004,017
Excess of receipts over payments,		$151,311

The preceding statements show that there will be an excess of receipts over the expenditures, even if the whole amount estimated for by the different Departments should be granted and expended. But it is known that the amount is estimated on the presumption that all the expenditures authorized by law will be required. This, however, in time of profound peace, has seldom been the case. The reform in the army, and reduction from the estimates of the several Departments, will amount at least to one and a half million of dollars, and thus confirm the opinion expressed by the committee, " that the revenue for 1821 will be fully adequate to the expenses of Government for that year."

The committee submit their views for the succeeding years of 1822, 1823, and 1824, to prove the opinion that the revenue will be fully equal to the payment of the expenses of Government during those years. In addition to the statement given of the receipts from customs for the year 1821, and with the view of further elucidating the subject, they submit the following statement of the receipts derived from the customs, land, &c. &c. for the years 1817, 1818, 1819, and 1820; three of those years are known to be the minimum years, the fourth not uncommonly productive.

In 1817 the customs produced nett	$17,524,778
In 1818 the customs produced nett	21,828,431
In 1819 the customs produced nett	17,116,702
In 1820 the customs produced nett	15,005,328
	$71,475,239
$71,475,239, averaged on four years, gives for one year	$17,868,809

Although your committee think it probable that the average receipts from the customs, during those four years, will be realized for the years 1822, 1823, and 1824, yet, under the uncertainty arising from the view already given, they consider it more safe to assume a less amount, and therefore submit the following statement of receipts and expenditures as one which they have full confidence may be relied upon for 1822, 1823, and 1824.

Receipts.

Customs,	$17,000,000	
Land, (per report of Secretary,)	2,500,000	
Bank dividends,	420,000	
Postage and incidental,	200,000	
		$20,120,000

Expenditures for those years.

Civil, miscellaneous, and diplomatic,	$1,750,000	
Civilizing Indians,	29,000	
		1,779,000

Military Department, to wit:

Arming militia,	$200,000	
Indian annuities,	152,000	
Revolutionary pensions,	1,200,000	
Invalid pensions,	300,000	
Fortifications,	400,000	
Indian Department,	170,000	
National armories,	360,000	
Cannon, shot, and shells,	50,000	
Arsenals,	30,000	
Army proper, (including the ordnance service and the Military Academy at West Point,) estimated, agreeably to the bill which has passed the House, at its utmost amount, to cost	2,000,000	
		4,862,000
Naval, including $500,000 per annum, for the gradual increase of the navy, amounting, agreeably to the estimate for 1821, to		2,928,676
Public debt, (see report,)		5,477,000
		$15,046,676

leaving a surplus of $5,673,324 per annum, from which will be deducted the interest on any loan that may be authorized during the present year.

The preceding view will show that the committee, in answer to the second question, to wit: "Whether any measures are necessary to increase the revenue?" are of opinion that the revenue is amply adequate to the expenses of the Government, and, of course, that no measure for its increase is necessary.

To the third resolution, to wit: "Is it expedient to prohibit or impose additional duties on the importation of foreign spirits, and to impose an excise on domestic spirits?" the committee answer, that the revenue from imported spirits amounted in 1818 to $2,646,186, and in the year 1819 to the sum of $1,959,125; and it is believed that that of the year 1820 will not amount to the sum received in 1819. But the committee are of opinion that the imposition of an excise, at this time of extreme distress, would be unwise, and is not demanded by the condition of the Treasury; and that, if imposed, it would be difficult to collect; and, if collected, it would, in some parts of the Union, be in paper little available to the Treasury. They therefore submit their opinion against any immediate imposition of an excise on domestic spirits, or of any new duty on, or prohibition of, the importation of foreign spirits.

The committee have thus far confined themselves to the answering of the three resolutions referred to them; they have, however, deemed it not improper, whilst on the subject, to submit their views of the financial state of the Treasury.

The demands on the Treasury, necessary to complete the payments for the year 1820, are—

For civil, diplomatic, and miscellaneous,		$855,905 00
Public debt,		2,076,913 15
Mississippi stock,		571,827 57
Navy Department, (report of 21st December,)		1,110,000 00
War Department, agreeably to a letter from the Secretary, dated 31st of January, to the Committee of Ways and Means,	$692,285 75	
From which must be deducted, agreeably to the same letter, the amount of money in the hands of the Treasurer, as agent for that Department, on the 1st of January, the sum of	251,565 30	
		440,720 45
		5,055,366 17
From which is to be deducted—		
Amount of money in the Treasury on the 1st day of January,	$1,076,271 18	
Less the notes of insolvent banks, which will not be available during the present year,	600,000 00	
Leaving of available funds in the Treasury, on the 1st of January,		476,271 18
Balance against the Treasury, on the 1st day of the present year,		$4,579,094 99

The committee believe the above statement to be accurate, and that the balance against the Treasury on the first day of the present year amounted to the sum of $4,579,094 99; that balance will, it is believed by your committee, be reduced by retrenchment in expenditures, as already stated, to an amount not less than one and a half million, which will reduce the actual deficit to be provided for to the sum of $3,079,094 99; but if the estimate of the Secretary of the Treasury should prove correct, to wit, that the customs in 1821 will produce only $14,000,000, then the two years will show the following result:

Deficit, as above, on the 1st January, - - - - -	$4,579,094 99
Excess of expenses over receipts in the year 1821, estimated on the demands made by the several Departments, conformably with the existing laws, - - -	854,017 00
	$5,433,111 99
From which deduct amount of expected retrenchment, - - -	1,500,000 00
	$3,933,111 99

The item of $854,017 will be found in the difference of $1,005,328 between the Secretary's estimates of the receipts from customs in the year 1821, and that of your committee; from which must be deducted the excess of receipts over expenditures of $151,311, in the view they have taken above of the receipts and expenditures of 1821, which will leave the item of $854,017.

In this last view, bottomed on the estimate of the Secretary of the Treasury for the receipts in the present year, there appears to be an actual deficit in the two years of 1820 and 1821 of $5,433,111 99, from which the committee believe that there may be deducted for retrenchment $1,500,000, which will leave the sum of $3,933,111 99 to be provided for.

The committee have deemed it proper to give to the House those two views of the subject. If the estimate of the Secretary, of $14,000,000 from the customs, should prove correct, the amount to be provided for will be, as already shown, $3,933,111 99.

If that of your committee should appear to the House as one to be relied upon, then the amount to be provided for will be $3,079,094 99.

The committee ask leave to observe, that a more accurate view of the actual amount to be provided for will be taken by your committee, if the appropriation bills shall pass in time to afford the opportunity.

The House have been correctly informed by the Secretary of the Treasury, that it requires time to transfer the money received in the Western States and in Louisiana to the Treasury, for which the Secretary asks the aid of $600,000. That difficulty will, in the opinion of your committee, be surmounted by the amount of appropriations which will remain unclaimed at the expiration of the present year. The unclaimed demands of appropriations at the expiration of each year have, on an average of years, amounted to about $3,000,000; but as the appropriations of the present year will be of a kind that will be called for to a greater proportionate amount than those of former years, it would be unsafe to calculate on a larger amount than that which would afford the time necessary to draw the funds from the States mentioned; but, to that amount, say $600,000, and to meet unforeseen demands on the Treasury, the committee are of opinion that the appropriations unexpended at the end of the present year will be amply adequate, and therefore they do not recommend any provision therefor.

The House will duly appreciate the difficulties under which the committee have acted, and will pardon unintentional errors, if any. The committee will only add, that they have used every exertion in their power to arrive at a correct view of the important subjects submitted to their consideration. All which they respectfully submit.

16th Congress.] No. 617. [2d Session.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 7, 1821.

The Commissioners of the Sinking Fund respectfully report to Congress:

That the measures which have been authorized by the board, subsequent to the last report of the 5th of February, 1820, so far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the 5th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as a part of this report.

JOHN GAILLARD, *President of the Senate pro tem.*
JOHN QUINCY ADAMS, *Secretary of State.*
WM. H. CRAWFORD, *Secretary of the Treasury.*

WASHINGTON, *February* 6, 1821.

The SECRETARY OF THE TREASURY respectfully reports to the Commissioners of the Sinking Fund:

That the sum disbursed from the Treasury, during the year 1819, on account of the principal and interest of the public debt, as per the last annual report, was -	$7,721,020 96	
From which deduct the amount of repayments in that year, - -	17,199 09	
		$7,703,821 87
Which, with a sum arising from damages and interest on two protested bills of exchange, repaid in 1819, which in that year had been purchased and remitted to Europe, for payment of interest on Louisiana stock, - - - - - -		(a)2,631 78

(a) Amount of repayment by J. M. Ehrick, including interest and damages, $15,520 66
Cost of two bills purchased by him in 1819, £2,900 sterling, at par, 12,888 88
$2,631 78

Together with this sum, being the difference between the principal of stock purchased during the year 1819 and the money paid for the same,		$47,608 49
And a further sum, being gain on remittances to Europe in 1819, as appears by statement D, annexed to the last annual report,		1,322 87
Amounting, together, to		$7,755,385 01

Have been accounted for in the following manner, viz:

There was applied for the payment of a sum short provided on account of the public debt, due prior to the 1st January, 1819, as per statement B, annexed to the last annual report,		$128,427 69
The application during the year 1819 towards the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as appears by the annexed statement A, to the sum of	$7,656,873 16	
In the reimbursement of the principal of the deferred stock,	485,863 45	
In the purchase of the domestic debt, (cost $664,356 62,)	711,957 55	
In the redemption of the Louisiana stock,	1,215,449 73	
In the payment of the principal of Treasury notes,	80,000 00	
In the payment of certain parts of the domestic debt,	64 32	
	2,493,335 05	
On account of the interest and charges,	5,163,538 11	
	7,656,873 16	
Of this sum there was short provided, consisting of unclaimed dividends on the public debt, not applied for by the proprietors, as per the annexed statement B,	29,915 84	
		7,626,957 32
		$7,755,385 01

That, during the year 1820, the following disbursements were made out of the Treasury on account of the principal and interest of the public debt:

On account of the interest on the domestic debt and reimbursement of the principal of the deferred stock,	$5,474,378 88
On account of the principal and interest of Treasury notes,	105,444 57
On account of the redemption of the Louisiana stock,	1,785,662 04
On account of the interest of the same,	188,133 87
On account of the redemption of the domestic debt,	1,718 77
On account of certain parts of the domestic debt,	124 08
On account of the Mississippi stock,	1,150,468 32
Making, together, as will appear by the annexed statement C, the sum of	$8,705,930 53
Which disbursements were made from the appropriation of $10,000,000, for the year 1820, agreeably to the act of the 3d March, 1817, to the amount of	$8,628,514 28
And from repayments into the Treasury, on account of moneys heretofore advanced for the interest and reimbursement of the public debt and Treasury notes, as per the annexed statement E,	77,416 25
	$8,705,930 53

and will be accounted for in the next annual report, in conformity to accounts which shall then have been rendered to this Department.

In the mean time, the manner in which the said sum has been applied is estimated as follows:

There is estimated to have been applied to the payment of the deficiency at the end of 1819, as per statement B,		$29,915 84
Also, in the reimbursement of the deferred stock,	$503,196 94	
Also, in the payment of the principal of Treasury notes,	100,000 00	
Also, towards the redemption of the Louisiana stock,	1,785,662 04	
Also, in the purchase of stock and in payment of certain parts of the domestic debt,	180 83	
Also, in the payment of the Mississippi stock,	1,150,468 32	
Also, in the payment of the interest on the funded debt and Treasury notes,	5,024,787 57	
And for replacing funds heretofore advanced for the payment of converted 6 per cent. stock, which in 1819 had been repaid into the Treasury,	1,678 43	
	8,565,974 13	
In the next annual statement, the repayments in 1820 will be exhibited as a deduction from the total amount of warrants issued for the public debt for that year, to the amount of	77,416 25	
And there is estimated as remaining unapplied in the hands of the agents in Europe, and in protested bills, on the 1st January, 1821, per estimate G,	114,439 79	
	8,757,830 17	
From which deduct this sum short provided on account of unclaimed dividends, payable but not demanded at the Treasury,	81,815 48	
		8,676,014 69
		$8,705,930 53

A statement marked H is annexed, which exhibits the balance of the annual appropriation of $10,000,000 unexpended on the 1st January, 1821.

And statement marked I, of the funded debt of the United States on the 1st January, 1821.

All which is respectfully submitted.

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *February* 5, 1821.

A.

Statement of the application, during the year 1819, *of the funds provided for the payment of the principal and interest of the public debt.*

I. *Payments on account of the principal of the public debt.*			
Reimbursement of the deferred 6 per cent. stock,		$485,863 45	
Purchase of the domestic debt, (cost $664,356 62,)		711,957 55	
Reimbursement of Louisiana stock,		1,215,449 73	
Principal of Treasury notes,		80,000 00	
Certain parts of the domestic debt,		64 32	
			$2,493,335 05
II. *On account of the interest and charges.*			
Interest for the year 1819 on the public debt, as settled at the Treasury,		4,935,313 69	
Interest paid with the instalment of Louisiana domestic stock, on the 21st October, 1819,		2,311 24	
Interest on Treasury notes,		2,220 29	
		4,939,845 22	
Commission to agents purchasing stock,		1,633 67	
		4,941,478 89	
Interest and charges on Louisiana 6 per cent. stock, payable in Europe—			
At Amsterdam, from 1st July, 1819, to 1st January, 1820, 335,936 guilders, at 40 cents,	$134,372 40		
At London, from 1st January, 1819, to the 21st October following, £18,485 2*s.* 10*d.*, at 4*s.* 6*d.*,	82,156 19		
Commissions and charges—			
At Amsterdam, 2,035 guilders 10 stivers, $814 20			
At London, £932 19*s.* 10*d.*, 4,146 62			
	4,960 62		
	221,489 21		
Commission to agents in America purchasing bills of exchange,	570 01	222,059 22	
			5,163,538 11
			$7,656,873 16

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February*, 1821.

JOSEPH NOURSE, *Register.*

B.

Statement of the provision which remained to be made after the 1*st day of January*, 1820, *for the payment of the principal and interest of the public debt falling due before that day.*

The demands to be satisfied on 1st January, 1820, were as follows:			
1. Dividends payable by commissioners of loans, including dividends due on that day, and exclusive of dividends no longer demandable at their offices,		$1,469,071 06	
2. Unclaimed dividends from the loan offices, payable at the Treasury, beyond the amount advanced for their payment,		151,767 72	
3. Balances due to the agents in Europe for paying interest on Louisiana stock, viz:			
At London, £1,606 2*s.* 8*d.* sterling, at 4*s.* 6*d.*,	$7,138 37		
At Amsterdam, 140,392 guilders, at 40 cents,	56,156 80		
		63,295 17	
4. Amount due for converted 6 per cent. stock; this sum heretofore advanced to a commissioner of loans no longer in office, which, not having been applied for, was, in 1819, repaid into the Treasury,		1,678 43	
			$1,685,812 38
The funds provided for these demands were as follows, viz:			
I. *On account of the interest on the Louisiana stock payable in Europe.*			
1. The amount of payments made at the Treasury, before the 1st of January, 1820, for bills which had been protested for non-payment, and which on that day had not been repaid,	103,937 74		
2. Bills paid for at the Treasury in 1819, not credited by the agents in Europe till 1820,	60,000 00		
		163,937 74	

STATEMENT—Continued.

II. *On account of the domestic debt.*			
1. Cash due from commissioners of loans deceased or out of office,	$5,778 97		
2. Cash in the hands of commissioners in office, applicable to dividends,	1,462,392 16		
3. Cash advanced for Treasury dividends over the amount payable,	19,966 06		
4. Cash heretofore advanced to a commissioner of loans no longer in office, for the reimbursement of exchanged stock, and remaining unapplied,	3,821 61		
		$1,491,958 80	
			$1,655,896 54
Remaining to be provided for after 1st January, 1820,			$29,915 84

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 1, 1821.

JOSEPH NOURSE, *Register.*

16th CONGRESS.] No. 618. [2d SESSION.

THE MINT.

COMMUNICATED TO THE SENATE, FEBRUARY 16, 1821.

To the Senate of the United States: WASHINGTON, *February* 14, 1821.

I transmit to Congress a report from the Director of the Mint, enclosing a statement of the treasurer, submitting the operations of the Mint for the last year.

JAMES MONROE.

SIR: MINT OF THE UNITED STATES, *January* 1, 1821.

I have now the honor of laying before you a report of the operations of the Mint for the last year.

From the statement of the treasurer, herewith transmitted, it will appear that, during this period, there have been struck at the Mint—

In gold coins,	263,806 pieces,	amounting to	$1,319,030 00
In silver coins,	1,821,153 pieces,	amounting to	501,680 70
And in copper coins,	4,407,550 pieces,	amounting to	44,075 50

making, in the whole, six million four hundred and ninety-two thousand five hundred and nine pieces, amounting to one million eight hundred and sixty-four thousand seven hundred and eighty-six dollars and twenty cents.

The above coinage of gold and silver has, in fact, been the work of no more than nine months; for, from the deficiency of deposites, the actual coinage did not commence till the beginning of April, and was even afterwards frequently interrupted from the same cause. The press employed in the copper coinage did not continue in operation more than six months, as the quantity of copper coins had accumulated far beyond the public demand.

From the above statement, with other well ascertained data, it may, I presume, be confidently affirmed that the Mint, in its present improved state, will be found fully adequate to all the purposes for which it was originally established.

I have the honor to be, with perfect respect, your most obedient servant,

R. PATTERSON.

JAMES MONROE, *President of the United States.*

16th CONGRESS.] No. 619. [2d SESSION.

BOUNTIES AND ALLOWANCES ON PICKLED FISH AND SALTED PROVISIONS EXPORTED; THE QUANTITY OF SALT IMPORTED AND RE-EXPORTED; AND THE DUTY ACCRUING ON SALT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 21, 1821.

SIR: TREASURY DEPARTMENT, *February* 20, 1821.

In obedience to a resolution of the House of Representatives of the 15th instant, directing the Secretary of the Treasury to communicate to the House a "statement of the bounties and allowances paid to fishing vessels, each year, from the commencement of the Government to the present time, and of the quantity of salt annually imported into each State, and not re-exported with benefit of drawback; also, the amount of duty annually collected on the same, in each State, during the time aforesaid;" I have the honor to submit the enclosed statement, with a letter from the Register of the Treasury, explaining the reasons of the defective character of the statement to which it refers.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. JOHN W. TAYLOR, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 19, 1821.

I have the honor to transmit, herewith, a statement so far in compliance with the resolution of the House of Representatives as the documents in this office will admit. That part of the resolution requiring the quantity of salt annually imported into each State, and not re-exported with benefit of drawback; and, also, the amount of duty annually collected on the same, in each State, from the commencement of the Government to the present time, cannot be complied with. In lieu thereof, the statement shows the amount of duty accruing, and the quantity of salt imported into the United States, annually, from the commencement of the present Government to the 31st December, 1819; also, the quantity of salt re-exported without benefit of drawback, from the 1st October, 1804, to the 30th September, 1819.

I have the honor to be, very respectfully, sir, your obedient servant,

JOSEPH NOURSE.

Hon. WILLIAM H. CRAWFORD.

A statement showing the quantity of salt imported into the United States, and the duty accruing thereon; the amount of bounties and allowances paid to fishing vessels from the commencement of the present Government to the 31st December, 1819; also, the quantity of salt re-exported without benefit of drawback, from the 1st October, 1804, to the 30th September, 1819.

	Amount of duty accruing on salt.	Quantity of salt imported.	Quantity of salt re-exported without benefit of drawback.	Bounty on pickled fish and salted provisions exported.	Allowances to vessels employed in the fisheries.	Total bounties and allowances.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 19, 1821.

JOSEPH NOURSE, *Register.*

16th CONGRESS.] No. 620. [2d SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1821.

Mr. SMITH, of Maryland, made the following report:

The Committee of Ways and Means, to whom was referred so much of the President's message, at the commencement of the session, as relates to the finances, respectfully submit the following report:

The total nett receipts into the Treasury during the year 1820 amounted to - -		$20,969,001

STATE OF THE TREASURY, PUBLIC REVENUE, AND APPROPRIATIONS FOR THE YEAR 1821.

1. *The state of the Treasury.*

The amount of available money in the Treasury on the 1st day of January, agreeably to report of the committee, dated the 6th February, was believed to be -	$476,271 18	
From which must be deducted amount of deposites in the Bank of Vincennes, which it cannot pay, - - - - - - - -	214,808 00	
Leaving available funds in the Treasury, on the 1st day of January, the sum of - -		$261,463 18

2. *The revenue for* 1821.

Customs, as estimated by the Committee of Ways and Means, in their report of 6th February,	$15,005,328
Land, estimated by the committee, - - - - - - -	800,000
Internal taxes, agreeably to the report of the Secretary of the Treasury, - -	100,000
Bank dividend, by the same, - - - - - - -	350,000
Post Office receipts from debts of banks, and other incidental receipts, - - -	100,000
Estimated amount of means available for the service of the year 1821, - - -	$16,355,328

3. *Amount of the several appropriations for the year* 1821.

1. Permanent appropriations, viz:			
Principal and interest of public debt, - -	$5,477,776		
Gradual increase of the navy, - - -	500,000		
Arming the militia, - - - -	200,000		
Indian annuities, - - - -	152,000		
Indian trading houses, - - - -	19,000		
Civilization of Indians, - - - -	10,000		
		$6,358,776	
2. Temporary, agreeably to the several appropriations made for the service of the present year:			
For the service of the navy, - - -	$2,209,093		
For the military, - - - -	4,936,451		
Civil department, - - - -	1,517,352		
Public buildings, - - - -	90,445		
Private claims, estimated at - - -	200,000		
Treaty of Ghent, presumed, - - -	45,000		
Spanish treaty, supposed, - - - -	100,000		
		9,098,341	
			15,457,117
Leaving an excess of receipts over the expenses authorized by law of - - -			$898,211

And of the state of the finances.

Actual balance against the Treasury on the 1st day of January, (see report of the Committee of Ways and Means, No. 616,) - - - - - - -		$4,579,094
To which must be added amount due by the Vincennes Bank, and which will not be available for the service of the present year, - - - - - - - -		214,808
Actual deficit to be provided for, - - - - - - - -		4,793,902
To supply that deficit, there may be applied the surplus of the estimated receipts in 1821 over the expenditures authorized by the several acts of appropriation passed during the present session, which is presumed, by the preceding view, to amount to the sum of - - - - - - -	$898,211	
And the available funds in the Treasury on the 1st day of January, - -	261,463	
		1,159,674
Leaving an actual deficit, to be provided for by loan, of - - - - - -		3,634,228
But if the estimate of the Secretary of the Treasury should prove correct, to wit, that the customs will yield only fourteen million, then there must be added (the difference between his estimate and that of the committee) the sum of - - - - - - -		1,005,328
		$4,639,556

The committee, under all these circumstances of difficulty and doubt, submit a bill authorizing a loan for $4,500,000.

The House will perceive a difference between the present report and that of the 6th of February, arising out of the expenditures being bottomed in the one as estimates, and in the other as the actual sums appropriated for the service of the present year; and, in the estimate of receipts for land during the year 1821, the committee have, in their present report, assumed only one-half the amount of their former, which was taken from the estimate of the Treasury. The committee do not pretend to much personal knowledge on the subject; but, from conversation with well informed gentlemen from the West and South, and a correspondence with the Secretary of the Treasury, they were induced to believe that it would be unsafe to rely on a larger sum than $800,000 to be received for land during the present year. The House will also perceive a difference in the available fund arising from the default of the Bank of Vincennes.

Retrenchments in the public expenditures.

The deductions made from the estimates of the several Departments for 1820 amounted to the sum of	$2,130,000
Those for 1821 amounted to - - - - - - - -	2,317,155

VIZ:

Civil, - - - - - - - -	$116,508	
Military, - - - - - - -	1,481,064	
Naval, including $500,000 from gradual increase, - - -	719,583	
Total amount of retrenchments in the annual public expenditures during the sixteenth Congress, -		$4,447,155

It will be perceived, by the preceding view, that the expenditures for the present year are less than fifteen and one-half millions. The committee are of opinion that those of the next year will not exceed $15,000,000, for during that year the whole effect of the reduction of the army will be felt; that reduction has reduced the expense of the present year $561,000, and will reduce that of the next nearly 1,000,000. The revolutionary pensioners will cost in future $200,000 less than the sum appropriated for the present year. In fine, the committee are of opinion that the receipts will, if no unforeseen change should happen, greatly exceed the annual expenditures.

All which the committee respectfully submit.

16th Congress.] **No. 621.** [2d Session.

THE MINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 1, 1821.

Sir: Treasury Department, *February* 27, 1821.

I have the honor to transmit, herewith, three statements, (marked A, B, and C,) which have been prepared pursuant to the seventh section of an act of Congress passed the 2d of April, 1792, entitled "An act establishing a Mint, and regulating the coins of the United States."

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. John W. Taylor, *Speaker of the House of Representatives.*

A.

Statement exhibiting the balance of the gold and silver bullion remaining in the hands of the officers of the Mint on the 31st of December, 1819; the amount deposited from 1st January to 31st December, 1820; the different species of coins made and paid on account of deposites; allowances for wastage; and the balance remaining in the hands of the officers of the Mint on the 31st December, 1820, to be accounted for on a future settlement, viz:

C.

Summary statement exhibiting the value of coins made at the Mint; the amount of disbursements on account of the establishment; the amount allowed for wastage; the amount retained of deposites; and the amount gained on the coinage of copper, from the commencement of the institution to the 31*st December*, 1820, *viz:*

Value of gold, silver, and copper coinage, up to the 31st December, 1819, -		-	$16,992,781 06 0
Gold coins made from January 1 to December 31, 1820, per account A, -		$1,319,030 00 0	
Silver coins made from January 1 to December 31, 1820, per account A, -		501,680 70 0	
Copper coins made from January 1 to December 31, 1820, per account B, -		44,075 50 0	
			1,864,786 20 0
Total value, gold, silver, and copper, -		-	$18,857,567 26 0
Nett charge on the coinage of gold, silver, and copper, to December 31st, 1819,		531,306 15 0	
Add amount gained on the coinage of copper to the same period, - -		63,037 01 0	
		594,343 16 0	
From which deduct amount of wastage of gold and silver to the 31st December, 1819, - - -	$63,120 28 0		
Also amount wastage from January 1 to December 31, 1820, -	6,263 56 5		
		69,383 84 5	
			524,959 31 5
Add amount disbursed on account of the establishment from January 1 to December 31, 1820, - - - - - - -		-	21,606 42 0
Add also the amount of wastage on gold and silver to the 31st of December, 1820, - - - - - - -		69,383 84 5	
From the above deduct the amount retained from deposites to 31st December, 1819, - - - -	$8,043 27 5		
Also this sum, from 1st January to 31st December, 1820, -	260 54 5		
		8,303 82 0	
			61,080 02 5
			607,645 76 0
Deduct amount gained on the coinage of copper from the commencement of the institution to December 31st, 1820, - - - - -		-	89,114 81 0
Nett amount chargeable to the coinage of gold, silver, and copper, from the commencement of the institution to December 31st, 1820, including the costs of lots, buildings, and machinery, - - - - -		-	518,530 95 0

Comptroller's Office, *February* 26, 1821.

LUND WASHINGTON, *Clerk.*

17th Congress.] No. 622. [1st Session.

DUTY ON BOOKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 10, 1821.

To the Senate and House of Representatives of the United States of America in Congress assembled: The petition of the rector and visiters of the University of Virginia, on behalf of those for whom they are in the office of preparing the means of instruction, as well as of others seeking it elsewhere, respectfully representeth:

That the Commonwealth of Virginia has thought proper lately to establish a university for instruction, generally, in all the useful branches of science, of which your petitioners are appointed rector and visiters, and, as such, are charged with attention to the interests of those who shall be committed to their care.

That they observe, by the tariff of duties imposed by the laws of Congress on importations into the United States, an article peculiarly inauspicious to the objects of their own, and of all other literary institutions throughout the United States.

That, at an early period of the present Government, when our country was burdened with a heavy debt, contracted in the war of independence, and its resources for revenue were untried and uncertain, the National Legislature thought it as yet inexpedient to indulge in scruples as to the subjects of taxation, and, among others, imposed a duty on books imported from abroad, which has been continued, and now is, of fifteen per cent. on their prime cost, raised by ordinary custom-house charges to eighteen per cent., and by the importer's profits to perhaps twenty-five per cent., and more.

That, after many years' experience, it is certainly found that the reprinting of books in the United States is confined chiefly to those in our native language, and of popular characters, and to cheap editions of a few of the classics for the use of schools; while the valuable editions of the classical authors, even learned works in the English language, and books in all foreign living languages, (vehicles of the important discoveries and improvements in science and the arts, which are daily advancing the interest and happiness of other nations,) are unprinted here, and unobtainable from abroad but under the burden of a heavy duty.

That of many important books, in different branches of science, it is believed that there is not a single copy in the United States; of others, but a few; and these too distant and difficult of access for students and writers generally.

That the difficulty resulting from this mode of procuring books of the first order in the sciences, and in foreign languages, ancient and modern, is an unfair impediment to the American student, who, for want of these aids, already possessed or easily procurable in all countries except our own, enters on his course with very unequal means, with wants unknown to his foreign competitors, and often with that imperfect result which subjects us to reproaches not unfelt by minds alive to the honor and mortified sensibilities of their country.

That, to obstruct the acquisition of books from abroad, as an encouragement of the progress of literature at home, is burying the fountain to increase the flow of its waters.

That books, and especially those of the rare and valuable character thus burdened, are not articles of consumption, but of permanent preservation and value, lasting often as many centuries as the houses we live in, of which examples are to be found in every library of note.

That books, therefore, are capital, often the only capital of professional men on their outset in life, and of students destined for professions, (as most of our scholars are,) and barely able, too, for the most part, to meet the expenses of tuition, and less so to pay an extra tax on the books necessary for their instruction; that they are consequently less instructed than they would be; and that our citizens at large do not derive from their employment all the benefits which higher qualifications would procure them.

That this is the only form of capital on which a tax of from 18 to 25 per cent. is first levied on the gross, and the proprietor then subject to all other taxes in detail, as those holding capitals in other forms, on which no such extra tax has been previously levied.

That it is true that no duty is required on books imported for seminaries of learning; but these, locked up in libraries, can be of no avail to the practical man, when he wishes a recurrence to them for the uses of life.

That more than thirty years' experience of the resources of our country prove them equal to all its debts and wants, and permit its Legislature now to favor such objects as the public interests recommend to favor.

That the value of science to a republican people; the security it gives to liberty, by enlightening the minds of its citizens; the protection it affords against foreign power; the virtues it inculcates; the just emulation of the distinction it confers on nations foremost in it; in short, its identification with power, morals, order, and happiness, (which merits to it premiums of encouragement rather than repressive taxes,) are topics which your petitioners do not permit themselves to urge on the wisdom of Congress, before whose minds these considerations are always present, and bearing with their just weight.

And they conclude, therefore, with praying that Congress will be pleased to bestow on this important subject the attention it merits, and give the proper relief to the candidates of science among ourselves, devoting themselves to the laudable object of qualifying themselves to become the instructors and benefactors of their fellow-citizens.

And your petitioners, as in duty bound, shall ever pray, &c.

TH: JEFFERSON, *Rector of the University of Virginia.*

November 30, 1821.

17th Congress.] No. 623. [1st Session.

STATE OF THE FINANCES.

COMMUNICATED TO THE SENATE, DECEMBER 13, 1821.

In obedience to the directions of the "Act supplementary to the act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report:

1. OF THE REVENUE.

The nett revenue arising from imports and tonnage, internal duties, direct tax, public lands, postage, and other incidental receipts, during the year 1818, amounted to - - $26,095,200 65

VIZ:

Customs, (see statement A,) - - - -	$21,828,451 48	
Arrears of internal duties, - - - -	947,946 33	
Arrears of direct tax, - - - -	263,926 01	
Public lands, exclusive of Mississippi stock, - -	2,464,527 90	
Dividend on stock in the Bank of the United States, - -	525,000 00	
Postage, and other incidental receipts, - - -	65,348 93	

That which accrued from the same sources during the year 1819 amounted to - 21,435,700 69

VIZ:

Customs, (see statement A,) - - - -	$17,116,702 96	
Arrears of internal duties, - - - -	227,444 01	
Arrears of direct tax, - - - -	80,850 61	
Public lands, exclusive of Mississippi stock, - -	3,274,422 78	
First instalment from the Bank of the United States, and dividend on stock in that bank, - - - -	675,000 00	
Postage, and other incidental receipts, - - -	61,280 33	

And that which accrued from the same sources during the year 1820 amounted to - 15,284,546 29

VIZ:

Customs, (see statement A,) - - - -	$12,449,556 15
Arrears of internal duties, (see statement B,) - -	104,172 07
Arrears of direct tax, (see statement B,) - - -	31,286 82
Public lands, exclusive of Mississippi stock, (see statement C,) -	1,635,871 61
Second and third instalments from the Bank of the United States, -	1,000,000 00
Postage, and other incidental receipts, (see statement B,) -	63,659 64

It is estimated that the gross amount of duties on merchandise and tonnage, which accrued during the first three quarters of the present year, exceeds $14,088,000.

The payments into the Treasury, to the 30th September last, have amounted to - $16,219,197 70

VIZ:

Customs, - - - - -	$10,068,394 85
Public lands, exclusive of Mississippi stock, - -	940,980 35
Arrears of internal duties and direct tax, - - -	69,867 26
Bank dividends, - - - - -	105,000 00
Incidental receipts, - - - -	21,581 51
Repayments, - - - - -	13,373 73
Loan, - - - - -	5,000,000 00

And the payments into the Treasury, during the fourth quarter, are estimated at - 3,595,278 14

VIZ:

Customs, - - - - -	$3,000,000 00
Public lands, - - - - -	360,000 00
Moneys recovered out of advances made in the War Department before the 1st of July, 1815, - - - -	120,000 00
Balances of military appropriations carried to the account of the surplus fund, - - - - -	90,278 14
Direct tax, internal duties, and incidental receipts, - -	25,000 00

Making the total amount estimated to be received into the Treasury during the year 1821, - 19,814,475 84
Which, added to the balance in the Treasury on the 1st of January last, of - - 1,198,461 21

Makes the aggregate amount of - - - - 21,012,937 05

The application of this sum for the year 1821 is estimated as follows, viz:

The payments to the 30th of September have amounted to - - $15,655,288 47

VIZ:

Civil, diplomatic, and miscellaneous, - -	$1,772,717 30	
Military service, including fortifications, ordnance, Indian Department, revolutionary and military pensions, arming the militia, and arrearages prior to the 1st of January, 1817, - -	4,872,865 78	
Naval service, including the gradual increase of the navy, - - - -	2,603,592 75	
Public debt, including $591,611 30 of Mississippi stock,	6,406,112 64	

During the fourth quarter it is estimated that the payments will amount to -	$3,580,000 00	
viz:		
Civil, diplomatic, and miscellaneous, - - -	$690,000 00	
Military service, - - -	290,000 00	
Naval service, - - -	700,000 00	
Public debt, - - - -	1,900,000 00	
Making the aggregate amount of - - - - -		$19,235,288 47
Which, being deducted from the above sum of $21,012,937 05, will leave in the Treasury, on the 1st day of January next, a balance estimated at - - -		$1,777,648 58

But, of the balances of appropriations for the service of the year 1821, necessary to effect the object of those appropriations, exclusive of balances which will not be required, and which have been deducted from the estimates of the year 1822, or will be carried to the account of the surplus fund, there remains the sum of $2,268,611 28, which is an existing charge upon the revenue of 1821, and exceeds the balance estimated to be in the Treasury on the 1st day of January next by $490,962 70.

II. OF THE PUBLIC DEBT.

The funded debt which was contracted before the year 1812, and which was unredeemed on the 30th of September, 1820, as appears by statement No. 1, amounted to - -		$20,570,627 12
And that contracted subsequently to the 1st of January, 1812, and unredeemed on the 30th of September, 1820, amounted, as appears by the same statement, to - -		70,654,933 65
Making the aggregate amount of - - - -		91,225,560 77
Which sum agrees with the amount stated in the last annual report as unredeemed on the 1st of October, 1820, excepting the sum of $38 66 which was then short estimated, and which has since been corrected by actual settlement.		
In the fourth quarter of the year there was added to the above the sum of - -		457,747 95
viz:		
In six and seven per cent. stocks for Treasury notes brought into the Treasury and cancelled, - - - -	$3,280 29	
In five per cent. stock, under the act of May 15, 1820, - -	454,567 66	
Making - - - -		91,683,308 72
And there was paid in the fourth quarter the sum of - - - -		388,892 21
viz:		
Deferred stock reimbursed, - - - -	$249,401 58	
Payments on account of the Louisiana stock, - - -	139,490 63	
Making the public debt unredeemed on the 1st of January, 1821, as per statement No. 2, -		91,294,416 51
From the 1st of January to the 30th of September, inclusive, there has been added the sum of -		4,739,776 38
viz:		
Three per cent. stock for interest on registered debt, - -	$26 01	
Treasury note six and seven per cent. stock, - - -	4,454 07	
Loan authorized by act of 3d March, 1821, - - -	4,735,296 30	
Making - - - -		96,034,192 89
From which is to be deducted the sum of - - - -		2,348,097 15
viz:		
Reimbursement of deferred stock during the same period, - -	$276,737 15	
Payments on account of Louisiana stock, - - -	2,071,360 00	
Making the public debt which was unredeemed on the 1st of October, 1821, as per estimate No. 3,		93,686,095 74
To which will be added, in the fourth quarter, Treasury note six per cent. stock issued, -		390 40
Making - - - -		93,686,486 14
From which will be deducted, in the fourth quarter, the sum of - - -		262,880 41
viz:		
Reimbursement of deferred stock, - - -	$257,322 26	
Residue of Louisiana stock, - - - -	5,558 15	
Making the amount of the public debt unredeemed on the 1st of January, 1822, as estimated, -		$93,423,605 73
The Treasury notes yet outstanding are estimated, as appears by estimate No. 4, at -		$28,495 00
The awards made by the commissioners appointed under the several acts of Congress for the indemnification of certain claimants of public lands in the Mississippi Territory amount to -		$4,282,151 12
Of which there have been received at the General Land Office, in stock, -	$2,442,535 39	
And there have been paid at the Treasury - - -	1,734,490 85	
Making, together, - - -		4,177,026 24
And leaving outstanding on the 30th of September, 1821, as per statement No. 5, - -		$105,124 88

3. *Of the estimates of the public revenue and expenditures for the year* 1822.

The diminution of the revenue from imports and tonnage, which occurred in 1819, advanced with progressive force through 1820, and reached its lowest point of depression in the first quarter of the present year. The duties secured in that quarter were $727,000 less than those of the correspondent quarter of 1820, whilst the amount secured in the second and third quarters exceeded that of the same period of the preceding year by $1,172,000; thus

presenting, on the 30th of September last, an aggregate excess of $445,000 for the first three quarters of 1821; which sum, there is just reason to believe, will be considerably augmented at the end of the year.

Whilst the duties have progressively increased, the debentures chargeable upon them have considerably diminished: the amount of debentures issued from the 1st of January to the 30th of September last being $952,000 less than was issued during the same period of the preceding year.

The same causes which, in 1819 and 1820, effected so great a reduction of the revenue arising from imports and tonnage, were felt, in an equal degree, in the sale of the public lands. Those who, from an anticipation of their resources previously to those years, were unable to purchase foreign merchandise, were equally incapable of purchasing public lands, or of discharging debts contracted with the Government by purchases antecedently made.

In the annual report of the Treasury, at the commencement of the last session of Congress, the receipts from the public lands for the year 1821 were estimated at $1,600,000, if no change should be made by law affecting the obligations which the purchasers were then under to be punctual in their payments. But, at the close of that session, an act was passed for the relief of the purchasers of public lands, which so far impaired that obligation as to induce the Committee of Ways and Means to estimate the proceeds of that source of revenue at only $800,000. It has been shown, however, that the receipts to the 30th of September last have exceeded $940,000, and those of the whole year are now estimated at $1,300,000.

This result in relation to the public lands, and the improvement which has taken place in the revenue arising from imports and tonnage, indicate a favorable change in the condition of the nation, from which a progressive increase of the public revenue may be confidently anticipated.

Independently, however, of any such increase, the facts disclosed by the fiscal operations of the year, some of which have been enumerated, warrant the conclusion that the receipts of the year 1822 may be estimated at - - - - -		$16,110,000 00
viz:		
Customs, - - - - -	$14,000,000 00	
Public lands, - - - - -	1,600,000 00	
Bank dividends, - - - - -	350,000 00	
Arrears of direct tax and internal duties, - - -	75,000 00	
Moneys recovered out of advances made in the War Department before the 1st of July, 1815, - - - -	60,000 00	
Incidental receipts, - - - -	25,000 00	
The expenditures of the year 1822 are estimated at - -	-	14,947,661 80
viz:		
Civil, diplomatic, and miscellaneous, - - -	1,664,297 00	
Public debt, - - - - -	5,722,857 01	
Military service, including fortifications, ordnance, Indian Department, revolutionary and military pensions, arming the militia, and arrearages prior to the 1st January, 1817, - - -	5,108,097 52	
Naval service, including the gradual increase of the navy, -	2,452,410 27	
The receipts of the year will therefore exceed the estimated expenditure by -	-	$1,162,338 20

which, after discharging the difference between the balance in the Treasury on the 1st of January, 1822, and the balance of appropriations chargeable upon it, will leave in the Treasury on the 1st of January, 1823, a balance estimated at $671,375 50.

It is, however, proper to state, that in the estimate for the naval service only $200,000 of the annual appropriation of $500,000 for the gradual increase of the navy is included; but that of the amount estimated by the Secretary of War, a sum larger than the balance of that appropriation is for arrearages for revolutionary pensions and the Indian Department, which will not be embraced in the estimates for the year 1823.

The expenditure of the two succeeding years, it is believed, will not exceed that of the year 1822, unless a further expenditure shall in the intermediate time be authorized by law. But in the expenditure of the year 1822, and also of 1823 and 1824, no part of the annual appropriation of $10,000,000 constituting the sinking fund is comprehended, except what is necessary to discharge the interest of the public debt and the reimbursement of the six per cent. deferred stock. On the 1st of January, 1825, and the three succeeding years, the debt contracted during the years 1812, 1813, 1814, and 1815 becomes redeemable at the will of the Government. These sums greatly exceed the amount of the sinking fund applicable in those years to the redemption of the public debt. As the current value of the five per cent. stock created during the last and present years exceeds that of the seven per cent. stock and of the six per cent. stock of 1812 and 1813, it is presumed that the holders of those stocks will be disposed to exchange them for an equal amount of five per cent. stock, redeemable at such periods as to give full operation to the sinking fund as at present constituted. According to this view of the subject, $24,000,000 of the stocks which will be redeemable in the years 1825 and 1826 may be exchanged for five per cent. stock, redeemable one-third on the 1st of January, 1831, and one-third on the same day of 1832 and of 1833. This exchange of six per cent. stock, if effected on the 1st of January, 1823, will produce an annual reduction of the interest of the public debt from that time to the first mentioned period of $240,000, and an aggregate saving through the whole period of $2,160,000. If the whole of the seven per cent. stock should be exchanged, the saving will be considerably increased.

If such an exchange of stock should be deemed inexpedient or impracticable, a saving of equal if not greater extent may be effected in the years 1825, 1826, 1827, and 1828, by borrowing at the rate of five per cent. in the first and each successive year a sum equal to the difference between the amount redeemable and that portion of the sinking fund applicable to its redemption: the five per cent. stock so created to be redeemable at such periods as to give full operation to the sinking fund, until the whole of the public debt shall be redeemed. If the five per cent. stock shall during those years be above par, a saving beyond that proposed to be effected by the exchange of stock in 1822 will be secured, to the extent of that difference, by the latter process.

But it is possible that the progressive increase of the revenue which has been anticipated, and which is necessary to the full operation of the sinking fund, may not be realized. In that event, the public expenditure authorized by law may, after the 1st of January, 1825, exceed the public revenue.

The remedy in such case must be, 1st, An increase of the public revenue, by an addition to the existing impositions; or, 2d, A reduction of the sinking fund.

1st. A general revision and correction of the duties imposed upon foreign merchandise seem to be required. Many of the articles which pay but fifteen per cent. ad valorem ought, in justice as well as policy, to be placed at twenty-

five per cent., which is the duty paid upon the principal articles of woollen and cotton manufactures. The same observation is applicable to some of the articles which pay twenty per cent. ad valorem. A correction of the existing duties, with a view to an increase of the public revenue, could hardly fail to effect that object to the extent of nearly $1,000,000 annually. It is highly probable, however, that an increase of duty on some of those articles might eventually cause a reduction of the revenue; but this can only take place where similar articles are manufactured in the country. In that event, domestic manufactures will have been fostered, and the general ability of the community to contribute to the public exigencies will have been proportionately increased.

2d. If it should be deemed expedient to reduce the sinking fund, in preference to the imposition of additional duties, it may be satisfactory to know that an annual appropriation for that object of $8,000,000, commencing on the 1st January, 1825, will extinguish the whole of the public debt, exclusive of the three per cent. stock, in the year 1819. Should the sinking fund be reduced to $8,000,000, an exchange of $36,000,000 of six per cent. for five per cent. stock may be effected in the course of the year 1822, if the present price of the latter stock should continue, without diminishing in any degree the operation of that fund in the redemption of the public debt. Such an exchange would reduce the interest, annually, $360,000.

The loan of $5,000,000, which was authorized by the act of the 3d of March, 1821, has been obtained at an average premium of nearly 5.59 per cent., upon the issue of five per cent. stock, redeemable at the will of the Government after the 1st of January, 1835.

All which is respectfully submitted.

W. H. CRAWFORD.

TREASURY DEPARTMENT, *December* 10, 1821.

A.

A statement exhibiting the amount of duties which accrued on merchandise, tonnage, passports, and clearances; of debentures issued on the exportation of foreign merchandise; of payments for bounties and allowances; and of expenses of collection, during the years 1818, 1819, *and* 1820.

17th CONGRESS.] No. 624. [1st SESSION.

EXCHANGE OF STOCK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 31, 1821.

The Committee of Ways and Means, to whom was referred the annual report on the state of the finances, report:

That they have had under consideration that part of the annual report on the state of the finances which recommends the exchange of a stock bearing an interest of five per cent. for the stocks bearing an interest of seven per cent. and those of six per cent. issued in the years 1812 and 1813.

The object of the Secretary of the Treasury appears to the committee to be practicable and advantageous, not only to the Government, but to the holders of the stock; they therefore submit a bill. It proposes to exchange a stock bearing an interest of five per cent. for the seven per cents due in 1825, and so much of the six per cents due the same year as will make a total of twelve millions of dollars; which will leave the sum of $5,462,332 redeemable by the Commissioners of the Sinking Fund during that year. And it also proposes a like exchange for fourteen millions of dollars of the six per cent. stock due in the year 1826; which will leave unredeemed of the stock due that year the sum of $8,357,368. But the proportion of the sinking fund applicable to the payment of the principal of the debt during the year 1826 amounts only to the sum of $5,707,000, which will leave in that year an unredeemed balance of $2,650,000; which balance will be redeemed gradually by the operation of the sinking fund, as will be shown by a document received from the Secretary of the Treasury, which the committee ask leave to submit as a part of their report; by which it will appear that, if the proposed exchange of stocks shall take effect, and the amount of the sinking fund be continued at ten millions of dollars, the whole debt of the United States (the three per cents excepted) will be extinguished in the year 1833, except only the sum of $1,952,000.

The same document shows a calculation bottomed on the idea that it may be deemed advantageous to reduce the amount of the sinking fund to eight millions of dollars; in which case, the whole of the debt (the three per cents excepted) will be paid off in the year 1836, except the sum of $1,281,000. But as the committee have deemed it advisable to divide the amount of the exchanged stocks into four annual instalments instead of three, (which had been recommended in the annual report on the finances,) it will, if adopted, prolong the final extinguishment of the present debt of the United States one year longer.

The committee are induced to propose that change, as well to lessen the pressure on the finances at the time as to do comparative justice to the holders of the seven per cent. stock, by giving them a longer time for their reimbursement.

All which is respectfully submitted.

Calculations of the operation of the sinking fund, referred to in the letter of the Secretary of the Treasury of December 25, 1821.

Description of debt.	Amount.	When redeemable.
Six per cent. of 1812,	$8,855,981 83	
Seven per cent.,	8,606,355 27	
	17,462,337 10	In 1825.
Six per cent. of 1813,	22,357,368 84	In 1826.
Six per cent. of 1814,	13,011,437 63	In 1827.
Six per cent. of 1815, and funded Treasury notes,	10,954,994 17	In 1828.
	$63,786,137 74	

Operation of the sinking fund of ten millions.

	Yearly amount applied to the payment of principal.	Total amount of principal paid.	Total amount of debt remaining unpaid.
1825,	$5,350,000		
1826,	5,707,000	$11,057,000	$52,729,000

1831,	7,636,000	45,156,000	18,630,000
1832,	8,095,000	53,251,000	10,535,000
1833,	8,581,000	61,832,000	1,954,000
Operation of a sinking fund of eight millions.			
1825,	3,210,000		
1826,	3,435,000	6,645,000	57,141,000
1827,	3,664,000	10,309,000	53,477,000
1828,	3,884,000	14,193,000	49,593,000
1829,	4,117,000	18,310,000	45,476,000
1830,	4,364,000	22,674,000	41,112,000
1831,	4,626,000	27,300,000	36,486,000
1832,	4,904,000	32,204,000	31,582,000
1833,	5,198,000	37,402,000	26,384,000
1834,	5,510,000	42,912,000	20,874,000
1835,	5,840,000	48,752,000	15,034,000
1836,	6,191,000	54,943,000	8,843,000
1837,	6,562,000	62,505,000	1,281,000

APPLICATION.

1825.	The amount of debt redeemable in 1825 is	$17,462,000
	And the amount of the sinking fund applicable in that year,	5,350,000
	Which leaves, of the stock redeemable in that year, a surplus unredeemed of	12,112,000
1826.	The amount redeemable this year is	22,357,000
	And the amount to be applied,	5,707,000
	Which leaves a surplus unredeemed this year of	16,650,000
1827.	The amount redeemable this year is	13,011,000
	Amount to be applied,	6,049,000
	Surplus unredeemed this year,	6,962,000
1828.	Amount redeemable this year,	10,954,000
	Amount to be applied,	6,412,000
	Surplus unredeemed this year,	4,542,000
1829.	To this sum add, in order to give employment to the sinking fund applicable this year, the surplus of the stock which was redeemable and unredeemed in 1827,	6,962,000
	Making,	11,504,000
	Amount to be applied in 1829,	6,797,000
	Surplus unredeemed this year,	4,707,000
1830.	To which add, of the surplus of 1826,	2,498,000
	Making,	7,205,000
	Which sum is also the amount of the sinking fund applicable in the year 1830.	
	The sum of $2,498,000 being deducted from the surplus redeemable and unredeemed in 1826, leaves a balance to be redeemed, subsequently to the year 1830, of	14,152,000
	To which add the surplus redeemable and unredeemed in 1825, of	12,112,000
	Making,	26,264,000
	Which may be exchanged for 5 per cent. stock, redeemable in 1831, '32, '33, and '34, viz:	
In 1831,		7,636,000
		18,628,000
In 1832,		8,095,000
		10,533,000
In 1833,		8,581,000
	Leaving to be redeemed in 1834,	$1,952,000

N. B. Fractions of a thousand dollars have generally been rejected in the calculations.

17th Congress.] No. 625. [1st Session.

THE MINT.

COMMUNICATED TO THE SENATE, JANUARY 4, 1822.

SIR: TREASURY DEPARTMENT, *January* 2, 1822.

In pursuance of the act entitled "An act regulating the currency within the United States of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France and five-franc pieces," passed the 29th day of April, 1816, I have the honor to transmit, herewith, a report of the Director of the Mint, giving the result of sundry assays made in pursuance of instructions from this Department.

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

SIR: MINT OF THE UNITED STATES, *December* 22, 1821.

Agreeably to your general instructions, I have caused assays to be made of the species of foreign coins still current by law in the United States.

The assayer's report is as follows:

No. 1. Made of equal parts of 5 French crowns, 10 oz. 19 dwts. fine in 12 oz.

No. 2. Made of equal parts of 5 five-franc pieces, 10 oz. 16 dwts. fine in 12 oz.

No. 3. Made of equal parts of 5 Spanish dollars, 10 oz. 16 dwts. fine in 12 oz.

The above assays were made from coins of the latest dates that could be procured; and as they correspond so nearly in quality with those assayed on former occasions, it may be safely presumed that no alterations have taken place in the quality of those coins.

The following statement of the average results of the last five annual assays, including the present, may not, perhaps, be unacceptable, especially if Congress should think proper to legislate on the subject of foreign coins.

The gold coins of Great Britain and of Portugal are constantly found to be of the same quality with those of the United States, (those of Portugal, however, being rather base,) viz. 22 carats fine in 24; and as the eagle (10 dollar piece) weighs 270 grs., it follows that the value of these coins is one dollar for 27 grs., or $88\frac{8}{9}$, say 88.89 cents per dwt.

The gold coins of France average 21 car. $2\frac{5}{12}$ grs. fine in 24 carats; consequently, their value will be one dollar for 27.49 grs., or 87.29 cents per dwt.

The gold coins of Spain average 20 car. $3\frac{1}{4}$ grs. fine in 24 carats; consequently, their value will be one dollar for 28.54 grs., or 84.09 cents per dwt.

The standard quality of silver coins of the United States is 10 oz. 14 dwts. $4\frac{5}{13}$ grs. fine in 12 oz., and the weight of the dollar 17 dwts. 8 grs.; consequently, their value per oz. will be $115\frac{5}{13}$ cents.

The average quality of silver French crowns is 10 oz. 18 dwts. 13 grs. fine in 12 oz.; consequently, their value will be 117.73 cents per oz.

The average quality of silver five-franc pieces of France is 10 oz. 16 dwts. fine in 12 oz.; consequently, their value will be 116.36 cents per oz.

The average quality of Spanish dollars is 10 oz. 15 dwts. 18 grs. fine in 12 oz.; consequently, their value will be 116.23 cents per oz.

The above average values of foreign coins differ but little from those established by former acts of Congress, as will be seen by the following comparison.

By acts of Congress:

British and Portugal gold coins at 88.89 cents per dwt.
French and Portugal gold coins at 87.27 cents per dwt.
Spanish and Portugal gold coins at 84.21 cents per dwt.
Silver French crowns at 117.6 cents per oz.
Silver five-franc pieces at 116 cents per oz.
Spanish dollars at 115.66 cents per oz.

By the above averages:

British and Portugal gold coins at 88.89 cents per dwt.
French and Portugal gold coins at 87.29 cents per dwt.
Spanish and Portugal gold coins at 84.09 cents per dwt.
Silver French crowns at 117.73 cents per oz.
Silver five-franc pieces at 116.36 cents per oz.
Spanish dollars at 116.23 cents per oz.

I have the honor to be, very respectfully sir, your obedient servant,

R. PATTERSON.

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

17th Congress.] No. 626. [1st Session.

THE MINT.

COMMUNICATED TO THE SENATE, JANUARY 7, 1822.

To the Senate of the United States: Washington, *January* 7, 1822.

I transmit to Congress a report from the Director of the Mint, with a statement of its operations for the last year.

JAMES MONROE.

Sir: Mint of the United States, *January* 1, 1822.

I have again the honor of laying before you another annual report of the operations of the Mint. From the statement of the treasurer, accompanying this, it will appear that, during the last year, there have been struck at the Mint:

In gold coins, -	41,089 pieces, amounting to - - -		$189,325 00
In silver coins, -	2,709,160 pieces, amounting to - - -		825,762 45
In copper coins, -	389,000 pieces, amounting to - - -		3,890 00
Making, in the whole,	3,139,249		$1,018,977 45

Of the deposites of silver bullion for coinage at the Mint, during the last year, it may not, perhaps, be deemed uninteresting to state that those from South America, with Mexico, amounted to $201,623.

I have the honor to be, sir, with the greatest respect and esteem, your most obedient servant,

R. PATTERSON.

James Monroe, *President of the United States.*

A statement of the coins struck at the Mint of the United States, from the 1st January to the 31st December, 1821, inclusive.

	Half-eagles.	Quarter-eagles.	Half-dollars.	Quarter-dollars.	Dimes.	Cents.	Value.	Number of pieces struck.
Gold coins, -	34,641	6,448	-	-	-	-	$189,325 00	41,089
Silver coins, -	-	-	1,305,797	216,851	1,186,512	-	825,762 45	2,709,160
Copper coins, -	-	-	-	-	-	389,000	3,890 00	389,000
							1,018,977 45	3,139,249

MINT OF THE UNITED STATES,
TREASURER'S OFFICE, PHILADELPHIA, *December* 31, 1821.

JAMES RUSH.

17th CONGRESS.] No. 627. [1st SESSION.

DUTY ON BOOKS.

COMMUNICATED TO THE SENATE, JANUARY 8, 1822.

Mr. HOLMES, of Maine, from the Committee on Finance, to whom was referred the memorial of the trustees of the Transylvania University, praying for a repeal of the duties on books imported into the United States, reported:

That the act of Congress of the 27th April, 1816, establishing the existing tariff, has included *books* among the unenumerated articles at an ad valorem of 15 per cent.

The second section of that act exempts from duty "all articles for the use of the United States, philosophical apparatus, instruments, *books*, maps, statues, busts, casts, paintings, drawings, engravings, specimens of sculpture, cabinets of coins, gems, medals, and all other collections of antiquities, statuary, modelling, painting, drawing, etching or engraving, specially imported by order and for the use of any society incorporated for philosophical or literary purposes, or for the encouragement of the fine arts, *or by order and for the use of any seminary of learning.*"

To justify an encroachment upon this tariff, by the exemption of particular articles, we should consider its effects, and understand its bearing upon the general system. It is possible that the exemption required would be chiefly felt in the price of the article exempted, and the manufacture of *paper* and *printing types;* and that its influence would be imperceptible or trifling upon the other branches of enterprise and industry. It may, then, be considered in its operations upon the manufactures, the revenue, and the consumption.

The constitution of the United States has placed *authors* under the protection of Congress. Essential to this protection is the encouragement of *printing*. Could foreigners maintain a successful competition with the American publisher, the American author would experience embarrassment and disappointment; foreign books would inundate the literary market; and even his own productions, from a foreign press, might be made to impair, if not defeat, his exclusive right.

The art of printing in the United States is rapidly advancing to its highest perfection. Samples have already been produced which will scarcely suffer by comparison with the best specimens of other nations. Still, the art has to encounter embarrassments. Comparatively, our capital is small, our labor high, and our skill not perfect. Such is our enterprise, that American competition has already done much to diminish profit and impede success. Remove this protecting duty, and foreigners, particularly the British, who speak the same language, whose labor is cheap, and skill matured, may overwhelm our market, and become the exclusive book makers for the United States.

Connected with this is the duty on paper. The manufacturer of this principal article of the printer's consumption is protected by an ad valorem of *thirty per cent.* So long as this operates as *a protection* to the paper maker, it is a tax on the book maker. By this partial interference, therefore, you leave the burden, while you remove the equivalent.

The manufacture of *printing types* in the United States is of recent origin. Such, however, has been its progress, that in 1816 Congress determined that the manufacturer required, and the consumer could sustain, an impost of *twenty-five per cent.* But, inasmuch as this art may be considered as still in its infancy, the competition at home will not, for a long time, create a depression of the price; and this duty will, consequently, remain a tax on American printing.

In this view of the subject, it is apprehended that it would be unequal, impolitic, and unjust, to single out this important branch of industry, strip it of all protection, and leave it to struggle with powerful competitors, to its serious embarrassment and probable destruction.

But the protection of the manufacturer, and the burden upon the consumer, are not our only objects of consideration in establishing a tariff on importations. It is our principal, and, ordinarily, our *only* source of *revenue.* Flourishing as our revenues are said to be, it seems to be agreed that we have no money to spare. "Loans, which consume the future," have become necessary; and rigorous economy and retrenchment must be enjoined and practised to prevent a recurrence to this pernicious expedient.

The exemption required would probably diminish the revenue beyond the amount of the duty repealed. Should American printing diminish, it would cause a corresponding diminution of the materials of consumption; and the impost on paper and types would probably vanish almost cotemporaneously with that on books. It ought, moreover, to be noticed that, in England, there is a bounty or drawback on the exportation of British books of *three-pence sterling on the pound weight.* Now, inasmuch as our duty is *ad valorem*, and their bounty is *specific*, not according to the *value*, but the *weight* of the books, their cheap editions may be imported into the United States at a premium which will about balance our duty of *fifteen per cent.* Their more expensive editions, and all books in foreign

languages, are chiefly wanted for our literary institutions; and for these they are already free. The inquiry, then, is, what portion of the community requires this repeal? Every college, academy, and other seminary, and every corporation for literary purposes, is now exempt. All members and students of these institutions are, consequently, exonerated of the burden of this tax. The question recurs, who is to experience the benefit of the exemption? Surely not the instructors, nor students in the higher branches of literature; for they are already relieved. Certainly not the members of our common schools; for ordinary British editions are compensated by a bounty. American school books are plenty and cheap; and those in foreign languages are not required for general use: and it is equally certain that our manufactories forbid it, and our treasury can scarcely afford it. None, then, but the professional gentleman, who can afford to extend his library beyond the resources of American publishers, or the scholar of wealth and leisure, who would indulge his taste in selecting the most elegant and expensive editions of foreign authors, can be interested in its favor. And is it expedient at this time to interpose *this* relief? To tax foreign luxuries is a dictate of the soundest policy. Expensive and highly finished editions are as much a *luxury* as any other extravagant expenditure. A moderate duty on such books, to be limited almost exclusively to gentlemen of wealth, could never subject us to the imputation of an indifference to education. Few nations, perhaps, have done more for the diffusion of knowledge. In the endowments and support of primary schools, we are second to none. Great Britain exacts an impost on all imported books, and allows a bounty on the exportation of her own. France exacts a specific duty of 100 francs per 100 killogrammes on books in the French language. To those reprinted from French editions is added 50 per cent., and pirated editions are entirely prohibited. There is, however, a deduction of 50 per cent. for *scientific memoirs*, and of 90 per cent. for books in the dead or foreign languages. Spain admits free of duty books, maps, and charts on the subject of navigation, when introduced for purposes of instruction. But *we* have surpassed them, and have, not improbably, exceeded the limits of a sound and enlightened policy.

With few exceptions, the English is our native and ordinary language. It is spoken as universally and purely as in England itself. But lately, we were a part of the British empire. From thence we have derived many of our habits, customs, and laws. We still esteem Great Britain as eminent in arts, sciences, policy, and power. Our principal and subordinate seminaries of learning are chiefly furnished with British books, and our youth are taught by British authors, wedded to their own institutions, and exultingly proud of their country, constitution, and laws. These means of a foreign influence have long been perceived, and have excited the jealousy of grave and intelligent politicians. Our government is peculiar to ourselves; and our books of instruction should be adapted to the nature of the Government and the genius of the people. In the best of foreign books we are liable to meet with criticisms and comparisons not very flattering to the American people. In American editions of these, the offensive or illiberal parts are expunged or explained, and the work is adapted to the exigencies and taste of an American reader. But withdraw the protection which our tariff affords, our channels of instruction will be *foreign;* our youth will imbibe sentiments, form attachments, and acquire habits of thinking, adverse to our prosperity, unfriendly to our Government, and dangerous to our liberties.

Your committee, therefore, recommend the following resolution:

Resolved, That it is, at this time, *inexpedient* to repeal the duty on the importation of books.

17th Congress.] No. 628. [1st Session.

TRANSFER OF THREE PER CENT. STOCK ISSUED TO THE STATES.

COMMUNICATED TO THE SENATE, JANUARY 15, 1822.

SIR: TREASURY DEPARTMENT, *January* 14, 1822.

In obedience to a resolution of the Senate, referring the petition of William Phillips and Gard Greene to the Secretary of the Treasury, I have the honor to report, that there does not appear to be any well-founded objection to granting the prayer of the petitioners.

According to the provisions of law, the certificates of the funded debt issued to the States which, upon the assumption of the States' debts by the Federal Government, were found to be creditors, were not transferable. The redemption of the old six per cent. stock, and the reimbursement which has already been effected of the six per cent. deferred stock, have reduced the amount of stock originally issued to the States to the amount of the three per cent. stock held by them; a statement of which is herewith enclosed. The original inducement to withhold from the stock thus issued the quality of transfer is so far weakened as to render it expedient to grant the prayer of the petitioners, and to remove by law the restriction in relation to the whole of such stock.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

The Hon. DANIEL D. TOMPKINS,
Vice President of the United States, and President of the Senate.

[The petitioners state that they have purchased from the State of Massachusetts the certificate which was issued to that State by the United States for $249,760 20 of the three per cent. funded debt of the United States, and pray that it may be made transferable.]

Amount of three per cent. stock issued to sundry States.

New Hampshire,	$95,134 45
Massachusetts,	249,760 20
Connecticut,	55,302 64
New Jersey,	10,143 80
Maryland,	335,104 74

17th Congress.] No. 629. [1st Session.

REMISSION OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 18, 1822.

The Committee on Commerce, to which was referred the petition of James Homer, respectfully submit the following report:

This petition presents the following case: A schooner, called the Anne, with her cargo of salt, both the property of a certain Edward Winslow, was seized and libelled. By an order of the district court of the United States for the State of Massachusetts, the vessel and cargo were appraised. The said Winslow having paid the duties on the salt, as required, and given his bond, with James Homer as security, for the appraised value of the said vessel and cargo, had both redelivered to him. The said vessel and cargo were, by a decree of the said district court, condemned; from which decree the said Winslow appealed to the circuit court of the United States, No. ——, to be held on the 15th of May, 1820. The said Winslow failing to enter his appeal, the United States obtained judgment, on which execution was issued for $1,436 05. James Homer then, for the first time, discovered that $158 40, which he had paid for the duties on the salt, was not deducted from the amount of the judgment. The said Homer claims this deduction, on the statement of the appraisers made after the execution was in the hands of the marshal. The appraisers state that, in estimating the value of the salt at four dollars per hogshead, they included the duties. On this discovery, he made application to the judge for relief. Execution was stayed until the next term of the circuit court, on condition that the amount of the said execution was (deducting therefrom the amount of the duties) paid to the marshal. The court, on hearing the parties, decided that the judgment having been rendered, and execution been issued, no relief could be given. The said Homer then applied for relief to the Secretary of the Treasury, who submitted the case to the Attorney General of the United States, and who gave it as his opinion that the Secretary of the Treasury had no power, by law, to correct an alleged error in a court of law, and to refund the money stated to have been improperly paid. The said Homer further states, that the amount of the said execution is $1,436 05; that he has paid $1,300, and has paid $158 40 for duties, as aforesaid; which last sum, if applied to the payment of the said execution, will leave a balance due the said Homer of $22 35. The said Homer prays that an act may pass, directing that the said sum of $158 40 may be applied in discharge of the said execution, and that the sum of $22 35 may be refunded to him.

This petition presents a new subject for consideration. The object it has in view is to obtain that redress from Congress which could have been more easily obtained from either the district or circuit courts of the United States, referred to in the case stated, had not the parties concerned, through inattention or negligence, suffered the opportunity to pass by without availing themselves of it. Either of the said courts was competent to afford, on statement of the facts, the relief now sought. To sustain the present application, to grant the relief solicited, would be to break down the barriers erected by wisdom and the constitution to keep separate the different branches of the Government, and to confine to each the subjects appropriate to the sphere of each. The subjects within the legislative scope are numerous, and, with an increasing population, are daily increasing. To open a door for the entrance of a new species of cases, nowise entitled to legislative interference, would be repugnant to every principle of sound and enlightened policy. If the parties have been injured, they have, with their eyes open, passively, and through negligence, suffered the infliction of it. From these views of the case, to which the attention of the committee has been called, they feel themselves constrained respectfully to submit to the consideration of the House the following resolution:

Resolved, That the petitioner have leave to withdraw his petition.

Boston, *August* 4, 1820.

Whereas we, the subscribers, were authorized and appointed by the Hon. John Davis, judge of the district court of the United States for the district of Massachusetts, in the month of November, 1819, to appraise and estimate the value of the schooner Anne and appurtenances, together with a quantity of salt on board the said schooner, we accordingly did execute our commission, and made a return of our doings into the said court, under our hands, on the 12th day of November, 1819; and we now certify, that in estimating the value of the salt at four dollars per hogshead, we did it on the ground of that being the real value of the salt, including the duties, and as though the United States were the actual owners of the same, and as though the parties to the bond were actually purchasing the same from the United States.

STEPHEN CODMAN,
JOSEPH RIPLEY,
WILLIAM JACKSON.

Custom-House, Boston, *September* 13, 1820.

This may certify that the duties have been paid at this office on seventy-five hogsheads of salt, imported in the schooner Anne, (on or about November 15, 1819,) a vessel then under seizure, and amounting to $158 40. Said amount of duties are recorded as having been paid on the 15th of August last past.

P. TRACY, *Deputy Collector.*

17th Congress.] No. 630. [1st Session.

REMISSION OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 18, 1822.

The Committee of Ways and Means, to whom was referred the petition of James Ross, report:

The petitioner states, that, in the beginning of the year 1820, he sailed from Trinity, in the island of Martinico, with a cargo of molasses for the United States, and arrived in the port of Richmond, in Virginia, on the 18th of February, in the same year; that he regularly entered his vessel and cargo with the collector, and gave bonds for the duty, amounting to $354 55, which he has since paid; that the said molasses was stored by the petitioner in a brick fire-proof warehouse in the city of Richmond, situated in a central part of the said city, which on the night of the 21st of March accidentally took fire and was consumed, together with the molasses which he had stored therein.

Your committee state, that it is proved to them that the duties, amounting to $354 55, have been paid by the petitioner to the United States; that the facts stated in the petition are true; and that the fire was entirely accidental, owing to the house having fallen in during a windy night, and the fire from a grate (as supposed) having communicated to the floor.

The committee are of opinion, that, from the peculiar circumstances and hardships of the case, the petitioner is entitled to relief, and ought to have the duties refunded to him. They therefore ask leave to report a bill.

17th Congress.] No. 631. [1st Session.

DUTY ON STILLS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 23, 1822.

The Committee of Ways and Means, to whom was referred the petition of certain distillers within the sixth collection district of Pennsylvania, report:

That, on the 24th of July, 1813, an act was passed by Congress, entitled "An act laying duties on licenses to distillers of spirituous liquors." By this act, section 2, it was provided, that, from the 1st day of January thereafter, distillers, who employed stills in distilling spirits from domestic materials, should pay a certain duty for a license for the employment thereof, "*for each gallon of the capacity of every such still, including the head thereof.*"

At the passage of the law, it appears there were many stills within the county of Lancaster, which constitutes the sixth collection district of Pennsylvania, made according to Henry Witmer's improvement upon Anderson's condensing tub; and that, in stills of this construction, the steam, instead of passing immediately from the head into the worm to be condensed, as is the case in common stills, is conducted from the head into a copper globe above it, and is there condensed, and from thence passes into the worm. This globe, or condensing chamber, is deposited in a large vessel filled with the mash or beer prepared for distillation. The improvement consists in this: that, while the surrounding liquor condenses the steam in the globe, it becomes heated by the steam to within 20 or 30 degrees of the boiling point. A considerable saving in fuel is thus made by communicating the heat of the steam to the mash or beer, which would otherwise be put cold into the boiler.

Soon after the passage of the act of the 24th July, 1813, a question arose, whether, under its provisions, this globe was liable to duty, or, in other words, whether its capacity was comprehended within the words "*the capacity of the still, including the head thereof.*" Whilst the collector of the revenue within the sixth collection district of Pennsylvania was clearly of opinion that the globe should not be measured, the commissioner of the revenue was of a different opinion, and directed him to charge a duty on its capacity. The law was, therefore, carried into effect in this manner within that district. The distillers, however, still continued dissatisfied with this construction of the law, and, in the month of June, 1815, had determined to defend themselves against the payment of so much of their bonds as consisted of the duty charged upon the capacity of the globes of their stills. This information being communicated to the Secretary of the Treasury, he directed a suit to be brought in the circuit court of the United States at Philadelphia against Colonel —— Anderson, of the county of Philadelphia, one of the patentees of the improvement, who had also refused to pay the duty upon the globes of his stills. During the pendency of this action, and before it was determined, Congress, on the 19th April, 1816, passed the "Act to abolish the existing duties on spirits distilled within the United States, and to lay other duties in lieu of those at present imposed on licenses to distillers of spirituous liquors." In this act they used the very same language, in imposing the duty, which had been used in the act of 1813, viz: "*the capacity of the still, including the head thereof.*" The suit brought by the United States *vs.* Colonel Anderson was determined in favor of the defendant, on the 12th November, 1818, upon principles, of the correctness of which this committee are perfectly satisfied, and which are contained in the charge of the court to the jury. This charge they submit to the House as part of their report. Another case was brought before the circuit court involving the same principle, wherein Jacob Leib, a distiller within the sixth collection district of Pennsylvania, was the defendant, which was determined in his favor on the 17th April, 1821. Immediately after the last decision, the acting commissioner of the revenue directed the collector "to deduct from the bonds which included the duty on the globe of the still, and which were then outstanding, that part which related to the globe, but not to refund any sum on account of the globe which had previously been paid to him, and by him into the treasury; as, being in the treasury, there was no authority to refund it without a special appropriation by Congress." The distillers who did not go to law with the Government ask to be

placed on the same footing as those who did; and your committee believe that their petition should be granted. The petitioners appear to have other and still stronger claims to relief. After they had determined not to pay their bonds until the question should be decided, and more than two years and seven months before the first decision of the circuit court, the commissioner of the revenue, by his letter dated the 1st April, 1816, after informing the collector of the sixth district that he believed the suit would be decided in favor of the United States, directed him as follows: "In the mean time I would recommend that those who, having given bonds, entertain a different opinion, be requested to pay the duty agreeably to their bonds, with the assurance that, in case the final decision shall be on their side, the excess of duty shall be refunded to them."

This pledge at once divided the distillers into two classes: those who paid the money voluntarily, and trusted to the faith of the Government, and those who refused to pay. The latter kept the whole amount of their bonds in their own hands till after the final decision in their favor, on the 17th April, 1821; the Government before that time being unwilling to receive that proportion of the bonds which they were willing to pay. They have since been relieved by the express order of the acting commissioner of the revenue.

The committee submit a bill.

UNITED STATES *vs.* ANDERSON.

The only question in this cause was, whether the condensing chamber of the defendant still constitutes a part of the capacity of the still, so as to be liable to the tax imposed by the act of Congress of the 24th of July, 1813, c. 24, s. 2, 4th vol. new edition, 572.

In the year 1801 the defendant invented, and obtained a patent for, an improvement in the art of distilling spirituous liquors, the principle of which is, the ascent of the steam by a tube, from the cap or head of the common still, into what he terms the condensing chamber, which is deposited in a large vessel filled with the mash or beer prepared for distillation. The improvement consists in the condensation of the steam the instant it enters into this chamber, by means of the surrounding liquor, and the gradual heating of the liquor, by means of the steam, to within 20 or 30 degrees of the boiling point, so as to prepare it for immediate distillation; thereby saving the additional fuel and time which are consumed in the common way, where the mash is put cold into the boiler. The spirit, as soon as it is formed in the condensing chamber, is carried off by a lateral tube into the worm, and the heated mash descends by a tube, with a stop-cock in it, into the boiler, as soon as it is prepared to receive it; the effect of which is, that many stills more can be run off in twenty-four hours, by means of this improvement, than in the common way.

It was contended by the district attorney and Binney, for the United States, that the condensing chamber is, in fact, the head of the still, and constitutes a part of the capacity of the still. They relied upon the following authors for a description of the different parts of a still, and for information upon the process of distillation: 2 Nicol's Natural Philosophy, 130, last edition; Lavon, 461-2; 1 Fourc. 158, 194; Black's Chemistry, 166.

CHARGE. *Washington, J.*—This case turns altogether upon the construction of an act of Congress, which the writings of chemists and philosophers will assist very little, if at all, to explain. The only question is, what constitutes the head of a still? And if it were not for the definitions given by the learned authors whose works have been referred to, the question could receive but one answer from plain practical men, possessing the slightest acquaintance with the common mode of distilling spirituous liquors in the United States.

Had this question been asked in the year 1791, when the first law imposing a duty upon stills was passed, in which the very words on which the present question is raised, viz: "the capacity of the still, including the head thereof," were used, there could have been no hesitation in answering, that the cap which covers the boiler, and receives and contains the steam till it passes towards the worm, formed the head. If so, and Congress has thought proper, at the distance of twelve years after the defendant's improvement was patented and known, to make use of the very same expressions in the law under consideration, we shall be most likely to give effect to the intention of that body by giving to them the same construction; for it is much more probable that the framers of these laws used the term *head* in its common and popular acceptation, as it was called and known by the distillers of spirituous liquors and others in the United States, than according to the definitions of the term to be found in works of philosophy.

Upon the authority of these writers, it is contended by the counsel for the United States that the head of the still is that part which receives and confines the steam, and condenses, or directs it into the worm to be condensed. There is no other objection to this definition, as applicable to the common stills used in the distillation of spirits, except that the condensation most usually, if not always, takes place after the steam has left the head. It may readily be admitted, however, that the definition is not less correct when applied to the common still, whether condensation takes place before or after the steam has passed from the head. But if the counsel for the United States mean to contend that that only is the head of the still where the steam is condensed, or whence it is directed, laterally, to a worm to be condensed, the argument cannot, in the opinion of the court, be maintained; and if it would, nothing would be more easy than to escape from the consequence of such definition, since it is obvious that the tube which conducts the steam to the condensing chamber of the defendant's still, above the boiler, might be placed diagonally, to conduct it to a like condenser placed in that direction.

But whether the steam ascend, or be conducted laterally to the refrigerator to be condensed, cannot change the name of the cap, or part of the still which receives and confines the steam until it is disposed of, which is universally denominated the head. The court must always be understood as speaking of stills used in the distillation of spirituous liquors, to which alone the law in question applies, and the different parts of which are known and distinguished by appropriate names. To test this, let us imagine a common still with three tubes, having stop-cocks in each, the one leading laterally to a worm, another to a condensing chamber or worm above, immersed in the mash to be warmed, and the third to a similar condenser, on the side, or in a diagonal position from the still, whilst the passage of the steam is impeded from passing either way; could a doubt exist that the part of the still which confines the steam is the head? This is admitted, if it pass into the common worm by opening the oven that leads to it; and, if so, can it lose its name by its being permitted to ascend, or to pass diagonally to the condenser? In either case the cap receives and contains the steam, and directs it to the condenser. If, notwithstanding, it be insisted, as it has been, that the defendant's condensing chamber is a head, then it would follow that this still has two heads; both of which, it must be admitted, cannot be taxed under this law, which is confined to *the* head.

It should never be forgotten that the use of the defendant's improvement, by himself and others, commenced soon after the year 1801, when he obtained his patent; that, in his specification, the cap of the old still used in the common distillation of spirits is denominated the *head*, and the part which is now contended to be the head the *condensing chamber;* that the former receives and contains the steam, so far as to prevent its escape in that form into the open air, as much so as the head of the common still, which equally parts with it, though in a different direction; that, notwithstanding these nominal, as well as substantial distinctions, between the different parts of this still recorded in the office of the Secretary of State, Congress, at the distance of twelve years after the date of the

patent, passed the law under consideration, in which the *capacity* of the still on which the duty is imposed is expressed in the very same words as were used in reference to the old stills, in a law passed ten years before the defendant's patent was granted. If, on account of the increased productiveness of these improved stills, Congress had thought proper to subject them to a higher rate of taxation, it would certainly have been imposed by terms better calculated to evince such intention than are used in this law.

It has been contended that the defendant's condensing chamber, if it be not the head, is at least a part of the still, increasing its capacity, and, consequently, subject to the tax.

With equal propriety might this be said of the worm, which, it is believed, has never yet been contended for by any person within or without the Treasury Department. In short, there is no foundation for the argument in the expressions of the law itself; and if we appeal to philosophers upon this subject, they inform us that the process of distillation ceases at the point where condensation commences. If so, the worm can form no part of the capacity of the still, the use of which is to carry on the process of distillation. If we appeal to the common understanding of mankind, we arrive at the same result. In short, it is obvious that the *capacity* of the still is, strictly, those parts only which are commonly denominated the boiler, and the head, which the Legislature has thought proper, by express words, to include as part thereof; but the capacity of the still is not, of necessity, increased one pint by means of the condensing chamber. The truth is, that the only use of this part of the defendant's improvement beneficial to the owner, as it must be admitted to be, is by means of the steam which it receives to heat and prepare the beer for rapid distillation; whilst, in return, the steam is condensed by the liquid which it warms. Upon the whole, we are of opinion that the capacity of the condensing chamber is not subject to the duty.

Verdict for defendant.

17th Congress.] No. 632. [1st Session.

DEBENTURE BONDS.

COMMUNICATED TO THE SENATE, JANUARY 28, 1822.

Mr. Eaton, from the Committee on Finance, to whom was referred the petition of William Nott and others, in behalf of the creditors of George T. Philips, made the following report:

George T. Philips was a merchant at New Orleans, where he died, the latter part of 1808, much embarrassed in his circumstances. The petitioners, who are syndics of the creditors, allege that, amidst great trouble and difficulty, they have obtained property of the deceased sufficient to create a dividend of eighteen per cent., but which is about to be taken from them by the United States, for the payment of certain debenture bonds executed by Philips in his lifetime.

It appears that, in the years 1806, 1807, and 1808, occasional shipments were made by Philips, and during that time twenty-four debenture bonds were executed at the custom-house, amounting to $25,517, upon which, in the year 1819, suits were instituted, and which are not yet determined. Certificates to show the landing in a foreign port have never been produced; nor does it appear that any application for an enlargement of the time limited by law has ever been made. There is no proof why the certificates were omitted to be filed; nor is there any equity shown, except in relation to two bonds, dated the 22d July, 1807, and which amount to $12,334 38, for coffee and bark shipped on board the Creole for Amsterdam.

Mr. Chew, collector of the port of New Orleans, deposes that he was, in 1807, at Amsterdam when the Creole arrived, and that a large amount of money was paid him on account of the cargo of the Creole: this testimony, however, is but presumptive. Hobkirk, master, swears that the Creole proceeded direct to Amsterdam, where she discharged the cargo taken in at New Orleans; and that he believes certificates were forwarded by Hope & Co., the consignees, to Mr. Philips, to enable him to cancel the debenture bonds.

A letter from Hope & Co., dated 27th October, 1807, and which is proven to be their handwriting, is produced: it contains an account of the cargo of the Creole, the sale of eleven hundred and fifteen bags of coffee, which, in amount, corresponds with the quantity stated in the bond of the 23d July, 1807.

There is no proof in relation to the other bonds, except a deposition of a Mr. Bogle, who was a clerk to Philips; he states, as his belief, that the certificates were filed and were carried off, or neglected and lost, by Mr. Brown, formerly collector at New Orleans. The committee are at a loss to determine what inducement the collector could have to take off certificates which were neither money nor the representative of money; nor can they believe that any commercial man of common prudence would file his certificates without at the same time cancelling his bond—a business that could be done in an instant, and one in which neither time nor labor is concerned.

Notwithstanding the proof in relation to the cargo shipped to Amsterdam may be considered pretty satisfactory, yet the committee distrust the propriety of giving sanction to a principle which might open a door for numerous frauds and impositions on the revenue. Drawbacks are but bounties on the re-exportation; and as the laws and regulations upon the subject are few and plain, with ample provision for any casualties that may arise, they deem it safest to reject the application.

Resolved, That the prayer ought not to be granted.

17th Congress.] No. 633. [1st Session.

REMISSION OF DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 28, 1822.

Mr. Smith, of Maryland, from the Committee of Ways and Means, to whom was referred the petition of Jonathan Battelle, reported:

That the petitioner states that he imported into Savannah, on the 24th day of August, 1818, fifty-three pipes of gin, and deposited them in the public warehouses, agreeably to law; and, at the same time, he entered at the custom-house other goods, secured the duties, and intended to export the same. That, on the 16th September, he also entered twenty-five boxes of Havana sugar, for which he ga e temporary bonds, estimated on a supposed weight, to be corrected when the weight should be ascertained; that a rain commenced on its landing, which compelled the officers to put it in the public store before it could be weighed. That the surveyor of the port had in charge the sugar and gin; and that, on the night of the 19th day of November, of the same year, all the articles were consumed by fire. He, the petitioner, therefore asks a remission of the duties on the said articles. The committee submit the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

Sir: Treasury Department, Comptroller's Office, *January* 31, 1820.

The preparation of some lengthy reports to Congress, which ought, ere this, to have been laid before that body, has prevented an earlier reply to your letter of the 8th instant, enclosing a memorial of Jonathan Battelle for relief.

Recollecting that his case was last year referred to this Department by the Secretary of the Treasury, on examining the records, I find that a communication was made by me on the subject to the Secretary, under date of the 3d December, 1818, a copy of which I take leave to enclose for your information.

From an examination of that communication, you will perceive that none of the cases in which the Treasury considered itself authorized to afford relief are analogous to the case of Mr. Battelle.

When goods are lost in the harbor, in attempting to land them from on board the vessel of importation, the case is considered in the same point of view as if they had been lost at sea, and, in that event, would not be liable to duty.

So, if goods be shipped for the benefit of drawback, all the prerequisites of the law being complied with, and the goods lost in the harbor before the sailing of the vessel, the shipper would be considered entitled to the drawback equally as if the goods had been lost at sea.

But the case of Mr. Battelle differs materially from the cases alluded to, so far as respects the interposition of this Department.

When merchandise is landed and stored, under the charge of a custom-house officer, the law says it shall be at the expense and *risk* of the owner.

From this positive language of the law, you will, I feel persuaded, readily accord with me in opinion, that it is not in the power of this Department to afford the relief which Mr. Battelle has applied for, and that the case remains for the equitable consideration of Congress.

I return, enclosed, the documents received with your letter.

With great respect,

JOSEPH ANDERSON, *Comptroller.*

Hon. W. H. Crawford.

P. S.—By an act of Congress passed on the 9th May, 1794, the duties on eleven hogsheads of coffee, destroyed by fire, were *remitted.*

I also find that several acts of Congress have been passed for *extending* the time for payment of duty bonds, viz: the act for the relief of the sufferers by fire in the town of Norfolk, dated 19th March, 1804; the act for the relief of the sufferers by fire in the town of Portsmouth, New Hampshire, dated 10th February, 1807.

Sir: Treasury Department, Comptroller's Office, *December* 3, 1818.

I have examined the case represented in Mr. Battelle's letter to the Honorable Mr. Crawford, in relation to which you have requested me to state the practice of the Treasury, if any similar case had occurred.

It appears that some pipes of gin belonging to Mr. Battelle, stored under the charge of the surveyor of the port of Savannah, with a view of securing for them the benefit of drawback, were consumed by fire; that a quantity of other goods in the same store, intended to be exported with that benefit, were destroyed at the same time, together with some sugars which had been put into it, in consequence of bad weather coming on whilst the custom-house officer was about to weigh the sugars.

I find that the duties on goods lost in attempting to land them have been remitted, and that a drawback has been allowed on merchandise lost in the harbor before the sailing of the vessel on board of which it had been regularly shipped to be entitled to that benefit.

I have the honor further to state, that I do not find a case on record where a remission of duties or drawback has been *applied* for on goods consumed by fire whilst stored under the charge of a custom-house officer.

The documents referred to me I have the honor to return herewith.

With great respect,

JOSEPH ANDERSON.

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

17th CONGRESS.] No. 634. [1st SESSION.

BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 2, 1822.

SIR: TREASURY DEPARTMENT, *February* 1, 1822.

In obedience to a resolution of the House of Representatives of the 22d ultimo, directing the Secretary of the Treasury to furnish the House "with the annual statement of the transactions of the Bank of the United States for the year 1821," I have the honor to inform the House that no such statement has ever been rendered by the bank to this Department.

The statements received by the Department, which approach the nearest to that called for by the resolution, are those rendered semi-annually, upon which the semi-annual dividends are declared. Enclosed, I submit those statements for the year 1821, and also the monthly statements for the months of June and December of the same year. These monthly statements are merely abstracts of the several accounts on the face of the books of the bank and its offices. The statements for those months are submitted in connexion with the semi-annual statements of profit and loss, because they furnish the materials from which the latter are formed.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

General statement of the Bank of the United States and its offices of discount and deposite at the dates specified herein.

Bank of the United States, *January*, 1822.

J. ANDREWS, *Assistant Cashier.*

17th Congress.] No. 635. [1st Session.

APPRAISEMENT OF GOODS IMPORTED.

COMMUNICATED TO THE SENATE, FEBRUARY 5, 1822.

Mr. Holmes, of Maine, from the Committee on Finance, to whom was referred the petition of Henry W. Delavan & Co., praying relief from several appraisements of goods imported into the port of New York, reported:

That it appears that the petitioners are respectable importing merchants of Albany; that, during the years 1819 and 1820, they imported goods into New York from England, and that the appraisers appointed under the act of the 20th April, 1818, adjudged these goods invoiced too low; whereby on all the importations they have been obliged to pay three hundred and seventy-six dollars and twenty-five cents in duties, and fifty dollars in appraisers' fees. By the evidence in the case, it is not improbable that the appraisers might have erred, and that the lowness of the invoices may be ascribed to the good credit of these merchants, and the promptness of their payments.

But inasmuch as the act of the 20th of April, 1818, vested in the appraisers a discretion in the exercise of an important and very responsible trust, their decisions should be revised by Congress with great caution, and probably never but in cases of manifest partiality or fraud, neither of which is here pretended. It appears, moreover, that much of the evidence produced to the committee has been obtained since the appraisal. Could merchants succeed in reversing the decision of the appraisers, by evidence subsequently obtained as to the true value of the goods, such would be the delay, uncertainty, and injustice, that it is extremely doubtful if the very important office of appraiser would not become even worse than useless.

Your committee, therefore, recommend the following resolution:

Resolved, That the prayer of the petitioners ought not to be granted.

17th Congress.] No. 636. [1st Session.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 7, 1822.

The Commissioners of the Sinking Fund respectfully report to Congress:

That the measures which have been authorized by the board, subsequent to the last report of the 6th February, 1821, as far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the 6th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as a part of this report.

JOHN GAILLARD, *President of the Senate pro tem.*
J. MARSHALL, *Chief Justice of the United States.*
JOHN QUINCY ADAMS, *Secretary of State.*
WM. H. CRAWFORD, *Secretary of the Treasury.*

WASHINGTON, *February* 7, 1822.

The SECRETARY OF THE TREASURY respectfully reports to the Commissioners of the Sinking Fund:

That the sum disbursed from the Treasury during the year 1820, on account of the principal and interest of the public debt, as per the last annual report, was	$8,705,930 53	
From which deduct the amount of repayments in that year,	77,416 25	
		8,628,514 28
Which, with a sum being gain on remittances to Europe in 1820, as appears by statement D, annexed to the last annual report,		1,766 67
Amounting, together, to		$8,630,280 95

Have been accounted for in the following manner, viz:

There was applied for the payment of a sum short provided on account of the public debt, due prior to the 1st of January, 1820, as per statement B, annexed to the last report,		$29,915 84
The application, during the year 1820, towards the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as appears by the annexed statement A, to the sum of	$8,598,484 22	
In the reimbursement of the principal of the deferred stock,	503,125 56	
In the purchase of the domestic debt,	40 34	
In the redemption of the Louisiana stock,	1,785,662 04	
In the payment of the principal of Treasury notes,	32,966 68	
In the payment of certain parts of the domestic debt,	124 08	
In the redemption of Mississippi stock,	1,150,468 32	
	3,472,387 02	
On account of the interest and charges,	5,126,097 20	
		8,598,484 22
The balance remaining unexpended at the close of the year 1820, and applicable to payments falling due after that year, as ascertained by accounts rendered to the Treasury Department, amounted, as will appear by the annexed statement B, to		1,880 89
		$8,630,280 95

That, during the year 1821, the following disbursements were made by the Treasury, out of the appropriation of $10,000,000, on account of the principal and interest of the public debt:

On account of the interest of the domestic debt and reimbursement of the deferred stock,	$5,623,321 38
On account of the redemption of the Louisiana stock,	2,071,360 00
On account of the redemption of the Mississippi stock,	634,022 53
On account of the redemption of Treasury notes,	1,774 38
On account of the interest of Louisiana stock,	36,560 88
On account of certain parts of the domestic debt,	54 45
Making, together, as will appear by the annexed statement C, the sum of	$8,367,093 62

and will be accounted for in the next annual report, in conformity to the accounts which shall then have been rendered to the Department.

In the mean time, the manner in which the said sum has been applied is estimated as follows:

There is estimated to have been applied in the reimbursement of the deferred stock,		$534,033 08
In the payment of the principal of Treasury notes,		1,700 00
In the redemption of Louisiana stock,		2,071,360 00
In the payment of Mississippi stock,		634,022 53
In payment of certain parts of the domestic debt,		54 45
	3,241,170 06	
And in the payment of interest on the funded debt, and Treasury notes and Louisiana stock,	5,087,272 01	
	8,328,442 07	
And there is estimated as applicable to the payments falling due after the year 1820, as per estimate F, the sum of	38,651 55	
	$8,367,093 62	

A statement (marked G) is annexed, which exhibits the balance of the appropriation of $10,000,000 unexpended on the 1st January, 1822, and a statement (marked H) of the funded debt on the 1st January, 1822.

All which is respectfully submitted.

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *February* 6, 1822.

A.

Statement of the application, during the year 1820, *of the funds provided for the payment of the principal and interest of the public debt.*

17th CONGRESS.] No. 637. [1st SESSION.

BANKS IN WHICH THE RECEIPTS FROM THE PUBLIC LANDS ARE DEPOSITED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 15, 1822.

SIR: TREASURY DEPARTMENT, *February* 14, 1822.

In obedience to a resolution of the House of Representatives, directing that the Secretary of the Treasury lay before the House "a statement showing in what banks the money received from the sale of the public lands has been deposited since the 1st of January, 1818; the contracts under which said deposites have been made; the correspondence between them and the Treasury Department relative thereto; the amount of deposites that were to be left in each, in consideration of taking charge of the balance of the money deposited; whether, in any instance, the deposites allowed for that purpose have been increased, and why such increase was allowed; together with copies of their situation furnished to said Department for the last twelve months preceding such increase; whether any of those banks have failed to comply with their engagements, and to what amount; the statements made by each for the last twelve months preceding its failure; what measures have been taken, in consequence thereof, to secure the Government against any losses resulting from such failure; what those measures have been, and at what expense; whether, in any instance, uncurrent or depreciated paper has been received from them, or any of them, which the Government was not bound to receive by any agreement between such banks and the said Secretary; and whether any further measures are necessary to be adopted by Congress to provide for the transmission of the public money from the different receivers to a more safe place of deposite, and, if so, what plan is most advisable;" I have the honor to submit the several statements and contracts, together with the correspondence, required by the resolution.

From an examination of the provisions contained in these contracts, it will be perceived that the principal inducements on the part of the Treasury to make them were, 1st, To increase the facilities of making payment for lands previously purchased; and, 2d, To secure the transmission of the public money from the places of deposite to those where the public engagements required it to be expended, with the least derangement of the ordinary moneyed transactions of those States from whence the funds were to be withdrawn.

By statement X it will be seen that the debt due by individuals for the purchase of public lands had, between the 1st days of January, 1815 and 1819, been augmented from $3,042,613 89 to $16,794,765 14.

In the year 1817, most of the banks in the States where the land offices were established, and in those parts of other States immediately adjoining them, had resumed specie payments. In the following year a great proportion of them stopped payment; and, in the early part of 1819, the price of all articles produced in the Western States fell so low as scarcely to defray the expense of transportation to the ports from whence they were usually exported to foreign markets. This condition of things, which had not been anticipated when the debt for the public lands was contracted, produced the most serious distress at the moment, and excited alarming apprehensions for the future. The forfeiture of the lands purchased between the two periods already described, and of the great amount of money paid at the time of purchase, appeared to be a result almost inevitable, unless some facility in making payment could be afforded. The resumption of specie payments by the banks whose notes formed, almost exclusively, the circulation in the States where the debt had been contracted, and the receipt of those notes at the land offices, seemed to be the only facility which it was practicable to afford. To effect this object, the contracts in question were tendered to the local banks as a modification of the various propositions which had been made by them to the Department. The extent of the facility which would be afforded by the receipt at the land offices of the notes of such local banks as should resume specie payments, would necessarily depend upon the amount of the public expenditure at the banks of deposite, and the capacity of those banks to transfer what could not be thus expended to the places where the public interest required. At that time an inconsiderable portion of the sum received at the land offices was expended in the States in which they were established. An inducement to transfer the remainder was to be presented to the banks which were to become the depositories of the public revenue arising from the sale of the public lands. In making the proposition to the local banks to transfer such portion of the public money deposited in their vaults as could not be expended by them on Treasury drafts, with the excep-

tion of the sum agreed to be left in deposite, the obligation of the Bank of the United States to transfer the public money to such places as the public exigencies shall require was duly considered. This obligation extends to money, and not to bank notes. The bank was under no obligation to effect the transfer of the public funds by disposing of the notes of the local banks which had been received at the land offices in the purchase of bills of exchange, rather than by a direct transportation of specie to the places designated. To have proposed the resumption of specie payments to the local banks, on the condition that they were to become the depositories of the public money received at the land offices, whilst the obligation of the Bank of the United States to transfer the public revenue was to be enforced, was to insure another failure on the part of those banks; as they would have been required, at short intervals, to discharge in specie the whole amount of their notes which had been received at the land offices. If the specie which would thus have been drawn from their vaults could have been restored to the local circulation, by the operations of the Government, it would have been practicable for the local banks to have continued specie payments. But the whole of the sums which would have been drawn from them by the Bank of the United States would have been transferred to the commercial cities in the Atlantic States, whence its return would necessarily have been slow and precarious. It was, therefore, indispensable to any proposition for inducing the local banks to resume and continue specie payments, that the obligation to transfer such part of the public money deposited with them as was to be expended at other places should be imposed upon those banks. Although it was manifestly their interest that this operation should be effected without suddenly withdrawing from circulation the amount to be transferred, yet it was equally manifest that it could not at all times be performed without inconvenience and expense. It became, therefore, necessary to present to them some other inducement to assume this obligation, than the mere possession of the public funds during the time that was requisite for making the transfer. The idea of a deposite which they were not bound immediately to transfer was adopted by the Treasury, and accepted by the banks. This deposite, however, with the exceptions which will be hereafter explained, was liable to be reduced at all times by the payment of drafts of the Treasurer whenever it was practicable to expend money at those banks. The whole amount deposited in them was, at all times, at the disposition of the Government, whenever the public service should require it, and the opportunity of expenditure at the banks of deposite shall occur.

During the existence of the former Bank of the United States, a number of State banks were, by the Secretary of the Treasury, made banks of deposite, upon conditions which secured to them a considerable amount always on deposite, without, however, specifying any particular sum. It was stipulated that the moneys deposited in them should not be drawn for *en masse;* and that whenever drafts should be drawn upon them with a view to transfer any portion of the public money in their possession, they should be drawn payable at sixty days. As these drafts were always issued for smaller sums than were at the time on deposite, the banks generally retained in their possession a sum exceeding the amount of the deposites in sixty days. An arrangement or contract of this kind still exists with a number of local banks in the States of Maine, Massachusetts, Rhode Island, Connecticut, Vermont, and Virginia.

With the Bank of the United States an arrangement for the transfer of the public funds has been found requisite, which necessarily leaves a considerable balance on deposite in those offices from which transfers are to be made. For the transfer of the public funds from New Orleans, and from the Western States, to the principal cities on the Atlantic coast, the bank is allowed four months; from places north of the seat of Government to those south of it, two months; and from and to places north of it, and from and to places south of it, one month.

In the States of Indiana, Illinois, Missouri, Mississippi, and Alabama, the Bank of the United States has established no office. In several of those States it was found impracticable for the receivers to make their deposites in that bank or its offices, without incurring an expense nearly equal to the amount of their salary and emoluments. In such cases, the only alternatives left to the Department were, to suffer the public money to remain in the hands of the receivers until it could be expended, or to direct it to be deposited in some of the local banks. Experience had shown that it was not prudent to adopt the first of these alternatives. Indeed, Congress, influenced probably by this conviction, had, in the year 1800, directed that the revenue bonds in Boston, New York, Philadelphia, Baltimore, Norfolk, and Charleston, should be deposited for collection in the Bank of the United States and its offices established in those cities; and in 1809 it was further directed, by law, that the principal disbursing officers of the Government should, whenever practicable, keep the public moneys in their hands, in some incorporated bank, to be designated for the purpose by the President of the United States. Acting in the spirit of these legislative injunctions, founded upon the idea that banks furnished an additional security, not only in the collection but in the disbursement of the public revenue, my predecessors in office had directed that the public money, whenever collected, should be deposited in banks in the vicinity of the officers who collected it. When the Department was placed under my direction, in October, 1816, there were eighty-nine banks of deposite in the different States of the Union.

If recent experience has furnished evidence in any degree conflicting with that which produced the legislative injunctions to which I have referred, it has also shown that the official integrity of the public agents has not been augmented.

By referring to the contracts, it will be seen that deposites have been made in the Bank of Mississippi at Natchez, in the Farmers and Mechanics' Bank of Indiana, and in the Franklin Bank of Columbus, Ohio, upon conditions somewhat different from those of the other banks. In the first, there is no stipulated deposite, as it was presumed that the whole amount which would be received could be disbursed at the bank, or transferred without hazard or inconvenience to New Orleans. The banks, too, whose notes circulated in that State, were generally of established credit; so that but little, if any, risk was incurred in receiving and crediting them in the account of the Treasurer as specie. The frequent and safe intercourse between Natchez and New Orleans made it easy for the receiver west of Pearl river to make his payments in the office of the Bank of the United States. The failure of that officer, however, to make his deposites with regularity, and his misapplication of a large amount of the public money, about two years ago, suggested the propriety of effecting an arrangement with the Bank of Mississippi.

The second is entitled to a deposite, which is not to be diminished by Treasury drafts. It is bound to transfer to the Bank of the United States, or its offices, any excess above that deposite which it may receive from the land offices, and which cannot be disbursed at the bank. From the position of this bank, it was believed that a very inconsiderable portion of the money deposited with it could be disbursed at the bank. As nearly the whole amount that should be received by the bank would have to be transferred, it was deemed just that the stipulated deposite should not be diminished by the payment of Treasury drafts; and it was believed that any profit which the bank could derive from it would not be more than equal to the expense which would necessarily be incurred in making the stipulated transfers.

The third is entitled to a small deposite, not liable to be diminished, and is not bound to transfer any part of the public funds deposited with it. From the geographical situation of the bank, it was intended to be the depository of the public moneys disbursed upon the northwestern frontier, as far as Lake Superior, with the exception of what

was received at Detroit and Michilimackinac. In this case, as the bank was not bound to transfer, the deposite was intended simply to indemnify it against losses which it might incur from the failure of any bank whose notes might be received at the land offices and deposited with it.

The deposites stipulated in the contracts have, in no instance, been increased; but sums to a much greater amount have, at different times, been in the possession of these banks. In some cases, this has been the result of a want of punctuality in making the transfers according to the conditions of the contracts, and, in others, of an expectation that the amount in deposite in a particular bank might be expended without transfer.

The following statement shows the number of local banks which have been employed since the 1st January, 1818; the amount of deposite to which they were entitled; the amount of the proceeds of public lands received by them, respectively, since that time; and the amount yet to be accounted for by each:

Banks.	Amount of deposite.	Amount received.	Am't now in possession of the bank.
Bank of Steubenville,	$50,000	$307,230	$167,297
Bank of Chilicothe,	100,000	227,244	15,000
Franklin Bank of Columbus,	20,000	112,990	48,038
Farmers and Mechanics' Bank of Indiana,	40,000	352,883	36,754
Bank of Illinois at Shawneetown,	50,000	164,629	64,598
Branch Bank of Kentucky at Louisville,	100,000	139,428	58,943
State Bank of Mississippi at Natchez,	-	165,950	19,930
Bank of Tombigbee at St. Stephen's,	100,000	1,068,476	93,669
Planters and Merchants' Bank at Huntsville,	75,000	763,059	64,044
Bank of Missouri,	150,000	1,088,333	152,342
Bank of Vincennes,	75,000	310,346	168,453
Bank of Edwardsville,	40,000	210,644	46,202
Farmers and Mechanics' Bank of Cincinnati,	100,000	47,785	36,966

In addition to the amount deposited in these banks, there has been deposited in the Bank of the United States and its offices the sum of $2,959,523.

It results from this statement, that there has been deposited in these banks the sum of $4,958,997, and that there remains in their possession, yet to be accounted for, the sum of $972,236. Of this amount the sum of $526,950 is due by banks which have stopped payment, and are no longer banks of deposite, viz: the Planters and Merchants' Bank at Huntsville, the Branch Bank of Kentucky at Louisville, the Bank of Missouri, the Bank of Vincennes, the Bank of Edwardsville, and the Farmers and Mechanics' Bank at Cincinnati. It is but just, however, to state that the bank at Huntsville has made large payments into the offices of the Bank of the United States at New Orleans and New York since its failure, and that no doubt is entertained that it will discharge the remainder in the present year. These are the only banks which have failed to comply with their contracts.

The statements made by these banks for the twelve months preceding their respective failures, as far as they have been received, are marked Cc, Ee, Gg, Jj, Ll. The statements of the Bank of Missouri will be found in the correspondence.

From the Bank of Tombigbee there have been received $15,311, in the notes of the State Bank of North Carolina; from the Bank of Missouri there have been received the following sums, viz: in notes of the State Bank of North Carolina $42,000; of the Bank of Nashville $29,844; of the Farmers and Mechanics' Bank of Cincinnati $11,845; of the Miami Exporting Company $8,661; of the Bank of Cincinnati $3,846; of the Bank of Muskingum $291; and of the Farmers, Mechanics, and Manufacturers' Bank of Chilicothe $350; and from the Bank of Edwardsville, there have been received $18,562 in notes of the Bank of Kentucky and its branches. In the first two cases, the notes were received in the month of March, 1820; and in the third, in October, 1821. All the notes above described were uncurrent at the time they were received from the banks. They were current when they were received at the land offices, and when deposited in those banks for safe keeping. These deposites were made before the date of the contracts by which the banks engaged, not only to account to the Treasury in specie for bank notes deposited in them, which might become uncurrent while in their possession, but in like manner to account for such as might become uncurrent in the hands of the receivers of public money, which had been received before notice of the failure of any of the banks whose notes the banks of deposite had authorized them to receive. As the banks of deposite before the date of these contracts exercised no discretion or judgment in determining what local bank notes should be received, it was not understood that they assumed the responsibility of accounting to the Treasury in specie for notes deposited with them for safe keeping, which should become uncurrent while on deposite. Such is now the relation of the Bank of the United States to the Treasury, in all cases where the notes of the State banks received at the land offices are deposited in it, except the notes of the banks in the commercial cities of the Atlantic States. In no other case have uncurrent bank notes been received from any bank in which the public money has been deposited; nor have any such notes been received in contravention of any agreement between the Department and those banks. It is proper to state, that the whole of the notes of the State Bank of North Carolina have since been discharged; and that of the Nashville Bank notes, there remains only $4,203 89 unpaid.

When the Bank of the United States went into operation, there was a very large amount of uncurrent bank notes in the Treasury, which were designated by the term *special deposite*. It consisted of bank notes which had been received on account of the Treasury, and which were refused to be entered to the general credit of the Treasurer by the eighty-nine banks in which the public money was then deposited; notwithstanding all those banks, with the exception of a few in the Eastern States, did not at the time discharge their own notes in specie. This amount was greatly increased by the balances in those of the Western banks, which, when the public deposites were turned over to the Bank of the United States, were unable to make any arrangement for their payment. To convert this special deposite into current money, the Bank of the United States tendered its best efforts, which were accepted by the Department. A considerable portion of the sum was, by the agency of the bank, converted into available funds; but, towards the close of the year 1818, the bank declined all further agency, under a conviction that its efforts were rather injurious than beneficial to the public interest. In the early part of 1819, the amount of special deposite then in the Bank of the United States was transferred to the Bank of Columbia, which had offered its services in collecting it. In the course of that year, its cashier visited the banks whose notes constituted the special deposite, and which were established in the interior of Pennsylvania, Maryland, and Virginia, and

in various parts of the State of Ohio. During his tour, he succeeded in converting a portion of the notes into current money; in most other cases he obtained written acknowledgments of the amount due, and generally an engagement to pay interest until the debt was discharged; and in several instances collateral security was proposed, which has since been accepted. Whilst in the execution of this service, he was charged to call upon the Farmers and Mechanics' Bank of Cincinnati for the amount which had been deposited with it during the three months that it had resumed specie payments in 1819. He was not able, however, to make any arrangement either for the payment or security of the debt.

Since that time, the claims of the Treasury upon the banks in Ohio, and in the interior of Pennsylvania, Maryland, and Virginia, have been placed in the hands of the attorneys of the United States, with instructions to endeavor in every case to obtain collateral security, where it is practicable. Their efforts, in conformity with these instructions, have been attended with some success; but it is now manifest that a resort to legal coercion will, in some cases, be necessary.

A bill of expenses incurred by the Bank of the United States, in its efforts to convert the special deposite into available funds, has been presented, amounting to $3,113 80.

Expenses have also been incurred by the attorneys of the United States in obtaining collateral security, which, together with a reasonable compensation for their services, will be a charge upon the Treasury, whenever their accounts shall be presented.

The receiver at St. Louis has been authorized to call upon the Bank of Missouri for the amount of public money in its possession at the time of its failure, and, in case of its refusal to pay, to obtain such collateral security as will insure the ultimate discharge of the debt.

The same authority has been given to the register at Edwardsville, in relation to the public money which was in possession of the Bank of Edwardsville at the time of its failure.

The result of the efforts made by those officers, in conformity with the powers with which they have been vested, has not yet been made known to the Department. For the services which they may render a reasonable compensation will be allowed, but no expense has been incurred on this account by the Government.

No measures have been taken to enforce or secure the payment of the public money in the possession of the Branch Bank of Kentucky at the time of its failure, because assurances were given that the whole amount would be paid within the time and in the manner prescribed by the contract. A considerable part of the sum has accordingly been paid; but, recently, no exertions appear to have been made to discharge the balance.

For the public money on deposite in the Bank of Vincennes at the time of its failure, collateral security has been obtained. For this service no expense has been incurred, as I had the honor to state in my report of the 28th ultimo.

The great decrease which has occurred in the receipts from the sales of public land since the passing of the act for changing the compensation of receivers and registers, in the year 1818, when the commission of the former was reduced from one and a half to one per cent. upon the amount received, has made their compensation extremely low, without the diminution which would necessarily be made by the expense of transmitting the money received to distant places. When that reduction took place, the local banks had, generally, resumed specie payments, their notes were received at all the land offices, and the banks of deposite were every where in their immediate vicinity. In most cases no expense was incurred in transferring the public money, and very little in any case. At this time the number of places of deposite is greatly lessened, and past experience indicates the propriety of a still further diminution. The general failure of banks in the States where land offices are situated, and the impracticability of the offices of the Bank of the United States established in the Western States keeping in circulation any of their notes, have compelled the public debtors to make their payments principally in specie. The expense of transportation has consequently greatly augmented. It is obvious, therefore, that the commissions of the receivers of public money ought to be increased, or that the expense of transferring the public money from the land offices to the banks of deposite ought to be paid by the Government.

In terminating this report, it is respectfully submitted whether it is not expedient that some special authority be given for the disposition of the special deposite now in the Treasury. A considerable amount of this deposite consists of bank notes, which, though uncurrent, and therefore not applicable to the public service, may yet be disposed of on loan, upon such security as to insure its conversion into current money at the expiration of one, two, and three years. Another part consists of engagements by banks whose notes are uncurrent, which, it is presumed, those banks would willingly discharge by the issue of their notes, and which might be disposed of in the same manner. There is, however, a small portion which probably cannot, without considerable loss, be converted into current money by any measure whatever. An authority to dispose of so much of the deposite as is of this description, upon the best terms that can be obtained for it, will probably save something to the Treasury; as delay in relation to it can have no beneficial effect.

I have the honor to be, with great respect, sir, your obedient servant,

WM. H. CRAWFORD.

The Honorable the SPEAKER *of the House of Representatives.*

A LIST OF THE PAPERS ACCOMPANYING THE REPORT.

A.

Bank of Steubenville.

1. Letter from the cashier of the Bank of Steubenville to the Secretary of the Treasury, dated February 13, 1819.
2. Letter from the Secretary of the Treasury to the cashier of the Bank of Steubenville, dated March 12, 1819.
3. Propositions accompanying the foregoing letter.
4. Letter from the cashier of the Bank of Steubenville to the Secretary of the Treasury, dated March 31, 1819.
5. Letter from the same to the same, dated April 3, 1819.
6. Letter from the Secretary of the Treasury to the cashier of the Bank of Steubenville, dated September 21, 1819.
7. Letter from the cashier of the Bank of Steubenville to the Secretary of the Treasury, dated November 3, 1819.
8. Letter from the same to the same, dated July 7, 1820.

9. Letter from the Secretary of the Treasury to the cashier of the Bank of Steubenville, dated July 15, 1820.
10. Letter from the same to the same, dated August 1, 1820.
11. Letter from the cashier of the Bank of Steubenville to the Secretary of the Treasury, dated August 25, 1820.

Aa.

1. Letter from the cashier of the Bank of Steubenville to the Secretary of the Treasury, dated January 18, 1818.
2. Letter from the Secretary of the Treasury to the cashier of the Bank of Steubenville, dated January 29, 1818.

B.

Bank of Chilicothe.

1. Letter from the Secretary of the Treasury to the president of the Bank of Chilicothe, dated March 12, 1819.
2. Letter from the president of the Bank of Chilicothe to the Secretary of the Treasury, dated April 22, 1819.
3. Letter from the Secretary of the Treasury to the president of the Bank of Chilicothe, dated April 30, 1819.
4. Letter from the president of the Bank of Chilicothe to the Secretary of the Treasury, dated May 12, 1819.
5. Letter from the Secretary of the Treasury to the cashier of the Bank of Chilicothe, dated August 1, 1820. (See A. No. 10.)
6. Letter from the same to the same, dated February 3, 1821.

C.

Farmers and Mechanics' Bank of Cincinnati.

1. Proposition of the Farmers and Mechanics' Bank of Cincinnati to the Secretary of the Treasury, dated February 27, 1819.
2. Letter from the Secretary of the Treasury to the cashier of the Farmers and Mechanics' Bank of Cincinnati, dated March 5, 1821.
3. Letter from the same to the same, dated March 11, 1819.
4. Letter from the cashier of the Farmers and Mechanics' Bank of Cincinnati to the Secretary of the Treasury, dated May 15, 1819.
5. Letter from the same to the same, dated April 10, 1819.
6. Letter from the Secretary of the Treasury to the cashier of the Farmers and Mechanics' Bank of Cincinnati, dated April 30, 1819.
7. Letter from the cashier of the Farmers and Mechanics' Bank of Cincinnati to the Secretary of the Treasury, dated July 29, 1819.

Cc.

1. List of notes receivable by the Farmers and Mechanics' Bank of Cincinnati.

D.

Franklin Bank of Columbus.

1. Letter from the Secretary of the Treasury to the cashier of the Franklin Bank of Columbus, dated May 24, 1820.
2. Letter from the cashier of the Franklin Bank of Columbus to the Secretary of the Treasury, dated June 7, 1820.
3. Letter from the Secretary of the Treasury to the cashier of the Franklin Bank of Columbus, dated June 30, 1820.
4. Letter from the cashier of the Franklin Bank of Columbus to the Secretary of the Treasury, dated June 29, 1820.
5. Letter from the same to the same, dated July 19, 1820.
6. Letter from the Secretary of the Treasury to the cashier of the Franklin Bank of Columbus, dated August 1, 1820. (See A. No. 10.)
7. Letter from the cashier of the Franklin Bank of Columbus to the Secretary of the Treasury, dated August 17 1820.

E.

Bank of Vincennes.

1. Letter from the president of the Bank of Vincennes to the Secretary of the Treasury, dated January 9th, 1819, and enclosing a memorial from that bank to the Secretary of the Treasury.
2. Letter from the Secretary of the Treasury to the president of the Bank of Vincennes, dated March 12th, 1819.
3. Letter from the president of the Bank of Vincennes to the Secretary of the Treasury, dated May 6th, 1819, with enclosures, Nos. 1, 2, 3, of the 20th, 22d, and 29th of April, 1819.
4. Letter from the Secretary of the Treasury to the cashier of the Bank of Vincennes, dated July 7th, 1820.

A statement of balances due by receivers and individuals in the several land offices, on the 1st of January, 1815 and 1819.

Bank of Steubenville.

A. No. 1.

SIR: BANK OF STEUBENVILLE, *February* 13, 1819.

In April last this bank received a bundle of its notes from the branch at Pittsburg, containing $30,000, the property of the United States, placed in that office on special deposite. From the great pressure for specie, this institution was compelled then, in order to obtain time, to submit to a charge of retrospective interest from the January preceding, because the cashier had written a letter on that subject in that month, which, as he alleged, amounted to a demand of payment. In consequence of the continuation of those pressures, and of the exertions which have been made to meet the engagements with you in relation to the cash and special deposite, and the determination of this board to sustain the manufacturing establishments just about, as it is hoped, to go into successful operation here, this bank has only been enabled to pay the interest and reduce this debt to $24,568 50.

In making the payment of interest at the branch in December last, (on account of the cash and special deposite,) I was mortified to find that the cashier had relapsed into his former determination of receiving nothing on that account but specie, and the notes of the Bank of the United States and its branches. My bundle contained that description of notes principally, but there were in it some Philadelphia, Baltimore, and District notes; the latter were exchanged by a friend, and the payment closed, otherwise the bundle would have been brought back, and this bank again subjected to the mortification of a failure in meeting its engagements, as in two former instances; by which, too, it had to pay three or four hundred dollars in interest. On your interposition, if I mistake not, he was nduced to receive from me New York, Philadelphia, Baltimore, and District paper; and, in explanation, assured

me, verbally, that he would continue to receive those notes to the credit of the Treasurer of the United States. I am ignorant of the cause of the late change in his determination; but, should he persist in exacting specie, and the notes of the Bank of the United States and its branches, I apprehend it will be found difficult, and almost impossible, for this bank to discharge this debt in any reasonable time.

I have made these statements, however, as a prelude to two propositions which I am instructed by our board of directors to make to you. The first is, that you order a transfer of the $24,568 51 from the branch at Pittsburg, (and add it to the present debt of $53,638 90,) payable with interest from the day of the transfer; the whole to be paid by deposites to the credit of the United States (in any bank or office which you may direct in those places) at New Orleans, New York, Philadelphia, Baltimore, or District of Columbia, as may be most suitable to this institution and to the drafts of the Treasurer, on account of disbursements which are to be made in this section of the country, with an understanding, if you deem it proper, that those drafts are to be paid in western notes of specie-paying banks, generally the notes of this bank.

The second proposition is, that you direct the receivers of public moneys at Wooster and this place, and the collector for this district, to make their deposites in this bank; to be paid without interest, in the same manner as stated above, but more particularly to the Treasury drafts.

The advantages to be derived by both parties, in the event of your acceding to the propositions, are, I think, obvious. With respect to the first, the Government would receive interest on a sum now lying dormant at Pittsburg, upon which the Bank of the United States has been drawing interest since January, 1818; and, with regard to the second, its receipts would be doubled, if not tripled. The bank would receive New York, Philadelphia, Baltimore, and District of Columbia notes, all of which (as well as all western paper) are rejected by the branches, the operation of which, to the western country, is to drain it of specie, and by amicable arrangements, which would enable them to return immediately to specie payments, (or to wind up their business,) the notes of several banks in this State, and in the western part of Pennsylvania and Virginia. And from the encouragement and aid which it could then give to traders in the produce of the soil, from whom it would receive, in numerous cases, bills of exchange upon the places mentioned, and from the payment of debts now in a train of collection, as stated in a former letter to you, it would be enabled not only to meet all its engagements with you, but to relieve and benefit the community, whose sufferings are more readily imagined than described, in consequence of the determination of the branches to receive (what, in fact, is not to be found) nothing but specie, and the notes of the United States Bank and its branches, added to the late suspension of specie payments on the part of the State banks following so immediately their extraordinary curtailments. In a word, the branches have no notes in circulation, their loans having been chiefly made to merchants, to whom drafts on the mother bank were given, to enable them either to pay debts previously contracted, or to purchase foreign goods in the Atlantic cities.

I am instructed further, should you require it, to furnish you, under oath, a confidential weekly, monthly, or quarterly statement from the books of the bank.

Should the terms offered not meet your ideas, you are requested to suggest any modifications which may occur to you as proper.

I am, very respectfully, your most obedient servant,

W. R. DICKINSON, *Cashier.*

The Hon. WILLIAM H. CRAWFORD.

A. No. 2.

SIR: TREASURY DEPARTMENT, *March* 12, 1819.

Your letter of the 13th ultimo has been received, and would have been answered sooner but for my indisposition.

I am willing to accede to your proposition for transferring the balance due by the Bank of Steubenville to the Bank of the United States, for the use of the Treasury. It does not appear, however, that the amount agrees with that stated in your letter. By the enclosed statement, rendered by the Bank of Columbia, (to which the whole of the special deposite has been transferred from the Bank of the United States,) it appears that, independent of the old debt, there is now due from the Bank of Steubenville to the Treasury $43,218 95, exclusive of interest. This sum the Treasurer of the United States will be instructed to transfer to the Bank of Steubenville, subject to the proposition before mentioned. On receiving it, you will credit the Treasurer's account with the principal and interest separately.

I have this day addressed the superintendent of the road west of the Monongahela, requesting him to ascertain whether the contractors for making the Cumberland road cannot be induced to receive the sums which may become due to them in drafts upon your institution. I have also instructed the superintendent of that part of the road which is yet to be contracted for to make the contracts subject to be discharged in western funds, if it can be effected without considerable loss to the Government. If this can be effected, the debt which is now due to the Treasury by your institution will be easily discharged, and arrangements can be made which will greatly relieve the public debtors in that section of the Union.

In the mean time I tender to the Bank of Steubenville the enclosed proposition, which, if accepted, the receivers of public money at that place and at Wooster will be directed to make their deposites in it. It is distinctly understood that the notes of any bank which does not discharge them in specie, on demand, cannot be received. It is also understood that the Bank of Steubenville does now discharge its notes in specie, or will have resumed specie payments before this arrangement takes effect, if it has in the course of last autumn or winter suspended them. As it is probable that, after all the disbursements which can be made at Steubenville, there will remain some part of the public deposites which must be transferred to the Atlantic cities, it will be for the interest of the bank to receive as specie the bills of the banks established in those cities. In making these transfers, the election between New York, Philadelphia, Baltimore, this District, and New Orleans, will be left with the bank.

I have the honor to be your most obedient servant,

WM. H. CRAWFORD.

W. R. DICKINSON, Esq., *Cashier of the Bank of Steubenville.*

A. No. 3.

Conditions on which the Secretary of the Treasury will employ the Bank of Steubenville as a depository of the public moneys.

TREASURY DEPARTMENT, *March* 12, 1819.

1. That the bank will receive from the receivers of public moneys, and others having moneys to deposite on account of the Treasury, the paper of such banks (whose paper is in circulation in their vicinity) as pay their notes

in specie, on demand, and are otherwise in good credit, (a list of which will be furnished to the Secretary of the Treasury by the bank,) and will credit the same to the Treasurer of the United States as cash. The bank may, however, discontinue to receive the paper of any of the said banks; but, in such case, it shall give immediate notice thereof to such receivers or others who usually deposite public moneys in it; and the notes of any such banks which may have been received by them before such notice shall, nevertheless, be taken and credited by the Bank of Steubenville as cash.

2. That the bank shall pay, at sight, all drafts which the Treasurer of the United States may draw on it; and shall, from time to time, transfer to the Bank of the United States, or its branches at New York, Baltimore, Washington, or New Orleans, in such moneys as will be received as cash, the excess of public moneys remaining on deposite, after such drafts are paid, over and above the sum of fifty thousand dollars; which sum of fifty thousand dollars shall remain on deposite in the Bank of Steubenville during the continuance of this arrangement, and shall be transferred in like manner within six months after the said bank shall cease to be employed to receive the public moneys. It is agreed, however, that if the amount received by the bank shall be so large as that the expense of the remittance shall exceed the benefit of the deposite, the sum which is to remain on deposite in the bank may be proportionably increased.

3. That the bank shall render to the Secretary of the Treasury and to the Treasurer of the United States duplicate monthly returns of its account with the Treasurer, and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; which latter returns shall be considered confidential. In these latter returns must be noted the sums standing on the books of the bank to the credit of any public officer or agent. The bank shall also render to the Secretary of the Treasury, as soon as practicable, a list of its debtors, showing the amount due by each, and shall render a similar list quarter-yearly: this list will likewise be considered confidential, and will in no case be made public; it being intended for the use of the Secretary of the Treasury, in determining on the propriety of continuing or discontinuing the arrangement with the bank.

It is understood that, if the money deposited in the bank to the credit of the Treasurer can be disbursed at the bank, the drafts of the Treasurer shall be paid at sight, notwithstanding such payments may reduce the deposite below the sum of fifty thousand dollars.

It is also understood that the sum now due by the bank is not to be affected by this arrangement, nor to be considered as forming part of the same deposite.

A. No. 4.

SIR: BANK OF STEUBENVILLE, *March* 31, 1819.

The Bank of Steubenville accedes, unconditionally, to the propositions contained in your letter of the 12th instant, which I had the honor this day to receive; and I have promptly given all the requisite notices to the receiver of public moneys at this place, who, I am sorry to add, has determined to withhold his deposites until he receives further instructions from you. He is not authorized, he alleges, to deposite in this bank any part of the funds which he has now in his possession; and states, further, that he is instructed hereafter to deposite such *bank paper* only as he may be directed by me to receive, but *no specie*. I have in vain represented to him the indubitable evidences of the friendly disposition to the Bank of Steubenville which you manifest in tendering this arrangement, (as well, indeed, as in former instances;) your determination to unite with the bank in restoring the value of western paper, and in relieving the sufferings of the community in this section of the Union; that your object was to aid the bank, and not embarrass it by exposing it to all the hardships of the arrangement, without affording to it any of the advantages; that you had offered, in sincerity, a standing deposite of fifty thousand dollars; and, in a word, that your aid would be most wanting at the beginning of the arrangement, on the first resumption of specie payments, rather than when the credit of bank paper shall be fully established, as it must be under the operations of the arrangement.

This bank having, in every instance, given specie for land office purposes, and having now publicly (and since the 27th instant in fact) resumed the payment of specie, unconditionally, for its notes, and as, in all probability, the *run* (if I may use the expression) may be unnatural, (although there are but few bills in circulation,) I beg leave to call your attention to the subject, and request you to give, immediately, instructions to the receivers of public moneys at this place and at Wooster, corresponding with the amicable spirit evinced in your propositions.

I have the honor to be, sir, your most obedient servant,

W. R. DICKINSON, *Cashier.*

The Hon. WM. H. CRAWFORD.

A. No. 5.

SIR: BANK OF STEUBENVILLE, *April* 3, 1819.

I addressed you hastily on the 31st ult., and informed you of the unconditional acceptance, on the part of this bank, of the propositions for making the Bank of Steubenville a depository of public moneys, as contained in your letter of the 12th March, 1819, and that the bank had complied promptly with all the requisitions incident to its acceptance. You will, no doubt, have received that letter before this reaches you, and have given to the receivers of public moneys their proper instructions.

I have authorized the receivers of public moneys at this place and at Wooster, to whom I have also sent a copy of the acceptance of this bank to the conditions, to take the following bills, which will be received from them to the credit of the Treasurer of the United States with their specie:

Bank of Steubenville; United States and branches; city of Philadelphia; city of New York; city of Baltimore, (except Marine Bank;) Bank of Pittsburg; new bank at Wheeling, and Farmers and Mechanics' Bank of Steubenville.

This list will be extended to several banks in the vicinity of this place, and to others in the State of Ohio, as soon as arrangements can be matured; and I have little doubt that it will be extended to the paper of the banks in the District of Columbia.

I have received letters from the road contractors, and have little doubt, in consequence of this late arrangement, from what they say, and the assurances which I have given them, that the notes of this bank will be taken as readily for Treasury drafts as any other description of bank notes.

It is in contemplation to make arrangements with some bank in the city of Philadelphia, by which this bank will not only have a credit there generally, but that its bills shall pass at par in that city.

I have the honor to be your most obedient servant,

W. R. DICKINSON, *Cashier.*

The Hon. WM. H. CRAWFORD.

A. No. 6.

SIR: TREASURY DEPARTMENT, *September* 21, 1819.

Upon comparing the monthly returns of the bank which have been rendered to this office, it appears that the discounts have been gradually increased for several months.

The deposite which has been stipulated in favor of the bank would certainly justify an increase of its discounts if the state of the bank, at the date of the stipulation, had been free from embarrassment; this, however, was not the case. The amount of its notes held by the Treasury, or deposited to its credit with the bank, and for the payment of which it was then enabled to provide, exceeded the amount of the deposite stipulated in its favor. Under such circumstances, it was expected that instead of considering the deposite and the advantages resulting from the possession of the other public deposites as a safe foundation upon which additional discounts might be made, the directors would have considered them together as mere facilities to enable it to preserve its credit, and guard against the embarrassments which so greatly affect banking institutions.

These observations are frankly submitted to the consideration of the directors, in full persuasion that upon a review of the subject they will be satisfied that their discounts are already extended as far as prudence and a just regard to the safety and reputation of the institution will justify. It may be proper to observe, that I see no reason to believe that the embarrassments to which most banks have been subjected, from the small amount of specie in the country and the fluctuations of commerce, will in any short time be considerably diminished. I will also add, that the interest which this Department feels for the stability and reputation of the banks which are used as places of deposite is not limited to the amount of public money deposited in such banks. The character of the Government is in some degree dependant upon the prudent management of a bank which thus becomes its agent.

I am, &c.

WM. H. CRAWFORD.

W. R. DICKINSON, Esq.

A. No. 7.

SIR: BANK OF STEUBENVILLE, *November* 3, 1819.

I enclose, herewith, copy of an account current forwarded this day to Thomas T. Tucker, Esq., Treasurer of the United States.

I had the honor to receive your letter of the 23d September early in October, which I laid immediately before the board of directors. The additions to the discounts, which you have very correctly taken notice of, were made under special circumstances, partly to road contractors in anticipation of Treasury drafts, but principally to the proprietors of the important manufacturing establishments in this town, to some of whom pledges had been given previous to the Treasury arrangement. I am, however, particularly instructed by the board, whose sentiments accord strictly with those contained in your letter, to say that no increase shall hereafter be made on any consideration to the discounts of the bank, and that their utmost endeavors shall be used to reduce the amount due to the institution. It may be fairly presumed, indeed, that a gradual reduction will be made, notwithstanding the difficulties and embarrassments of the country, and the delays incident (especially in this State) to the causes already in suit, which amount at least to $100,000.

I have the honor to be, very respectfully, your most obedient servant,

W. R. DICKINSON, *Cashier.*

The Hon. W. H. CRAWFORD.

A. No. 8.

SIR: BANK OF STEUBENVILLE, *July* 7, 1820.

It is evident, from the statement enclosed, that the reputation of this institution, for the present, rests alone upon your forbearance, until collections can be made, or further deposites made by the receivers of public moneys.

The directors have determined, by every means in their power, to reduce their discounts at least $100,000, and upon no condition whatever to make any future loan; and although the laws of this State are tardy in their operation, I flatter myself that it will not be long before you begin to witness in the state of the bank the effects of their determination.

The entire confidence expressed to you with regard to the stability of the bank under the Treasury arrangement rested upon a sure belief that the road commissioners and contractors would give a credit to the bills of the bank, by receiving them on Treasury drafts, and paying them out to the work hands on the road; in which case all the calls of the Treasury could have been readily met. But I was greatly mistaken; the last $60,000 ($20,000, $35,000, and $5,000) having been exclusively drawn in specie, or put into neighboring banks, besides 6 or $7,000 paid to the treasurer of this State in gold and Eastern bills. Hence, as you will readily perceive, the present difficulty and the very low state of the institution. Could the contractors be prevailed on to change their course, and pursue one more amicable, it would be doing an invaluable service both to the bank and to the country.

I have already stated, that having a surplus fund of nearly $10,000, it will be left entirely to you to make any charge of interest whatever against the bank; for, independent of the effect it would have upon our important manufacturing establishments here, the pain and mortification of being compelled again to stop specie payment would be far beyond any thing I could express.

I have the honor to be, very respectfully, your most obedient servant,

W. R. DICKINSON, *Cashier.*

Hon. W. H. CRAWFORD, *Secretary of the Treasury.*

A. No. 9.

SIR: TREASURY DEPARTMENT, *July* 15, 1820.

Your letter of the 7th instant has been received by this day's mail.

It is a subject of surprise and regret that the road contractors should have dealt so illiberally by the bank, and I have so informed them; and, giving them another draft for fifteen thousand dollars, have stated my expectations that they would act with liberality hereafter.

When that draft is paid, and another, I believe of five thousand dollars, in favor of Mr. Shriver, as one of the road commissioners, there will not be additional drafts upon the bank until the road is completed, or nearly so. It is therefore presumed, if you can get along with the drafts that have been already issued, there will be no further demands upon you until November.

The state of the Treasury is such that it cannot suffer its funds to lie idle; nor is the receipt of interest any compensation for the forbearance requested, when that forbearance is impracticable. The perfect ease in which

the banks in the Atlantic cities are now placed, and the impossibility of vesting their capital with security, which is known to exist, will probably enable the bank to obtain a supply of specie sufficient to meet all the demands which will be made upon it during the remainder of the year. These demands, in the month of November, may amount to fifty thousand dollars, as nearly that sum will be due to the road contractors. If, by any means, I should be compelled to pay this sum at the Treasury, it will impose upon the Bank of Steubenville the necessity of transferring an equal amount to this place. The bank had better make an effort, therefore, to obtain a supply of specie, until its discounts can be contracted so as to place it at its ease.

The difficulties interposed by the laws for the recovery of debts ought always to be considered before the discounts of a bank are extended to a point which any adverse circumstances will require to be reduced. I had the honor to suggest to the bank that, considering the extent of its discounts, the permanent deposite to which it was entitled ought to be considered as a facility with which it might relieve itself from previous embarrassments, rather than as a means of increasing its dividends. It is to be regretted that the bank did not adhere rigidly to this suggestion.

Every indulgence, consistently with the wants of the Treasury, will be extended to the bank; but the expectations of indulgence ought not to influence the exertions which are necessary to the preservation of its credit. Its concerns ought to be so conducted as not to require assistance from the Treasury beyond the conditions stipulated in its favor by the existing agreement.

I am, &c.

WM. H. CRAWFORD.

W. R. Dickinson, Esq.

A. No. 10.

To the presidents of the several banks in which the public money is deposited in Ohio, Indiana, Illinois, and Missouri.

Sir: Treasury Department, *August* 1, 1820.

I annex a copy of an instruction issued to the receivers of public moneys, designating the funds in which payments may be made for the public lands. By the arrangement now existing between the Treasury and the banks in which those officers make their deposites, nearly the same funds, with occasional variations, are already receivable as cash. It is desirable, however, for many reasons, that the practice of all the land offices should be uniform. I propose, therefore, that the existing arrangement be so modified as to conform to the annexed instruction; and I request that you will, as early as practicable, communicate to me the assent of the bank.

I am, sir, your obedient servant,

WM. H. CRAWFORD.

To ——, *President of the Bank of* ——.

To the several receivers of public money in Ohio, Indiana, Illinois, Missouri, and Michigan.

Sir: Treasury Department, *August* 1, 1820.

With a view to increase and to equalize the facilities of making payment for public lands in the several land districts of the United States, I have determined to authorize the receivers of public moneys to take, in addition to specie and bills of the Bank of the United States and its branches, the notes of the following incorporated banks, viz:

Those in the cities of Boston, New York, Philadelphia, Baltimore, and Richmond, and in the District of Columbia; (except the City Bank of Baltimore, and the Merchants' and Franklin Banks of Alexandria.)

All those specie-paying banks in the State in which the land office is situated.

This instruction supersedes those that have heretofore been given on the subject, except in so far as they prohibit the receipt of the paper of any bank which does not discharge its notes, on demand, in specie; and that prohibition must, in every case, be rigidly adhered to.

In order to facilitate the collection of the notes of the banks in your State which may be received by you, you will, on making a deposite, give notice to each of those banks of the amount of its notes contained in such deposite; and if you shall be informed by the cashier of the bank in which you make your deposites that the notes of any bank in your State, which may have been deposited by you, have not been paid on demand, you will discontinue to receive the notes of such bank. It may be proper for you to take the first occasion to intimate, in respectful terms, to each of those banks, the consequence that will result from a want of punctuality in paying its notes on presentation.

For the information of the purchasers of public lands, you will publish in one of the newspapers in your district a list of the kinds of money receivable at your office; and you will give notice, in like manner, of any change which may occasionally take place.

I am, sir, your obedient servant,

WM. H. CRAWFORD.

To ——, *Receiver of Public Moneys at* ——.

A. No. 11.

Sir: Bank of Steubenville, *August* 25, 1820.

Your circular of 1st current was received, and submitted to the board of directors of this bank; and I am instructed to signify to you their assent to your proposition so to modify the existing arrangement respecting deposites, as to make it conform to your instructions to the receivers of public moneys given in your circular of the 1st August, viz: "to receive, in addition to specie and bills of the Bank of the United States, the notes of the following incorporated banks, viz: those in the cities of Boston, New York, Philadelphia, Baltimore, Richmond, and in the District of Columbia, (except the City Bank of Baltimore and the Merchants' and Franklin Banks of Alexandria,) and the notes of all the specie-paying banks in this State."

Although the board of directors promptly agree to your request, and feel every disposition to accommodate the Treasury Department with any arrangement you may think proper to propose with a view to facilitate the public collections, yet I cannot refrain from observing that, adding to the list all the specie-paying banks of this State will very considerably increase the trouble and expense to this bank in making collections from those banks that will be added. They are situated between one and two hundred miles to the west of us; and the current of money being from the west to the east, their notes will not redeem ours, nor pay any of our debts; we must, therefore, collect from them by sending messengers for that express purpose.

I am, sir, respectfully, your obedient servant,

B. S. WELLS, *President.*

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

Aa. No. 1.

SIR: BANK OF STEUBENVILLE, *January* 18, 1818.

It is presumed that all moneys received in its vicinity, on account of the United States, will be deposited in the branch of the United States Bank at Pittsburg, as soon as it commences its operation; and that no further deposite will be made at this bank. With a view to obviate difficulties which have heretofore occurred in discharging drafts from the Treasurer of the United States for *special deposites*, (although properly drawn by the Treasurer,) which pass first through the Bank of the United States, and thence through its branches, as well as to prevent this institution from being thrown upon the mercy (if I may use the expression) of the Bank of the United States, the directors have instructed me to submit the following proposition to you, to wit: that the $79,707 80, special deposite, per account current rendered the 10th instant, be changed into a cash deposite, and added to the $27,570, the amount of the cash deposite stated in the same accounts; making a cash credit to the Treasurer of the United States of $107,277 80, payable with interest, from the receipt of your letter agreeing to the proposition, at the branch at Pittsburg, *to the credit of the Treasurer of the United States*, in four equal payments, at three, six, nine, and twelve months, with the privilege of paying sooner than the periods mentioned, in order to save interest, if it should be convenient to this institution.

If you can confide in the integrity and capacity of the directors of this bank to fulfil this engagement, it is hoped that you will accede to the proposition, as thereby you will evince a friendly disposition to a bank that has uniformly (under every pressure) sustained a fair reputation, by giving ample time to pass the amount to the credit of the United States, as well as (it is respectfully presumed) aid the Treasury, by converting nearly $80,000 of notes, of various sorts and descriptions, on banks scattered through different sections of the country, into an *an actual cash deposite upon interest.*

I am, very respectfully, your most obedient servant,

W. R. DICKINSON, *Cashier.*

Hon. W. H. CRAWFORD, Esq.

Aa. No. 2.

SIR: TREASURY DEPARTMENT, *January* 29, 1818.

Your letter of the 18th instant has been received. I accede to the proposition which you have therein made, on behalf of the Bank of Steubenville, for the discharge of the balances due by that bank to the Treasurer of the United States, viz:

"That the $79,707 80 of special deposite be changed to a cash deposite, and added to the $27,570 of cash deposite; making a cash credit to the Treasurer of $107,277 80, which is to be paid with interest at the office of the Bank of the United States at Pittsburg, in four equal payments, at three, six, nine, and twelve months, with the privilege of paying sooner than the periods mentioned, in order to save the interest."

In making the payments stipulated by this arrangement, you will state how much is principal and how much interest.

I am, &c.

WM. H. CRAWFORD.

W. R. DICKINSON, Esq., *Cashier of the Bank of Steubenville.*

Bank of Chilicothe.

B. No. 1.

SIR: TREASURY DEPARTMENT, *March* 12, 1819.

Being desirous to remove, as far as may be in my power, consistently with the public interest, the inconveniences to which the public debtors in Ohio are subjected by the disordered state of the currency, it is my wish to make an arrangement with some of the principal banks in that State, by which the paper of such banks as pay their notes in specie on demand, and are otherwise in good credit, may be received in payment of dues to the United States.

The first overture for such an arrangement having been made on behalf of the Farmers and Mechanics' Bank at Cincinnati, I have offered to that bank the terms on which I am willing to employ it as a depository of public moneys. I have made the like offer to the Bank of Steubenville. I now submit, for the consideration of the Bank of Chilicothe, the same propositions; and I trust that the directors will find in them a sufficient inducement to aid in a measure which, if carried into full effect, may produce results highly beneficial in that part of the country. With the further view of enabling the western banks to continue the payment of specie, I have instructed the superintendent of the Cumberland road to make proposals for paying the contracts for that work in notes of western banks which are in good credit and discharge their notes in specie. If the contracts can be made in this form without considerable loss to the Treasury, they will form an additional mean of expending the public money where it is collected, and, consequently, afford relief to a considerable extent.

If the terms proposed are unconditionally accepted by the bank, the receivers of public money at Chilicothe, Zanesville, and Marietta, are instructed, on receiving an official copy of the act of acceptance, to make deposites in the Bank of Chilicothe of such moneys as they may receive in consequence of this arrangement.

I am, &c.

WM. H. CRAWFORD.

The PRESIDENT *of the Bank of Chilicothe.*

[NOTE.—The proposition which accompanied this letter was the same as that which accompanied the letter to the cashier of the Bank of Steubenville of the 12th instant, (see A. No. 3,) with this difference: the sum to remain on deposite was fixed at $100,000, and the last sentence was omitted, as not applying to this bank.]

B. No. 2.

SIR: BANK OF CHILICOTHE, CHILICOTHE, *April* 22, 1819.

Your letter of the 12th ultimo, covering propositions for using the Bank of Chilicothe as a depository of public moneys, was received on the 6th instant, and immediately laid before the board of directors of that institution for consideration. They, understanding the terms of the letter in their fullest sense, passed a resolution

accepting the terms of negotiation. On the same evening, a letter was received by the receiver of public moneys from the Department of the Treasury, notifying him of the propositions made to the Bank of Chilicothe, and informing him that, in case of their acceptance, he should use that bank as the depository of individual State banks, and continue the branch as the depository of United States paper and specie. The board were somewhat astonished at the reception of this information, as being a measure, in their opinion, not at all calculated to effect the object of the Treasury, and at the same time be beneficial to this institution. They deemed the letter of conditions, particularly some of them, as being sufficiently strict to entitle this institution to all advantages to be derived from the acceptance of the propositions in their most unqualified sense: they therefore rescinded the resolution of acceptance. The bank appreciates the motives of the Treasury in making the propositions, and is willing to assist in carrying them into effect, if the Treasury will consider it as the depository of all public moneys collected at Marietta, Zanesville, and Chilicothe.

I have the honor to be, &c.

THOMAS JAMES, *President.*

The Hon. Wm. H. Crawford, *Secretary of the Treasury.*

B. No. 3.

Sir: Treasury Department, *April* 30, 1819.

I have had the honor this day to receive your letter of the 22d instant, informing me that the board of directors of the Bank of Chilicothe had accepted of the conditions tendered by this Department on the 12th ultimo to that institution, but that it had subsequently revoked that acceptance, on the ground of some real or supposed incongruity between those conditions and the instructions given, contemporaneously, to the receivers of public moneys directed to make their deposites in the said bank.

Upon a review of the whole subject no such incongruity is perceived. As my object, however, was to relieve the public debtors from the inconvenience to which they have been subjected by the rejection at the land offices of most of the currency which circulates in the State of Ohio, the receivers at Marietta and Chilicothe have been this day instructed to deposite, generally, the moneys received by them from the public debtors in the Bank of Chilicothe, upon the acceptance by the bank of the conditions contained in my letter of the 12th ultimo. As this arrangement will take from the office of the United States Bank at Chilicothe the deposites of the public money hereafter to be made at that place, it may be proper to advertise the Bank of Chilicothe that the payment of Indian annuities will require nearly fifty thousand dollars in specie in the spring of each year. It will be incumbent upon the bank, therefore, to be prepared to make this disbursement.

It is also my duty to state that it has been usual to discharge the expenses of surveying the public lands, by giving the surveyor general credits with the receivers of public moneys, who make the necessary advances upon the bills of that officer upon the Treasury Department. The continuation of this practice, if considered necessary, is not to be understood as conflicting with the arrangement made with the bank. Generally, however, it will be equally convenient to give the surveyor general a credit with the Bank of Chilicothe.

I remain, &c.

WM. H. CRAWFORD.

Thomas James, Esq.

B. No. 4.

Sir: Bank of Chilicothe, *May* 12, 1819.

Your letter of the 30th ultimo has been duly received. This institution accepts the proposition of the Treasury Department to become the depository of public moneys, and the receivers at Zanesville, Marietta, and Chilicothe will be this day advertised thereof.

I have the honor to be, your most obedient servant,

THOMAS JAMES, *President.*

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

B. No. 5.

[For letter from the Secretary of the Treasury to the cashier of the Bank of Chilicothe, dated August 1, 1820, see A. No. 10.]

B. No. 6.

Sir: Treasury Department, *February* 3, 1821.

As the office of discount and deposite of the Bank of the United States at Chilicothe now receives, on behalf of the Treasurer of the United States, the same bank bills that are receivable by the Bank of Chilicothe, there appears to be no sufficient reason to justify the employment of that bank as a depository of the public moneys. It becomes necessary, therefore, that the arrangement under which it has been employed in that character should now terminate. I have, accordingly, to request that you will discontinue to receive the public deposites, and that you will proceed, as your convenience will permit, to transfer the remaining balance in the manner stipulated; in doing which, however, you are at liberty to make the payments at any of the offices of the Bank of the United States to which it can be done most advantageously for your institution.

You will observe, generally, to give me the earliest information of any such payments, in order that the proper drafts may be issued by the Treasurer.

I avail myself of this occasion to express the satisfaction that has been produced by the good faith and accommodating disposition manifested by the Bank of Chilicothe during the continuance of the arrangement.

I have the honor to be, yours, &c.

WM. H. CRAWFORD.

The Cashier *of the Bank of Chilicothe.*

Farmers and Mechanics' Bank of Cincinnati.

C. No. 1.

WASHINGTON CITY, *February* 27, 1819.

Propositions of the Farmers and Mechanics' Bank at Cincinnati to the honorable Secretary of the Treasury.

1st. The Farmers and Mechanics' Bank will receive from the receiver of public moneys, and collectors of the revenue, and be accountable for the amount thereof, the notes of the following banks, or such of them as will make a satisfactory arrangement for the payment of their notes so received:

Miami Exporting Company, Bank of Cincinnati, Bank of Lebanon, Bank of Dayton, Bank of Urbana, Bank of Chilicothe, Bank of Columbus, Bank of Lancaster, Bank of Kentucky and its branches, Farmers and Mechanics' Bank of Lexington, Bank of Georgetown, and Bank of Newport.

2. The Farmers and Mechanics' Bank will pay over all sums exceeding $100,000, which is to remain as a deposite so long as the arrangement exists, at such points as the Secretary may require; but it is expected that such points will be named as will be most convenient to the bank, provided the funds will be there useful to the Treasury.

3. The Farmers and Mechanics' Bank will give whatever additional security the Secretary of the Treasury may require.

The capital of the Farmers and Mechanics' Bank is about $200,000 paid in.

The Farmers and Mechanics' Bank will make immediate arrangements for resuming specie payments, and for inducing the other banks in Cincinnati to join in the measure.

Respectfully submitted by

SAMUEL W. DAVIES, *Cashier.*

C. No. 2.

SIR: TREASURY DEPARTMENT, *March* 5, 1819.

In answer to your proposition of the 27th ultimo, on behalf of the Farmers and Mechanics' Bank at Cincinnati, I have to inform you that I am willing to employ that bank as a depository of public moneys, upon the following conditions:

1st. That the bank will receive from the receivers of public moneys, and others having moneys to deposite on account of the Treasury, the notes of the banks, a list of which* has been deposited in this office by you, and credit the same to the Treasurer of the United States as cash. The banks may, however, discontinue to receive the notes of any of the said banks, or of any other banks whose notes it may hereafter agree to receive, whenever it may deem it necessary. But, in such case, it shall give immediate notice thereof to such receivers or others who usually deposite public moneys in it; and the notes of any such banks which may have been received by them before such notice shall, nevertheless, be taken by the Farmers and Mechanics' Bank as cash.

2d. That the bank shall pay, at sight, all drafts which the Treasurer of the United States may draw on it, and it shall, from time to time, transfer to the Bank of the United States, or its branches, (in such moneys as will be received by it as cash,) the excess of public moneys remaining on deposite, after such drafts are paid, over and above the sum of one hundred thousand dollars; which sum of one hundred thousand dollars shall remain on deposite in the said bank during the continuance of this arrangement, and shall be transferred, in like manner, within six months after the said bank shall cease to be employed to receive the public moneys. It is agreed, however, that if the amount received by the bank shall be so large as that the expense of remittance shall exceed the benefit of the deposite, the sum which is to remain on deposite in the bank shall be proportionately increased.

3d. That the bank shall render to the Secretary of the Treasury, and to the Treasurer of the United States, duplicate monthly returns of its accounts with the Treasurer, and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; which latter returns will be considered confidential. In these latter returns will also be noted the sums standing in the bank to the credit of any public officer or agent.

If these conditions are accepted by the bank, it will immediately give me notice of its acceptance; and the receiver of public moneys at ———— is authorized, upon receiving from the bank an official copy of such notice, to make deposites in the Farmers and Mechanics' Bank at Cincinnati: provided, however, that the said bank shall previously have resumed specie payments, and shall have given notice thereof to the receiver of public moneys at Cincinnati.

I am, &c.

WM. H. CRAWFORD, *Secretary of the Treasury.*

SAMUEL W. DAVIES, Esq., *Cashier of the Farmers and Mechanics' Bank, Cincinnati.*

C. No. 3.

SIR: TREASURY DEPARTMENT, *March* 11, 1819.

Upon reflection, and further examination of my letter of the 5th instant, defining the conditions upon which the Farmers and Mechanics' Bank of Cincinnati may become the depository of that part of the public money received at that place which will not be received by the Branch Bank of the United States but as special deposite, it has occurred to me that doubts may arise whether the notes of the banks described in the list deposited by Colonel Davies in this office will not be receivable, whether those banks resume and continue specie payments or not. It is highly important that no misunderstanding should exist upon this subject. It is therefore expressly declared, that the receiver of public money will not be authorized to receive the notes of any bank in that list which does not discharge them in specie upon demand. Considering the precarious situation of banking institutions generally, at this time, and the probability that it may become more so, I have, upon mature reflection, determined to require of the banks in which the public money may be deposited a monthly statement, exhibiting the names of the debtors of the bank, and the amount in which they are indebted. This statement will be confidential, and in no case to be made public. It is intended exclusively for the Secretary of the Treasury, for the government of his conduct in continuing or terminating his arrangements with those institutions.

I am, &c.

W. H. CRAWFORD.

The PRESIDENT *of the Farmers and Mechanics' Bank of Cincinnati.*

* For the list referred to, see the accompanying paper Cc. No. 1.

C. No. 4.

SIR: FARMERS AND MECHANICS' BANK, CINCINNATI, *May* 15, 1819.

I am directed to inform you that the president and directors of this institution have accepted the conditions contained in your letter of the 5th March, preparatory to receiving the public deposites, and this morning resumed the payment of specie for their notes.

I am, sir, very respectfully, your obedient servant,

S. W. DAVIES, *Cashier.*

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

C. No. 5.

SIR: FARMERS AND MECHANICS' BANK, CINCINNATI, *April* 10, 1819.

The president and directors of this institution, previous to the receipt of your letter of the 11th ultimo, and to my arrival, had ratified the arrangement as contained in your letter of the 5th of the same month, and had addressed the banks named in the list deposited by me, inquiring whether they would make the arrangements necessary to the reception of their paper; to which all who have replied answer in the affirmative.

Your letter of the 11th has disappointed the hopes which were entertained of relief from the severe embarrassments felt by the citizens of this State, and has created almost insurmountable obstacles to any plan which can be devised to effect a purpose so greatly to be desired.

Any State bank will embarrass itself by accepting only such part of the public deposite as the United States Bank will not receive, and by becoming bound to convert it into such funds as that bank will receive.

If the paper to be received is limited to banks paying specie, in a short time it will be as difficult to obtain that paper as it now is that of the United States.

The banks of this State cannot now generally resume specie payments, but most of them can make satisfactory arrangements for meeting their paper received through the land offices and collectors of the revenue.

From the desire manifested by you, sir, to afford relief, I cannot but believe that the conditions contained in your letter of the 11th instant will be waived, at least for the present; to adhere to them, will afford no relief whatever.

General Harrison forwarded a copy of the arrangement of the 5th March for publication; it was published, and produced universal approbation. The community anxiously looked for its operation, and no public act ever raised the reputation of the officer who performed it higher than it did throughout this State.

The little I did towards it makes me anxious to see it in force; that it ought to be, I have no doubt.

To put down the unjust charges and the unfounded clamor against the Treasury and the United States Bank has been my aim, in connexion with an attempt to remove the difficulties complained of. The arrangement under date of the 5th ultimo strongly armed me for both purposes. I felt success certain, and do earnestly hope that it may be carried into effect.

One passage in your letter of the 11th seems to imply a want of confidence in the Farmers and Mechanics' Bank; should this be the case, any security you may require shall be given. The president of this bank is confined to his bed. I have therefore been instructed by the board of directors to address you on the subject.

I am, very respectfully, your obedient servant,

SAMUEL W. DAVIES, *Cashier.*

The Hon. WM. H. CRAWFORD.

C. No. 6.

SIR: TREASURY DEPARTMENT, *April* 30, 1819.

Your letter of the 10th instant has been received. From an attentive examination of its contents, I am induced to believe that there are but two objections to the arrangement proposed by the Farmers and Mechanics' Bank in my letter of the 6th ultimo, as explained in my letter of the 11th of the same month.

1st. That the bills of the United States Bank and of its offices, and specie received at the land office, are still to be deposited in the office at Cincinnati; and, 2d. That the bills of banks which do not pay them, on demand, in specie, are not to be received at the land office. The first of these objections I am prepared to obviate, but the second cannot be removed. The acts of Congress, and especially the resolution of the two Houses approved on the 30th April, 1816, requiring that from and after the 20th of February thereafter no "duties, taxes, or debts, or sums of money accruing or becoming payable to the United States, ought to be collected or received otherwise than in the legal currency of the United States, or Treasury notes, or notes of the United States Bank, or notes of banks which are payable and paid, on demand, in the said legal currency of the United States, forbid, too distinctly to be mistaken, the receipt of bank notes, on account of the Government, which are not paid in specie when demanded." Presuming that the latter objection will not be considered insuperable, the receiver of public moneys has been instructed to deposite in the Farmers and Mechanics' Bank of Cincinnati the whole of the public money received by him, in the several kinds in which it has been received, upon his receiving from you satisfactory evidence that the conditions which were tendered to the bank on the 6th ultimo have been complied with.

I am, &c.

W. H. CRAWFORD.

S. W. DAVIES, Esq., *Cashier Farmers and Mechanics' Bank, Cincinnati.*

C. No. 7.

SIR: FARMERS AND MECHANICS' BANK, CINCINNATI, *July* 29, 1819.

The pressure for specie has been so great for the last three or four weeks that the directors this morning resolved to discontinue the payment of specie for their notes. The causes which have produced the necessity for this measure are chiefly the following:

The high premium of eastern funds, twenty per cent. having been given for the notes of this bank for the purpose of drawing specie from it, which could be exchanged at the office of discount and deposite of the United States Bank here for their notes; (a large proportion of the specie drawn was for this use;) the industry excited in

every quarter of the country to collect the notes; and the banks in our neighborhood closing their vaults, one after another, so that it became impossible to procure specie to meet the demand. My long confinement to my room has prevented arrangements, too, which otherwise could have been made. I have not been able to go to the bank for five weeks.

It will require more time and strength than I now have to give you a detailed statement, such as you have a right to expect, and is due to myself, in relation to this business; but a moment shall not be lost in attending to it.

I have the honor to be, sir, your obedient servant,

SAMUEL W. DAVIES, *Cashier.*

Hon. W. H. CRAWFORD.

Cc. No. 1.

List of notes which will be received by the Farmers and Mechanics' Bank, and credited as cash to the Treasurer of the United States.

Miami Exporting Company,
Bank of Cincinnati,
Lebanon and Miami Banking Company,
Dayton Manufacturing Company,
Urbana Banking Company,
Bank of Chilicothe,
Franklin Bank of Columbus,
Lancaster (Ohio) Bank,
Bank of Marietta,
Belmont Bank of St. Clairsville,
Bank of Steubenville,
Farmers and Mechanics' Bank of Steubenville,
Western Reserve Bank,
Bank of Kentucky and its branches,
Farmers and Mechanics' Bank, Lexington,
Bank of Georgetown, Kentucky,
Newport Bank, Kentucky,
Office of Discount and Deposite of the Farmers and Mechanics' Bank of Indiana, Lawrenceburg, Indiana.

The bank will extend this list in proportion as it can do so with safety.

SAML. W. DAVIES, *Cashier.*

Franklin Bank of Columbus.

D. No. 1.

SIR: TREASURY DEPARTMENT, *May* 24, 1820.

Upon the representations made by Mr. Neil, the cashier of the Franklin Bank of Columbus, I submit for the consideration of the directors of that institution the annexed proposition for employing it as a depository of the public moneys.

On receiving the assent of the bank to the proposed conditions, I will instruct the receivers of public moneys at Delaware and Piqua to make their deposites in it.

1. That, in addition to specie and the bills of the Bank of the United States and its branches, the bank will receive from the receivers of public moneys, and others having moneys to deposite on account of the Treasury, the notes of such specie-paying banks as are in good credit, and whose paper is in general circulation in Ohio, (a list of which will be furnished to the Secretary of the Treasury by the bank,) and will credit the same to the Treasurer of the United States as cash. The bank may, however, discontinue to receive the notes of any of the said banks when it may deem it expedient; but, in that case, it shall give immediate notice thereof to those receivers and other public officers who usually deposite in it; and such notes as may have been received by them before the notice shall nevertheless be credited by the bank as cash.

2. That the bank shall pay, at sight, all drafts which the Treasurer of the United States may draw on it for any moneys that may be on deposite to his credit, over and above the sum of $20,000; and this sum shall remain on deposite until the expiration of six months after the termination of this arrangement.

3. The balance now due by the bank to the Treasurer shall be included in this arrangement.

4. That the bank render to the Secretary of the Treasury, and to the Treasurer of the United States, duplicate monthly returns of its account with the Treasurer. It shall also render to the Secretary of the Treasury monthly returns of the state of its affairs, which will be considered as confidential. In these latter returns must be noted the sums standing on the books of the bank to the credit of any public officer or agent. The bank shall also render to the Secretary of the Treasury, as soon as practicable, and quarterly thereafter, a list of its debtors, showing the amount due by each. This will likewise be considered as confidential, and will in no case be made public; it being intended for the use of the Secretary of the Treasury in determining on the propriety of continuing or discontinuing the arrangement with the bank.

The Secretary of the Treasury reserves to himself the right of terminating this arrangement whenever he thinks proper.

This arrangement is not to take effect unless the bank shall, on or before the 1st day of July next, have *bona fide* resumed specie payments, and it shall in no case continue after the bank shall have discontinued to discharge its notes in specie, on demand.

I have the honor to be, &c.

WM. H. CRAWFORD.

JOHN KERR, Esq., *Cashier of the Franklin Bank of Columbus, Ohio.*

D. No. 2.

Extract from the minutes of the President and Directors of the Franklin Bank of Columbus, convened the 7th of June, 1820.

Ordered, That the propositions made by the Secretary of the Treasury of the United States to the directors of this bank, bearing date of 24th May, 1820, be accepted; and that the president and cashier of the bank inform the Secretary of the same.

WM. NEIL, *Cashier Franklin Bank of Columbus.*

The Hon. WM. H. CRAWFORD,
Secretary of the Treasury of the United States.

Agreeably to the above order, I hereby inform you of the acceptance of the propositions made by you to the direction of this bank, bearing date of 24th ultimo, to employ it as a depository of public moneys from the land offices at Delaware and Piqua.

Respectfully, your obedient servant,

JOHN KERR, *President Franklin Bank of Columbus.*

Attest: WM. NEIL, *Cashier.*

D. No. 3.

SIR: TREASURY DEPARTMENT, *June* 30, 1820.

I have received the letter of yourself and the president of the Franklin Bank of Columbus, communicating the acceptance by that institution of the propositions made to it by me, under date of the 24th ult. The receivers at Piqua and Delaware have, accordingly, been instructed to deposite in that bank, monthly, or oftener if they find it convenient, the public moneys which they may receive; and it will be necessary for you to note, on the back of the monthly return of the Treasurer's account, the description of money composing each deposite. As those receivers are instructed to take, in addition to specie and the bills of the Bank of the United States and its branches, only the notes of such banks as you may designate, you will immediately furnish them with a proper list, and will, at the same time, transmit a copy of it to me.

WM. H. CRAWFORD.

W. NEIL, Esq., *Cashier Franklin Bank, Columbus.*

D. No. 4.

SIR: FRANKLIN BANK, COLUMBUS, *June* 29, 1820.

Your propositions of the 24th ultimo to the direction of this bank have been accepted, which you were advised of the 17th instant; in consequence of which the bank has this day resumed specie payments for its notes in circulation hereafter presented.

Respectfully, your obedient servant,

WM. NEIL, *Cashier.*

The Hon. W. H. CRAWFORD, *Secretary of the Treasury U. S.*

D. No. 5.

SIR: FRANKLIN BANK, COLUMBUS, *July* 19, 1820.

I received yours of the 30th ultimo, instructing me to forward to the receivers at Piqua and Delaware a list of such banks, the paper of which the direction of this bank would designate to be received in payment, in addition to specie and the bills of the Bank of the United States and its branches. Having complied, I here transmit you a copy of the same:

The incorporated banks of the cities of New York, Philadelphia, and Baltimore, (except City Bank;) the Bank of Virginia, and Farmers' Bank of Virginia, with their branches at Norfolk, Petersburg, and Fredericksburg; the State Banks of New Jersey at Newark, Trenton, and Morristown; the Bank of Delaware, at Wilmington; the Bank of Columbia, the Bank of Potomac, the Union Bank of Alexandria, and the Union Bank of Georgetown, in the District of Columbia; the Bank of Pittsburg; the Lancaster (Ohio) Bank; the Bank of Chilicothe; the Franklin Bank of Columbus; and Stephen Girard's Bank, Philadelphia.

Respectfully, your obedient servant,

WM. NEIL, *Cashier.*

The Hon. W. H. CRAWFORD, *Secretary of the Treasury U. S.*

D. No. 6.

[For the letter from the Secretary of the Treasury to the cashier of the Franklin Bank of Columbus, see A. No. 10.]

D. No. 7.

SIR: COLUMBUS, *August* 17, 1820.

Yours of the 1st instant, with instructions to the receivers of public moneys, desiring a modification of the arrangement with this bank, has been laid before its directors, who seem disposed to assent to any terms you may think proper to suggest. The directors of this institution are, however, desirous of being distinctly informed how the instructions of the 1st instant are to effect that part of our former arrangement stipulating, on our part, to cash all such bills as may be received on deposite, under the instructions of the bank to the receivers of public moneys, pointing out to them the bills of such banks as this institution will agree to be responsible for as cash.

They are also desirous of being informed whether, in addition to the banks you have named in your instructions to the receivers of public moneys of the 1st instant, they will be at liberty to extend this list, by naming other banks not included therein, such as they may deem good and solvent, whose bills they will agree to accept as cash.

A list of the incorporated banks of Boston, New York, Philadelphia, Baltimore, District of Columbia, and Richmond, you will be so good as to forward to this institution as early as convenient.

Respectfully, &c.

JOHN KERR,
President of the Franklin Bank of Columbus.

The Hon. WM. H. CRAWFORD.

Bank of Vincennes.

E. No. 1.

BANK OF VINCENNES,

SIR: THE STATE BANK OF INDIANA, *January* 9, 1819.

By order of the board of directors of this bank, I submit to you the enclosed propositions for receiving the deposites of public moneys for lands sold in this district.

Should those propositions meet your approbation, and be embraced by the principal banks in the western country, we have no doubt but it will promote the interest of the western people generally. It will enable the banks to loan to those who may be engaged in collecting and carrying the produce of the western country to the New Orleans market; it will enable the people to pay for their lands with the notes they receive for their productions; it will enable the banks that loan their money to the New Orleans traders to redeem their notes taken in the land office, by causing the amount due them by those traders to be deposited to their credit in the office of discount and deposite of the Bank of the United States at New Orleans; and the United States will have all their funds, derived from the western country, concentrated at New Orleans, from which they may be applied to any purpose of the General Government.

The present situation of the western people is distressing; they cannot get for their produce one dollar of the kind of money that will be received in payment of their debts due to the United States. It is not for want of a sufficient quantity of produce that the western people do not pay their debts, but for the want of system in bringing the products of their labor to its proper market. The banks of the United States west of the mountains issue but few notes, and those few are immediately collected by the merchants and sent to the eastward. The State banks of the western country have generally perverted the system of banking, and, instead of encouraging and fostering those who were employed in collecting and exporting the produce from which their country derives its wealth, they have built up their capital in cities and towns, from which they may, perhaps, derive the interest of their money, but cannot again withdraw their funds, at least for a long time; but if the enclosed propositions should be adopted generally, we are induced to believe that it will tend to correct this error, and enable the banks of the Western States to regain their credit.

I am, sir, very respectfully, your obedient servant,

NATHL. EWING, *President of the Bank of Vincennes.*

The Hon. Wm. H. Crawford, *Secretary of the Treasury of U. S.*

E. No. 1.—(Enclosure.)

To the honorable the Secretary of the Treasury of the United States: The memorial of the directors of the Bank of Vincennes, the State Bank of Indiana, respectfully represents:

That, inasmuch as no branch of the United States Bank has been established in this State, your memorialists conceive your honor to be left at liberty to dispose of the public funds received in this place as you may think proper; that, previous to the establishment of the United States Branch Bank at Louisville, Kentucky, this bank had been made the depository of the public moneys in this place; that it has always promptly complied with all the requisitions of the Department of the Treasury; that it has invariably redeemed all its notes with specie, when demanded, since the 20th February, 1817; that your memorialists are strongly of opinion that the citizens of this State have a right to the use of the public moneys raised within this State, when they are not wanted by the Government—an opinion in which they believe they are seconded by the unanimous voice of their fellow-citizens of this State; and that, from your letters of the 1st and 11th July, 1818, your memorialists did expect that this bank was again to enjoy the advantage of the public deposites. Why the arrangement was not entered into your memorialists are unable to determine, inasmuch as, by their answer to your letter, they informed you that they accepted the propositions therein contained.

Your memorialists would further respectfully represent that the debtors of the United States in the western country (or, in other words, the purchasers of the United States lands) labor under distressing and almost insuperable difficulties in meeting their engagements with the Government, not so much from their want of means, as from the scarcity of such funds as are receivable in payment of public lands. Should the country continue in its present situation with respect to these funds, many an honest citizen, many an industrious farmer, who has migrated to this country, and has paid his last eighty dollars as a first instalment on his quarter-section of land, will be compelled, at the end of five years, to leave his favorite spot, his cabin, and all the comfortable improvements which the labor of his own hands has acquired, and, with his wife and children, seek a new home, without money to procure it. And why? Because the produce of his farm, although he may have an abundance to spare, will not command such funds as Government demand for the completion of his payments. New Orleans is the great emporium of the western country; and your memorialists feel deeply impressed with the conviction, that if the public moneys were deposited in that place it would redound to the advantage both of the Government and of every individual of whom the community is composed, by equalizing the circulating medium of the country, and thereby enabling the public debtors to comply with their engagements.

Under these impressions, and to effect these desirable objects, your memorialists beg leave to propose that this bank be again made the depository of the moneys received in payment for public lands in the district of Vincennes, upon the following conditions, viz:

1st. The bank will be subject to drafts from the Department of the Treasury, to any amount that may be required, in favor of individuals, on sight.

2d. The bank will deposite the remainder in the United States Branch Bank at New Orleans, at the end of each year.

By this means the bank could loan to such enterprising citizens as might wish to purchase the produce of the country for exportation, and require in payment of the loan a certificate of deposite in the United States Branch Bank at New Orleans, to the credit of this bank: thus all the surplus funds of the Government might be transferred to New Orleans, in the natural course of business, where we believe they would be worth considerably more than they are in this country.

Your memorialists do not wish to have all the benefits of such a course of things confined to their own institution; they therefore further propose that the notes of all such banks as you may direct shall be receivable in payment of public lands, provided the said banks will agree to redeem the amount of their notes received in each year, by deposites in the Branch Bank of the United States in New Orleans. Should not these propositions meet your approbation, this bank still considers itself bound by the arrangement made between it and the Treasury, by your letter of the 1st and 11th of July, 1818, and our acceptance of the 6th of August of the same year.

Your memorialists conclude, by expressing their wish that you would give the subject that early and due consideration which it demands.

By order of the directors of the Bank of Vincennes, the State Bank of Indiana:

NATHANIEL EWING,
President of the State Bank of Indiana

E. No. 2.

SIR: TREASURY DEPARTMENT, *March* 12, 1819.

Being desirous of removing, as far as may be in my power, consistently with the public interests, the inconveniences to which the public debtors are subjected by the disordered state of the western currency, I have made propositions to some of the principal banks in Ohio, to the Branch Bank of Kentucky at Louisville, and to the Bank of Illinois, for an arrangement by which the paper of such banks as pay their notes in specie, on demand, and are otherwise in good credit in those districts, may be received in payment of dues to the United States.

As these terms are more favorable than those which I had before proposed to the Bank of Vincennes, and which were accepted by it, I have thought it equitable to tender them to that bank. And the receiver of public moneys at Vincennes is instructed, on receiving from you an official copy of the unconditional act of acceptance of these terms, to deposite in that bank such moneys as he may receive, from time to time, in consequence of this arrangement.

In making this proposition, it is understood that the Bank of Vincennes does now discharge its notes in specie, or will do so when this arrangement takes effect, and that the notes of any bank which does not discharge them in specie, on demand, cannot be received.

If this proposition is accepted, it will be necessary to furnish the receiver of public moneys at Vincennes with a copy of the list referred to in the first article.

I am, &c.

WM. H. CRAWFORD.

The PRESIDENT *of the Bank of Vincennes.*

[NOTE.—The proposition which accompanied this letter was the same as that made to the bank at Steubenville, (see A. No. 3,) with this difference: the sum to remain on deposite was fixed at $75,000, and the last sentence was omitted.]

E. No. 2.—[Enclosure 1.]

BANK OF VINCENNES, THE STATE BANK OF INDIANA,
Thursday, April 20, 1819.

The board met, according to adjournment: Present, Nathaniel Ewing, president; Charles Smith, Samuel T. Scott, John McGiffin, E. McNamee, W. E. Breading.

On motion,

Resolved, That this bank do accept of the deposites of the public moneys of the United States, on the conditions proposed by the Secretary of the Treasury of the United States, by his letter of the 12th March, 1819, which conditions are as follows, viz:

1. That the bank shall receive from the receivers of public moneys, and others having moneys to deposite on account of the Treasury, the paper of such banks (whose paper is in circulation in its vicinity) as pay their notes in specie, on demand, and are otherwise in good credit, (a list of which will be furnished by the bank to the Secretary of the Treasury,) and will credit the same to the Treasurer of the United States as cash. The bank may, however, discontinue to receive the paper of any of the said banks. But, in such case, it shall give immediate notice thereof to such receivers or others who usually deposite public moneys in it; and the notes of any such banks which may have been received by them before such notice shall, nevertheless, be taken and credited by the Bank of Vincennes as cash.

2. That the bank pay, at sight, all drafts which the Treasurer of the United States may draw on it; and it shall, from time to time, transfer to the Bank of the United States, or its branches at New York, Philadelphia, Baltimore, Washington, or New Orleans, in such moneys as will be received as cash, the excess of public moneys remaining on deposite in the Bank of Vincennes, over and above the sum of seventy-five thousand dollars; which sum of seventy-five thousand dollars shall remain on deposite in the Bank of Vincennes during the continuance of this arrangement, and shall be transferred, in like manner, within six months after the said bank shall cease to be employed to receive the public moneys. It is agreed, however, that if the amount received by the bank shall be so large as that the expense of the remittance shall exceed the benefit of the deposite, the sum which is to remain on deposite in the bank may be proportionably increased.

3. That the bank shall render to the Secretary of the Treasury, and to the Treasurer of the United States, duplicate monthly returns of its account with the Treasurer, and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; which latter returns shall be considered confidential.

In these latter returns must be noted the sums standing on the books of the bank to the credit of any public officer or agent. The bank shall also render to the Secretary of the Treasury, as soon as practicable, a list of its debtors, showing the amount due by each, and shall render a similar list quarter-yearly. This list will likewise be considered confidential, and will in no case be made public; it being intended for the use of the Secretary of the Treasury in determining on the propriety of continuing the arrangement with the bank.

It is understood that, if the money deposited in the bank to the credit of the Treasurer can be disbursed at the bank, the drafts of the Treasurer shall be paid at sight, notwithstanding such payments may reduce the deposite below the sum of seventy-five thousand dollars.

The board adjourned until three o'clock, P. M. on Thursday next.

A true extract from the minutes of the board of directors of this bank:

E. BOUDINOT, *Cashier.*

E. No. 2.—[Enclosure 2.]

STATE BANK OF INDIANA, *Thursday, April* 22, 1819.

The board met, according to adjournment: Present, Nathaniel Ewing, president; Charles Smith, G. R. C. Sullivan, W. E. Breading, John McGiffin, George Ewing, Samuel T. Scott.

On motion,

Resolved, That the Bank of Vincennes, the State Bank of Indiana, receive on deposite from the United States the following bank notes, viz:

Bank of Vincennes, and branch at Vevay; Bank of Missouri at St. Louis; Bank of Illinois at Shawneetown; Bank of Kentucky at Frankfort, and its branches at Louisville, Shelbyville, and Lexington; Commercial Bank of Louisville; Farmers and Mechanics' Bank at Lexington; Banks of the District of Columbia; Banks of the cities of New York, Philadelphia, and Baltimore; State Bank of Virginia and its branches; Farmers' Bank of Virginia at Richmond, and its branches; State Banks of North and South Carolina and branches; State Banks of Georgia; banks of the city of New Orleans; Bank of Natchez; Bank of the United States and branches.

On motion,

Resolved, That the cashier furnish the Secretary of the Treasury of the United States with a copy of the proceedings of the meeting of this board on the 20th instant, and also of this meeting.

The board adjourned.

A true extract from the minutes of the board of directors of this bank:

E. BOUDINOT, *Cashier.*

E. No. 2. [Enclosure 3.]

BANK OF VINCENNES,

THE STATE BANK OF INDIANA, *Thursday*, *April* 29, 1819.

The board met: Present, Nathaniel Ewing, president; Charles Smith, W. E. Breading, G. R. C. Sullivan, John McGiffin.

On motion,

Resolved, That the board reconsider the resolution entered into on Thursday last, on the subject of the notes receivable for public lands.

On motion,

Resolved, That all the branches of the State Bank of Kentucky, not heretofore ordered to be received, be added to the list of notes receivable in deposite for the United States, for public lands and other debts due the United States.

A true extract from the minutes of the board of directors of this institution:

E. BOUDINOT, *Cashier.*

E. No. 3.

SIR: BANK OF VINCENNES, THE STATE BANK OF INDIANA, *May* 6, 1819.

I have the honor of enclosing you the acceptance of this bank of the deposites of the public moneys of the United States, agreeably to conditions proposed by you, enclosed in your letter of the 12th of March, 1819; also, a list of the notes which the bank has agreed to receive on deposite. It is intended to extend the receipts to all banks whose notes are circulating in this State, which pay specie, and are in good credit, provided they will enter into arrangements to enable this bank to comply with its engagement with the Treasury Department, so far as it may depend, respectively, on them. This, it is hoped, they will do. A list of the debtors to this bank will be made out and forwarded shortly.

I am, sir, respectfully, your obedient servant,

NATHL. EWING, *President.*

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury U. S.*

E. No. 4.

SIR: TREASURY DEPARTMENT, *July* 7, 1820.

On the 12th of March, 1819, a proposition was made by this Department to, and accepted by, the Bank of Vincennes, by which, among other things, the bank engaged to transfer, from time to time, to the Bank of the United States, or its branches at New York, Baltimore, Washington, or New Orleans, in such moneys as would be received as cash, the excess of public money remaining on deposite after such drafts were paid, as should be drawn upon it over and above the sum of seventy-five thousand dollars.

This engagement did not require any previous notice from this Department of the sum, the time, or the place to which the transfer was to be made. The bank always knew when the obligation to transfer was incurred, and had the option of the place, and the mode to and by which it was to be effected.

As it had, however, neglected to make any transfer, sixty days notice was given previous to the issue of the following drafts upon it, viz:

1st. October 19, 1819, for $40,000.
2d. November 18, 1819, for $20,000.
3d. December 28, 1819, for $55,000.

The former sum was paid after much delay, and the remainder are yet unsatisfied.

On the 10th of March, 1820, another draft was drawn for $50,000; and this sum also remains unpaid.

It is proper to observe, that all transactions with banks are, on their part, required to be conducted with the strictest punctuality; it is no less indispensable in all Treasury transactions. In the cases which I have enumerated, there has been a total disregard of that punctuality which the bank would doubtless exact of others under similar circumstances.

From a deliberate view of the whole subject, I should not only be justified in declaring that the connexion between the Treasury and the bank no longer exists, but in proceeding with the utmost rigor in relation to the sums which have been withheld by it. From a desire, however, to avoid every thing of an unpleasant nature in my intercourse with the bank, I propose, as the condition upon which the connexion shall continue, that the whole amount of the public money now in the hands of the bank, above the deposite stipulated in the arrangement, shall, within forty days from this date, be deposited in the Bank of the United States, or one of its branches, and the certificate of deposite forwarded to this office; and that, whenever the public money in the possession of the bank shall exceed the permanent deposite by ten thousand dollars, it shall be promptly deposited in like manner to the credit of the Treasurer, who, in all such cases, will forward a draft upon the Bank of Vincennes for the amount so transferred.

If this condition is not strictly complied with, you will consider the arrangement between the bank and the Treasury terminated, and proceed to the fulfilment of the last condition of that arrangement, viz: the repayment of the permanent deposite stipulated by the arrangement.

In the mean time the receiver of public moneys will be instructed to decline the receipt of the bills of the Bank of Vincennes, and to discontinue his deposites in that institution, until the preliminary condition here presented shall be complied with. He will also be instructed to renew the receipt of those notes, and to recommence his deposites, whenever satisfactory evidence of that fact shall be offered.

I am, &c.

WILLIAM H. CRAWFORD.

The CASHIER *of the Bank of Vincennes.*

E. No. 5.

SIR: BANK OF VINCENNES, *April* 5, 1821.

In consequence of some difficulties under which the operations of the Bank of Vincennes labor, and their relations as debtor to the Government of the United States in an amount of some magnitude, I do myself the honor of respectfully addressing you on the subject.

The causes of our suspending specie payments, and consequent difficulties, a loss of credit, are such as have affected us in common with nearly the whole of the western banks. The sudden and almost extinction of trade; the depression of the whole agricultural interest; the too general and extensive loans, predicated on a continuance of days of prosperity, are the germ out of which has grown the present situation of our affairs.

After having examined into the debits and credits of the bank, and the security of loans, there is no doubt of its solvency; its losses are but nominal, and few likely to occur: but to call in debts generally now, would be extremely ruinous in its consequences to a large portion of the people; it must be a gradual work, and a steady perseverance will accomplish it.

Endeavors were made to meet your drafts, without effect. A part had been sent on to the United States Branch Bank at Louisville, and placed to our credit for that purpose; but, as it was not the whole, it was not accepted. Since I was called to the presidency of this bank, which was in the early part of last month, I directed the cashier to draw on that bank for a part; but Mr. Cochran, its cashier, thought proper to dishonor our bills, by saying "*the Bank of Vincennes had no funds there*;" and yet, in the account current with this bank, acknowledges a balance of upwards of $50,000 to our credit. Why he should thus act is inexplicable to us, as we have never had any communication on the subject. If it has been in consequence of any directions from the Treasury we cannot complain, since we are its debtor; but, sir, if this be the case, we would beg for a little forbearance in our low condition, and ask for your interference in restoring it again to us. This would revive our languishing institution; specie payments would be resumed; confidence restored; our debts more easily and successfully collected; and we more speedily enabled to liquidate the claims of the United States.

Your friendly dispositions towards the West in times peculiarly difficult, and the interest you have evinced for the welfare of this remote section of our common country, lead to a hope that the hand which has hitherto befriended us will not be withdrawn.

Respectfully, yours, &c.

DAVID BROWN, *President of the Bank of Vincennes.*

The Hon. W. H. CRAWFORD, *Secretary of the Treasury U. S.*

E. No. 6.

SIR: TREASURY DEPARTMENT, *May* 4, 1821.

Your letter of the 5th ultimo has been received by due course of mail. In replying to the several suggestions presented in that letter, it may be proper to recall your attention to the time and circumstances attending the connexion between the Treasury and the Bank of Vincennes.

The first deposite made in the bank was in the month of April, 1819, and the last in June, 1820. During that period $295,325 77 were deposited, and $77,062 87 paid by the bank; leaving in its hands $218,262 90, which was more than $140,000 beyond the sum that, according to the arrangement made with the bank, ought to have remained in its possession. Time was given for the execution of the engagements of the bank, and forbearance was carried to an extremity before the final resolution was taken to terminate the connexion with the bank, unless, within a given period, those engagements were fulfilled. The result proved the necessity of that resolution. Instead of meeting, after such a delay, and within the time limited, the requisition of the Department, which ought to have been complied with more than six months before, and without requisition, this measure, founded in indispensable duty to the nation, was made the pretext for not performing what ought to have been done long before. Not satisfied with this breach of its engagement, the bank, with more than $218,000 of the public money in its possession, caused a draft of the Treasurer for the paltry sum of $300 to be protested, and thrown back upon that officer dishonored, as far as the acts of an institution which had dishonored itself could stamp dishonor on such an instrument. According to the arrangement made with the bank, not only the amount in its possession above the permanent deposite, but that deposite, was to be repaid within six months after the termination of the arrangement by either party. That time had expired before the date of your letter of the 5th ultimo. Not only has no communication been made by the bank advising of the time and place when the sum now in the hands of the bank will be discharged, or explaining the reasons why this is impracticable, and offering some other mode of payment which shall, in substance, indemnify the Treasury for the breach of that engagement, but the Treasury is now informed that partial payments made upon drafts issued by the Treasurer upon the bank have been attempted to be withdrawn from the object for which they were made. Before the receipt of your letter of the 5th ultimo, information was received from the branch of the United States Bank at Louisville, and at this place, of the sums deposited by the Bank of Vincennes in those offices, and its attempt to withdraw them; and instructions from this Department were requested for the government of their conduct. The instructions have been given, and confirm the decision which had been made by them, respectively, of which you complain.

To comply with the request of the bank, and restore these sums, (which never, in fact, belonged to the bank,) would be a dereliction of duty for which I should not fail to be called to a severe account. I acknowledge that the request has occasioned rather more surprise than all the acts of omission and commission of the bank against its solemn and precise engagements from the commencement of the arrangement to the present time. Notwithstanding this surprise, I am gratified with the communication, because it furnishes some ground to expect that the money now in the hands of the bank will be repaid, and because it breaks that silence which, from the termination of the arrangement, prevailed on the part of its directors, that seemed to be the result of a systematic determination to elude that payment. I was, however, unwilling to adopt such an opinion, believing it highly improbable that gentlemen, who had sufficient claim to the confidence of their fellow-citizens to be placed in so responsible a situation, should so far lose sight of the principles of rectitude and of self-respect as to meditate a fraud of so gross a character as that of appropriating to their own use, or that of the corporation, a sum of money so sacredly confided to their care. Under this impression, I have not taken any measure to coerce the repayment of the sum now in the hands of the bank. Considering this letter as the confirmation of this favorable opinion, I have the honor to invite your attention to the terms of the engagement made by the bank, and to request an early communication of the views of the directors of the time and manner in which it will be practicable for it to comply with that engagement. The subject is one of great urgency and of some delicacy. The state of the public treasury strongly admonishes me of the necessity of rendering available every dollar which has been collected from the people, especially as the imposition of additional taxes may be the result of any failure in the accomplishment of this object.

I forbear any comment upon the transactions of the bank which may have contributed to produce the events which have been reviewed in this letter. They are past, and cannot be recalled. The object which I hope will now command the attention of its directors is, the repayment of the sum confided to their safe keeping, with the least possible delay. This repayment is no less essential to the character of the bank than to the interest of the public treasury.

I remain, &c.

WILLIAM H. CRAWFORD.

DAVID BROWN, Esq., *President of the Bank of Vincennes, Indiana.*

E. No. 7.

SIR: VINCENNES, *May* 22, 1821.

Your communication of the 4th instant was received this day, and will be laid before the directors at their meeting on the 24th.

I stated to you, in my communication of the 5th April, that we might probably retrieve the character of the bank. Further investigations, however, have given me such views of the situation of affairs as to convince me of the fallacy of all hopes of placing the institution on a respectable footing again. I therefore advertised, the 12th instant, a general meeting of the stockholders, to take place the 13th June ensuing, to investigate the situation of the bank, and to take into consideration the expediency of winding up its business.

In relation to the pension business, I feel it my duty to state that no funds for the payment of pensioners have ever come into my hands. How your appropriations have been disposed of, I am unable to say.

It was an unfortunate day which brought me to preside over an already, ruined institution. My character, to me, is more than all the world besides; and I have to regret the possibility of my reputation suffering for the sins of others. The evils which have been done were before the 7th of March last, (the period of my appointment.)

Very respectfully, yours, &c.

DAVID BROWN.

The Hon. WILLIAM H. CRAWFORD.

Farmers and Mechanics' Bank of Indiana.

F. No. 1.

SIR: MADISON, *June* 14, 1820.

The Representatives in Congress from this State have informed the officers of this institution that your Department was disposed to accommodate it with a deposite of the public money received at the Brookville land office, provided the bank could show a state of solvency sufficient to justify such a measure. The enclosed papers will show the state of its affairs at this time, and also the amount of its discounts, notes in circulation, and specie on hand, on the 16th day of November, 1818, after the suspension of specie payments in Ohio, and the temporary suspension in Kentucky—a circumstance which caused an excessive drawing of specie from the bank.

To show the views and policy of the institution, a copy of a resolution passed by the board of directors at that time is also annexed, and which has been strictly adhered to. This bank continued the payment of specie until its notes, with all western paper, were refused in payment of land; which circumstance caused a general depreciation of all western paper, whether it was redeemed in specie or not, and caused a double pressure on the bank. Under these circumstances it suspended payment, but continued, generally, to redeem its notes either in specie or such paper as would pay for land, when presented by those who had payments due within this district; and since January last its notes have been regularly redeemed, one-fourth in specie, and the balance in such paper as, by the custom of merchants, is called current paper of the country.

The funds of the bank, at this moment, are in such a situation that a specie payment might be resumed without risk or hazard; but, unless its notes were at the same time taken in payment for land within the State, that course would only be a means of entire accommodation to the brokers, and of no benefit to the honest laborer; for the expense of travelling to the bank to have a few dollars exchanged would be a very heavy discount on the paper, and, of course, would be sold at a discount, and the profit made by those who follow that business.

This bank does not ask the aid of the Treasury to help it to pay its debts, (as has too often been the case,) but is perfectly able to pay its own contracts; the only object is, that it may be enabled to support a sound currency, without running into that fictitious and forced course of trade that has been the cause of the distresses of the West. A large standing deposite is not wanted; they would not ask a deposite above the capital paid in.

The accounts above spoken of relate entirely to the standing of this bank, unconnected with its office of discount and deposite at Lawrenceburg. However, to show more clearly the standing of the institution in all its concerns, is enclosed a separate statement of the affairs of that office. It is not expected that that office could at this time commence and sustain a specie payment on its own funds, but, by a moderate collection of debts, in a short time could.

The statements and accounts are all substantially correct; and as the test by which the solvency of any institution must be tried is the character of its debts due, I would merely observe that they are generally well secured, as well here as at the office of discount and deposite; and there cannot be a doubt but it could close its business and pay to the stockholders the par value of their stock.

Will you, sir, do us the favor to answer this communication?

By order of the president and directors.

Very respectfully, your obedient servant,

JOHN SERING, *Cashier.*

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

F. No. 2.

SIR: TREASURY DEPARTMENT, *July* 7, 1820.

From representations made to this Department by the Senators and Representatives of the State of Indiana, stating the solvency and discreet management of the Farmers and Mechanics' Bank of Indiana, at Madison, and that it was desirous of becoming the depository of a part of the public money collected in that State, I have been induced to submit the enclosed agreement to its consideration.

If it should be accepted without modification, the receiver at Brookville, upon receiving evidence of such acceptance, will deposite the public money received by him in the bank, at the end of each month.

Any reasonable modification of the arrangement, however, not affecting the leading objects of the Department, will not be refused, upon the suggestions of the bank.

I am, &c.

WILLIAM H. CRAWFORD.

The PRESIDENT *of the Farmers and Mechanics' Bank of Indiana, at Madison.*

Conditions upon which the Secretary of the Treasury will employ the Farmers and Mechanics' Bank of Indiana, at Madison, as a depository of public moneys.

1. That, in addition to specie and the bills of the Bank of the United States and its branches, the bank will receive from the receivers of public money the notes of such specie-paying banks as are in good credit, and whose notes are in general circulation in Indiana and the neighboring parts of Ohio, (a list of which must be furnished to the Secretary of the Treasury by the bank,) and will credit the same to the Treasurer of the United States as cash. The bank may, however, discontinue to receive the notes of any of the banks included in such list; but, in that case, it shall give immediate notice thereof to those receivers who usually deposite in it; and such notes as may have been taken by them before the notice shall nevertheless be credited by the bank as cash.

2. That, in consideration of the responsibility to which the bank may be subjected in transferring the public moneys received by it, in manner hereinafter prescribed, it shall be entitled to retain the sum of $40,000 as a permanent deposite, during the continuance of this arrangement.

3. That, whenever the public moneys in the possession of the bank shall exceed, by $10,000, the amount of the said permanent deposite, the bank shall promptly transfer and pay such excess to the Bank of the United States, or one of its branches, to the credit of the Treasurer of the United States, giving immediate notice thereof to the Secretary of the Treasury. And it shall also transfer, in like manner, within six months after the termination of this arrangement, the before-mentioned deposite of $40,000.

4. That the bank shall render to the Secretary of the Treasury, and to the Treasurer of the United States, monthly returns of its account with the Treasurer; and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs, which will be considered as confidential. In these latter returns must be noted the sums standing to the credit of any public officer or agent on the books of the bank. The bank shall also render to the Secretary of the Treasury, as soon as practicable, and quarterly thereafter, a list of its debtors, showing the amount due by each. This list will likewise be considered as confidential, and will in no case be made public; it being intended for the use of the Secretary of the Treasury in determining on the propriety of continuing or discontinuing the arrangement with the bank.

5. The Secretary of the Treasury reserves to himself the right of terminating this arrangement whenever he may deem it proper; but it shall also terminate whenever the bank shall discontinue to pay specie for its notes on demand.

F. No. 3.

SIR: TREASURY DEPARTMENT, *July* 12, 1820.

Before the receipt of your letter of the 14th ultimo, I had addressed to you a proposition for making the Farmers and Mechanics' Bank of Indiana, at Madison, a depository of the public moneys received at Brookville. I was not then aware that the bank had not returned to specie payments; but, as I learn from you that the fact is so, it becomes necessary for me to state, explicitly, that the proposed arrangement cannot take effect unless the bank shall previously and *bona fide* have resumed the payment of its notes, on demand, in specie. From the statement which you have given of the affairs of the bank, it is evident that the utmost prudence and good management on the part of the directors will be necessary to enable it to continue specie payments after it shall have recommenced them; and, without doubting the discreetness of their intentions, I suggest this caution, that they may not be led into an erroneous policy by the hope of the aid to be derived from the public deposites. To be entitled to the confidence of the Treasury, a bank should look only to its own intrinsic resources for the means of sustaining its engagements.

I am, &c.

W. H. CRAWFORD.

JOHN SERING, Esq., *Cashier of the Farmers and Mechanics' Bank of Indiana.*

F. No. 4.

FARMERS AND MECHANICS' BANK OF INDIANA,

SIR: MADISON, *August* 2, 1820.

I have the honor to acknowledge the receipt of your favor of the 7th July, enclosing propositions from the Treasury for the receipt of the public deposites. Your letter of the 12th July, acknowledging the receipt of mine of the 14th June, has also been received. The president of the bank is at this time absent. I would, however, state that this bank never had the most distant idea of a public deposite, or for its notes to be taken in payment for land, upon any other condition than that of a general and unreserved specie payment.

It was not believed, at the time of the suspension, in the fall of 1818, that so long a time would have elapsed without a resumption; but, finding the embarrassment of the old institutions so great, and that a general resumption could not be expected from them, this bank determined, in January last, to resume gradually, by first paying a certain proportion of specie, and, by a gradual increase, bring the notes to specie value, without the excessive running that would be the consequence of an entire resumption at once. This was the course marked out, and one that would have been pursued had no propositions been made by the Treasury; but a full and entire resumption will be made before the bank will consider itself entitled to a deposite of the public money, or the notes taken in payment for land. It is well understood that the greatest caution and prudent management is necessary in returning to specie payments, in such an embarrassed situation of things.

As soon as the president returns, the propositions will be laid before the board. I would only add, that the bank does not expect the aid of the public money to enable it to fulfil its engagements.

I am, very respectfully, sir, your obedient servant,

JOHN SERING, *Cashier.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

F. No. 5.

[For the letter from the Secretary of the Treasury to the president of the Farmers and Mechanics' Bank of Indiana, dated August 1, 1820, see A. No. 10.]

F. No. 6.

FARMERS AND MECHANICS' BANK OF INDIANA,

SIR: MADISON, *August* 24, 1820.

Your letter of the 1st instant has been received; and I am instructed to state that the bank will agree to the request of the Treasury in receiving the notes of the banks named therein. This is agreed to, under the impression that the Treasury Department is satisfied as to the solvency of those institutions.

I am, very respectfully, &c.

JOHN SERING, *Cashier.*

The Hon. WM. H. CRAWFORD.

Bank of Edwardsville.

G. No. 1.

SIR: TREASURY DEPARTMENT, *December* 21, 1818.

From the favorable representations that have been made to me of the character of the Bank of Edwardsville, I am willing that the public moneys may be deposited therein, on the usual conditions. These are:

1st. That the public moneys shall be entered to the credit of the Treasurer as cash.

2d. That all drafts which that officer may draw on the bank, in favor of individuals, shall be paid at sight.

3d. That the bank shall have sixty days notice of drafts drawn out for transferring the public moneys to the Bank of the United States; these transfers, however, to be gradual, and not *en masse*.

4th. That the bank shall render to the Secretary of the Treasury, and to the Treasurer, duplicate monthly returns of its account with the Treasurer.

5th. That the bank shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; these returns to be considered as confidential. In these latter returns are also to be noted any sums standing in the bank to the credit of any public officer or agent of the United States.

On communicating to me the assent of the Bank of Edwardsville to these conditions, that bank will be authorized to receive the public deposites. But, in order that the arrangement may go into effect without the delay which must arise from waiting for my reply, I have instructed the receivers of public moneys at Kaskaskia and Edwardsville to make their deposites in that bank, upon their receiving from you an official copy of its acceptance of my proposition. When you transmit the answer of the bank, you will also inform me of the names of its officers.

I am, &c.

WM. H. CRAWFORD.

To the PRESIDENT *of the Bank of Edwardsville, Illinois.*

[A similar letter, in relation to the deposites of the receiver of public moneys at Shawneetown, was addressed to the president of the Bank of Illinois, at Shawneetown.]

G. No. 2.

SIR: BANK OF EDWARDSVILLE, *February* 1, 1819.

Your letter of the 21st December, 1818, proposing to make the Bank of Edwardsville an office of deposite for public moneys, &c., has been received, and its contents laid before the directory of this bank for their consideration and assent; and I am authorized and instructed to communicate to the Secretary of the Treasury the cheerful and unconditional assent and acceptance of the terms and conditions contained in the propositions communicated in your letter to which I have above referred.

And I have the honor to transmit the names of the officers of the Bank of Edwardsville, as requested in the last paragraph of your communication aforesaid:

Benjamin Stephenson, president; Ninian Edwards, Robert Latham, Theophilus W. Smith, Abraham Prickett, William Kenney, Joseph Bowers, Joseph Conway, and Robert Pogue, directors; Benjamin J. Seward, cashier.

I have the honor to be, sir, your obedient and very humble servant,

BENJAMIN STEPHENSON, *President.*

G. No. 3.

SIR: BANK OF EDWARDSVILLE, ILLINOIS, *April* 18, 1820.

The directors of this institution have directed me to address you relative to the practical effects which have arisen, and continue to arise, from the mode adopted for the transferring of the public debt due by this bank to the Treasury of the United States, with the hope that a change, which I have the honor to suggest, deemed alike beneficial to the Government and the bank, may be acceded to. It is presumed that, under the existing arrangement, it was never the intention of the Treasury Department that this bank should become the guarantee of such banks whose paper is received by the receivers of public moneys in payment for lands, and deposited to the credit of the United States in the bank; nor that it is to be inferred from the terms of the agreement, because it would be repugnant to every principle of equity to suppose that a description of funds in the designation of which this bank has no control, (the public officer receiving it on the account of the Government,) should, by the mere act of deposite in the bank, be converted into specie, or its equivalent; nor that the institution could, from becoming the mere depository of the Government funds, and for a very limited period, have consented to such a construction, without having received a satisfactory equivalent for so great a hazard and responsibility, which it cannot be urged has ever been received. Believing, then, that all that was ever intended by the existing arrangement between the bank and the Treasury Department was, that the bank should be bound to pay the drafts of the Treasurer on it in such description of funds as were actually received, the Secretary may judge that this institution has viewed with much surprise the illiberal and unjust requisition which the branch of the United States Bank at Louisville has imposed on this bank, in the payment of the drafts heretofore drawn by the Treasurer in favor of the Bank of the United

States; a requisition which the directors of this institution have acquiesced in, from a disposition to avoid all collision with that bank or its branches, and a sincere desire to show every disposition to meet promptly the drafts of the Treasurer in the most valuable funds in its possession. They have, in accordance with these feelings, paid in eastern funds, which were at the time of payment at an advance of four per cent., $11,000; and in gold and silver, $34,000; and they are now again apprized by the branch at Louisville that a draft of the Treasurer on the bank for $20,000 has been transmitted by the parent bank for collection, although the directors are uninformed by the Treasurer of its being drawn, of which they are by the arrangement entitled to sixty days; and that it will be required to be paid in the notes of the banks, a list of which is subjoined, or that the specie will be required. The directors of this bank, confidently believing that it never could be the wish of the Secretary of the Treasury that the branch shall arrogate the power to require the fulfilment of conditions believed not to have been intended or pledged; and that it is merely an avaricious claim on the part of the branch to require such description of funds as she may gain a considerable per cent. on by the sale of; and that it is an advantage neither claimed by, nor resulting to, the Treasury; and, furthermore, that it cannot be the policy of the Treasury Department to permit such a course to be pursued as shall yield to the United States Bank so great an advantage from the mere possession of the public deposites, and at so great an injury to other institutions, do respectfully propose that the president of this bank shall be authorized to instruct the receivers of Kaskaskia and Edwardsville what notes of banks shall be by them received in payment of public lands, on account of the United States; and that this bank shall then be accountable for them without reservation; and that, as a compensation for this risk, the bank shall be entitled to a permanent deposite, out of the Government funds, to the amount of fifty thousand dollars over and beyond the other deposites of the Government, which shall at no time be withdrawn while the bank shall comply in good faith with the terms of this arrangement. If this should be deemed objectionable, it is the desire of the directors that, in the future drafts of the Treasurer, the Bank of the United States should be instructed that payment can only be required in the description of notes actually received by the bank on deposites from the receivers, on account of the Treasurer. This course, it is hoped, will be perceived to be essentially necessary, when it is stated that, of the funds required by the branch of the United States Bank at Louisville, there has never been at any time $8,000 in the possession of this bank; and that it is not to be had in the country; and that for it to be expected that this institution shall pay in specie all the deposites standing to the credit of the Treasurer is physically impracticable. The specie resources of the institution, collected at great expense to the stockholders, have heretofore, in the mode pointed out, been much exhausted; and now that, at the same trouble and expense, they are replenished, and when it is so desirable an object, not only to the country, but understood to be a favorite policy of the Department, that specie payments shall continue, it is strongly to be hoped that the Secretary will not permit, through the medium of others, the practical effects of an arrangement to defeat the equitable and just intentions thereof, nor sanction a policy at once detrimental to this institution and this section of the country, and of no possible benefit to the Government; and they cannot but believe that additional force will be given to the application, when it is considered that the funds thus transmitted arise from the citizens of this section of the country, who might, perhaps, with justice, ask an application of a large portion within their limits of the Government appropriations, but on which they do not pass a decided opinion.

I have the honor to be, very respectfully, your obedient, humble servant,

BEN. STEPHENSON, *President.*

Hon. WILLIAM H. CRAWFORD.

Notes of banks which only will be received by the United States Branch Bank at Louisville.

Bank of the United States and its branches,	Banks in Philadelphia,
Banks in Savannah and Augusta, Georgia,	Banks in New York,
Banks in Charleston, South Carolina,	Banks in Boston,
Banks in Richmond, Virginia,	Banks in Salem, Massachusetts.
Banks in Baltimore, (except City Bank,)	

G. No. 4.

SIR: TREASURY DEPARTMENT, *August* 1, 1820.

Enclosed I transmit, for the approval of the Bank of Edwardsville, the conditions of a new arrangement for regulating the connexion between that institution and this Department. These terms are in conformity with a general system which has just been adopted in relation to all the State banks which are employed as depositories of the public moneys in the Western States; and, as they are more favorable to the Bank of Edwardsville than those heretofore adopted, I presume they will receive its ready assent. It will be necessary, however, for you to communicate to me, as early as practicable, the decision of the bank upon the subject.

I also transmit a copy of the instructions which have been given to the receivers of public money.

The sum now in the Bank of Edwardsville will be considered as included in the new arrangement; but, as it might be inconvenient to the bank to make an immediate transfer of the excess beyond the amount of the permanent deposite, I am willing to allow three months for that purpose.

I am, &c.

WM. H. CRAWFORD.

BENJ. STEPHENSON, Esq., *President of the Bank of Edwardsville.*

Conditions upon which the Secretary of the Treasury will continue to employ the Bank of Edwardsville as a depository of public moneys.

1st. That, in addition to specie and bills of the Bank of the United States and its branches, the bank will take from the receivers of public money, and place to the credit of the Treasurer of the United States, as cash, the notes of the following incorporated banks, viz: Those in the cities of Boston, New York, Philadelphia, Baltimore, and Richmond, and in the District of Columbia, (except the City Bank of Baltimore, and the Merchants' and Franklin Banks of Alexandria,) and those specie-paying banks in the State in which the bank is situated.

2d. That, in consideration of the responsibility to which the bank may be subjected in transferring the public moneys received by it, in the manner hereinafter prescribed, it shall be entitled to retain the sum of forty thousand dollars, as a permament deposite, during the continuance of this arrangement.

3d. That the bank shall pay, at sight, all drafts which the Treasurer of the United States may draw on it, although the permanent deposite may thereby be occasionally reduced below the sum herein proposed; it being

the intention of the Secretary of the Treasury that the public moneys deposited in the Bank of Edwardsville shall, as far as practicable, be disbursed there.

4th. That, whenever the public moneys on deposite in the bank shall exceed, by ten thousand dollars, the amount of the permanent deposite, the bank shall promptly transfer and pay such excess to the office of discount and deposite of the Bank of the United States at Louisville, giving immediate notice thereof to the Secretary of the Treasury; and it shall also transfer, in like manner, within six months after the termination of this arrangement, the before-mentioned deposite of forty thousand dollars.

5th. That the bank shall render to the Secretary of the Treasury, and to the Treasurer of the United States, monthly returns of its account with the Treasurer; and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs, which will be considered as confidential. In these latter returns must be noted the sums standing on the books of the bank to the credit of any public officer or agent. The bank shall also render to the Secretary of the Treasury a quarterly list of its debtors, showing the amount due by each. This will likewise be considered as confidential, and will in no case be made public; it being intended solely for the use of the Secretary of the Treasury in determining on the propriety of continuing or discontinuing the arrangement with the bank.

6th. The Secretary of the Treasury reserves to himself the right of terminating this arrangement whenever he may deem it proper; but it shall also terminate whenever the bank shall discontinue to pay its notes in specie on demand.

WM. H. CRAWFORD.

SIR: TREASURY DEPARTMENT, *August* 1, 1820.

With a view to increase and to equalize the facilities of making payments for public lands in the several land districts of the United States, I have determined to authorize the receivers of public moneys to take, in addition to specie and bills of the Bank of the United States and its branches, the notes of the following incorporated banks, viz:

Those in the cities of Boston, New York, Philadelphia, Baltimore, and Richmond, and in the District of Columbia, (except the City Bank of Baltimore, and the Merchants' and Franklin Banks of Alexandria,) and those specie-paying banks in the State in which the land office is situated.

This instruction supersedes those that have heretofore been given on the subject, except in so far as they prohibit the receipt of the paper of any bank which does not discharge its notes, on demand, in specie; and that prohibition must, in every case, be rigidly adhered to.

In order to facilitate the collection of the notes of the banks in your State which may be received by you, you will, on making a deposite, give notice to each of those banks of the amount of its notes contained in such deposite; and, if you shall be informed by the cashier of the bank in which you make your deposites that the notes of any bank in your State, which may have been deposited by you, have not been paid on demand, you will discontinue to receive the notes of such bank. It may be proper for you to take the first occasion to intimate, in respectful terms, to each of those banks, the consequence that will result from a want of punctuality in paying its notes on presentation.

For the information of the purchasers of public lands, you will publish, in one of the newspapers in your district, a list of the kinds of money receivable at your office; and you will give notice, in like manner, of any change which may occasionally take place.

I am, sir, your obedient servant,

WM. H. CRAWFORD.

To ——— ———, *Receiver of Public Moneys at* ———.

G. No. 5.

SIR: BANK OF EDWARDSVILLE, *September* 12, 1820.

Your communication of the 1st of August last has been received, and laid before the board of directors of this institution; and I am instructed to communicate, for your information, their cheerful assent to the propositions of the same date, received therewith, connected with the condition contained in your letter.

I have also to assure you that the excess of Government funds, which may have been or shall be received from the receivers of public moneys, beyond the amount of the permanent deposite stipulated in the new arrangement, will be promptly deposited in the office of discount and deposite of the Bank of the United States at Louisville, at the period specified, and agreeably to the terms of the arrangement.

I have the honor to be, very respectfully, your obedient servant,

BEN. STEPHENSON, *President.*

The Hon. the SECRETARY OF THE TREASURY.

G. No. 6.

SIR: BANK OF EDWARDSVILLE, *November* 21, 1820.

With a view of anticipating the period of making the deposite at the Branch Bank of the United States at Louisville, under the late arrangement between this bank and the Treasury Department, a confidential agent was despatched to Kentucky, in the latter part of September last, with authority to purchase with the funds confided to him such description of eastern funds as would be received by that branch on account of the Government, in payment of the deposite. Application was made at that branch, as well as the one at Lexington, for drafts, or paper of the banks of the Atlantic cities; but the reply at both offices was, that they were instructed, or rather inhibited from drawing, by the parent bank, and that they had no description of funds to dispose of. Similar applications for eastern funds were successively made at the Bank of Kentucky at Frankfort, and their branches at Lexington and Louisville, with no better success. Attempts were then made to obtain them of individuals; but the agent still could not succeed, there being no sum of any moment at either place. As a last resort, he proceeded to the bank at Shawneetown, where he only obtained a sum under a thousand dollars. The reasons for wishing to obtain those funds will be apparent, when it is stated that a very large proportion of the funds of this institution are in specie; and that the expenses and hazard of its transportation would be avoided, in case of obtaining the funds desired; as, otherwise, a considerable proportion would be required to be applied to the payment of the deposite. The period for making the deposite is about the 12th of December next. Every exertion will be made to comply with punctuality; but it is feared, from the interruption of the navigation from the low state of the waters on the Ohio, and the uncertain communication between St. Louis and Louisville by water, that some delay may unavoidably occur. It would be extremely dangerous, and almost impracticable, to transport specie at this season

of the year across the country of the Illinois; the road to Vincennes being extremely bad after leaving the Kaskaskia, and from thence to Vincennes mostly a wilderness, and infested with men of desperate fortunes and habits. The first safe opportunity by water will be embraced, and an agent despatched with it accordingly.

I am, sir, your most obedient servant,

BEN. STEPHENSON, *President.*

Hon. Wm. H. Crawford.

G. No. 7.

Sir: Treasury Department, *December* 26, 1820.

I have received your letter of the 21st ultimo. I regret that the Bank of Edwardsville should have met with so many difficulties as you state in providing means to fulfil its engagements with the Treasury; but I trust it has ultimately been successful. You must be aware that punctuality is as necessary in all transactions with the Treasury as in those with banks; and, in the present state of the public funds, it is indispensable to the preservation of the public credit. In order to insure this punctuality on the part of those banks which have been made depositories of public money, it is my determination to regard any failure to comply with their engagements with the Treasury as terminating their agency in that character. And I mention this to you, not only from a wish to promote that object, but from a desire to prevent every thing of an unpleasant nature in the intercourse between the Treasury and the Bank of Edwardsville.

I am, &c.

WM. H. CRAWFORD.

The President *of the Bank of Edwardsville.*

G. No. 8.

Sir: Treasury Department, *February* 2, 1821.

Colonel R. M. Johnson having stated to me, on your behalf, that upwards of twenty thousand dollars, in notes of the Bank of Kentucky and its branches, had been received at the Bank of Edwardsville, on account of the Treasurer of the United States, previously to the suspension of specie payments by the Bank of Kentucky, and are still on hand, I have consented that they shall be transferred, at the risk of the Bank of Edwardsville, to the Bank of Kentucky at Frankfort, and there placed to the credit of the Treasurer; and that thereupon the Bank of Edwardsville shall have credit for the amount in its account with the Treasurer of the United States, provided the whole shall not exceed twenty thousand dollars.

As soon as the notes in question are sent away, you will give me information of the fact, and state the precise amount, in order that the Treasurer may issue his draft to cover the transfer.

If a portion of this sum should be found to consist of notes of the Bank of Tennessee, or Nashville Bank, it may be included, provided it be transferred to Knoxville or Nashville, as the case may require.

I am, &c.

WM. H. CRAWFORD.

The President *of the Bank of Edwardsville.*

G. No. 9.

Sir: Bank of Edwardsville, *September* 26, 1821.

Owing to the failure of the Bank of Missouri, and the great alarm produced in this and the adjoining sections of the country, an incessant pressure was made on this bank, when, after having paid upwards of $30,000, the board of directors thought it most advisable to adopt the course stated in the enclosed paper.

A committee, to whom was referred the subject of setting apart sufficient means for the security of the Government deposites, and the mode best calculated to effect that object, have reported, in substance, that the bank ought to pledge the following security as a guaranty for the ultimate payment thereof, to wit:

Notes amounting to $27,647, secured by *deeds of trust* on real estate, worth, at a reasonable estimate, $52,000; notes amounting to $4,500, secured by *mortgage* on real estate, worth, at a moderate estimate, $15,000; notes secured by judgments on various real estate, which afford the utmost certainty of collection, $8,986; notes well endorsed, with the additional security of pledges of stock in each case, $4,265; which, with the interest due on the several sums, will amount to the sum of $50,000.

RECAPITULATION.

$27,647	secured by deeds of trust on property worth - - -	$52,000
4,500	secured by mortgage on property worth - - - -	15,000
8,986	secured by judgments, - - - - -	8,986
4,265	sufficiently secured by endorsements and stock, - - -	4,265
4,602	interest, supposed to amount to - - - -	4,602
$50,000		$84,853

From this recapitulation, it will be perceived that the debt due by this bank, amounting to $46,202 43, would be secured by the pledge of debts due to the bank to the amount of $50,000; which sum, it will be seen, is abundantly secured, as appears by the statement, amounting to $84,853, being a moderate estimate of the property over which the bank has already obtained legal claims, excepting the sum of $4,265 secured by endorsed notes and stock.

The bank are willing to agree to any mode of arrangement which shall be within the compass of their means for effectually securing the payment of the debt due by them to the Government within a reasonable period, or of making an immediate and entire liquidation of the claim out of their present means, as shall be most satisfactory to yourself.

Unforeseen difficulties have arisen, and against which the bank have had to contend, which no human foresight could have anticipated; and the laws of this and the adjoining States, where a considerable portion of the debts due the bank are owing, have procrastinated their collection without the hope of an immediate liquidation, although of their ultimate safety there can be no doubt. If time should be afforded to the bank to collect her debts, which are believed to be all good, or very nearly so, it is presumed she will be enabled to pay the deposite in cash. The means which she now has are, however, offered; and it is for yourself to say which method will be preferred. The only

object the bank can have in view is an honorable and satisfactory adjustment of the claim. An earlier communication would have been made had it not been delayed for the report of the committee on the subject of the securities and their condition.

I am, very respectfully, your obedient servant,

BEN. STEPHENSON, *President.*

BANK OF EDWARDSVILLE, *September* 3, 1821.

The board of directors of this institution have determined on a temporary and partial suspension of specie payment. In order, however, that as little inconvenience as possible may follow the adoption of this measure, the bank will continue to redeem all its notes in specie of a denomination less than ten dollars, until it shall resume specie payments generally. The motives which have governed the board in the adoption of this course of policy may be found in a justifiable right of self-preservation, exercised, at different times, by almost every bank within the United States, and more peculiarly so when large and incessant drains of specie have been made by persons (having no interest in the general welfare of the State or its institutions) whose intentions are to transport the same to remote and distant points in other States, and when it is evident that such exportations of specie affect most materially the citizens of the State from which the same may be drawn. Whether this course of policy will prevent these drains, time will determine.

By order of the board: BEN. STEPHENSON, *President.*

Bank of Illinois.

H. No. 1.

[For the letter of the Secretary of the Treasury to the president of the Bank of Illinois, dated December 21st, 1818, see G. No. 1.]

H. No. 2.

SIR: BANK OF ILLINOIS AT SHAWNEETOWN, *February* 8, 1819.

The board of directors for the Bank of Illinois have the honor to acknowledge the receipt of your letter of the 21st December, 1818, containing the propositions of the Government for constituting this institution a bank of public deposite, which, having been under consideration since the 28th ultimo, was this day finally and unconditionally acceded to, as will more fully appear by the unanimous resolution of the board, which, in the absence of the president, I have the honor to enclose, (being duly constituted,) pursuant to the fourth article of the seventh section of the act to incorporate the president, directors, and company of the Bank of Illinois.

I have also the honor to transmit the names of the officers of the bank.

I have the honor to be, very respectfully, your obedient servant,

JOHN CALDWELL, *President pro tem.*

The Hon. W. H. CRAWFORD.

H. No. 2.—[Enclosure.]

An extract from the proceedings of the board of directors for the Bank of Illinois.

BANK OF ILLINOIS AT SHAWNEETOWN, *February* 8, 1819.

The board resumed the consideration of the propositions of the honorable Secretary of the Treasury for constituting the Bank of Illinois the depository of public moneys received in the district of Shawneetown, and came to the following resolution, to wit:

Resolved, unanimously, by the directors of the Bank of Illinois, That they unconditionally accede to the propositions of the Secretary for constituting this bank a bank of deposite for the public moneys, to wit:

1st. That the public moneys shall be entered to the credit of the Treasurer as cash.

2d. That all drafts which that officer shall draw on the bank, in favor of individuals, shall be paid at sight.

3d. That the bank shall have sixty days' notice of the drafts drawn on it for transferring the public moneys to the Bank of the United States; these transfers, however, to be gradual, and not *en masse.*

4th. That the bank shall render to the Secretary of the Treasury, and to the Treasurer, duplicate monthly returns of its accounts with the Treasurer.

5th. That the bank shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; these returns to be considered confidential. In these latter returns are also to be noted any sums standing in the bank to the credit of any public officer or agent of the United States.

JOHN C. RIVES, *Cashier.*

The following are the names of the officers of the Bank of Illinois.

Samuel R. Campbell, *president.*

John Caldwell, John McLean, John Robinson, Leonard White, Timothy Guard, Michael Jones, James Kirkpatrick, Nicholas Casey, John Marshall, Ephraim Hubbard, Jun., Charles Campbell, *directors.*

H. No. 3.

SIR: TREASURY DEPARTMENT, *March* 12, 1819.

Being desirous of removing, as far as may be in my power consistently with the public interests, the inconveniences to which the public debtors are subjected by the disordered state of the western currency, I have made propositions to some of the principal banks in Ohio, to the Branch Bank of Kentucky at Louisville, and to the Bank of Vincennes, for an arrangement by which the paper of such banks as pay their notes in specie, on demand, and are otherwise in good credit in those districts, may be received in payment of dues to the United States.

As these terms are more favorable than those which I had before proposed to the Bank of Illinois, and which were accepted by it, I have thought it equitable to tender them to that bank; and the receiver of public moneys at Shawneetown is instructed, on receiving from you an official copy of its unconditional act of acceptance of these terms, to deposite in that bank such moneys as he may receive, from time to time, in consequence of this arrangement.

In making this proposition, it is understood that the Bank of Illinois does now discharge its notes in specie, or will do so when this arrangement takes effect; and that the notes of any bank which does not discharge them in specie, on demand, cannot be received.

If this proposition is accepted, it will be necessary for you to furnish the receiver of public moneys at Shawneetown with a copy of the list referred to in the first article.

I am, &c.

WM. H. CRAWFORD.

To the PRESIDENT *of the Bank of Illinois.*

[NOTE.—The proposition which accompanied this letter was the same as that made to the Bank of Steubenville, (see A. No. 3,) with this difference, that the sum to remain on deposite was fixed at $50,000, and the last sentence omitted.]

H. No. 4.

SIR: BANK OF ILLINOIS AT SHAWNEETOWN, *May* 10, 1819.

I have the honor to acknowledge the receipt of your letter of the 12th March, 1819, covering propositions to this bank for continuing it as a depository of the public moneys of the United States; which propositions were this day laid before the directors, and unconditionally acceded to by them.

Enclosed you will receive a list of banks, the notes of which the receiver of public moneys at this place has been instructed to receive in payment for lands, and which will be received from the United States (by this bank) as cash.

A list of debtors to this bank, and the sums due from each, will be furnished you as soon as possible.

I am, very respectfully, &c.

SAMUEL R. CAMPBELL,
President of the Bank of Illinois.

SECRETARY OF THE TREASURY, &c.

A list of banks, the notes of which are received on deposite to the credit of the Treasurer of the United States at the Bank of Illinois.

Bank of the United States and branches.
Bank of Illinois.
Banks in the city of New York.
Banks of Trenton and Camden, (New Jersey.)
Banks in the city of Philadelphia.
Banks in Baltimore, (except Marine Bank.)
Bank of Virginia and branches.
Farmers' Bank of Virginia and branches.
Bank of Alexandria, D. C.
Bank of Potomac, D. C.
Union Bank of Georgetown, D. C.
Bank of Washington, D. C.
Farmers and Mechanics' Bank of Georgetown, D. C.
Bank of Columbia, D. C.
Union Bank of Alexandria, D. C.
State Bank of North Carolina and branches.
Bank of the State of South Carolina.
State Bank of South Carolina.
State Bank of Georgia and branches.
Bank of Augusta, (Georgia.)
Banks in New Orleans.
Bank of Mississippi at Natchez.
Branches of the State Bank of Tennessee, at Nashville, Franklin, Carthage, and Clarksville.
Bank of Nashville, and branch at Gallatin.
Farmers and Mechanics' Bank of Nashville.
Bank of Kentucky and branches.
Bank of Vincennes.
Bank of Missouri and branch at St. Genevieve.

JOHN C. RIVES, *Cashier.*

H. No. 5.

[For the letter from the Secretary of the Treasury to the President of the Bank of Illinois, dated August 1, 1820, see A. No. 10.]

H. No. 6.

SIR: BANK OF ILLINOIS, *September* 1, 1820.

I have the honor to acknowledge yours under date 1st August, 1820, with an annexed copy of instructions to the receivers of public moneys, designating the funds in which payments may be made for public lands. By authority of the arrangement existing between the Treasury and this bank at the time of receiving your instructions, the receiver at this place was taking in for public lands, in addition to specie and bills of the Bank of the United States and its branches, the notes of the following incorporated banks, viz: Bank of Illinois, banks in the city of New York, Trenton Banking Company, N. J., State Bank at Camden, N. J., banks in the city of Philadelphia, banks in Baltimore, (except Marine and City Banks,) Bank of Virginia and branches, Farmers' Bank of Virginia and branches, Bank of Alexandria, Bank of Potomac, Union Bank of Georgetown, Bank of Washington, Farmers and Mechanics' Bank of Georgetown, Bank of Columbia, Union Bank of Alexandria, banks in New Orleans, Bank of Mississippi at Natchez, Bank of Missouri and branch at St. Genevieve, Bank of Edwardsville, Illinois, Bank of the State of South Carolina, State Bank of South Carolina, and Bank of Chilicothe, Ohio; from which it will appear that this bank has gone every length that its own security and the safety of the Government would warrant, to make the payment for the public lands easy to the purchaser. It will be seen, by reference to our list, at the receipt of your instructions, that the notes of nearly all the banks which you direct to be taken were receivable here; and that in lieu of the notes of the banks in the city of Boston, which this bank has not authorized the receiver to take, (and of the notes of which banks there are probably not $100 in the State,) that he was instructed by the bank, and did receive in payment for public lands, the notes of the banks in New Orleans, the Bank of Mississippi at Natchez, the Bank of the State of South Carolina, the State Bank of South Carolina, Bank of Chilicothe, Ohio, and Bank of Missouri and branch at St. Genevieve. Sensible of the embarrassment it would impose on persons in this country indebted to the Government for public lands, and conscious of the solvency of the banks in New Orleans, the bank at Natchez, and the banks in Missouri, this bank is desirous of exercising, as relates to the receipt of their notes, the same control, incurring the same responsibility as heretofore. As to the list contained in your instructions, this bank makes no exception; but it is thought no more than just, if this bank have not the right to direct what bank notes are to be received in payment for lands, that it should not be accountable for the notes of such banks, but that such notes as may be on hand in the bank received

from the land office, and there taken by your direction, ought to be accepted in satisfaction of the debt incurred by this bank to the Government, by reason of their receipt. Until your reply, this bank assents to conform to the instructions to the receiver.

Yours, respectfully,

SAML. R. CAMPBELL,
President of the Bank of Illinois.

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

H. No. 7.

SIR: TREASURY DEPARTMENT, *November* 15, 1820.

As a considerable amount of public moneys has accumulated in the Bank of Illinois above the sum agreed upon as a permanent deposite, and as the state of the treasury renders it desirable that the public funds should be placed where they may be readily available, I have to request that the excess in that bank may be transferred as early as practicable to the points indicated in its agreement with the Treasury; and that an equal amount be not again permitted to accumulate.

I am, &c.

WM. H. CRAWFORD.

The PRESIDENT *of the Bank of Illinois, Shawneetown.*

Bank of Missouri.

I. No. 1.

SIR: TREASURY DEPARTMENT, *July* 1, 1818.

The arrangement by which the public money deposited in the State banks as offices of deposite was subject to the drafts of the cashier of the Bank of the United States, has, by agreement, expired on the 30th ult. All sums deposited in such banks subsequent to that time may be entered, as heretofore, to the credit of the Bank of the United States, for the use of the United States, and shall be drawn, from time to time, by Treasury drafts, as occasion may require, subject to the following conditions, viz:

1. If in favor of individuals, to be paid at sight.
2. If in favor of the Bank of the United States, payable in sixty days.
3. In the latter case, the public money will be drawn out gradually, and not *en masse.*
4. The usual returns made to the Bank of the United States must be continued until the money subject to its order shall be drawn from the bank; those made to this Department must be rendered as heretofore.

The bank is requested to signify its acceptance of the public deposites upon the foregoing conditions.

I am, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

P. S. The account to be rendered to the Treasury, under the new arrangement, is to commence on the 1st of July, and must embrace all deposites made in your institution to the credit of the Bank of the United States subsequent to the 30th of June, and, for distinction sake, should be entitled "new account." You will be pleased, however, to note at the foot of each return the balance due to the United States Bank on the "old account," until such balance shall have been extinguished.

To the PRESIDENTS *of Banks in which the Public Moneys are deposited.*

I. No. 2.

SIR: TREASURY DEPARTMENT, *July* 11, 1818.

As the arrangement proposed in my letter to you of the 1st instant was to be considered as merely temporary, there not being sufficient time to apprize the banks and the collectors of the intended change, I have now, with a view of giving permanency to the system, to request:

1st. That, on the 30th of September next, you transfer to the credit of the Treasurer of the United States all the moneys, or the balance of such moneys, as may have been deposited in your institution to the credit of the Bank of the United States subsequent to the 30th of June last.

2d. That, after the said 30th of September next, you make your returns regularly to the Treasurer, as heretofore; observing, also, to send a duplicate thereof to my office.

I will only further add, that the public moneys which may be deposited in your institution to the credit of the Treasurer, in pursuance of this arrangement, will be drawn for in the manner stated in my letter of the 1st instant.

I am, very respectfully, sir, &c.

WM. H. CRAWFORD.

To the PRESIDENTS *of Banks in which the Public Moneys are deposited.*

I. No. 3.

SIR: BANK OF MISSOURI, *August* 1, 1818.

This institution accepts of the public deposites, agreeably to your instructions of the 1st ultimo.

Herewith I transmit the monthly report of the state of this bank. The receivers of public moneys have not made a deposite since the 30th of June last.

I am, with great respect, sir, your obedient servant,

AUGUST. CHOUTEAU, *President.*

Hon. W. H. CRAWFORD, *Secretary of the Treasury.*

I. No. 4.

SIR: TREASURY DEPARTMENT, *June* 22, 1819.

Letters have been received by this Department, from a gentleman connected with the direction of the Bank of Kentucky, and the Branch Bank of the United States at Louisville, stating that about $200,000 in specie had

lately been drawn from the banks in Kentucky, by the Bank of Missouri, and that about $35,000, in like manner, had been drawn from the Branch Bank of the United States at Louisville. The circumstances attending the acts complained of by the writers are not detailed, and on that account I have no means of judging whether there has been any thing, either in the facts themselves or the circumstances attending them, which furnishes just cause of complaint. The writers, however, presume that the capacity of the Bank of Missouri to make such demands upon the banks in Kentucky is the result of its connexion with the Treasury, and appeal to this Department for redress against the repetition of such acts in future.

It is certainly not the interest of the United States to retain on hand a large amount of the bills of State banks at places where they cannot be employed in meeting the current demands upon the Treasury; but it is, at the same time, extremely desirable that the most convenient and conciliatory course should be resorted to in obtaining payment of the bills which may happen to accumulate in the banks in which the public money is deposited. Timely notice should be given of the amounts which would be required, so as to enable the debtor banks to provide for the payments, either in specie, or by making other satisfactory arrangements for the adjustment of the balance which may have been found against them. This would be a fair and just course, in ordinary times and under ordinary circumstances. In the present critical situation of the country, when the distress of the citizens requires the utmost indulgence which the banks, consistently with their own solvency, can extend to them, any measure or course of conduct on the part of the banks having the public deposites towards other solvent banks, which will require them to press with more urgency for the payment of debts due to them, cannot fail to add greatly to the pecuniary distress which prevails in the country. It is extremely desirable that this pressure should not be increased beyond what is required by the safety of the banks having the public deposites, and it is confidently expected their conduct towards other banks will be regulated according to these views. If the transactions which have given rise to this communication have been conducted upon these principles, there has been no just cause of complaint; but if they have been differently conducted, the most confident reliance is entertained that there will hereafter be no cause for the renewal of the complaint.

I remain, &c.

W. H. CRAWFORD.

The PRESIDENT *of the Bank of Missouri.*

I. No. 5.

SIR: TREASURY DEPARTMENT, *June* 23, 1819.

In lieu of the arrangement now existing between the Treasury and the Bank of Missouri, in relation to the public moneys deposited therein, I now transmit, for the consideration of that institution, conditions similar to those which have been agreed upon with all the other banks of deposite in the western country. As the proposed arrangement appears better calculated to preserve the good understanding which is so necessary between this Department and the banks connected with it, and as they offer to the bank considerable advantages in the opportunity which they afford of transferring the public funds in the manner and to the points most convenient to itself, it is presumed that these will form no obstacle to their adoption. In that case, you will be pleased to signify to me, as early as may be convenient, the formal acceptance on the part of the institution. As the current payments into the Bank of Missouri will probably be more than sufficient to meet any demands which may arise for the public service in that quarter over and above the deposite proposed to remain in the bank, and as it is desirable that the large sum which is now in that bank may, as soon as practicable, be made available where the public service will require it, I have to request that measures may be taken for paying it over to the Bank of the United States as fast as may be convenient. I have thought it would be more agreeable to the bank that the Treasurer should not be directed to draw on it for that purpose until it had an opportunity of providing for the transfer. If the bank will designate the office of the Bank of the United States to which it will be most convenient to make the transfer, and the time at which it can be effected, the Treasurer will be instructed to issue his drafts for that purpose accordingly.

It is presumed that the amount of the bills of the Bank of the United States and of its offices, now in the possession of the Bank of Missouri, can be conveniently, and without delay, transferred to the office at Louisville.

I remain, &c.

WM. H. CRAWFORD.

To the PRESIDENT *of the Bank of Missouri.*

[NOTE.—The conditions referred to in the preceding letter are the same as those offered to the other banks in the Western States. The sum to remain on deposite is $150,000. See A. No. 10.]

I. No. 6.

SIR: ST. LOUIS, *August* 9, 1819.

Your several communications of the 22d and 23d of June were received at this office on the 24th of July, during my attendance on public business at Edwardsville. On my return from thence they were immediately laid before the board of directors; and they have requested me, in answering them, to embrace the opportunity of making to you an exposition of various circumstances relative to the commencement of this bank, and to its present and probable future operations, which may naturally present themselves, and not be deemed superfluous, on the occasion.

The Bank of Missouri, unlike most other banking institutions, owes not its origin to any selfish or speculative purposes. Self-defence alone has given it birth, and the same principle has continued uniformly to govern its operations all along. At a time when this country already began to feel the noxious influence of a system which has since become the source of such universal pressure, the Bank of St. Louis sprang into existence, under circumstances and appearances of great peculiarity; the manner of its formation, the nature of its regulations, and the materials of its composition, all tended to create apprehensions which its subsequent transactions proved to have been but too well founded. Then it was that an association was formed, of well-meaning persons, all attached to this Territory, and intimately concerned in its welfare, who, instead of indulging in the fabrication of fictitious means, meant, on the contrary, to repel the influx of those unwarrantable issues of bills which all found their way to this country, and which, if not betimes opposed, would perhaps have ultimately enveloped in one common ruin the whole mass of our unsuspecting population. The expectation, indeed, of the public utility which promised to grow out of such an association was the motive which alone could have induced me, at my advanced period of life, to subject myself to the discharge of those duties which are attendant on my situation.

With such professed views, however, and a course of conduct correspondent therewith on the part of this institution, it could not fail to become an object of jealousy and distrust to most of the western banks, who looked upon this country as the devoted market for their bills, and upon the Missouri Bank as a hindrance thrown in their way. Attempts were made by several of these banks to effect with it what they termed "arrangements of mutual benefit;" and when these were declined, as being inconsistent with the plan of our association, from that moment we became the object of their avowed enmity.

The Bank of Missouri has not been ignorant, for some time past, of the exertions of certain individuals, and of various neighboring institutions, to create against it unfavorable impressions in your Department. But, conscious of the purity of its intentions, it has felt a reluctance to intrude upon you with any thing foreign from its relation with the Treasury, until it was encouraged thereto by a direct communication from yourself. Such encouragement being afforded by your letter of the 22d of June, the complaints against this institution, concerning which it now finds itself prompted to give an explanation, are those preferred by gentlemen connected with the direction of the Bank of Kentucky and the Branch Bank of the United States at Louisville, who state that about $200,000, in specie, had lately been drawn by us from the banks of Kentucky, and about $35,000 in like manner from the said branch bank. It is difficult for us to account for the exaggeration of $71,310 which exists in this statement; the actual amount drawn from both institutions being $163,690. It is equally difficult for us to understand how our draft on the branch bank can have been strained into a matter of complaint, when such draft merely was a withdrawal of a specie deposite made there some time last winter for account of this institution, partly by merchants of Lexington, and resulting from the conversion into specie of various bills of the banks of Ohio. It is erroneous, also, that we derive solely from our connexion with the Treasury the capacity we have of troubling these banks; for the fact is well known, that, for a number of years prior to our establishment, the bills of the Bank of Kentucky formed a very considerable part of the circulating medium of this country; and inasmuch, particularly, as the whole of our capital stock had been, by an article of our association, exclusively paid in with such bills, this capacity in us evidently existed before our relation with the Treasury. But, if we freely admit it to have been greatly increased thereby, these gentlemen cannot consistently deny us the justice to find that we have not applied it to any purposes of annoyance to them.

But the Bank of Missouri, while it deplored the latitude given to banking operations in various parts of our country, did confine its acts solely to the safe conducting of its own affairs; and, not wishing to avail itself of its charter for an issue of its own bills, nor feeling itself called upon by its relation with the Treasury to convert the bills received on account of the public, the drawing of specie into its vaults has by this board never been deemed an object of solicitude; it being attended with considerable expense, oppressive to such banks as have stepped beyond limits, disagreeable even to such as have transacted with prudence, and not followed by any essential advantage to ourselves. In this manner we have countenanced with us the circulation of the bills of various institutions, as long as their standing would possibly justify any degree of confidence in their solvency. But when the defection of some banks of high credit had actually occurred, and the stability of others of equal credit began to be doubted, even in the very places of their activity, then it became incumbent on the direction of this bank to lose no time in answering to the trust reposed in them by the stockholders, and to realize the amount which had been paid in by them. This object having been effected, there can be no recurrence of the like complaints against us in future.

The Bank of Missouri agrees to receive the public deposites, in future, on the terms proposed by you. But, in subscribing to the condition of crediting as cash all the deposites which shall henceforward be made therein, it can, at present, unless further authorized, only receive the bills of the following banks, viz:

Bank of the United States and its branches; Bank of Missouri and branch; Bank of Kentucky, and its branches at Louisville, Shelbyville, Lexington, and Paris; Bank of Virginia, and its branches at Fredericksburg, Lynchburg, and Petersburg; Bank of Illinois at Shawneetown; all the banks in New Orleans, Philadelphia, New York, Baltimore, and District of Columbia, whose paper is received on deposite at the Bank of the United States or at its branches; information respecting which point will be thankfully received from your Department. But, until the same can be conveyed to us, we will enter as cash all the sums deposited in notes of the said eastern banks.

This bank would willingly receive the notes of any institution which might be named by you, and, if possible, convert them into such funds as would be received by those banks to whom we are bound to transfer the deposites made here. But it cannot take upon itself to guaranty the solvency of distant institutions, which are unknown to them; and they are too well acquainted with the situation of the western banks generally to jeopardize this institution on their responsibility. A number of them, of old standing, may ultimately prove good; but they cannot, in a reasonable time, make payment, so as to answer the views of the Treasury in enabling this bank to comply with the second article of the proposition. As to the Bank of Edwardsville, the only one near to us, we cannot give it our confidence. Their paper is received with distrust, even in their own neighborhood, and passed from hand to hand as soon as possible. Owing to the intimate connexion which it had with the Bank of St. Louis, which cannot pay its debts, and has entirely discontinued business, the capital stock of that bank has been taken for the most part, and is now owned by five or six individuals, some of them living out of the State, and the direction secured to such persons as they may choose to appoint. There are other objections, which we forbear to mention.

It is with extreme reluctance that this bank feels itself obliged to state an objection to the latter clause of the first proposition, arising solely from the manner in which the public deposites are made by the receiver at this place, and is, in fact, one principal reason why this bank cannot be safe in receiving the paper of several banks who do pay at this time, but may probably soon discontinue to pay their notes in specie.

The Bank of Missouri will, within sixty days after receiving an order to that effect, cause to be deposited in the Branch Bank of the United States at Fayetteville, or in any other bank which shall be designated in the State of North Carolina, $50,000 in such paper of that State and of South Carolina and Georgia, as was authorized to be received, and in the Branch Bank of the United States at Washington city $50,000, in notes of the banks of Virginia and of the District of Columbia, and specie; say $10,000 in specie and $40,000 in notes.

It will deposite, within thirty days after receiving an order to that effect, in the Branch Bank of the United States at Louisville, or in any other bank in the State of Kentucky, $275,000, viz: $87,000 in notes of the Bank of the United States and its branches, $103,000 in notes of the State Bank of Kentucky and branches, $15,000 in notes of the Bank of Vincennes, and $70,000 in notes of the banks of Tennessee, such as were authorized to be received; and in the Branch Bank of the United States at Cincinnati, or any other bank in Cincinnati, $25,000, in such Ohio notes as were authorized to be received. The remainder in bank, over and above $150,000, will be paid to your orders, or deposited, from time to time, as fast as convenient, in the banks designated by you to receive the surplus deposites.

I am, very respectfully, sir, your obedient servant,

AUG. CHOUTEAU, *President Bank Missouri.*

To the Hon. WM. H. CRAWFORD,
Secretary of the Treasury, Washington city.

I. No. 7.

SIR: TREASURY DEPARTMENT, *September* 22, 1819.

Upon the information communicated in your letter of the 9th ultimo, it is my intention to direct that the drafts, mentioned in my letter of the 20th ultimo, to be drawn on the Bank of Missouri, at the expiration of sixty days, be made payable as follows: $50,000 at the office of discount and deposite of the Bank of the United States at Washington, and $160,000 at the office of discount and deposite of the Bank of the United States at Louisville. You may, therefore, proceed in the mean time to transfer, at the convenience of the bank, the funds intended to meet them.

For the last-mentioned draft, it is presumed that you will be able to provide chiefly by means of the notes of the Bank of the United States and its branches. But, if the Bank of Missouri should not hold a sufficient amount of these, it is my wish that the balance be made up with such other moneys as the office at Louisville will receive as cash; it being important to the Treasury that it shall have credit with the Bank of the United States for the whole amount proposed to be transferred.

The Bank of the United States having declined to receive, as cash, the Vincennes and Ohio notes mentioned in your letter, I have to request that you will deposite the former in the Bank of Vincennes, and the latter in the Bank of Chilicothe, to the credit of the Treasurer; transmitting to me, at the same time, a list showing the amount of notes of each of the Ohio banks.

In consequence of the suspension of specie payments by the State Bank of North Carolina, the Bank of the United States will not receive its notes as cash. The State Bank, however, has expressed to me its readiness to make the best arrangement in its power for the payment of such of its notes as may be held by the Treasury. I have, therefore, to request that all the North Carolina notes included in the $50,000 mentioned in your letter may be deposited in the State Bank at Raleigh, to the credit of the Treasurer.

The South Carolina and Georgia notes may be deposited to the credit of the Treasurer, in the office of discount and deposite of the Bank of the United States at Charleston, and the Kentucky notes in the Branch Bank of Kentucky at Louisville.

Respecting the Tennessee notes, instructions will be given as soon as I receive your reply to my letter of the 9th instant.

In making these deposites, it will be necessary for you to advise me of the amount of each, that the proper drafts may be issued for the transfer.

I am, &c. WM. H. CRAWFORD.

A. CHOUTEAU, Esq.

I. No. 8.

SIR: BANK OF MISSOURI, *November* 29, 1819.

You have been informed by the cashier of the bank that funds were transmitted on the 17th to the United States Branch Bank at Louisville, to meet the Treasurer's draft for $160,000. Since the departure of our agent, we have been notified that on the 8th the draft was protested. This circumstance has mortified us much, as we have been proud of our ability and willingness to comply with our obligations, and, on this occasion, were particularly ambitious of acquitting ourselves to your satisfaction. These feelings induce me to trespass so far on your attention as to explain the reasons for the delay, and the consequent protestation.

You were pleased to express a desire that the funds destined for Louisville should consist principally of United States paper, or such as would be acceptable to the branch. To comply as far as possible with this desire, the officers of the bank were instructed to save and to acquire this kind of fund; and, to enable them to do so, the longest time permitted by you was given to them. This indulgence was also necessary to enable the successor of our late cashier to become acquainted with the situation of the institution, and the nature and classification of its funds. But when the period arrived for the departure of the agent, a suitable person could not be found. The road is thinly settled; the trust was great; and the murders and robberies which at that time were committed on the road were circumstances which deterred those who were capable of feeling a responsibility from incurring it. It was not until the 17th that a proper person could be induced to start. These were the causes of delay; I know them to be real; for, under my inspection and observation, every exertion was made.

While addressing you, permit me to add, that, by our engagements with you, the bank has unwarily committed itself. When we stated that we would deposite the specified sums at the designated places, we presumed that the payment would be a subject of negotiation with the different institutions; that arrangements mutually advantageous could be made; but, when impracticable, they would find at our banking house every means necessary to discharge the debt. We did not suppose that it would be expected of us to transport so large a sum, at such distances, at our expense, and, above all, at our risk. This last consideration alone is estimated at three per cent., by individuals, in the transmission of small sums; a policy which must be much increased when undertaken by a corporate body, and for a large amount. This estimate will convince you that we could not have undertaken this responsibility for the advantage afforded by the deposites, and that the promise to do so was incautiously made. But, on a candid revisal of our correspondence, I must confess that it was made, and your understanding so renders the construction unequivocal. It is made, and shall be complied with. These observations are not made to avert it, but to urge a request that you will make it as easy as possible; and that you will grant some equivalent, by indulgence or accommodation, to equal these risks and expenses; as also to apologize, in part, for the unfortunate delay of the funds destined for Louisville.

I am, very respectfully, &c.

AUG. CHOUTEAU, *President.*

Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

I. No. 9.

SIR: TREASURY DEPARTMENT, *March* 2, 1820.

In consequence of a proposition made by Colonel Riddick, as agent for the Bank of Missouri, I have agreed that the Treasury draft for $210,000, drawn on that bank on the 18th November last, payable at Louisville, shall be recalled; and that, in lieu thereof, transfers shall be made by that bank to meet the following drafts upon it:

1. In favor of the office of discount and deposite Bank United States, Louisville, payable at said office, for $14,000, in such money as is received at that office as cash.

2. In favor of the Branch Bank Kentucky at Louisville, payable at said branch, for $2,150, in notes of the Georgetown (Kentucky) Bank.

3. In favor of the Branch Bank Kentucky, Louisville, payable at said branch, for $3,850, in notes of the Bank of Kentucky.

4. In favor of the Bank of the State of Tennessee, payable at Louisville, for $40,156, in notes of that bank and its branches.

5. In favor of the Nashville Bank, payable at Louisville, for $29,844, in notes of that bank and its branches.

The cashiers of the two last-mentioned banks have been informed that these notes will be delivered to their order, respectively, by the agent of your bank at Louisville.

6. In favor of the Bank of Chilicothe, payable at said bank, for $25,000, in Ohio notes.

Colonel Riddick states that these notes are already at Chilicothe.

7. In favor of the office of discount and deposite Bank United States, Washington, payable at said office, for $20,000, in such notes as are received by that office as cash.

8. In favor of the office of discount and deposite, Washington, for $1,175, in certain District notes.

9. In favor of the office of discount and deposite, for $42,000, in North Carolina notes.

The notes to meet these two last grants have already been deposited in that office by Colonel Riddick.

The balance which may remain in the Bank of Missouri is to be considered a cash deposite.

The draft for $60,000, mentioned in my letter of the 19th October last, has not been, and will not be drawn; and it is not probable that any other transfers will be required during the present year.

I am, &c.

WILLIAM H. CRAWFORD.

AUG. CHOUTEAU, Esq., *President of the Bank of Missouri.*

P. S. Colonel Riddick having undertaken that the Bank of Missouri will endeavor to dispose of the Kentucky and Georgetown notes, the second and third drafts above mentioned will not be drawn.

I. No. 10.

SIR: BANK OF MISSOURI, *April* 7, 1820.

Your letter of the 2d ultimo was received by the last mail, and laid before the directory to-day.

The information it gives completely removes the anxiety and perplexity they were under, in consequence of the difficulty attending the transportation of the public deposites to distant points, and the refusal of certain offices to receive such deposites in payment of your drafts.

The directory duly appreciate the spirit of accommodation manifested by you towards this institution on this occasion.

Transfers of funds to the several offices designated in your letter, of the description required, will be immediately made.

With much respect, I have the honor to be, sir, your most obedient servant,

AUG. CHOUTEAU,
President of the Bank of Missouri.

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

I. No. 11.

SIR: TREASURY DEPARTMENT, *July* 5, 1820.

The great distance from the land office in the Lawrence district to St. Louis will make it very inconvenient for the money collected at the former to be deposited at the latter place.

That inconvenience will be in a great measure removed, if the deposites are made in the Branch Bank of Missouri at St. Genevieve, provided that the Treasurer can be credited for the amount so deposited in his account with the Bank of Missouri. But it has been represented to this Department that the ordinary relations between parent banks and their branches do not exist between the Bank of Missouri and its branch at St. Genevieve; and that, on that account, the arrangement ought to be made with the branch bank, and not with the parent institution. It is, on the other hand, an object of some importance to the Treasury to avoid the multiplication of its accounts, and the division of its disposable funds, beyond what is indispensably necessary.

If there should not exist between the bank and its branches an entire community of interest, it will not be difficult for it to arrange with that at St. Genevieve such a participation of the benefits resulting from the public deposites as will compensate it for the risk and expense which the transfer of the public money to St. Louis, or to other places, may incur.

I therefore propose that the money received in the Lawrence district shall be deposited in the branch at St. Genevieve, to the credit of the Bank of Missouri, for the use of the Treasurer of the United States; and that, for all sums so deposited, credits shall be given to that officer in his account with the Bank of Missouri; such credits to be entered from time to time, whenever a certificate of deposite shall be forwarded by the receiver, or the returns of the branch bank to the parent institution shall show that a deposite has been made.

As the money will be deposited to the credit of the Bank of Missouri, for the use of the Treasurer, it will be subject to the drafts of the bank, without the intervention of the acts of that officer, and may be transferred, from time to time, as the interest or convenience of the bank may require, consistently with any arrangement which it may have made with the branch bank at St. Genevieve.

It is possible that the money collected at Arkansas may be deposited also at St. Genevieve, but no determination has yet been made upon that subject.

If this proposition is acceded to by the bank, I request that notice thereof may be given to the receiver of public money for the Lawrence district, and that the necessary instructions be given to the branch bank at St. Genevieve.

I am, &c. WILLIAM H. CRAWFORD.

AUG. CHOUTEAU, Esq., *President of the Bank of Missouri.*

I. No. 12.

SIR: BANK OF MISSOURI, ST. LOUIS, *August* 4, 1820.

This institution, being desirous of preserving the good understanding existing between it and your Department, in order to remove the inconvenience you suggest, accedes to the proposition contained in your letter to me, under date of the 5th ultimo, and will give the necessary information and instructions.

With much respect, &c.

AUG. CHOUTEAU,
President of the Bank of Missouri.

The Hon. WILLIAM H. CRAWFORD.

I. No. 13.

[For the letter from the Secretary of the Treasury to the president of the Bank of Missouri, dated August 1, 1820, see A. No. 10.]

I. No. 14.

SIR: BANK OF MISSOURI, ST. LOUIS, *August* 31, 1820.

Yours, desiring that the existing arrangement between the Treasury and this institution be so modified as to conform to certain instructions lately issued to the receivers of public moneys, was laid before the directors at their last session. I am authorized to announce to you their assent to the proposed modification.

I am, sir, very respectfully, your obedient servant,

AUG. CHOUTEAU, *President of the Bank of Missouri.*

The Hon. WILLIAM H. CRAWFORD.

I. No. 15.

SIR: BANK OF MISSOURI, ST. LOUIS, *February* 2, 1821.

We have the honor of conveying to you the information that, in consequence of his very advanced age and decline of health, Colonel Auguste Chouteau has found it necessary to resign his situation as president of this bank. Due notice will be given of the nomination of a new president, the election of whom will take place immediately on the return of several members who are absent at this moment. We also transmit a statement of the account with the Treasury, showing the actual balance of all the public deposites which remain at this office in available funds to be this day $97,835 40. From a full consideration of the interests which the stockholders in this bank have confided to their hands, and from an earnest regard also to the obligations which result from their relation with the Treasury Department, this board is induced to lay respectfully before you what seems to them expedient to be submitted to your attention.

The concerns of the western country in general, and those of this section thereof in particular, have undergone a very remarkable alteration since this bank has been made the agent of your Department in this quarter, under the stipulations signified in your communication of the 23d June, 1819. The board did readily assent to the conditions of the new arrangement, as appearing at that time fully correspondent with its means of compliance, and sufficiently promotive of the benefit of the institution. Even from that clause in your communication which in certain cases warranted the acceptance of all Treasury drafts, without regard to the diminution of the permanent deposite, and whereby an indefinite liability might have been incurred, no serious inconvenience was apprehended, under the then existing complexion of the times, when the sales of public lands, the influx of emigration, and the state of our commerce here were yet such as seemed adequate to provide for every emergency. But a new aspect of affairs has since then developed itself; and the calculations of this board, grounded as they were on the most reasonable expectations, are left unconfirmed by the influence of such changes as could not well have been foreseen.

The peculiar situation of this new country, which is as yet obliged to look to a distance, and to pay in money for most of its supplies; the natural rejection of all such paper as had ceased to be redeemable in specie; the exclusion, also, of the Missouri notes from passing at the land offices in the adjoining States; and, above all, the constant drain of specie by the steamboats from New Orleans—all these have produced in this country an almost absolute disappearance of the circulating medium; and the extent of the evil, in this respect, which has arisen to this country, particularly from its trade with New Orleans, may be judged of, from the well-ascertained fact, that during the space of the last twelve months only not less than $90,000 have been drawn by steamboats from the vaults of this bank.

At the same time, it is fully within the knowledge of this board that the greater proportion of the loans which it has granted has been applied to public lands; and although a sufficient guaranty is thereby afforded to the bank for the amount of such loans, yet, there being an impossibility at present to realize the funds which have been vested in this manner, it would appear that any peremptory course, to the adoption of which this board should see itself urged to resort, could not fail to be felt oppressive, and might, perhaps, prejudice those interests which it feels itself bound to cherish and anxiously disposed to cultivate.

Under circumstances like these, and fully aware of what is expected from them on the part of the community, the board would solicit your interposition for the purpose of avoiding an increase of that pressure which is already but too general a subject of complaint here, and they therefore beg leave to express to you their most earnest wish that, for a time at least, the further drafts on this institution may affect such funds only as form an excess over and above the permanent deposite, and that the bank may remain possessed of the full amount of that deposite, which at present stands considerably reduced; and, moreover, in order to avert as much as possible the very embarrassing consequences of our trade with New Orleans, and which, if continued as at present, must necessarily tend to the exhaustion of this country, may this board be permitted to suggest that a very considerable relief in this respect would be afforded if the funds which may in future be appropriated to be disbursed in these parts were expended by checks on the branch bank at New Orleans, which will at all times be cashed at this office. Your acquiescence in what has been submitted is greatly desirable for the good of this community, and will be very thankfully received by this board,

Which remains, very respectfully, yours, &c.

THOS. F. RIDDICK,
JOSEPH PHILIPSON,
THOS. HEMPSTEAD,
H. VON PHUL,
M. TESSON,
} *Directors.*

Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

I. No. 16.

SIR: BANK OF MISSOURI, ST. LOUIS, *January* 30, 1821.

It is now several months since we had the honor of laying before you an exposition of the pecuniary concerns of this country, and of showing the influence these had on the affairs of this institution; and also requesting, at your hands, certain measures for the purpose of enabling us to extend to the interests of this community that indulgence and relief which seemed indispensably required by the state of embarrassment it had fallen into, in consequence of the unnatural and most disadvantageous relation it was compelled to maintain with that of its sister

States. Matters of a more general nature, and of much greater interest, have no doubt drawn your attention from that communication. In the mean time, however, the several causes which had produced the uncommon pressure complained of have continued to operate on the affairs of the country with such accelerated severity, as to preclude the hope (without the assistance we are about to ask of you) of our being able to afford to the community that indulgence which may enable them to emerge from the load of debt which almost paralyzes their every effort. From the time the notes of this bank ceased to be received in payment at the several neighboring land offices, their circulation has greatly diminished, and the unexpected continuance of that exclusion has thrown back upon us the greater part of our issue, which, under a former and more favorable arrangement, had obtained general currency in the neighboring States. The uninterrupted drain of specie from the bank produced by this measure, and the constant arrival and departure of steamboats, combined with the total absence of drafts, or suitable produce with which our merchants might make their remittances, have brought on such a crisis as demands from our integrity a full and complete statement to you of the actual situation of the bank at this time, which is accordingly given for two years past, and until this day, in the paper enclosed herewith. Comparatively small as the amount of individual deposites and that of Missouri notes in circulation appears, yet, considering the incessant calls for silver, and the utter impracticability (arising out of the nature of things here, at this time) of calling in with sufficient promptitude (amply substantial as the debts due to us are) what may be necessary to cover these two amounts, we cannot view without apprehension the prospect of a case, although probably not of immediate occurrence, where the demands for specie would exceed our means for furnishing it; more particularly as a special clause in our charter provides that the bank shall pay at the rate of five per cent. per month for whatever amount of its notes it may be unable to redeem on presentation. Reflecting, therefore, on the importance it is to the interests of the country, that the character and usefulness of this bank should be maintained entire and unexposed to any alteration, and believing that so desirable an object can be completely secured by your assistance, we feel ourselves prompted, by motives of prudence and expediency, to request that you increase the standing deposite fifty thousand dollars, at least for one year; at the end of which time, we have every reason to believe, by means of gradual curtailments, which even in these times cannot be thought oppressive, such excess can without difficulty be refunded. At the same time, we would renew our former request, that the paper of this bank may be made receivable at the several land offices in the neighboring States, as, without such regulation, it will always be impossible to give circulation to any but a very limited amount thereof. Permit us to observe, that the promptitude with which the bank has always honored the drafts of the Treasury, (always in specie,) even when the amount of the standing deposite was greatly diminished, will deserve at your hands every aid and assistance you can give to it, consistently with the public interests.

We have the honor to be, &c.

THOS. F. RIDDICK, *President.*

The Hon. WM. H. CRAWFORD.

Of the sum charged to banks, there have been since the 20th May, 1820, deposited at Louisville, in Kentucky, and Georgetown, Kentucky, notes, $6,000; and in Tennessee notes, to meet the Treasurer's draft in favor of the Bank of Tennessee, $40,156; making, in all, $46,156, which, according to the arrangement made by T. F. Riddick, agent at Washington city, ought to be deducted from the items marked thus *. You will perceive, therefore, that the actual balance due the Treasury this day is $153,810 88. It may also be proper to remark, that the bank expects to receive from the officers of the Government (Surveyor's and Indian Departments) about $40,000, as soon as it shall be received; being for so much advanced to facilitate the operations of the surveyor general, and to make payments to Indians on public account.

LS. BOMPART, *Cashier.*

I. No. 17.

SIR: BANK OF MISSOURI, ST. LOUIS, *August* 17, 1821.

It is with extreme regret I announce to you that this institution ceased its operations on the 14th instant, being constrained thereto by the very embarrassing situation of the pecuniary affairs of the country, of which the board of directors endeavored to give you a knowledge in theirs of the 30th June last. If the relief asked in that communication could have been afforded, it is probable the measure which it gives me so much pain to announce would not have been necessary. Upon a full investigation, however, of the affairs of the institution, it is found to be completely solvent; and I trust that the uniform and energetic course the board has resolved to adopt and pursue

will soon restore it to the confidence of the public. The president directs me to say that he will forward to you, by the next mail, a full and ample communication on the subject, together with a statement of the situation of the bank.

I am, very respectfully, sir, your obedient servant,

LS. BOMPART, *Cashier.*

The Hon. WM. H. CRAWFORD.

I. No. 17.—[Enclosure.]

OFFICE OF THE ST. LOUIS ENQUIRER, *Friday morning, August* 17, 1821.

BANK OF MISSOURI.

This institution, as has been announced by the president, suspended its operations on Tuesday last, with a view to the surrender of its charter, and, as speedily as possible, to the final adjustment of its accounts. On Wednesday a committee was appointed (composed of persons entirely disinterested, who were selected for their probity and intelligence) to examine and report upon the condition of the bank. The following is the result of the investigation, &c. had at the banking house, which we hasten to lay before the citizens as early as possible:

TO THE PUBLIC.

The undersigned having been requested by the president of the Bank of Missouri to inspect the books of that institution, and examine into its state and condition, with a view to expose the same to the public, believing it due to those who are interested to know the true condition of the bank, we complied with his request, and submit the following as the result of a full but hasty examination:

The Bank of Missouri is	Dr.	
For capital stock paid in,	$210,000 00	
Notes in circulation,	84,301 00	
The United States deposite,	152,407 65	
Individual deposites,	42,611 01	
Balances due on dividends,	421 90	
		$489,741 56

The Bank of Missouri is	Cr.	
By bills discounted on personal security,	$129,015 14	
Bills in suit,	4,019 02	
Bills secured by mortgage,	99,689 00	
Bills secured by stock pledged,	186,335 00	
Bills of exchange on eastern cities,	12,700 00	
Bills of exchange inland,	8,726 00	
Bills of exchange protested (eventually considered safe)	3,385 02	
Notes of western banks (principally Knoxville and Huntsville)	9,147 00	
Amount due from other banks,	1,517 26	
Notes of the St. Genevieve branch,	1,045 00	
Auditor's certificates,	752 80	
Specie on hand,	8,234 45	
Real estate,	17,713 75	
Overdrafts,	11,622 27	
		$493,901 71

The committee, in the investigation of the accounts of the bank, have not been enabled to enter fully into the sufficiency of the security upon notes discounted. The notes upon personal security we should suppose to be good, with the exception of the amount of about $39,416 62, (say thirty-nine thousand four hundred and sixteen dollars and sixty-two cents,) part of which is considered doubtful; those secured by mortgage, owing to the difficulties of the times, and the depreciation of property, we cannot consider as a full security; in some instances the property is mortgaged for more than its value, even in better times. It ought also to be recollected, that if the bank should proceed to collect its debts by legal means, instead of procuring money thereby, they will be under the necessity of taking property of which the possession cannot be obtained sooner than two years and a half.

It appears, also, that the present directors are the owners of 1,347 (say one thousand three hundred and forty-seven) shares of stock, upon which they have borrowed the sum of $108,795, (say one hundred and eight thousand seven hundred and ninety-five dollars,) and pledged their stock to the bank as security. They are further indebted by notes, secured by mortgage, for the sum of $79,689, (say seventy-nine thousand six hundred and eighty-nine dollars,) and on personal security the sum of $60,075 86, (say sixty thousand and seventy-five dollars and eighty-six cents,) and are ultimately liable as endorsers for the sum of $37,310, (say thirty-seven thousand three hundred and ten dollars.) The committee have no means of ascertaining the condition of the branch at St. Genevieve, which possesses an independent capital of *forty thousand dollars*, and keeps its accounts distinct from the mother bank.

From the foregoing statement it will be seen that the ultimate payment of the notes of the bank in circulation, and the amount on deposite, are amply secured, in the estimation of the committee, provided the bank is indulged in making its collections, and proper measures are adopted to enforce the same, &c. The committee would further remark, from the shortness of the time taken up in the investigation, that they cannot vouch for the entire accuracy of the statement, but believe it would differ very little in the amount of the several items from a more particular and laborious examination.

R. WASH,
A. FERGUSON,
JAMES H. PECK,
JAMES CLEMENS, JR.
A. GAMBLE,
Committee.

ST. LOUIS, *August* 15, 1821.

Branch Bank of Kentucky at Louisville.

J. No. 1.

SIR: TREASURY DEPARTMENT, *March* 12, 1819.

Being desirous of removing, as far as may be in my power, consistently with the public interests, the inconveniences to which the public debtors are subjected by the disordered state of the western currency, I have made propositions to some of the principal banks in Ohio, to the banks of Vincennes and Illinois, for an arrangement, by which the paper of such banks as pay their notes in specie, on demand, and are otherwise in good credit in those districts, may be received in payment of dues to the United States.

With a view to the convenience of those who have moneys to pay in the district of Jeffersonville, I now tender the same proposition to the Branch Bank of Kentucky at Louisville. And the receiver of public moneys at Jeffersonville is instructed, on receiving from you an official copy of the unconditional act of acceptance of these terms, to deposite in that bank such moneys as he may receive from time to time in consequence of this arrangement.

In making this proposition, it is understood the Branch Bank of Kentucky at Louisville does now discharge its notes with specie, or will do so when this arrangement takes effect; and that the notes of any bank which does not discharge them in specie, on demand, cannot be received.

If this proposition be accepted, it will be necessary to furnish the receiver of public moneys at Jeffersonville with a copy of the list referred to in the first article.

I am, &c.

WM. H. CRAWFORD.

The PRESIDENT *of the Branch Bank of Kentucky at Louisville.*

[NOTE.—The proposition which accompanied this letter was the same as that made to the cashier of the Bank of Steubenville, (see A. No. 10.) with this difference: the sum to remain on deposite was fixed at $100,000, and the last sentence was omitted.]

J. No. 2.

SIR: LOUISVILLE BRANCH BANK, *April* 24, 1819.

I have received your letter of the 12th ultimo. Your proposition for depositing the public moneys received in the district of Jeffersonville in this bank has been laid before our board. They have determined to receive the deposites on the conditions proposed by you. We shall to-day give May Taylor, the receiver of public moneys at Jeffersonville, a list of the bank notes to be received.

Mr. Bustard, our cashier, will, early next month, forward you the report requested.

I am, very respectfully, your most obedient servant,

THOMAS PRATHER, *President.*

Hon. WM. H. CRAWFORD,
Secretary of the Treasury of the United States.

J. No. 2.—[Enclosure.]

List of bank notes to be received at the Louisville Branch Bank, from the receiver of public moneys at Jeffersonville, to the credit of the Treasurer of the United States, as cash, viz:

APRIL 26, 1819.

JOHN BUSTARD, *Cashier.*

J. No. 3.

SIR: TREASURY DEPARTMENT, *March* 14, 1820.

Funds being required for the public service at Lexington, I have instructed the Treasurer to draw on you in favor of the office of discount and deposite of the Bank of the United States at Lexington for $25,000, payable at

that place, where I trust it will be convenient for you to provide funds to meet it. I have to request that you will inform me whether, since the recent suspension of specie payments by the Bank of Kentucky, your branch bank has suspended, or purposes to suspend, the payment of its notes in specie on demand.

I am, &c. WM. H. CRAWFORD.

J. BUSTARD, *Cashier of the Branch Bank of Kentucky, Louisville.*

J. No. 4.

SIR: LOUISVILLE BRANCH BANK, *April* 5, 1820.

In answer to your letter of the 14th ultimo, I regret that it is not convenient for me to provide funds at Lexington to meet the Treasurer's draft on me for $25,000, payable at that place. Since the suspension of specie payments by the Bank of Kentucky and its branches, all the energy of our board has been directed to the providing funds at New Orleans and the eastward to meet the claims of the Treasurer of the United States against this office. Our branch suspended the payment of its notes in specie on the 18th of January last.

My letter to you of the 5th of February last, (duplicate of which is enclosed,) covering James Johnson's first of exchange on the Hon. J. C. Calhoun, Secretary of War, for $15,000, payable to me at sight, I fear has miscarried, having received no advice from you thereof.

I herewith transmit you James Johnson's second of exchange, of same tenor and date; and beg you will, in return, transmit me a draft of the Treasurer of the United States on myself for the amount.

On the 8th ultimo I transferred to the creditof the Treasurer of the United States $23,910 72 out of the funds of this office at New Orleans and the city of Washington, of which I advise you. (A duplicate thereof is herewith enclosed.)

I also transmit you a report of the Treasurer of the United States' account with this office up to the 31st March last, inclusive.

I am, very respectfully, your obedient servant,

JOHN BUSTARD, *Cashier.*

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

J. No. 5.

SIR: TREASURY DEPARTMENT, *June* 6, 1820.

Your letter of the 5th April was duly received. The draft for $25,000, to which it refers, has been suffered to lie in the office of discount and deposite of the Bank of the United States at Lexington, in the hope that it would soon be convenient to the Branch Bank of Kentucky at Louisville to discharge it. If, however, that branch is still unable to make any arrangement with the office at Lexington for the payment, the cashier will be instructed to return the draft to the Treasurer. It is expected that the branch will proceed, without delay, to transfer the balance of public moneys in its possession, in the manner stipulated in the engagement entered into by it with this Department.

I am, &c. WM. H. CRAWFORD.

J. BUSTARD, Esq., *Cashier of the Branch Bank of Kentucky, Louisville.*

Bank of Mississippi.

K. No. 1.

SIR: TREASURY DEPARTMENT, *February* 11, 1820.

In answer to the applications which have been made to this Department on behalf of the Bank of the State of Mississippi, for making that bank a depository of the public moneys in that State, I have the honor to propose the following conditions for such an arrangement:

1. That the bank will receive, on behalf of the Treasurer, in addition to specie and bills of the Bank of the United States and its branches, the bills of such banks (whose paper is in general circulation in that State) as pay their notes in specie, on demand, and are otherwise in good credit, (a list of which is to be furnished by the bank to the Secretary of the Treasury and to the receiver at Washington, Mississippi;) and, if the bank should, at any time, deem it inexpedient to continue the reception of any of the notes mentioned in such list, it shall nevertheless receive such sums as the receiver at Washington may have taken in those notes before he was informed of the change.

2. That, at the expiration of each quarter, the bank shall transfer to the branch of the Bank of the United States at New Orleans, or some one of the Atlantic cities, the balance then remaining on hand, after discharging such drafts as the Treasurer may have drawn upon it.

3. That the bank shall render to the Secretary of the Treasury, and to the Treasurer, monthly returns of its account with the Treasurer, and shall also render to the Secretary a monthly return of the state of its affairs; which latter return shall be considered confidential. In this latter return must be noted the sums standing on the books of the bank to the credit of any public officer or agent.

On receiving the assent of the bank to these conditions, the receiver at Washington will be instructed to make his deposites in that bank.

It is understood, however, that the bank discharges its notes in specie, on demand; and that if it should discontinue to do so, it will cease forthwith to be employed as a depository of public moneys.

I am, &c.

WM. H. CRAWFORD.

G. TICHENOR, Esq., *Cashier of the Bank of the State of Mississippi.*

K. No. 2.

SIR: BANK OF STATE OF MISSISSIPPI, NATCHEZ, *March* 27, 1820.

The propositions contained in your letter of the 11th of February have been submitted to the consideration of the directory of this bank, and by their order I have the honor to report, that the conditions on which this bank can become the depository of public moneys in the State of Mississippi are agreed to, and monthly returns of the condition of this office will be furnished.

I am, sir, very respectfully, your obedient servant,

G. TICHENOR, *Cashier.*

WM. H. CRAWFORD, Esq., *Secretary of the Treasury U. S.*

K. No. 3.

SIR: TREASURY DEPARTMENT, *August* 1, 1820.

I annex a copy of an instruction issued to receivers of public moneys, designating the funds in which payments may be made for the public lands. By the arrangement now existing between the Treasury and the banks in which those officers make their deposites, nearly the same funds, with occasional variations, are already receivable as cash. It is desirable, however, for many reasons, that the practice of all the land offices should be uniform. I propose, therefore, that the existing arrangement be so modified as to conform to the annexed instruction. And I request that you will, as early as practicable, communicate to me the assent of the bank.

I am, sir, your obedient servant,

WM. H. CRAWFORD.

To the PRESIDENT *of the Bank of the State of Mississippi, Natchez.*

SIR: TREASURY DEPARTMENT, *August* 1, 1820.

With a view to increase and to equalize the facilities of making payments for public lands in the several land districts of the United States, I have determined to authorize the receivers of public moneys to take, in addition to specie and bills of the Bank of the United States and its branches, the notes of the following incorporated banks, viz:

Those in the cities of Boston, New York, Philadelphia, Baltimore, and Richmond, and in the States of South Carolina and Georgia, except the City Bank of Baltimore; and those specie-paying banks in the State in which the land office is situated.

This instruction supersedes those that have heretofore been given on the subject, except in so far as they prohibit the receipt of the paper of any bank which does not discharge its notes, on demand, in specie; and that prohibtion must, in every case, be rigidly adhered to.

In order to facilitate the collection of the notes of the banks in your State which may be received by you, you will, on making a deposite, give notice to each of those banks of the amount of its notes contained in such deposite; and if you shall be informed by the cashier of the bank in which you make your deposites that the notes of any bank in your State, which may have been deposited by you, have not been paid on demand, you will discontinue to receive the notes of such bank. It may be proper for you to take the first occasion to intimate, in respectful terms, to each of those banks, the consequence that will result from a want of punctuality in paying its notes on presentation.

For the information of the purchasers of public lands, you will publish, in one of the newspapers in your district, a list of the kinds of money receivable at your office; and you will give notice, in like manner, of any change that may occasionally take place.

I am, sir, your obedient servant,

WM. H. CRAWFORD.

—— ——, *Receiver of Public Moneys.*

K. No. 4.

BANK OF THE STATE OF MISSISSIPPI,

SIR: NATCHEZ, *September* 9, 1820.

I have the honor to acknowledge your communication of the 1st of August, with a copy of instructions to the receivers of public moneys, designating the particular funds in which payments for public lands may now be effected, and requiring the assent of this bank thereto.

With an earnest desire to afford every practicable facility to the public business, our practice hitherto led us to receive from Mr. Walton, the late receiver, as a special deposite, the Virginia, Carolina, and Georgia notes, which we generally exchanged in a short time, at par, for the usual currency. The notes of all the other enumerated banks, having a very limited circulation, can now and at all times readily be received as cash.

The principal difficulty apprehended from the proposed arrangement arises from an extended circulation which will probably be given to the Georgia and Carolina bank notes, throwing upon our hands a mass of currency which cannot be disposed of, except to casual applicants, and always liable to some depreciation from the remoteness and the fluctuations in the intercourse between Carolina and Georgia and this State. All difficulties cease if we are permitted to withhold a cash credit for such notes until they are disposed of as heretofore.

I have the honor to be, very respectfully, your obedient servant,

SAM. POSTLETHWAITE, *President.*

To the Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

K. No. 5.

SIR: TREASURY DEPARTMENT, *April* 19, 1821.

Upon the information communicated in your letter of the 27th ultimo, I have instructed the receiver of public moneys at Washington, Mississippi, no longer to receive the notes of the South Carolina and Georgia banks in payment for public lands.

WM. H. CRAWFORD.

G. TICHENOR, Esq., *Cashier Bank of Mississippi, Natchez.*

Planters and Merchants' Bank of Huntsville.

L. No. 1.

SIR: PLANTERS AND MERCHANTS' BANK OF HUNTSVILLE, *August* 21, 1818.

I have the honor to acknowledge the receipt of your two letters, dated on the 1st and 11th of July,* touching the deposite of the public money in this bank, under certain conditions; indicating the mode in which the accounts for those deposites should be kept, and the returns made; and likewise the manner in which they will be drawn from the bank, since the expiration of the arrangement by which they were subject to the drafts of the cashier

*See I, Nos. 1 and 2.

of the Bank of the United States. I have to observe, in reply, that this bank accepts the deposites on the terms and conditions proposed, and will conform its accounts and returns to the new arrangement. This acceptance would have been signified earlier, but for an absence of a fortnight from town.

With the highest respect and consideration, I have the honor to be, sir,

Your most obedient and humble servant,

LEROY POPE,

President of the Planters and Merchants' Bank, Huntsville.

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

L. No. 2.

Extract of a letter from the Secretary of the Treasury to Leroy Pope, president of the Planters and Merchants' Bank of Huntsville, Alabama, dated

TREASURY DEPARTMENT, *December* 11, 1818.

In making the Planters and Merchants' Bank of Huntsville a place of deposite, at its particular solicitation, it was expected that the transfer of the funds which it undertook to make would be effected in funds that circulated at par at the place where the transfer was directed. As the receiver had been directed to receive the bills of no banks which did not discharge them in specie, upon demand, it was expected that the bank would be answerable for the amount deposited, in specie, or in bills which would be received as specie, at the place to which the money should be directed to be transferred, unless it should state to the contrary. But, as no explanation of this nature has been made or sought on either side, this requisition will not be rigorously required. It is, however, expected that the bills of banks received in deposite which are situate west of the mountains will be converted by your institution into funds receivable at par at the place to which you may be directed to transfer them. Should it be more convenient to you to pay the bills which may be drawn upon you by the Treasurer, for the purpose of transferring the funds, at New Orleans than at Savannah, that direction will be given to them, upon your signifying your wishes to that effect. I observe that a part of the deposite made at Savannah, to which you refer, was made in your own notes and in the notes of the banks of Tennessee. It is a matter of notoriety that the notes of these banks were not at par in Savannah; and I presume that they will not at any time be at par at New Orleans. In making payments, or in transferring funds to either of these places, the bills of those banks cannot be received.

In the case of your own bills, specie is demandable of right; and in case of the bills of Tennessee or Kentucky, the expense of converting them into specie, or funds receivable at par at Savannah or New Orleans, ought to be borne by your institution. In requiring transfers to be made to places where the public exigencies require, it cannot be expected that the United States Bank or the Treasurer will be able at all times to consult the convenience of the banks in which public money may be primarily deposited: but, as far as it is practicable, it shall be done. The inconvenience, however, resulting from sudden exigencies, might be avoided by the bank, by transferring to either of the places designated in this letter a large portion of the public funds in its possession, at those seasons of the year when that operation can be most easily effected, and depositing them in the offices of discount and deposite of the United States Bank established there, to the credit of the Treasurer of the United States. It may be useful to observe that the bills of banks in the Middle States may, it is presumed, be easily exchanged for the bills of your own institution with persons who have transactions with those States in which it is known that large sums are annually employed. These exchanges may be effected without inconvenience to the bank, to which application will be made when it is known that that description of bank notes is in its possession. If this can be done, the bills of the banks in the Middle States can be received in payment of the public lands without inconvenience.

I shall be glad to receive such communications upon the subject embraced by the latter part of this letter as you shall think proper to make.

L. No. 3.

Extract of a letter from Leroy Pope, president of the Planters and Merchants' Bank of Huntsville, Alabama, dated

JANUARY 21, 1819.

The suggestions in the latter part of your letter deserve, and have received, a very serious attention. So long as western bank paper continues to be received at the land office here, and is under par in the Atlantic cities, it is manifest that this institution must suffer inconvenience and loss whenever it is called on to transfer *such* funds to any of those cities. It must either convert those notes into others that circulate there at par, or it must submit to lose the difference of exchange. The last is a permanent evil, involving a burdensome tax, of varying, but always of serious amount. The first cannot always be done at a very short warning; though it could, at all times, be easily effected in whole, or at least in great part, by a slight modification of the plan you propose. If certain points on the Atlantic coast were designated, and this bank were authorized to transfer, from time to time, to either or all of them, at its option, such portions of the public moneys as were conveniently in its power, by the usual and natural course of the commerce of the country, placing the sums in the branches of the United States Bank to the credit of the Treasurer, all difficulties, it is believed, could be readily obviated. The total ignorance of the point at which a draft drawn on us may be made payable subjects us to frequent embarrassment. We know not what description of foreign paper would most avail us, and of course are liable to accumulate such as will not answer, and to part with such as would. For instance: contemplating last summer, before any bill had been drawn on us, the probability that funds for paying the Tennessee troops would be demanded of us as the most convenient point for that purpose, we sent off about $50,000 of Georgia money to be exchanged, and, very soon after we had disposed of it, received a draft payable in Savannah. This was one of the chief reasons why we had not then a sufficient quantity of southern paper to meet the draft. Similar evils may occur again; and an industrious endeavor to accumulate available funds, at the most probable place of demand, may meet with a similar reward. Nor could a supply sufficient of such paper be procured at that time in all West Tennessee. We despatched an agent to the several banks of that part of the State for the purpose of exchanging their paper for such as we wanted; and sent all that we could get. It is true that, in default of the required sum in southern paper, we sent to Savannah some western paper—that of Tennessee, and that of our own bank. A portion of this last was sent, because it was somewhat nearer than Tennessee, and because we supposed it would be more likely to answer the purposes of the United States Bank, as it would more probably be preferred by the numerous emigrants who were flocking from Georgia and the Carolinas into our Territory. The Bank of the United States

notified to us that it would hold us responsible for any difference which may exist in the value of such notes as did not circulate at par at Savannah, or for the loss which might be sustained in rendering such notes available. We have complied with this demand, although our cashier, some time since, not adverting to the original propositions of this bank to your Department, and taking into view only the extreme hardship of our being bound to receive from the land office paper which did not circulate at par along the Atlantic, and yet were required to make it so circulate at our own expense, questioned the rightfulness of the claim in a letter to the cashier of that bank. We settled this business some time since entirely to the satisfaction of the agent of the branch at Savannah.

Our merchants dealing principally with New York, Philadelphia, and Baltimore, it would be easy for us to transfer, from time to time, large portions of the public moneys to one or other of those points, *especially the first*, by exchanging the paper of western banks for bills on those cities; and the same is true, to a limited extent, at certain seasons of the year, of New Orleans. With Savannah we have no commercial intercourse, or next to none; and to make remittances there, we must either send an agent with the money, which is both expensive and dangerous, or resort to the circuitous operation of transferring first to New York and then to Savannah. If the mode hereinbefore proposed should meet your approbation, it would afford us great relief. Bills would be bought on New York, New Orleans, &c., as the course of trade permitted. The proceeds would be placed in the branch banks there, to the credit of the Treasurer of the United States. Of the amount at the respective points you would, from time to time, be advised, as well by this bank as by those in which the deposites would be made. And we would, as occasion offered, or at stated periods, if required, place in the branch at Savannah, to the credit of the Treasurer, as before, such southern paper as was in our hands and circulated there at par. Presuming that an arrangement of this description might be sanctioned by you, we have recently purchased bills on New York to a considerable amount, which will mature in from two to four months. But we shall not like to add much to the sum already negotiated until we hear from you on the subject. Our proposition seems to differ from yours only in allowing *us* the option of place; and we do not conceive that this can materially affect the operations of the Treasury. If you designate *two* optional points, let them be New York and New Orleans; and if you restrict us to one only, let it be the first. To make receivable in the land office here only such paper as circulates at par in the Atlantic cities, would, in our opinion, be a very ruinous and unnecessary measure. Its effect on the prices of the public lands still in market would be instant and most depressing. The fall would be great and permanent, and the ability to make the future payments on lands already sold would be at least extremely questionable, if not wholly unattainable. The difficulty, at any rate, would be very great, and the consequent sacrifices and distress incalculable. The interests of the Government would suffer in equal measure with those of our own people, and the policy of both obviously dictates that the existing arrangement in that regard, or one approaching to it, should be continued, so long as the banks whose paper is authorized to be received shall preserve the reputation of solidity, by paying specie. This they have not yet forfeited; but, although they have a substantial specie basis, and are still in deserved credit at home, there is no probability that their notes will be at par at either of the points named by you or by us; and loss must always be sustained by this bank when suddenly called on to transfer such funds to an unknown and unexpected point. To effect transfers without loss, time is required, and the further aid of such an arrangement as we have proposed. Whether this institution ought, in justice to itself, and with a due regard to its own safety and its profitable existence, to continue, under such a state of things, without some such understanding, in the receipt of the public funds, except as a mere *special deposite*, is a very serious question, which a prudent forecast will, ere long, feel itself bound to discuss and determine.

Respectfully, your obedient servant,

LEROY POPE, *President.*

WM. H. CRAWFORD, Esq., *Secretary of the Treasury.*

L. No. 4.

Extract of a letter from the Secretary of the Treasury to Leroy Pope, president of the Planters and Merchants' Bank of Huntsville, dated

MARCH 9, 1819.

To refuse, in payments to the Government for public lands, every thing but specie and the bills of the Bank of the United States and its branches, would greatly embarrass the public debtors, and affect, to a great extent, the sale of the public lands. To admit of payments in a medium which would reduce the receipts, in a great degree, to the denomination of special deposites, would greatly embarrass the fiscal operations of the Government. The inconvenience resulting from the former would be less than the latter, and must be submitted to, if no other alternative can be devised.

I have just made an arrangement with one of the banks in Ohio, which is intended to be offered to several others in the northwestern section of the Union, for the purpose of removing the inconveniences complained of there, and which have resulted from the improvident multiplication of banks, and other causes not necessary to be explained. A copy of this arrangement is now submitted to the directors of the Huntsville Bank, with such modifications as the particular situation of the bank renders expedient.

If this arrangement shall be accepted by the bank, it will remain the depository of the public money. The money to be transmitted by it may, at its option, be deposited in the Branch Bank of the United States at New Orleans, or at New York, Philadelphia, Baltimore, or this city, as may be most convenient to the institution. If the arrangement be not accepted, or some other arrangement made which shall be satisfactory, some other depository must be sought for. I presume, however, that the arrangement will be acceptable, as the benefit resulting from the permanent deposite will enable the bank to cover any loss or expense resulting from the transmission of the public money, and from calling upon the banks whose bills are receivable for payment, where that shall be necessary.

The amount of the permanent deposite may be increased gradually, according to the amount of the capital paid in and the sums received upon deposite, so as always to indemnify the bank for the expenses to which it may be subjected, and secure to it such advantages as are reasonable and just. If the draft which is yet to issue under the notice which has been given can be payable more readily and conveniently at New York or at New Orleans than Savannah, it shall be made payable at either of those places. The same course will be pursued in all subsequent transfer drafts, and care will be taken that the interest of the bank shall not be unnecessarily affected by the transmission of the public money to those points.

L. No. 4.—[Enclosure.]

Conditions on which the Secretary of the Treasury will continue to employ the Planters and Merchants' Bank, at Huntsville, as a depository of public moneys.

1st. That all moneys received by the bank on account of the Treasurer of the United States shall be entered to the credit of that officer, and accounted for as cash. The bank may, however, discontinue to receive the paper of any of the banks whose notes it is now authorized, or may hereafter be authorized, by the Secretary of the Treasury to receive. But, in such case, it shall give immediate notice thereof to such receivers, or others who usually deposite public moneys in it; and the notes of any such banks which may have been received by them before such notice shall, nevertheless, be taken and credited by the Planters and Merchants' Bank as cash.

2d. That the bank shall pay, at sight, all drafts which the Treasurer of the United States may draw on it; and it shall, from time to time, transfer to the Bank of the United States, or its branches at New Orleans, New York, Philadelphia, or this city, (in such moneys as will be received as cash,) the excess of public moneys remaining on deposite after such drafts are paid, over and above the sum of $75,000; which sum of $75,000 shall remain on deposite in the Planters and Merchants' Bank during the continuance of this arrangement, and shall be transferred, in like manner, within six months after the said bank shall cease to be employed to receive the public moneys. It is agreed, however, that if the amount received by the bank shall be so large as that the expense of remittance shall exceed the benefit of the deposite, the sum which is to remain on deposite in the bank shall be proportionately increased.

3d. That the bank shall render to the Secretary of the Treasury, and to the Treasurer of the United States, duplicate monthly returns of its account with the Treasurer, and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; which latter returns shall be considered confidential. In these latter returns must be noted the sums standing on the books of the bank to the credit of any public officer or agent. The bank shall also transmit, as soon as practicable, to the Secretary of the Treasury, a list of its debtors, showing the amount due by each, and shall render a similar list quarter-yearly. This list will likewise be considered confidential, and in no case will be made public.

L. No. 5.

SIR: PLANTERS AND MERCHANTS' BANK OF HUNTSVILLE, *May* 4, 1819.

I had the honor to receive by last mail your letter of the 9th March, in reply to mine of the 21st January, and covering a series of conditions on which you propose to continue to employ this institution as a depository of public moneys.

This letter and the accompanying conditions were submitted to the consideration of the board of directors at its last meeting; and I am authorized to inform you that they are accepted by the board, with the exception of the last clause of the last article only, which requires that the bank shall also transmit to the Secretary of the Treasury, as soon as practicable, a list of its debtors, showing the amount due by each, and shall render a similar list quarter-yearly. Motives of delicacy towards its customers cannot but strongly indispose the board to accede to a requisition in its nature so inquisitorial, and the object of which they do not very clearly perceive. If it be intended as a means to enable your Department to form an opinion as to the ultimate solvency of the bank, and its probable ability at any time to meet its engagements, the board beg leave respectfully to suggest that this object may be attained by other modes not liable to similar objections, and involving nothing which can amount to a constructive breach of faith towards the debtors of the institution, to whom an exposure of their accounts must always be unpleasant, and, perhaps, where they are engaged in extensive mercantile business, sometimes unsafe, operating injuriously to their credit. The pledge tendered by your Department that this list shall be entirely confidential, and shall in no case be published, lessens the force of the objection; but certainly so much as belongs to motives of delicacy, and the customary engagement of secrecy, still remains. The board, therefore, cannot but hope that you will not persist in requiring this condition; it is one which, if acceded to at all, would be acceded to unwillingly, and with a feeling of impropriety. But if they are right in their conjecture of the *object* of this rule, they presume to hope that you will readily relinquish it when you recall a circumstance which materially distinguishes this bank from other institutions of that nature: it is that feature in our charter which renders not only directors, but even stockholders, liable in their individual capacities, and out of their private fortunes, for the debts of the bank. I had the honor, on a former occasion, to transmit to you the act of incorporation, to which I beg leave to refer you, and, in lieu of the clause objected to, I am authorized to propose to you a list of the stockholders, with the amount of shares by them held, respectively, which list may be corrected quarter-yearly. Any person at all acquainted with the situation and circumstances of persons in this quarter will inform you that this list comprises many of the most respectable and opulent men in our country, whose united private property is more than ten times equal to any amount which will probably be ever issued by the bank. This feature in our charter has already given us a hold on the confidence of the community which it will be our study not to forfeit; and we trust that it will, on the present occasion, relieve us from the necessity of acceding to a condition yielded with reluctance, and of dubious utility when yielded.

It will be more convenient to this institution that the drafts which are yet to issue under the notice which has been given should in part be made payable at New York than any other place. We made arrangement, by remitting bills of exchange to New York, to have met the drafts alluded to; but in consequence of two drafts of the Treasurer of the United States, each for $30,000, being presented a few days ago, (of which we had no previous notice,) we were compelled to make use of a part of those funds to discharge them, as we could not obtain such money as would answer the person applying for payment. You will therefore have the goodness to draw on us for $50,000 payable in New York, in all the month of June. The balance we are endeavoring to make an arrangement for in Philadelphia.

With the highest respect and esteem, I have the honor to be, sir, your humble servant,

LEROY POPE, *President.*

Hon. WM. H. CRAWFORD, *Washington City.*

L. No. 6.

SIR: PLANTERS AND MERCHANTS' BANK OF HUNTSVILLE, *June* 30, 1819.

We have recently received authentic information that the Nashville Bank and its branches, as well as the independent banks of Tennessee, have all stopped specie payments; and rumors are already rife, and apprehensions

very strong, that the Bank of the State of Tennessee and its branches must soon follow the example. We do not know but this is even now the case. This event is certainly every way probable, and is almost universally expected. The effect of such a state of things on the operations of this institution must be too obvious to require comment. We have never yet refused to redeem our notes with specie, and we have no intention to do so. We deprecate such a course as a most serious calamity, to which nothing but the most imperious necessity shall compel us to resort. Our paper now in circulation may be naturally expected to flow in upon us copiously, as this bank is now the only point in this quarter at which specie can be obtained; and, while that article is disappearing from our vaults, we have not the power to replace it from the vaults of other banks whose paper we hold. We have, however, a firm confidence that our institution cannot be compelled to stop, unless the blow should come from you. We have no engagements that we need to fear, except those to the Government. Our own notes we can easily meet; but, at this time, heavy drafts from you would place us in a most disagreeable dilemma. In that case, we must either empty our vaults or refuse payment. If you take away from us our specie, we shall no longer have it to pay with here; and if you draw largely, we shall be compelled to stop, whichsoever of these courses we take. We trust, however, that you will not reduce us to a necessity so hateful.

You are aware of the difficulties we have heretofore experienced in converting into funds, available in the Atlantic cities, the paper of the western banks in which the Government deposites in this institution have been generally made; and you are apprized of our intention to accumulate funds in New York and New Orleans, as fast as practicable, to meet such drafts as might from time to time be drawn on us by you. With this view we have been induced, in some instances, to discount for our merchants more liberally than we should probably have done, on the faith and with the understanding that they should draw in our favor on the Atlantic cities. But the unexampled depression in the price of our produce has put this, for the present, out of their power; and should we proceed to call in hastily on our discounts, they would not probably be able to meet the call; certainly not, except in such western paper as they received from us. This would not answer *our* purpose, since it would not serve *yours*. And bills cannot now be obtained at any sacrifice. The sums arising from bills heretofore negotiated and placed at our disposal, in New York, have been nearly absorbed by drafts already drawn by the Treasury; and we see no reasonable prospect of placing other funds there until the new crop shall begin to come into market. We shall then count confidently on being able to perfect our arrangement, and, during the ensuing winter and spring, to place large sums at your disposal at New York or New Orleans, or both. We cannot, therefore, but earnestly hope that you will for the present forbear to draw on us (at least not largely) unless your bills could be made payable in such paper as we can conveniently procure. We trust we are justified in preferring this request by the existing state of things. The pressure of the times has been, and is yet, extreme; but we *know* our ultimate ability to meet all our engagements; and if, after taking into consideration a view of our situation, the difficulties of which have been wholly produced by the Government deposites, you should be of opinion that our case is not completely made out, we shall not object to an allowance of interest on the overplus in our hands beyond the amount allowed by your propositions to be retained. We have dealt frankly with you, and in your known candor and liberality we repose an animating confidence.

Be so good as to let me hear from you, in reply, as early as may be.

And believe me to be, with the highest respect and consideration,

Sir, your most obedient servant,

LEROY POPE, *President.*

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

L. No. 7.

SIR: TREASURY DEPARTMENT, *July* 30, 1819.

Your letter of the 30th ultimo has been received by due course of mail.

You will perceive, by the contents of my letter to you of the 9th instant, that the failure of the Nashville Bank and its offices was at that time known to this Department. It was then foreseen that the Bank of Huntsville could not fail to be injuriously affected by that event, and by others of a similar nature which were then anticipated. I cannot, however, admit that these are the only causes which have produced the embarrassment described in your letter, nor concur in the opinion which you express, that the difficulties of your situation have been wholly produced by the Government deposites. The real cause of them is, that you have discounted excessively upon your capital. If the public money had not been deposited with you, and you had discounted to the same extent that you have done, the amount of your notes in circulation would bear a most unreasonable proportion to the specie in your vaults; a proportion which, in times most favorable to banks, would be considered wholly unsafe. The public deposites, indeed, may be chargeable with your difficulties, so far as they have tempted you to discount beyond what you would have done had they not been in your possession.

The reasons stated in my letter of the 9th instant, in favor of the prompt adoption by the bank of the measures necessary to the transfer of the public money in the possession of the bank beyond the permanent deposite, remain unimpaired. The most liberal disposition, however, exists in this Department to foster and cherish such of the State banks as are disposed to make the necessary exertions to preserve their credit, and particularly those in which the public money is deposited. Due regard will be paid to their representations, and nothing will be exacted of them which a sense of public duty shall not require of me. Notwithstanding the declarations of the bank, that it is impracticable to make any remittances at this season of the year, it is hoped that, to some extent, this will be effected. No drafts, however, will be drawn upon it, for the purpose of transferring the public money to the United States Bank, until information of its readiness to meet them shall be received. But, to meet demands upon the Treasury in Nashville and in Knoxville, especially to pay the semi-annual pensions in those places, drafts will be drawn upon the bank at Huntsville. The sums required for this purpose will be, at Nashville about $23,000, and at Knoxville about $10,000. About the latter sum will be required to pay the Tennessee volunteers. It is presumed that these drafts can be met without inconvenience by the bank. The two sums first named, it is expected, may be discharged in the notes of the State Bank of Tennessee, which is understood still to pay its notes on demand. As the Nashville Bank is still, and must remain until after the 4th of September next, the agent for paying pensions, it is presumed that it will not so far discredit its own notes as to refuse to receive them in the discharge of the Treasurer's draft for that purpose.

I remain, &c.

WILLIAM H. CRAWFORD.

LEROY POPE, Esq., *President Planters and Merchants' Bank, Huntsville.*

L. No. 8.

SIR: PLANTERS AND MERCHANTS' BANK OF HUNTSVILLE, *September* 15, 1819.

Your favors of the 9th and 30th July have been duly received, and would have been answered much sooner if it had been in my power to have given you any satisfactory assurance in regard to remittances. I have been endeavoring, for three months past, to procure all the southern money I could, in order to make a remittance to Savannah, as there is no other kind of bills here in circulation, that will pass east of the mountains, but Georgia and South Carolina; and there has been some difficulty in obtaining an amount which would be a sufficient object to send to Savannah. There is at this time one of the officers of the bank now in Tennessee, endeavoring to procure southern money; and as soon as he returns, which will be in two or three days, I shall send him on to Savannah with about thirty thousand dollars, which will be placed to the credit of the Treasurer of the United States, on the books of the Branch Bank of the United States at Savannah, and subject to his drafts. The precise sum I shall advise you of so soon as the officer starts from here. The several sums which you say will be drawn on this bank, to meet the demands on the Treasury at Nashville and Knoxville, can and will be paid without any inconvenience; and I could have wished the sum had been larger. You may, sir, rest assured that every exertion has been made use of, and will be made use of, to transfer the funds in this bank, belonging to the United States, in such money as can be made available to the Treasury in the Atlantic seaport towns. At what time and where the next remittance will be made, depends on circumstances. The bank has a lien on a large quantity of cotton now lying in New Orleans, and, as soon as it is sold, the proceeds will be placed to the credit of this bank, in the Branch Bank of the United States at New Orleans. This was for money advanced on the faith of bills on New York, which have not been paid, that the bank intended for the Treasury. The precise amount which this cotton will bring is yet uncertain, but, as soon as I am informed of the amount, I shall order it to the credit of the Treasurer of the United States, and inform you thereof.

As our cotton crops are now coming in, we may daily expect eastern funds here to purchase, when it will be in the power of the bank to procure those funds.

I remain, with sentiments of respect, your most obedient servant,

LEROY POPE, *President.*

The Hon. WM. H. CRAWFORD, *Washington City.*

L. No. 9.

Extract of a letter from Leroy Pope, Esq., president of the Planters and Merchants' Bank of Huntsville, to the Secretary of the Treasury, dated

SEPTEMBER 30, 1819.

I have been able to start Mr. Hobson, an officer of this bank, this morning, to Savannah, with twenty thousand dollars, with instructions to deposite it in the Branch Bank of the United States at Savannah, to the credit of this institution, subject to the drafts of the Treasurer of the United States.

The banks of Tennessee stopping specie payments, and no bank near them paying specie but ourselves, has been a serious injury to us, and caused us to be severely pressed by the eastern merchants. Our bills are now, in Tennessee, from 5 to 8 per cent. above par; but I trust and hope we shall weather the storm. And we do acknowledge ourselves greatly indebted to you for your manifest friendship towards our young institution, and the wholesome advice you have given us.

You may rest assured sir, that every exertion has been made, and will continue to be made, to curtail our discounts wherever it is practicable. Such have been the distresses amongst our mercantile men, who are our greatest borrowers, that to have pressed them would have proved ruinous to many. We were induced to discount much larger last fall for our merchants than we should have done if we could have transferred Tennessee money for bills on the eastward; this we could not do to any thing like the amount which we had. We then concluded to extend our accommodation to the merchants; they would purchase the produce of the country, and sell us bills in the spring; but such was the sudden fall of the staple article, and so great was the fall, that it was out of the power of the merchants to draw bills or to take up their notes, and we have been compelled to renew them in almost every case. I hope the present crop will relieve them in a great degree, and will enable us to retrench our discounts down to a proper standard.

L. No. 10.

SIR: PLANTERS AND MERCHANTS' BANK OF HUNTSVILLE, *June* 21, 1820.

It becomes my duty, as president of this institution, to apprize you that the board of directors passed an order, on the 16th instant, to suspend specie payments for the present. Some of the principal causes of this measure are set forth in the printed address which I have the honor to enclose. There are not wanting others entitled to respect; and a confident expectation is entertained that, when the motives are duly appreciated, and our peculiar situation properly considered, the measure will receive your approbation. It is one to which we have been most reluctantly driven, and which we have long anxiously striven to avoid. At last, however, it seems to have become imperiously necessary; unless, indeed, we should protract the struggle a while longer, until our last dollar was withdrawn, then to close the doors of empty vaults. This alternative would deprive us of the means of being serviceable to the community; it would operate most injuriously to our credit; and would drive our paper out of circulation, only for the benefit of banks in the neighboring States which have long since refused specie payments; which very refusal itself has imposed on us the necessity of adopting the step we have taken.

Notwithstanding the uniform punctuality which, up to this period, this bank has observed in the redemption of its notes with specie, its issues were never sufficient to constitute an adequate circulating medium for this part of the State of Alabama; nor did this punctuality give its notes any considerable circulation beyond the limits of our own State and the State of Tennessee. Our notes did not afford our commercial men sufficient facilities in effecting their remittances to the north and east, since they could not be passed there, except at great discount. Nor yet had they here, among our own planters, any preference over Tennessee paper in paying debts, or purchasing necessary articles; because Tennessee paper *would* pay debts here, and buy goods and produce, (and this from the very necessity of having *some* medium of circulation,) and our paper was *insufficient.* Our paper was indeed better, not only because it commanded specie, but because it was received at the land office; and for these purposes it was preferred. Not much is at present required by the land office. But with northern and eastern merchants, and their agents, here and in Tennessee, our paper has been continually in great demand, and has been strongly preferred over any other description of western paper, as it enabled them to convert their funds into specie. This they have uniformly done, as often as they could procure our paper; and to procure it has been a regular business, ex-

changing Tennessee paper for ours, even at a premium of from five to ten per cent. The balance of trade being greatly against Tennessee, and in favor of the north and east, and the banks in Tennessee having refused specie payments, and all western paper being greatly below par in the Atlantic cities, the merchants of these last collected their Tennessee debts in Tennessee paper, which was then exchanged at a great discount for ours, with which they drew the specie, unless we supplied them with eastern funds. This operation has only increased the amount of Tennessee paper in circulation here, and renders our paper too much like an article hoarded for profit—a sort of interest—to make it as desirable as a mere *medium* should be. The Tennessee paper has already excluded from *circulation* almost all other in this part of our State. For the last nine months we have been furnishing specie to pay off the debts of Tennessee; and we must have continued to import it for that purpose, so long as the banks of that State refuse to redeem their notes, and any of ours remain to be purchased.

I forbear to lengthen this letter unnecessarily by stating in detail how, and to what degree, the late state of things would have been aggravated by the recent refusal of the banks of Georgia to redeem their notes in specie.

I fear I have been already tedious; but the board are anxious to preserve your good opinion, and I trust you will be kind enough to excuse a little prolixity. The Government need be in no apprehension for its funds in our hands. I am authorized to assure you that we shall not relax in our exertions to discharge, as speedily as practicable, our debt to the Treasury. All reasonable efforts have been made, and will be continued. We have now about twenty-five thousand dollars in the office of discount and deposite at New York, already ordered to be transferred to the credit of the Treasury, and held subject to the Treasurer's warrant. I have, on my own individual account, remitted to New York about ten thousand dollars in bills, now payable within sixty days, and three hundred and seventy-two bales of cotton: the proceeds of all which, as soon as realized, shall be likewise placed to the credit of the Treasury at the same office. I have also a large quantity of cotton in New Orleans, the proceeds of which will be applied in the same manner. In addition to these funds, the bank has a lien on a large quantity of cotton shipped to Europe last November; and the last mail brought advice of its safe arrival at Liverpool. The proceeds of so much of this last cotton as will belong to the bank are to be paid by Messrs. J. and C. Bolton, of New York; and should we realize from this cotton any thing like the sum for which it is pledged, we shall certainly be able, during the summer, to reduce our debt to the Treasury considerably below one hundred thousand dollars.

For my own part, I am decidedly of opinion that our suspension of specie payments will the better enable us, under existing circumstances, to discharge our debt to the Treasury: for all the eastern and northern funds, which may come into our hands hereafter, we can pay over to the Treasury; whereas, heretofore, we have been compelled to part with them in order to save our specie; and the produce of our country must and will continue to bring eastern funds here. I am authorized to assure you that the board of directors are determined not to follow the example, too commonly set by other banks who have suspended specie payments, of making new issues on new discounts. It is the determination of the board not to discount new paper, but only to renew notes on loans already made, until they can be gradually called in, without too enormous loss to the makers.

I am likewise instructed to give you the most explicit assurance, should you think proper to continue the Government deposites with us, and will authorize the receipt of our paper at the land office, that the bank will transfer the sums received to some of the places heretofore designated, in such money as shall be available at par. The nature and amount of our great staple production will always enable us to do this. Whatever debts the Government may owe in this State, or Tennessee, may be very conveniently, and without loss, paid in our paper.

You will discover, from the statement of the cashier, that our specie is much reduced in amount. But we shall have in a few days about thirty thousand dollars on the way from New Orleans, an officer of this institution having been despatched thither some weeks ago with the means of procuring it. This sum, added to what we have on hand, will make our specie bear a fairer proportion to our paper in circulation; perhaps greater than a majority of the best banks in the Union.

I have the honor to be, with great respect, &c.

LEROY POPE, *President.*

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

N. B.—The printed address I am disappointed in, but I will forward you next.

L. P. *President.*

L. No. 11.

Sir: Treasury Department, *July* 12, 1820.

Your communication of the 21st ultimo, announcing the suspension of specie payments by the Planters and Merchants' Bank of Huntsville, has been received by this day's mail.

Without investigating the causes which have led to this result, I sincerely regret the consequences which must flow from it.

The receipt of any thing but the current coin of the United States, or the notes of the Bank of the United States, in payments due to the Government, not being countenanced by law, has nevertheless been practised from necessity. The necessity, however, which is to be relied upon to justify a breach of the law, must not only be great, but imperious. After the expiration of the charter of the Bank of the United States in 1811, the paper of the State banks was received. When these stopped payment, in 1814, the necessity of receiving their notes, notwithstanding they were not convertible into specie, was not only great, but absolutely imperious. The Government had to elect between the receipt of such notes and the total cessation of the collection of the revenue. Under such circumstances the law of necessity prevailed, and the public revenue was collected in paper which bore no legal relation to current coin, and was not convertible into it. The shock thus produced in the public credit was too violent to be borne longer than the necessity which had produced it continued to be imperious.

In April, 1816, Congress, by joint resolution, directed that, after the 20th of February, 1817, the public dues should be collected only in current coin, or in the notes of banks which discharged them, upon demand, in specie.

The sufferings which the passage from paper to specie payments has produced have been too great to justify any act on the part of the Government which may tend to reproduce them, or to protract those which are not yet terminated. To receive as specie the notes of a bank which has stopped payment, would tend, so far as they should be received, to reproduce the paper system by the acts of the Government, and lay the foundation of additional suffering on the part of the people. If, therefore, there was nothing in the law to oppose this measure, I could not hesitate for a moment to declare that the notes of the Planters and Merchants' Bank of Huntsville cannot be received in any payment to the Government as long as they are not paid in specie, upon demand. Independent, however, of this view of the subject, the established practice of the Treasury has been to refuse the notes of all banks which do not discharge them, upon demand, in specie. The notes of most of the banks in the interior of

Pennsylvania, Ohio, and all those of North Carolina and Kentucky, have been refused upon this principle. A departure from it in your case would justly draw upon the Department the indignation of all those banks.

I have been thus particular, in order to satisfy you that the wish you have expressed cannot be granted consistently with my official duties, and that it is equally forbidden by the public interest.

I confidently believe that you will spare no exertions to refund the sum now standing to the credit of the Treasurer upon your books, and that it will be transferred to the Bank of the United States, or its offices, within the time prescribed by the arrangement.

I remain your most obedient servant,

WM. H. CRAWFORD.

LEROY POPE, Esq.

Tombigbee Bank.

M. No. 1.

SIR: ST. STEPHEN'S, *August* 9, 1818.

By an act of the Territorial Legislature, last session, a bank has been incorporated in this town, under the name of the *Tombigbee Bank*. It is about commencing its operations; and, as it is the wish and interest of the directors of the institution to obtain so far the confidence of the Treasury Department as to have its paper credited in payment of public lands in this Territory, and to receive deposites of public moneys, I have thought it proper to represent to you the situation and prospects of the bank.

The capital stock, $500,000 when filled, of which $200,000 is reserved for the Territory or State. The shares, $100 each, payable one-eighth on subscribing, and three-eighths when notified to be ready to go into operation, all in specie; the balance payable in sixty and one hundred and twenty days, equal payments. About $80,000 is subscribed. The second payment has been notified, and the payments nearly all completed, making half the amount subscribed, *in specie*. No doubt every dollar of the first four-eighths will be paid in specie before any paper will issue. The bank is limited in its issues to three times the payments into it by shareholders; it is bound to redeem its notes by specie. The estates of the stockholders are also bound to make good the debts of the corporation, by the charter.

As to the standing of the stockholders, generally, I consider it of the most solid kind which this quarter of the Territory affords.

The agricultural and commercial advantages of this portion of the Territory, as affording grounds of prosperity to the institution, are well known to you. Excepting in the extreme north end of the Territory, (Huntsville,) there is no other banking institution in the Territory.

On the new survey coming into market, and after the land office is brought from Milledgeville into the heart of the country, the effect produced on the land market by the facility of procuring loans in the country may be easily imagined.

In presenting the Tombigbee Bank to your favorable notice, it is fair that I should, at the same time, apprize you that I have, for the time being, a share in its government, and, therefore, a particular anxiety for its success. Whenever it is desired by the Treasury Department, a statement of its situation will be given, or any other information that may be asked in relation to it.

I am, very respectfully, your obedient servant,

ISRAEL PICKENS.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

M. No. 2.

SIR: TREASURY DEPARTMENT, *October* 17, 1818.

Your letter of the 9th August was received during my absence from the seat of Government, or it should have received an earlier answer.

The conditions on which the State banks have been employed to receive the public deposites are:

1. That the public moneys shall be entered to the credit of the Treasurer as *cash*.
2. That all drafts which that officer may draw in favor of individuals shall be paid at sight.
3. That the bank shall have sixty days' notice of all drafts drawn upon it, for transferring the public moneys to the Bank of the United States; these transfers, however, to be gradual, and the public money not to be drawn out *en masse*.
4. That the bank shall render to the Secretary of the Treasury, and to the Treasurer, duplicate monthly returns of its account with the Treasurer.
5. That the bank shall also render to the Secretary of the Treasury monthly returns of the state of its affairs; these returns to be considered as confidential.

On receiving the assent of the Tombigbee Bank to these conditions, I will decide whether it may also be employed to receive the public deposites.

I have to request that I may at the same time be informed of the name of the president and cashier of that institution, and have notice of the time when it goes into operation.

I am, &c.

WM. H. CRAWFORD.

ISRAEL PICKENS, Esq., *St. Stephen's, Alabama.*

M. No. 3.

SIR: ST. STEPHEN'S, *November* 24, 1818.

Your letter of the 17th of October has been received, and its contents have been submitted to the board of directors of the Tombigbee Bank. They consider the conditions therein mentioned, whereon the State banks have been employed to receive deposites of the public moneys, to be fair and reasonable; and I am instructed to communicate to you their assent to the conditions you have prescribed, should you conclude on employing this bank to receive deposites for the Government.

When my former letter was written, this institution had not been fully organized. It went into operation on the 12th of September. I herewith enclose a statement of its situation. The capital $500,000, when full; of which $200,000 is reserved for the Territory or State. Only 770 shares have been subscribed—$100 per share. Books are proposed to be again opened for the remaining shares about the 1st of January next, when, no doubt, the whole will be subscribed.

The presidency of the institution is, for the time being, intrusted to my charge. Mr. George S. Gaines, late United States factor in the Choctaw nation, is the cashier. Having acted for the Government a considerable time, his prudence and correctness are probably not unknown to you.

I have the honor to be, &c.

ISRAEL PICKENS.

The Hon. Wm. H. Crawford.

M. No. 4.

Sir: Treasury Department, *July* 9, 1819.

At the present moment, when banks in the principal cities which have been prudently managed are dividing but little, if any, more than legal interest; when those in the interior of the Atlantic States have generally failed; and such of them in the Western States as have not preceded them in the loss of credit are justly alarmed with the apprehension of it, the directors of all banks who intend to preserve their credit and usefulness are imperiously called upon to exercise the utmost circumspection and prudence. All those in the management of which any departure from the principles which ought to govern banking institutions has occurred, ought with promptitude to review their proceedings, and to introduce such reforms and curtailments as are necessary to secure their stability and usefulness.

Considering the small quantity of specie in the country, which forms the basis of the bank notes which circulate as its substitute, and its liability to exportation in the prosecution of the East India and China trade, as well as to meet balances which may happen to be due to the commercial states of Europe, whenever the rate of exchange between the United States and those countries shall furnish inducements, it is difficult to conceive that any bank can be managed with prudence which extends its discounts more than fifty per cent. beyond its capital actually paid in. During the existence of the former Bank of the United States, when there was but little bank competition, and when, owing to a most fortunate combination of circumstances, the precious metals abounded in this country more than in any other, that institution extended its discounts but little beyond fifty per cent. above its actual capital. The Bank of Tombigbee has, however, during a period of the most unexampled difficulty for moneyed institutions generally, discounted to more than three times the amount of its capital paid in. In making it the depository of the public money collected in its vicinity, it was expected that it would avail itself, to a reasonable extent, of the funds deposited in its vaults to the credit of the Treasury; taking care, however, to be always prepared to answer the demands of the Treasury for the whole amount, if emergencies should render it necessary. It would be difficult to define the extent to which it might with prudence have extended its discounts upon the public money in its possession. In times favorable to banking operations, it will readily be perceived that these discounts might be extended much further than at a crisis when banking institutions were generally struggling for existence; a crisis at which the Bank of the United States has not been able to declare a dividend of more than two and a half per cent., and when it is at this moment unable to make any dividend. Under such circumstances, unless favored extremely by locality of position, prudence would probably have dictated the employment of the public money in the possession of the bank as a means of guarding against the embarrassments by which other banks were beset, and under which they were daily sinking, instead of considering it a fund upon which its discounts might be extended. Such an employment would have been so much the more prudent, if the previous discounts of the bank were principally composed of what is generally called accommodation paper. The common misfortune of most of the banks in the commercial cities, at this moment, and still more so, it is presumed, of the interior banks, is, that their discounts are generally of that description. When pressed by the return of their notes, they have been unable to contract their discounts in a corresponding degree. Embarrassments in their operations have been the necessary consequence of this inability, frequently resulting in the loss of credit.

I am aware that it may be urged that, at the time the bank became the depository of the public money, its discounts bore nearly the same proportion to its capital that they now do. This is admitted, and it is also admitted that the return upon which the instruction to make the deposites was issued exhibited discounts to double the amount of the capital paid in. That proportion was conceived, at the time, to be imprudent; but the change which has occurred since that period in the currency, so far from justifying a greater disproportion between the discounts and capital, have called most imperiously for a reduction of the debts of the bank. It is, I think, manifest, that a bank, conducted upon the principles which have prevailed in the Bank of Tombigbee, holds the credit which it enjoys by no other tenure than the public sufferance.

It is possible that the local position of the bank may be so favorable as to exempt it from the emergencies and casualties to which banks in the commercial cities are liable, but it is not understood that any such favorable circumstances exist in relation to it.

I feel it, therefore, my duty to warn the directors of the danger which the present state of the bank is calculated to bring upon it, and invite them to a review of their measures. As an inducement to this course, it is my duty to state that the whole of the public money in the possession of the bank will probably be drawn from it in the course of the ensuing autumn, for the purpose of making a payment upon the Mississippi stock which is yet outstanding. Independent, however, of this circumstance, I am persuaded that the directors will, upon due consideration of the case, feel the necessity of retrenchment, and set about the reduction of their discounts, and bring them to a due proportion to the amount of the capital which has been actually paid in.

If any portion of the sums which now remain in the possession of the bank can be by it conveniently transferred to the United States Bank, or either of its offices, I will be thankful if you will inform me of the amount, and of the time and place at which it can be effected.

I remain, &c.

WM. H. CRAWFORD.

Israel Pickens, Esq., *President of the Tombigbee Bank.*

M. No. 5.

Sir: Tombigbee Bank, St. Stephen's, *August* 13, 1819.

Your confidential letter of the 9th ultimo was received by last week's mail, and has been laid before the board of directors, who have considered duly its important contents.

Your very frank and admonitory remarks are appreciated, not only for their practical correctness, but the sentiments which appear to dictate them, having a favorable regard as well to the interest of this institution as to that of the Government. And it is hoped that, in the future course of policy which will govern this bank, no cause of dissatisfaction will be left to the Government, or any other party concerned in its affairs, and that every reasonable requisition upon it will be promptly met.

In answering your letter, it is due to the directors of this bank to satisfy your Department of the perfect security of the public moneys intrusted to it, and also to explain the circumstances and motives under which discounts were so much extended in relation to the capital *paid in* for some months, and until lately.

The notes discounted are of the most unquestionable solvency, always combining with the principals securities of the most solid circumstances and known punctuality. In obtaining this material object, the want of competition in this quarter, and the multiplicity of applications beyond the capacity of the bank to accommodate, afforded it the best opportunities for selection of its debtors. It is true that these are generally so situated that a sudden call upon them, before the collection of their cotton crops, might subject them to some inconvenience; but, after that event, no serious difficulties can be felt by any of them, it is believed.

Not a bad debt has yet been discovered; nor has a recourse to legal measures ever been found necessary to enforce payment. One-eighth part of the original sum discounted is always exacted on every renewal of the note, though they are payable at sixty or ninety days.

At present, and during existing prospects, few, if any, original discounts are or will be allowed; and, in a short period, when the produce of the present promising crop will justify, payments will be accelerated, as well of notes discounted as of arrears of subscribed stock not yet paid in; which last is a resource in addition to those noticed in our statements.

It is also proposed, on the first Monday of next month, to open books for subscription of the remaining shares of unsubscribed stock, the second instalments on which will fall due two months after subscribing, at a suitable period for our planters to meet; and, from the present credit of this institution in this quarter, and the provisions in the new State constitution restricting future establishments, it is believed the stock will be in sufficient demand.

In addition to these considerations, the responsibility of the stockholders, in the ultimate resort which is furnished by the terms of the charter, will afford a surer guaranty than generally is found in similar institutions, and will also operate in inspiring those interested with care in the management of the affairs of the institution, and in adding confidence to its acts in the public opinion; and it is just to add, in behalf of those who conduct the affairs of the bank, that, however unskilled in the business of banking, no institution is conducted with more fidelity, economy, and impartiality between the customers, whether stockholders or not.

As regards the extent of the discounts allowed, in addition to the motives arising from the near and the sure prospect of increasing the capital, by payment of arrears of subscribed stock and sale of unsubscribed shares, there is some apology in other circumstances.

This bank commenced operation during a period of prosperity, while our staple produce commanded the highest prices. Great demand existed for a circulating medium within this section of the country; there was no institution of the kind in our vicinity. The paper most current was the notes of the banks of Georgia, and the Carolinas and Tennessee. The sales of valuable public lands were coming into market in this quarter in quick succession, which produced a press of applications for obtaining discounts that exceeded the capacity of the institution to accommodate, either with its existing or anticipated extent of capital. If the board have erred in the extent of its discounts, the error has been occasioned by a disposition to relieve this meritorious class of applicants, thereby enabling them to add to the improvement and substantial wealth of our new and growing Territory, and at the same time affording competition in the land market, and thereby contributing to the interest of the General Government. As to the last particular, I have the opportunity to know that the effect mentioned has been produced to some extent; and I can moreover declare, that a regard to public utility, combined with certainty of payment, were the general grounds on which a preference between applicants has been determined; and there is no rule by which stockholders have any preference in accommodation on notes on personal security; and, as far as my knowledge extends, there is a perfect satisfaction and confidence in the community in regard to the conduct of the institution. Under these circumstances, it was believed that an error in the extent of the discounts would not be viewed by the Government or its agents as one of the most reprehensible kind.

No apprehension could be entertained from any other quarter than from the Government itself, in the liberal and disinterested policy of which the fullest confidence was placed. Indeed, without such confidence, no bank could feel a safety in becoming the depository of public moneys on the terms required; for, while it is acknowledged that the Government, in this situation, may be our greatest friend, it has *the power* of being our most fatal enemy. Having furnished the Treasury Department with monthly statements of the affairs of the bank, in which it is believed the relative proportion between the discounts and capital had not much changed from the first, it was not apprehended that, at the date of your letter, we would receive a reprimand in such strong terms, as this was the first letter which afforded a hint at dissatisfaction with our statements.

It is true that changes in the state of other banks have been taking place, which required a change of policy with us; but it is also true that, in our remote position from other banks, we could not know the existence of those changes so soon as if our situation had been nearer to them; nor, by observation of their prospects and movements, has it been in our power to anticipate any consequences in relation to them. It was not until about the date of your letter that we had any knowledge that the banks of Tennessee and North Carolina had found any difficulty in their operations. In this remote situation, therefore, from the sphere of observation, and almost of knowledge, of the changes in the banking institutions to the east and northward, and being happily almost out of the influence of most of those changes, I hope that our tardiness in corresponding our policy to those changes may, in some degree, be palliated. As, however, the difficulties which affected some of the banks at a distance have approached nearer our vicinity, the wisdom of the course of policy has become obvious which you have so clearly and justly pointed out.

In answer to your inquiry as to the convenience of transferring a portion of the United States deposites to the United States Bank, or one of its offices, I presume that, with no other difficulty than the transportation, the amount contained in the enclosed statement could be transferred at any moment. The remaining deposites will also be transferred as may be directed, and as nearly as may be within the power of the institution. And of our situation for making such transfers we will give early notice, from time to time, as may be desired.

We will be thankful to be informed whether the same notes, or the same in kind, which may be received for the United States on deposite, will be received by the United States Bank, or its offices, or accepted on Treasury drafts. Some of the notes on the banks of North Carolina and Tennessee have not yet been exchanged; and it would be desirable to know what is the understanding on the part of the Treasury Department as to such deposites. No care, however, has been spared in making exchanges of North Carolina and Tennessee notes deposited for the United States, since some difficulties were understood to affect their banks; and, it is believed, no losses whatever will be sustained in the case of any notes deposited; though, unless the same paper received, or the same in kind, should be accepted in satisfaction of Treasury drafts, or accepted for the Government by the United States Bank or its offices, it is easy to suppose that it might at many times subject this bank to some difficulty, if not loss. This is rendered the more obvious, by considering that paper is authorized to be collected by the public receivers, and put in deposite, of distant banks, of whose situation we can have no very particular knowledge, and entered to the credit of the Treasurer of the United States as cash, according to the terms of our employment.

It is, however, believed that the Treasury Department will put such a construction on the terms of the deposite of public moneys that will preserve the bank from advancing specie for foreign notes entered as a credit to the United States, at least so far as to discourage the operations of resentment or of speculation. However, as to this particular, it is not our wish to be made an exception out of the rules observed in like situations towards others; indeed, it is sufficient for us to know that the power of construing our engagements, and of affecting materially our operations, rests with the Treasury Department, in the liberal policy and justice of which we have the most confident reliance. We have commenced correspondences with the officers of the Branch Banks of the United States in North Carolina and Georgia, to be informed whether the notes of the banks of those States will be received from us, and entered to the credit of the Treasurer of the United States. After receiving information on this point, we will be enabled to give a more particular answer to your inquiry as to the amount we might, at a very short period, be enabled to transfer to those branch banks; and should the notes of those State banks be admitted, much more facility will be afforded us than otherwise.

It is believed that drafts, to any reasonable proportion, of the United States funds in favor of individuals within our State, or therein to be applied, would be honored satisfactorily on presentation at this bank.

I am aware how much of your useful time must be occupied in reading this tedious letter, but its length will find apology in the importance to us of the matter it is designed to answer—in relation to the solvency of our means, our devotion to public usefulness, and regard to punctuality and honor in our engagements.

Although I will candidly admit that the extent of discounts was greater than in prudence they should have been, however, I trust that some allowance will be made for our peculiar situation, and that of the customers of the institution—being out of the sphere of that commercial failure and distress which has pervaded other banking operations—and, though more slow in payment, more certain; and for our anticipations of enlarged capital, and our dispositions to extend the benefits of the institution, perhaps too far, in aiding the meritorious class of our citizens and emigrants in the means of procuring the public lands.

I am commanded by the board of directors to tender their acknowledgments for your frank and friendly advice, and their assurances that nothing shall be wanting on their part to perform their engagements with your Department agreeably to your reasonable expectations.

I am, very respectfully, your most obedient,

ISRAEL PICKENS,
President of the Tombigbee Bank.

Hon. Wm. H. Crawford.

Statement.

The following sums can at any moment be advanced, or transmitted to such offices as may be disposed to receive them on the credit of the Treasurer of the United States.

In a short period a considerable sum more may be in like manner advanced, if the Carolina and Georgia notes will answer.

Georgia notes,	$100,000
North Carolina,	15,000
South Carolina,	15,000
Tennessee,	10,000
	$140,000

M. No. 6.

Sir: Treasury Department, *September* 15, 1819.

Your letters of the 13th and 21st ultimo have been received by due course of mail. The first discloses some facts and circumstances which certainly are calculated to diminish, in some degree, the supposed imprudence of the discounts of the bank. After making all reasonable allowance for those circumstances, the board of directors, I think, will, upon mature reflection, be convinced that the safety of a bank cannot be insured when its discounts shall so greatly exceed its capital. Permit me to observe, that the ultimate solvency of a bank has but little to do with its credit and its security as a moneyed institution. Bank notes are not received as money because it is believed that the bank will ultimately be able to pay its debts; they are received because they are convertible at the will of the receiver into specie, which is a legal tender. When the holder of them, instead of being paid the nominal amount in specie, is told that, notwithstanding the inability of the bank to pay in specie, he will ultimately be paid; that the debts due to the bank are good; and that, when they are able to collect them, he will be paid the value of their notes in his hands, or that debts to that amount will be transferred to him at once, he feels that he has been deceived and imposed upon, and no longer reposes confidence in the bank. It is considered by him as a mere mockery, when the notes cease to be money in his hands, to be told that, a year or two hence, if he will have patience, or if he will engage in a lawsuit, they may again be converted into money. The times have passed away, never to return, when a bank could lend out double and treble its capital. The community is overcharged with these institutions, even in those sections where they have been least multiplied. Every new bank which is organized diminishes instead of increases the sound circulation of the country, viz: bank notes convertible into specie at the will of the holder. This, I think, will be apparent to the most superficial observer, unless the creation of a bank increases the amount of the precious metals in the country. That no such increase is effected by the organization of an additional bank will be universally admitted.

Deposites made to the credit of the Treasurer of the United States in the offices of the Bank of the United States at Boston, New York, and Baltimore, and in the bank itself at Philadelphia, will be the most acceptable disposition of the public money deposited in the Bank of Tombigbee that can be made. Treasury drafts will be drawn upon that bank in favor of its cashier for all sums so deposited, so as to enable it to make the proper charges to the debit of the Treasurer of the United States upon the books of the bank.

Deposites of the notes of the Georgia and South Carolina banks in the offices of the Bank of the United States in those States will be equally acceptable, and drafts will issue in favor of your cashier for all sums so deposited, in the manner already described. The State Bank of North Carolina having stopped payment, the Bank of the United States would not credit the Treasurer for such deposites in its office at Fayetteville. That institution has been requested to disclose to this Department the means which it possesses, and intends to apply to the redemption of its notes which have been received and deposited in different local banks to the west.

There is every disposition in this Department to relieve such banks as have received, on account of the Treasury, the notes of that institution and of the banks of Tennessee which have stopped payment. It is, however,

expected that those banks will use every exertion in their power to exchange the notes which have been received, and to get them off their hands without loss. So far as the aid of this Department can be employed with effect to effect this object, it may confidently be calculated upon.

The fate of the State Bank of North Carolina ought to be a warning to all other banks. To rid itself of the teasing of the brokers, who could have done it no essential injury, the directors discredited their own paper, and that discredit drew upon the bank a run, which terminated in the entire loss of its credit.

I remain, &c. WM. H. CRAWFORD.

ISRAEL PICKENS, Esq., *President of the Tombigbee Bank.*

M. No. 7.

SIR: TREASURY DEPARTMENT, *September* 22, 1819.

Since I wrote to you on the 15th instant, I have received a communication from the State Bank of North Carolina, professing its willingness to make the best arrangement in its power for the payment of such of its notes as may be held by the Treasury. You may therefore deposite in that bank, at Raleigh, to the credit of the Treasurer, such of the North Carolina notes as may remain in the Tombigbee Bank of those actually received on account of that officer. On making this deposite, you will advise me of the amount, in order that the necessary drafts may be issued for the transfer. It is presumed, however, that the amount cannot be large, as, by a return from your institution of the 30th of July, it appears that the whole amount of North Carolina notes held by it was $11,961, of which sum a part was probably received in its ordinary business.

The return of the Tombigbee Bank to the 27th of August has been received, under cover of a letter from the cashier of the 2d instant. In a postscript, he states that he is instructed by the board of directors to inform me that, since the receipt of my confidential letter of the 9th of July, *no discounts on personal security have been allowed.* It appears, however, that discounts of some kind have been made during the month of August. It is presumed they were made prior to the receipt of my letter of the 9th of July. If it is intended by the directors to reduce discounts upon personal security, and extend them upon real security, I cannot but think the plan injudicious. If the bank should invest not only its capital but its too greatly extended credit upon real security, or in accommodation transactions, when a pressure arrives it cannot fail to stop payment. If the new discounts are on pledges of stock, so long as the stock continues to command the price at which it is pledged, the danger will not be imminent. It is proper, however, to state that, except in large commercial cities, a small amount of stock brought into the market cannot fail to depress its value.

If discounts are made by the bank, I presume they will be confined to the single operation of transferring funds to New York, through the agency of the cotton planters, whose crops are intended to be shipped to that place. If the shipments are made contemporaneously with the discounts, the receipts from the sales may be in time to save the bank from the inconvenience which might be apprehended in the absence of such a resource.

I am, &c.

WM. H. CRAWFORD.

ISRAEL PICKENS, Esq., *President of the Tombigbee Bank.*

M. No. 8.

SIR: TREASURY DEPARTMENT, *August* 1, 1820.

Enclosed I transmit, for the approval of the Tombigbee Bank, the conditions of a new arrangement for regulating the connexion between that institution and this Department. These terms are in conformity with a general system which has just been adopted in relation to all the State banks which are employed as depositories of the public moneys in the Western States; and as they are more favorable to the Tombigbee Bank than those heretofore adopted, I presume they will receive its ready assent. It will be necessary, however, for you to communicate to me, as early as practicable, the decision of the bank upon the subject.

I also transmit a copy of the instructions which have been given to the receivers of public money.

The sum now in the Tombigbee Bank will be considered as included in the new arrangement; but, as it might be inconvenient to the bank to make an immediate transfer of the excess beyond the amount of the permanent deposite, I am willing to allow two months for that purpose.

I am, &c.

WM. H. CRAWFORD.

The PRESIDENT *of the Tombigbee Bank, St. Stephen's.*

Conditions upon which the Secretary of the Treasury will continue to employ the Tombigbee Bank as a depository of public moneys.

1st. That, in addition to specie, and bills of the Bank of the United States and its branches, the bank will take from the receivers of public moneys, and place to the credit of the Treasurer of the United States, as cash, the notes of the following incorporated banks, viz: those in the cities of Boston, New York, Philadelphia, Baltimore, and Richmond, and in the States of South Carolina and Georgia, (except the City Bank of Baltimore,) and those specie-paying banks in the State in which the bank is situated.

2d. That in consideration of the responsibility to which the bank may be subjected, in transferring the public money received by it in the manner hereinafter prescribed, it shall be entitled to retain the sum of one hundred thousand dollars as a permanent deposite, during the continuance of this arrangement.

3d. That the bank shall pay, at sight, all drafts which the Treasurer of the United States may draw on it, although the permanent deposite may thereby be occasionally reduced below the sum herein proposed; it being the intention of the Secretary of the Treasury that the public moneys deposited in the Tombigbee Bank shall, as far as practicable, be disbursed there.

4th. That whenever the public money on deposite in the bank shall exceed, by ten thousand dollars, the amount of the permanent deposite, the bank shall promptly transfer and pay such excess to the office of discount and deposite of the Bank of the United States at Savannah, giving immediate notice thereof to the Secretary of the Treasury; and it shall also transfer, in like manner, within six months after the termination of this arrangement, the beforementioned deposite of one hundred thousand dollars.

5th. That the bank shall render to the Secretary of the Treasury, and to the Treasurer of the United States, monthly returns of its account with the Treasurer; and shall also render to the Secretary of the Treasury monthly returns of the state of its affairs, which will be considered as confidential. In these latter returns must be noted the sums standing on the books of the bank to the credit of any public officer or agent. The bank shall also render to the Secretary of the Treasury a list of its debtors, showing the amount due by each. This will likewise be considered as confidential, and will in no case be made public; it being intended solely for the use of the Secretary of the Treasury in determining on the propriety of continuing or discontinuing the arrangement with the bank.

6th. The Secretary of the Treasury reserves to himself the right of terminating this arrangement whenever he may deem it proper; and it shall also terminate whenever the bank shall discontinue to pay its notes in specie, on demand.

M. No. 9.

SIR: TOMBIGBEE BANK, ST. STEPHEN'S, *September* 8, 1820.

I have received your letter of the 1st of last month, containing propositions to this bank relative to the depositing of the public money therein, which have been submitted to the board of directors, and to which they have acceded, with the following modifications: This bank will transmit the present excess of public money, beyond the permanent deposite, to the Branch Bank of the United States at Savannah, as early as possible—that is to say, in four months; and will thereafter transmit every excess of fifty thousand dollars, as early as it shall accrue. It is hoped that you will agree to these modifications. If this bank were to agree to transmit every excess of ten thousand dollars, it would probably require a messenger to be constantly employed between this place and Savannah, at an expense of about three hundred dollars for every ten thousand dollars transmitted. If a branch of the United States Bank were situated in this State, and the facilities of travelling as great as in other States on the Atlantic, this bank would not hesitate to agree to the propositions as offered; but it is believed that the remote situation of the United States Branch Bank, the difficulty of travelling, and the danger of transmitting money, will make a discrimination in favor of this bank, and induce you to accede to the modification which it proposes.

I am, with great respect, sir, your obedient servant,

ISRAEL PICKENS, *President.*

Hon. W. H. CRAWFORD, *Secretary of the Treasury.*

General Land Office, *February* 6, 1822.

JOSIAH MEIGS, *Commissioner.*

17th Congress.] No. 638. [1st Session.

REMISSION OF A FORFEITURE TO THE EXCLUSION OF INFORMER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1822.

Mr. Smith, of Maryland, from the Committee of Ways and Means, to whom was referred the petition of Joseph Harris, reported:

That the petitioner states that he was an inspector of the customs for the port of Alexandria, and gave the information that induced the seizure of the Betsey and Charlotte, with her cargo, and that the said vessel and cargo were condemned as forfeited for a breach of the law interdicting the intercourse with the island of St. Domingo, which sentence was affirmed by the Supreme Court of the United States. That, on application of William Yeaton, the President of the United States did remit, on the 24th June, 1811, so much of the forfeiture as belonged to the United States; and, on a subsequent petition of the said William Yeaton, did, on the 24th day of August, remit all the remaining part of the forfeiture, being that part which the law had vested, in the opinion of the petitioner, in the informer and the officers of the customs; against which act the petitioner protests as arbitrary, and prays that Congress would pass an act directing payment from the treasury of a sum equal to that of which he was deprived by an act of the President, which he conceives to be illegal.

It appears to the committee that the President remitted the forfeiture under the power vested in him by the constitution "to pardon," and that the prayer of the petitioner ought not to be granted.

17th Congress.] No. 639. [1st Session.

BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 7, 1822.

The committee on the memorial of the Bank of the United States, to whom was referred a resolution directing them to inquire "whether the Bank of the United States has not taken, and is not in the practice of taking, more than six per centum per annum for or upon its loans or discounts," report:

That, having inquired into the facts deemed to be material in relation to the question proposed in the resolution, they find:

1st. That it is, and from the establishment of the Bank of the United States has been, the practice of that bank, in calculating the discount upon a note payable a certain number of days after the date, to compute the interest upon a month of thirty days, and the fractions of such a month. Thus one per cent. is charged for sixty days.

In this respect, the bank has conformed to the established, and, it is believed, universal usage in the United States, prevailing among individuals as well as in moneyed institutions, and to the most approved tables heretofore in use.

2d. That, in charging the discount upon a sixty days' note, the bank and its branches have followed the usage of the place where the loan was made, as to the number of days (including the days of grace) for which the discount should be computed. In general, it has been the practice in the United States to charge the interest for sixty-four days; but there are some places where the interest is charged for only sixty-three days, and the branches established at such places have conformed to the practice there prevailing.

The committee do not think that there is any thing in either of the modes of computing interest adopted by the bank which calls for legislative interposition, and, therefore, submit the following resolution:

Resolved, That the committee be discharged from the further consideration of the subject.

17th Congress.] No. 640. [1st Session.

DRAWBACK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 19, 1822.

Sir: Treasury Department, *March* 15, 1822.

I have the honor of transmitting, herewith, a statement exhibiting the amount of drawback payable on merchandise exported from the United States during the years ending on the 31st day of December, 1818, 1819, and 1820, compared with the amount of duties which accrued on the same, respectively.

I have the honor to be, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the Speaker *of the House of Representatives.*

A statement exhibiting the amount of drawback payable on merchandise exported from the United States during the years ending on the 31st day of December, 1818, 1819, and 1820, compared with the amount of duties which accrued on the same, respectively.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *March* 11, 1822.

JOSEPH NOURSE, *Register.*

17th CONGRESS.] No. 641. [1st SESSION.

BALANCES—DUTY AND DEBENTURE BONDS—AMOUNT OF DUTIES SECURED IN 1821, &c.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 29, 1822.

SIR: TREASURY DEPARTMENT, *March* 28, 1822.

In obedience to a resolution of the House of Representatives of the 13th ultimo, directing the Secretary of the Treasury "to lay before the House a statement of the balances of money in the Treasury, and of the amounts of appropriations unexpended at the end of each year, from the commencement of this Government to the 31st of December last; also, a statement of the amounts of public moneys which had been received by the collectors and receivers, and not paid into the Treasury, on the 30th day of September, and on the 31st of December last, respectively; also, a statement of the amounts of revenue bonds outstanding on the 30th September last, showing separately the amount of those that are considered insolvent, and a statement of the debentures outstanding at the same period; also, a statement of the amounts of revenue bonds outstanding and due on the 30th September and the 31st December last, respectively; showing, at each period, the amount that was in suit, and the amount upon which indulgence had been given, and the extent of that indulgence; and a statement of the sum due for public lands on the 30th of September, 1820, and on the 30th of September last, respectively, deducting from each of these sums the amounts from which the purchasers of public lands may have been released under the act of the last Congress passed for their relief; also, a statement of duties secured in each quarter of the past year; and, also, a statement of the amount standing to the credit of the Treasurer of the United States, and other public officers, on the books of the Bank of the United States and the branches, on the 1st day of February instant:" I have the honor to submit sundry statements which contain all the information required, as far as it has been practicable to obtain it.

It is proper to observe, that the amount of duties which have been secured in the first three quarters of 1821 has been ascertained by settlement at the Treasury; but that of the fourth quarter has been estimated from the monthly account of bonds which have been rendered by the collectors. This estimate is believed to be sufficiently accurate for all the purposes for which it has been required. From this statement it appears that the duties secured by bond during the year 1821 amounts to $18,027,010 65, exclusive of tonnage duties, and of duties upon small invoices which are paid in cash at the time of entry.

It has been found to be impracticable to furnish any statement of the sum due for public lands on the 30th day of September last, which furnish the information required by the resolution. The letter of the Commissioner of the General Land Office, herewith transmitted, explains the ground of this deficiency.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. P. P. BARBOUR, *Speaker of the House of Representatives.*

NOTE.—There will be small variations in the balances in the hands of the Treasurer, in consequence of outstanding warrants which cannot be ascertained until his account for the fourth quarter of 1821 is settled; and, also, in the balance of appropriations, which is caused by moneys received and included in the collectors' accounts not yet settled, of marine hospital money, &c.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 25, 1822.

JOSEPH NOURSE, *Register.*

SIR: TREASURY DEPARTMENT, GENERAL LAND OFFICE, *March* 19, 1822.

I have the honor, herewith, to transmit an estimate of the balances due from receivers of public moneys on the 30th of September and 31st of December, 1821, in obedience to a resolution of the House of Representatives of the 13th ultimo.

The unusual labors incurred at the land offices, by the operation of the act of the 2d March, 1821, for the relief of purchasers of the public lands prior to the 1st of July, 1820, have unavoidably retarded the rendering of the receivers' quarterly accounts to the dates required by the resolution. For this reason I furnish the enclosed as an estimate of the balances due at the dates specified, compiled from their monthly accounts current to the Treasury, in all cases where the quarterly accounts have not been rendered.

The statement called for by the same resolution, "of the sums due for public lands on the 30th of September, 1820, and on the 30th of September last, deducting from each of those sums the amounts from which the purchasers of public lands may have been released under the act of the last Congress passed for their relief," cannot be furnished until the accounts of the receivers, delayed from the cause stated, shall have been rendered and adjusted.

With great respect,

JOSIAH MEIGS.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

Ba.

Approximating statement of balances due from receivers of public moneys on the 30th September, 1821; of moneys received since; of payments made into the Treasury, up to the 31st December, 1821; and of balances due on that day, in obedience to a resolution of the House of Representatives of the 13th February, 1822.

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *March* 27, 1822.

In pursuance of the resolution of the House of Representatives of the 13th ultimo, which you referred to me, requiring, among other things, "a statement of the duties secured in each quarter of the past year," I have the honor to enclose, agreeably to your request, a statement of the duties on merchandise secured by the collectors of the customs in the first, second, and third quarters of the year 1821.

With considerations of high respect, I have the honor to be, your obedient servant,

JOSEPH ANDERSON, *Comptroller.*

Hon. WILLIAM H. CRAWFORD.

F.

Statement of the duties on merchandise secured in each quarter of the year 1821, *by the collectors of the customs, by bonds.*

JANUARY 7, 1822. JOHN HOAFF, *Cashier.*

17th Congress.] No. 643. [1st Session.

DUTIES—AD VALOREM AND SPECIFIC.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 12TH OF APRIL, 1822.

Mr. SMITH, of Maryland, submitted the following statement of duties:

Articles paying ad valorem duties.

ARTICLES.	Rates of duty according to the present tariff.	Rates proposed by the new bill.
	Per cent.	Per cent.
Articles, all composed wholly or chiefly of gold, silver, pearl, and precious stones,	7½	10
Bristol stones,	do.	do.
Dying drugs, and materials for composing dyes, not subject to other rates of duty,	do.	do.
Embroidery,	do.	do.
Epaulets,	do.	do.
Gum Arabic,	do.	do.
Gum Senegal,	do.	do.
Gold watches,	do.	do.
Gold lace,	do.	do.
Jewelry,	do.	do.
Laces, laced veils, shawls, and shawls of thread and silk,	do.	do.
Nitre,	do.	do.
Paste work,	do.	do.
Pearls of all kinds, set or not set,	do.	do.
Pearl, all articles composed wholly or chiefly of,	do.	do.
Precious stones of all kinds, set or not set,	do.	do.
Precious stones, all articles composed wholly or chiefly of,	do.	do.
Saltpetre,	do.	do.
Silver lace,	do.	do.
Silver watches,	do.	do.
Watches of all kinds, and parts of,	do.	do.
All manufactures of cotton, wool, and linen, or of which either is a component part, not particularly specified. *Note.*—According to the Treasury construction, articles of this description have been subjected to this rate of duty,	25	25
Articles of silk, or of which silk is a component part, the manufacture of India, China, or any other country beyond the Cape of Good Hope,	(*a*)	25
Combs of ivory, shell, or horn,	15	25
Engraving,	15	25
Handkerchiefs, Madras, and other manufactures made of the bark of trees,	15	25
Muffs,	15	25
Tippets,	15	25
Nankeens, the manufacture of any place beyond the Cape of Good Hope,	25	33½
Clothes, ready made,	30	40

(*a*) Articles entirely of silk have been subject to an ad valorem duty of 15 per cent. When silk has been a component part of an article, but wool or cotton was the material of chief value, the article has been subjected to an ad valorem duty of 25 per cent.

Articles paying, or to pay, specific rates of duty.

ARTICLES.	Rate of duty according to the present tariff.	Rate of duty as proposed by the new bill.
Arrack,	15 per cent.	40 cents per gallon.
Ale, beer, and porter, in bottles,	15 cents per gallon,	20 do.
otherwise than in bottles,	10 do.	15 do.
Anvils,	20 per cent.	2 cents per pound.
Boots, laced, or bootees,	30 do.	$1 50 per pair.
Beeswax,	15 do.	7 cents per pound.

Mercury, and all preparations of it,	15 per cent.	8 cents per pound.
Madder,	7½ do.	2 do.
Nails,	4 cents per pound,	5 do.
Oil, linseed, palm, and hempseed,	15 per cent.	25 cents per gallon.
Opium,	15 do.	1 dollar per pound.
Pepper,	8 cents per pound,	10 cents per pound.
Pewter,	15 per cent.	4 do.
Pimento,	6 cents per pound,	8 do.
Plums, in jars and boxes,	3 do.	4 do.
Prunes, in jars and boxes,	3 do.	4 do.
Pine apples,	15 per cent.	4 cents each.
Pepper, Cayenne,	15 do.	15 cents per pound.
Paper, printing, all,	30 do.	8 do.
wrapping,	30 do.	6 do.
colored,	30 do.	6 do.
writing,	30 do.	12 do.
sugar loaf,	30 do.	4 do.
letter or folio post,	30 do.	15 do.
bookbinders', bandbox, and sheathing,	30 do.	3 do.
all others not enumerated,	30 do.	6 do.
Quicksilver, and all preparations of it,	15 do.	8 do.
Raisins, Muscatel, and raisins in jars and boxes,	3 cents per pound,	4 do.
all other,	2 do.	3 do.
Shot, manufactured of lead,	2 do.	3 do.
Shoes, prunello and other, or slippers of stuff or nankeen,	15 per cent.	25 cents per pair.
Salmon, smoked,	15 do.	1 dollar per quintal.
Salts, Glauber,	15 do.	2 cents per pound.
Epsom,	15 do.	3 do.
Spikes, of iron,	3 cents per pound,	4 do.
Spades and shovels,	20 per cent.	2 dollars per dozen.
Soap,	3 cents per pound,	4 cents per pound.
Tobacco, not manufactured or in leaf,	15 per cent.	4 do.
Teas, all black,	(b)	25 do.
hysonskin, and other green teas not enumerated,	(b)	25 do.
Vinegar,	15 per cent.	8 cents per gallon.
Wool,	15 do.	6 do.
Wines, Madeira,	1 dollar per gallon,	60 do.
Marsala, or Sicily Madeira, and other wines of Sicily,	50 cents do.	40 do.
Malaga and Colmenar,	30 cents do.	30 do.
Fayal,	40 cents do.	30 do.
Fayal, Pico Madeira,	40 cents do.	40 do.
Canary,	40 cents do.	30 do.

(*b*) According to the present tariff, the duties on teas depend upon the character of the vessel of importation, and the place whence imported.

17th CONGRESS.] No. 644. [1st SESSION.

REMISSION OF DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 13, 1822.

Mr. NEWTON, from the Committee on Commerce, to whom was referred the petition of Thomas Thaxter, of Boston, reported:

That the petitioner states that, during the years 1807, 1815, and 1817, he imported from different parts of the Netherlands, into the United States, very considerable quantities of cat skins, rabbit skins, Angora goat skins, and lamb skins, in the hair and wool, as raw materials, to be manufactured into hats, muffs, and tippets; and that,

during the year 1807, he paid duties on such skins to the amount of $4,644 76; and during the years 1815 and 1817, to the amount of $1,667 61; amounting, in the whole, to $6,312 37. He further states, that at the time of paying said duties, he objected to the same, considering them as coming under the description of raw materials and undressed furs and skins, they having been so considered in other districts. Accompanying the petition is a statement certified by the collector at Boston, showing that the petitioner did import furs in 1807, on which he paid duties amounting to $4,639 92; and in 1815, to the amount of $1,470 14. These amounts differ somewhat from those stated in the petition, but not materially. There is also a deposition of Ambrose Morell, a furrier, who states his knowledge of the importations of furs and skins by Thomas Thaxter, about the times mentioned in the petition. He also states that the furs and skins were similar to a sample which accompany the petition, and that they are considered as a raw material, generally requiring coloring preparatory to their being made up into hats, and muffs, and tippets.

To the foregoing is added a paper which purports to be an entry of merchandise imported into New York in the year 1816, among which appears to be a considerable quantity of cat, hare, rabbit, and lamb skins, all of which, if the statement be correct, were exempted from duty. This paper is certified by the importer, J. B. Graves, to be a true copy of an entry made at the custom-house in New York. Mr. Graves also states, that in the year 1815 cat and rabbit skins, as usually imported from Holland, were exempt from paying duty, and were so at the time of signing the certificate, which is dated April 15, 1819. There is no corroboration of Mr. Graves's certificate by any officer of the customs at New York, or other person, nor is his certificate on oath. On these grounds the petitioner prays that the amount of moneys so paid by him may be refunded. The propriety of granting relief in this case seems mainly to depend on the question whether, as the laws stood at the time of importation, those furs and skins ought to have been considered as exempt from duty. It would seem there was nothing in the revenue laws specifically exempting them from duty, otherwise there would have been no difficulty on the subject. If not specifically exempted, ought the construction put by the collector on the law in 1807, and persevered in up to 1816, as appears by the petitioner's own statement, to be called into question at this time? It will be observed that much the largest portion of the money was paid in 1807. If, then, as the petitioner states, he was aware, at the time that the articles were not subject to duty, and objected to the decision of the collector, the question naturally arises, why did he not seek for redress at the Treasury Department, or by a judicial decision, or by an early application to Congress? The committee are of opinion that it would establish a dangerous precedent to open the door to applications of this kind, where the construction put upon the law by the proper officer had been so long acquiesced in—a construction, too, which the committee, from an examination of the sample of skins submitted to their inspection by the petitioner, believe to have been correct. Under these impressions, the committee beg leave to submit the following resolution:

Resolved, That the petitioner have leave to withdraw his petition.

17th Congress.] **No. 645.** [1st Session.

RETRENCHMENT IN THE PUBLIC EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 15, 1822.

The Select Committee appointed to inquire whether any part of the public expenditure can be retrenched without detriment to the public service, and whether there be any offices or appointments in the Government of the United States which have become useless and unnecessary, and can be dispensed with, report in part:

The first subject which presented itself to the committee, in the discharge of the duties imposed on them by the resolution of the House, was to ascertain, with as much certainty as practicable, the sums properly chargeable upon the revenue by the existing laws.

The next in order, the means of the Government to meet those demands.

The public debt, independent of the floating unliquidated demands, is $93,423,605 73; the interest upon that sum, annually, is $5,165,248 24.

The stock composing the debt, and when reimbursable, is shown by the following table:

Deferred six per cent. stock,	$1,525,826 12
Three per cent. stock,	13,295,956 04
Six per cent. stock of 1796,	80,000 00
Exchanged six per cent. stock,	2,668,974 99
Six per cent. stock of 1812,	6,187,006 84
Six per cent. stock of 1813, ($16,000,000 loan,)	15,521,136 45
Six per cent. stock of 1813, ($7,500,000 loan,)	6,836,132 39
Six per cent. stock of 1814, ($25 and 3,000,000 loan,)	13,011,437 63
Six per cent. stock of 1815,	9,490,099 10
Treasury note six per cent. stock,	1,465,285 47
Treasury note seven per cent. stock	8,606,355 27
Five per cent. stock, (subscription to Bank United States,)	7,000,000 00
Six per cent. stock of the loan of 1820,	2,000,000 00
Five per cent. stock of the loan of 1820,	999,999 13
Five per cent. stock of 1821,	4,735,296 30
	$93,423,605 73

The above amount of debt is reimbursable as follows:

In 1822, deferred six per cent. stock,		$566,588 75
In 1823, deferred six per cent. stock,		602,836 47
In 1824, deferred six per cent. stock,		356,400 90
		1,525,826 12
In 1825, exchanged six per cent. stock,	$2,668,974 99	
In 1825, six per cent. of 1812,	6,187,006 84	
In 1825, Treasury note six per cent. stock,	1,465,285 47	
In 1825, Treasury note seven per cent. stock,	8,606,355 27	
		18,927,622 57
In 1826, six per cent. stock of 1813, (loan of $16,000,000,)	15,521,136 45	
In 1826, six per cent. stock of 1813, (loan of $7,500,000,)	6,836,232 39	
		22,357,368 84
In 1827, six per cent. stock of 1814,		13,011,437 63
In 1828, six per cent. stock of 1815,		9,490,099 10
In 1832, five per cent. stock of 1820,		999,999 13
In 1835, five per cent. stock of 1821,		4,735,296 30
Stock reimbursable at the pleasure of the Government:		
Three per cent. stock,		13,295,956 04
Five per cent., subscription to Bank of the United States,		7,000,000 00
Six per cent. of 1820,		2,000,000 00
Six per cent. of 1796,		80,000 00
		$93,423,605 73

In addition to the public debt as it now stands, there will have to be added, it is presumed, $5,000,000 of at least five per cent. stock, to discharge the claims against Spain, agreeably to the stipulations with that Government, and which is the consideration for the purchase of Florida, which will make the public debt $98,423,605 73; the interest upon which will be $5,410,248 24 annually.

The estimates, as furnished by the Secretary of the Treasury, for the year 1822, stand thus:

Civil, diplomatic, and miscellaneous,	$1,664,297 00
Military service &c.	5,108,097 52
Naval service, &c.	2,452,410 27
To the naval service, add	300,000 00
(part of the $500,000 for the gradual increase of the navy, not included in the estimate;) and also the interest on the national debt, as above estimated, (which will be the amount after the year 1822,)	5,410,248 24
Making the sum of	$14,935,053 03

This estimate is made without allowing one cent to the sinking fund for the gradual discharge of the public debt.

The civil, diplomatic, and miscellaneous expenditures, they believe, are estimated too low, because the foreign intercourse about to be opened between the United States and Portugal, and also with the independent nations of North and South America, will add to the sum at least $120,000. Although it may be objected that, in the estimates for the military service, &c., a sum is included for arrearages prior to the 1st of January, 1817, yet it is believed by the committee that the deficiencies not included in the estimate in that Department for the year 1821, which amount to $521,886 57, are equal to the arrearages prior to the 1st of January, 1817. It may also be objected that part of the estimates for the War Department, such as fortifications, are only temporary. To that it may be answered, that, when the fortifications are finished, the expenses will be rather increased than diminished, by the additional number of men necessary to man them. It may be further objected that, in the estimates for the naval service, the sum of $500,000 is included; which expenditure is also temporary, as the appropriation for that object is to last but five years. The committee are of opinion that the additional number of men and officers which the navy will then require, in addition to the sums required, from time to time, to refit and keep in repair the vessels, will make a greater demand from that Department upon the treasury than is estimated.

They would further remark that Congress, each session, upon an average, appropriates for temporary purposes, and which cannot be taken into any estimate, a sum equal to $200,000.

They, therefore, have no hesitation in giving it as the result of their most deliberate opinion, that, according to the now existing laws, the estimate which they have made of $14,935,053 03 as a permanent charge upon the revenue, is not too high.

The committee will now proceed to the consideration of the means of the Government to meet the current demands against it. The estimates given by the Secretary of the Treasury are as follows:

Customs,	$14,000,000
Public lands,	1,600,000
Bank dividends,	350,000
Arrears of direct tax and internal duties,	75,000
Moneys recovered out of advances made in the War Department before 1st July, 1815,	60,000
Incidental receipts,	25,000
Making	$16,110,000

The committee are apprehensive that the customs will not be as productive as by some have been supposed, and by others confidently predicted. For the year 1821, the receipts from the same source amounted to $12,968,915 15.

Why, then, this increase in the estimates? It is a fact well ascertained, that the exports of domestic articles for the year 1820 amounted to $51,684,000, and that the exports of the same articles for the year 1821 amount to but $43,671,894. Although the amount of imports may have an apparent increase, yet it may be considered as an axiom in political economy that the imports never can be considered as increasing when, at the same time, there

is a falling off of the exports; and if, in any one year, the imports shall appear to increase, when the exports, instead of a correspondent increase, are actually diminished, we ought to attribute it either to an excrescence upon the regular operations of trade, or that the imports were intended for exportation again. That the excess in the importations for the year 1821 was owing to an intention of re-exporting part of the same goods, is now manifested by the fact that the debentures will greatly exceed the estimate of the Treasury Department. They can, therefore, see no reason why the estimate for 1822 ought to exceed the amount received from the same source in 1821; but suppose that the customs shall yield, for a series of years, $14,000,000, and beyond that sum it would be entirely unsafe to estimate them; because, although the nation is increasing in population and wealth, yet with feelings of pride it ought to be recollected that she is rapidly increasing in her domestic manufactures; and, as far as they are consumed, so far will the foreign fabrics be thrown out of market, and part of the exports be turned into the channels of domestic trade by way of barter.

The duty arising from sugar imported will be greatly diminished, if not, in a few years, entirely cut off, by the use of the sugar of Louisiana and Florida. The estimate for the year 1822 of $1,600,000 from the public lands, they flatter themselves, will be realized, owing to the discount of thirty-seven and one-half per cent. which is offered to the debtors for public lands who shall pay by September next. All who do not avail themselves of the discount offered for prompt payment will accept the credit given by the act of 1821. From this circumstance, it is believed that, as a permanent source of revenue, after the year 1822, one million per annum would be a high estimate. The resource of public lands cannot be considered as entirely a permanent one; and they very much deprecate the policy of throwing so much land into market, and hope for the future it will not be pursued beyond the limits of the present States and Territories. The policy is ruinous to the western country, by draining it of all the precious metals, and, consequently, embarrassing its circulating medium. The origin of all the pecuniary difficulties of the West may be traced to this cause. The impolicy of the measure is again made manifest by dispersing the population over too great an extent of territory, by which means there is great danger that the Government, at a day not distant, if the policy be not checked, will fall to pieces by its own unwieldiness, and consequent imbecility. The administration of such a Government can never be felt to the extremities of the empire. This system of measures keeps up an irritated state of feelings between the Indian tribes and the people of the United States; besides, humanity forbids the driving those unfortunate people to the ends of the habitable earth; at the same time, self-respect ought to restrain the United States from amusing and gulling them and the world about, in point of practice, the unmeaning word of civilization.

In the estimate of the bank dividend of $350,000—on what data the Secretary went in making that estimate, they know not, as the bank has never yet averaged four per cent. per annum. The items in the estimate of $75,000, $60,000, and $25,000, are not of a permanent character.

Suppose, then, the estimate of a permanent nature should stand thus:

Customs, - - - - - -	$14,000,000 00
Public lands, - - - - - -	1,000,000 00
Bank dividends, - - - - - -	350,000 00
	15,350,000 00
The estimates of the committee, as a permanent charge upon the revenue, - -	14,935,053 03
Balance in favor of the revenue, - - - - -	$414,946 97

which balance is scarcely sufficient to relieve the Treasury from its immediate embarrassments, and meet the unforeseen contingent expenses of Government. To talk of the present resources of Government (incumbered with the demands as now authorized by law, and also the present embarrassments of the Treasury, which will be more particularly noticed hereafter) as being sufficient to operate at all upon, much less redeem within a reasonable time, the public debt, is the veriest delusion that any enlightened people ever fell into; and nothing could keep it up but a reluctance at parting with any of the expenditures of Government. The conclusion of the committee, of the inadequacy of the present revenue, incumbered with the existing demands, is confirmed by the melancholy fact, that, in 1820, the public debt was $89,112,916 63; in 1821, $91,294,416 51; in 1822, $93,423,605 73.

The committee regret to find the Treasury not in as flourishing a situation as the President supposed, in his message to both Houses of Congress at the opening of the session. It is true that, on the 1st of January, 1822, there was a supposed balance in the Treasury of - - - - $1,777,648 58
which is part of the loan of 1821, and no part of the permanent revenue of Government.

That sum, nevertheless, is to be subjected to the following deductions:

-	$226,135 83	
the estimate of the quarter ending the 31st of December, 1821, being estimated too high by that amount.		
Deficiencies in the Indian and Pension Departments for the year 1821, -	521,886 57	
Unavailable funds in the Treasury, - - - -	842,159 60	
		1,590,182 00
Leaving only -		$187,466 58
This sum of - - - - - -		187,466 58
is all that is, in reality, left to discharge the balance of appropriations for the year 1821 which must be required, and which amounts to - - - - -		2,268,611 28
Leaving a balance of		$2,081,144 70

which must remain a charge upon the revenue of 1822.

From the previous part of this report, these three conclusions are clearly deducible:

First. That the present resources of the Government are scarcely equal to the authorized and current demands upon the Treasury, without operating upon any part of the principal of the public debt.

Secondly. That the Treasury, after deducting the deficiencies for the last year, the over-estimate for the quarter of the year ending 31st of December, 1821, the amount of unavailable funds, and the balance of appropriations, as above stated, which will be required, is in arrear $2,081,144 70 for the year 1821, which sum must be charged upon the revenues of 1822.

Thirdly. That the public debt now amounts to $93,423,605 73, and will shortly amount to $98,423,605 73.

The question comes fairly before the nation, What disposition shall be made of the public debt? Shall we go on and make the experiment, and solve the question long agitated among politicians, Is a national debt a curse or a

blessing? The committee, however solicitous some may be to try the experiment, and leave to the silent operations of time the solution of the proposition, are unanimously of opinion that every effort within the power of the Government, and which would not be extremely prejudicial to the interest of the people, should be made to redeem the public debt as soon as possible.

A national debt creates, in the persons of the stockholders, a proud, haughty aristocracy, in their manners extremely offensive, and ever destitute of that kind of patriotism and love of country that would sacrifice their pecuniary interest for that of the nation. It creates a body of men whose interest is separate and distinct, and at war with that of the great mass of the people, and who have an undue influence upon the administration of Government. The stock contributes nothing to the support of Government, when every other kind of property does. The balance of the nation, as we see by an example in Great Britain, become the slaves, the hewers of wood and drawers of water for the stockholders. Already have the people of the United States paid to the stockholders, on the score of interest, $119,489,394 84.

Money has been emphatically denominated the sinews of war. A payment of the public debt in times of peace is a much better and more pleasing preparation for war than armies, fortifications, and navies. It puts public credit upon a better footing, and, in another war, loans can be more advantageously obtained. In every war the nation may be engaged in—and an exemption from that scourge of mankind is not to be expected—a resort must be had to loans. The consequence will be that, if the public debt is not paid off in times of peace, and additions made to it in times of war, the payment of the interest will become an insupportable burden.

In 1816 a sinking fund was created of $10,000,000. It is believed by the committee, unless commerce is much more prosperous than can be anticipated, that with the most rigid economy practicable, consistent with keeping up the necesssary establishments of Government, and without resorting to the aid of internal duties and taxes, the Government cannot set apart $10,000,000 of her revenue on account of the public debt, and that, instead of 10, $8,000,000 will be the extent; but, whatever the amount of the sinking fund may be, the same should not be nominal, but real, and held inviolate, and never touched for any other purpose. The people would thereby have certain assurances that the national debt would be discharged within a given time. The full operation of a sinking fund of $8,000,000 would redeem the public debt in 1842, by extinguishing first the six per cent. stock until the seven shall become reimbursable, and then operate upon the stock bearing the highest interest first,computing the three per cent. stock at two-thirds the nominal amount. In this estimate the stock which will be created on account of the purchase of Florida is included, and the stock due the Bank of the United States excluded, because the stock which the Government has in bank will always be equal to the like amount of five per cent. stock due the bank.

From the facts exhibited in this report, and the conclusions deduced therefrom by the committee, these questions necessarily occur:

First, has the Government the means of creating and *keeping up* a sinking fund of $8,000,000; and, if it has, what are those means?

Some politicians have supposed that at the end of each fiscal year there will be an unexpended balance of appropriations, which will be required in the year succeeding, and that the same will average from year to year $1,500,000; that the Government can consider that sum as a bank would her deposites, and carry the same to the credit of Government for the succeeding year. The amount of unexpended balances which will be required to meet the object of appropriations depends so much upon unforeseen events and contingencies, (some years the appropriations are deficient; other years, when the Government has a full treasury, and appropriates liberally, the balance may be considerable,) as, in the opinion of the committee, to render that sum too unsafe and precarious to be calculated upon.

The means within the control of Government are not temporary loans, as a late short-sighted policy seems to indicate, but they are, first, a new modification of the tariff of duties; secondly, retrenchment in the expenditure of Government; thirdly, internal, direct, and indirect taxation.

In relation to the first question proposed, the committee decline going into the question with any other view than that of revenue; they do believe that an additional duty upon woollen manufactures, and that a diminution of the duties already imposed upon articles, particularly cotton, imported from countries beyond the Cape of Good Hope, would increase the customs; besides, should the whole tariff be revised with no other view than that of revenue, they have no doubt but that the same could be made much more productive. As it respects the second proposition, to wit, a retrenchment of the expenditures of Government, the committee disclaim all intention of cutting down and destroying any one useful or *necessary* establishment of Government; but, at the same time that they make this declaration, they have no hesitation in saying that, from the best investigation they can give the subject, such retrenchments can be made in the public expenditures as will save to the Treasury, annually, near $2,000,000, and not impair or weaken any of the permanent establishments of the Government, but, on the contrary, give it renewed health and vigor, like cutting away the dead timber from a forest of young trees. If there be any one feature in the administration of the different Governments of the earth more uniform, more alike, and more inveterate than any other, it is the continued disposition to increase the expenses of Government, and an unwillingness to retrench. The cause is very obvious: those in power are disinclined to part with any of the emoluments of office. Even should not much be saved by efforts towards retrenchment, yet a check to the present disposition of Government to increase the expenditures thereof is gaining a great point. Fabius, the Roman Dictator, and Washington, both thought, and so did their countries, that to prevent the enemy from gaining a victory was to obtain one themselves.

The committee, in this report, decline going into the several subjects of the retrenchment which they intend to propose, because each distinct subject will form the basis of a separate report and bill.

The third subject proposed in this inquiry, as forming a part of the ways and means of Government, is a resort to a system of internal, direct, and indirect taxation. This mode of raising and collecting a revenue is at all times to be avoided by Government, unless the most imperious necessity requires it, such as war, when the other resources of Government are to a great extent cut off. In the imposition of internal direct taxes, only such objects can be selected as are visible, and to a certain extent tangible: it consequently falls principally upon the agricultural part of the country, and the great moneyed capitalists escape its operation. Owing to that clause in the constitution which compels Congress to apportion direct taxes according to the representation, it falls unequally upon the different States, some paying three times as much upon the hundred dollars as others. Again, the collection of that kind of revenue is odious and oppressive, because there is no choice left to the people whether they have the means of payment or not, as there is in the duty collected from the consumption of goods; and nothing is so consoling to the feelings of a man as to have, or seem to have, the right to elect whether he will pay the tax or not.

The very collection of that kind of revenue is vexatious in its operation, by introducing into the domestic circle of a man the rude, and not unfrequently fraudulent tax-gatherer. Moreover, internal taxation is the only source of revenue left to the States to support their respective Governments; and common justice towards them forbids a resort to this kind of revenue, until every other means shall fail. Besides, two sets of tax-gatherers at the same time

collecting from the people, renders it difficult for them to know how much they owe to each Government, and greatly increases the facilities which the collectors of the revenue too frequently avail themselves of to practise frauds and impositions in their collections. Another reason, which has great weight with the committee, is, that it costs the solvent man more to get his contribution in that way into the public treasury than any other mode of collecting a revenue ever resorted to by the United States. From an inquiry at the Treasury Department, it is ascertained that the gross amount of the direct tax, since the formation of the Government, is $14,029,997 60; the payments into the treasury from the same source is $12,626,813 50; from which deduct $672,516 27 for the expenses of collection, which leaves a balance of $11,954,297 23: this result shows that from former experiments it has cost the man who did pay $14 78 for each $100 that reached the treasury. The gross amount of internal duties for the same period is $25,015,720 43; the amount received from the same sources is $21,957,061 14; the expenses of collection $2,105,317 78; which, deducted from the amount received, leaves $19,851,743 16; the per cent. is $20 64. The above calculations include insolvencies of individuals, defalcations of officers, and all the expenses of collection.

It is probable that some of the outstanding debts and dues may yet be collected, but it is believed the amount will be trifling.

The gross amount of customs for the same period is $494,933,179 11; the expenses of collection, $14,356,853 97; making $2 90 upon each one hundred dollars. In 1819 an estimate was made of the amount of revenue bonds due, and the whole amount was equal to forty-five cents upon the hundred dollars of the gross amount of the customs, the greater part of which bonds are considered recoverable. Since 1819, the revenue bonds due and unpaid have not increased in a greater proportion.

The foregoing considerations induce the committee to believe that it would be unwise and impolitic to resort to the ways and means of internal duties and taxes for the support of Government and redemption of the public debt at this time, when every object of Government can be answered without it.

The committee cannot, in justice to themselves, conclude this report without bringing to the view of the House the former operations of this Government under the administration of Presidents Jefferson and Madison. In 1801, at the commencement of Mr. Jefferson's administration, the public debt was $83,038,050 80; the whole amount of revenue for that year was $12,846,530 95; and from that period up to the year 1812, inclusive, $48,254,675 01 of the principal of the public debt was redeemed without resorting to internal, direct, or indirect taxation, and with a commerce embarrassed and trammelled by embargoes, restrictions, and non-intercourse, French Berlin and Milan decrees, and British orders in council; and at the same time deriving little or no aid from the sale of public lands, and a very inconsiderable sum from loans, except the loan of 1812, which was obtained to enable the Government to prepare for war. It has been said by some that the Government can, without any material alteration in her present ways and means, meet her current expenses as now authorized by law, and within a period not very remote pay off the national debt. To support this position, a reference is made to the amount paid since the war. The public debt in 1816 was $123,052,782 62, which is the highest point to which it ever arrived; at the same time there might be a floating debt, such as arrearages due the army, &c. The reason of this operation upon the national debt is obvious: the Government had at that time extraordinary means; the proceeds of the war taxes and duties; also, an unexpended balance of the loans of 1815 and 1816; the excessive importations immediately after the war made the receipts of the Treasury, from customs alone, in 1816, $36,000,000, when they had only been estimated at $25,000,000.

In conclusion, the committee submit to the House the following resolutions:

1. *Resolved*, That the policy of resorting to loans, for the support of Government, in times of peace, is unwise and inexpedient.

2. *Resolved*, That this Government owes it to the people to take efficient measures for the redemption of the public debt.

3. *Resolved*, That the resources of this nation are such as to render unnecessary a resort to a system of internal, direct, and indirect taxation.

4. *Resolved*, That this Government ought to adopt such a system of retrenchment as will dispense with useless expenditures, and bring the pay and salaries of the officers of Government to what they were during the administration of former Presidents.

5. *Resolved*, That the tariff ought to be new modified, with a view to revenue.

17th Congress.] No. 646. [1st Session.

RETRENCHMENT IN THE PUBLIC EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 20, 1822.

Mr. Hardin, from the select committee to whom was referred a resolution of the House directing an inquiry to be made whether any part of the public expenditure can be retrenched, without detriment to the public service, and whether there be any offices or appointments in the Government of the United States which have become useless and unnecessary, and can be dispensed with, further reported, in part:

That, from the best estimate which they can make as to the average expenses of both Houses of Congress, taking one session with another, and allowing each session to be as long as the sessions of the sixteenth Congress, the same will stand thus, or nearly so:

Pay and mileage of the members,	$336,975 90
Salaries of clerks, &c.	17,100 00
Salaries of doorkeepers and sergeants-at-arms,	9,000 00
	$363,075 90

The committee propose to reduce the pay and mileage of the members to $6 per day, and $6 for every twenty miles' travel; also, the pay of the Clerk of the House of Representatives and Secretary of the Senate to $2,000 each; the principal deputy of each House to $1,500, and the other deputies to $1,200; the doorkeepers and their assistants, and the sergeant-at-arms, of each House, to $6 a day during the session of Congress; and to each doorkeeper, for taking care of that part of the Capitol set apart for the use of Congress, $200 in addition. If the reduction proposed shall be made, it will lessen the expenditure for the legislative department about $90,000 annually; and, after the seventeenth Congress, the reduction will be equal to near $100,000. The committee, in proposing to reduce the expenses of the legislative department, are influenced by several considerations. They are decidedly of opinion that nothing can save the nation from a system of internal taxation but retrenchment in the public expenditures, and a return to good old principles, which, for some years past, have been lost sight of. The pay of the members of Congress, from the formation of the Government until a few years ago, was what is now proposed by the committee; and money is worth as much now as it has been at any period within the last twenty or thirty years. It may be objected that a reduction of the pay of the members will drive all those who are not wealthy out of Congress. To that it may be answered that the former experiments of the Government, in its operation before the compensation was raised, prove the contrary; for the best talents in America, since the formation of this Government, have been proud and ambitious of a seat in Congress. Besides, money cannot be the object of any man in accepting a seat in Congress: an indemnity is all he can or ought to expect. It has been alleged by some that the pay of the members should be so high as to make them entirely independent of the influence of executive patronage. If there be any thing in that argument, this answer may be given: that the committee are fearful that $8 a day would not answer the desired purpose. Without going further into the discussion of this question, the committee are unanimously of opinion that, in the great and good work of retrenchment, Congress ought to be the first to set an example to the balance of the nation, and begin with themselves. They, therefore, to effectuate the objects pointed out in this report, submit to the House a bill.

17th Congress.] No. 647. [1st Session.

FOREIGN DISTILLED SPIRITS.

COMMUNICATED TO THE SENATE, APRIL 24, 1822.

Mr. Dickerson, from the Committee of Commerce and Manufactures, who were instructed to inquire into the expediency of prohibiting the importation of foreign spirits, reported:

That in their opinion the agricultural as well as manufacturing interest of the United States would be promoted by prohibiting the importation of foreign spirits; that the quantity of spirits that would in a short time be manufactured in this country, to supply the place of that now imported, would afford a source of revenue more efficient and much less precarious than that now derived from the importation of foreign spirits. But as an immediate prohibition would injure the commercial interest of the United States, as well as diminish the revenue, until a system of excise could be brought into operation, the committee think it would be expedient to arrive gradually at the objects in view, by increasing the duties on foreign spirits. A bill, however, for this purpose must be considered as a bill for raising revenue, and can only originate in the House of Representatives.

The committee, therefore, submit the following resolution:

Resolved, That the Committee of Commerce and Manufactures be discharged from the further consideration of the resolution instructing them to inquire into the expediency of prohibiting the importation of foreign spirits.

17th Congress.] No. 648. [1st Session.

RETRENCHMENT IN THE PUBLIC EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 27, 1822.

Mr. Hardin, from the select committee to whom was referred a resolution of the House directing an inquiry to be made whether any part of the public expenditure can be retrenched, without detriment to the public service, and whether there be any offices or appointments in the Government of the United States which have become useless and unnecessary, and can be dispensed with, further reported:

The committee state that, very soon after the commencement of the present session, it was convened for the purpose of taking its duties into consideration; that it was not a little puzzled in coming to a decision upon the question of What are the duties of the committee? The rule of the House, to be sure, presents a very extended field for inquiry; many very important subjects, by classes, are embraced; but subsequent rules provide for the appointment of six standing committees, and prescribe to them duties, severally, which, when taken collectively, may perhaps occupy every ground upon which this committee could move. The committee, however, determined to institute an inquiry into the state of the laws by which the several executive departments are organized, with the

view of ascertaining whether any imperfections existed. To this end, a note was addressed to the several heads of departments, including the General Post Office, requesting from each an exposition of any existing imperfections tending to the increase of expenditures, or to leave the officers in a less degree accountable than they ought to be. To this request, so respectively made, no answers were received which are worthy of being reported. In the mean time, great willingness had been displayed by individual members to engage in the examination of many subjects which, perhaps, might fall within the scope of the powers of this, or some other standing committee. This activity on the part of the members, with the more exact information which they seemed to be in possession of, rendered it, in the view of the committee, entirely unnecessary for it to take any further steps. The committee were, therefore, for a considerable time, entirely inactive, believing nothing would be necessary to be reported by it for the consideration of the House; and it was the more inclined to this course, because it is believed that very few, if any, matters had been acted upon heretofore by the Committee on Public Expenditures; but some recent occurrences determined the committee to enter upon the examination of some matters which, it believes, are proper to be presented to the House.

The committee feel it to be, in some degree, its duty to present to the House for consideration the subject of individual claims against the Government. The practice has been to present those claims to Congress by petition; and a great consumption of time, and consequent expenditure of money, has resulted from the legislation, and the attempts to legislate, upon such matters: the rejection of a claim at one session is no bar to its presentation at another; so that it may, in truth, be affirmed that legislative inquiries touching such matters are interminable. The committee cannot but consider the consumption of time and money in legislating upon such matters, connected with the matters which it has stated, as a serious evil in our policy, demanding the application of a proper remedy, if one may be devised. The greater part of the claims which would warrant legislative relief must be based upon laws previously existing, but rejected at the Departments because of the informality of documentary evidence, or the loss of evidence, or the informal mode of performing the service; or upon some expenditure of money, loss of money, or performance of service, which would, under all the circumstances, place the nation under an obligation to compensate, or refund, or relieve, under well-settled principles of equity. All the cases properly falling within either of the above, as two great classes, it seems to the committee might be referred to the judiciary department of the Government for examination and decision by a general law. Without intending to give offence to members of Congress now in service, or those which have been in service, or may hereafter be in service, but merely to speak of human nature as it is found to exist, the committee feel authorized to say that there is some cause to fear that some members may have, and that others may hereafter feel too great a solicitude to favor the applications of individuals, making a merit of doing injustice to the nation for the benefit of individuals; and that others may have, or hereafter may feel too strongly inclined to reject such applications, making a merit of economy founded upon injustice. In like manner, it feels authorized to say that there is some cause to fear that such applications have been, and may hereafter be decided upon, without that severe scrutiny which affairs of justice require. The judicial mode of examination and decision, then, in the view of the committee, presents, upon a comparison with the legislative, these advantages: 1st. A great saving of time, consequently a great saving of money. 2dly. A conclusive determination of matters which may be urged before the Legislature without end. 3dly. A decision by men not so directly subjected to motives for doing injustice. 4thly. A decision by men whose habits and prescribed modes of examining questions are more favorable to a right decision of mere questions of law or equity. 5thly. The withdrawal of such subjects from the consideration of Congress would enable the members to bestow more time upon the examination of those matters which cannot be considered and decided upon by any other department of the Government.

The committee have deemed it proper to call the attention of the House to the subject of forts, and other permanent, stationary, or fixed defences of the military kind. Upon these subjects the committee will urge nothing with any high degree of confidence, not professing to be learned or skilful in relation to such matters; but some considerations will, with diffidence, be suggested. The mode of erecting forts, &c. by contracts, is liable to the objection that the undertakers are ever interested in performing the work in a manner less substantial and durable than their contracts require; and this may be effected in some degree, notwithstanding a very strict scrutiny; and it is liable to the further objection of being extremely expensive. The committee are strongly inclined to believe that this mode of performing such service ought to be abolished, and that the performance of it ought to be committed to the military, with the aid of such mechanics as cannot be found among the soldiery, under the superintendence of proper officers of the corps of engineers. This would afford employment to the soldiers, and guard them against the evils of idleness; and even if it should be thought that justice required that some compensation should be made them for such labor, in addition to their monthly pay, still the change of mode might be productive of a considerable pecuniary saving. In this mode, no person may be supposed interested in using improper materials, or in performing labor in a slovenly or unskilful manner, because it may be conducted in such a manner as to give no person any advantage from such improper use, or from such improper workmanship. Again: the officers of the Engineer Department, it is fair to suppose, ought to superintend the construction of such works; and if the change should have the effect of requiring their attention more strictly, it would thereby be productive of beneficial results. The committee believe that examples of high authority may be adduced in support of the change of policy proposed. It was the policy of Rome, as the committee believe, throughout her long course of successful warfare with the various nations of the earth.

The committee state further, that, not long since, certain publications were inserted in some of the gazettes of the country, charging many acts of favoritism, fraud, and defalcation in the management of the fiscal concerns of the nation, and of the misapplication and unauthorized application of public money and of public property. The committee would never believe vague, declamatory charges of corruption, or of the wasting of public money, worthy of notice, whether made in newspapers or elsewhere; but when they are made in a precise, definite, and tangible form, they are calculated to disquiet the minds of the people, and demand from their representatives a proper scrutiny. Such, in the view of the committee, is the character of the publications above referred to. The committee, then, believing they deserved examination, determined to investigate the whole of the said charges thoroughly, and present to the House a full view of the evidence to be procured from the several branches of the executive department of the Government, hoping thereby to aid in exculpating innocence, in presenting the guilty, if any, in their proper colors, and in ascertaining the defects in the system of laws which relate to the management of the finances of the country. The inquiry has been prosecuted with great diligence, and much evidence has been obtained; but the committee now believe it will not be practicable to present to the House, during the present session, a full and digested view of the various charges to which reference has been made. The committee will, however, in general terms, state that many of the charges are not well founded; that some of the accounts mentioned in the gazettes have been recently closed; and that some of the balances stated as standing against individuals will be found, upon a final settlement, to be much below the sums now appearing. On the other hand, the committee feel compelled to say that there has been, in some of the cases, a degree of negligence on the part of the officers engaged in the settlement and collection of public moneys, for which no good reason can be assigned, and that considerable losses will result therefrom.

The committee have thought that the several subjects above mentioned were worthy of being brought distinctly to the consideration of the House; and, with this view, the following resolutions are submitted:

1. *Resolved*, That the Committee on the Judiciary do inquire into the expediency of prescribing by law a mode by which all persons having claims against the United States, on account of money or property, may have the same brought before, examined, and decided upon, in the judicial way, embracing therein all cases where, upon a like state of facts between individual and individual, an action at law, or bill in equity, would be sustained.

2. *Resolved*, That the Committee on Military Affairs do inquire into the expediency of repealing all laws authorizing the building of forts, and erecting certain other military defences, by contracts made with persons not of the army; and of providing, in lieu thereof, the most advantageous mode of having such services performed by the labor of the regular soldiers, aided by proper mechanics, under the superintendence of the proper officers of the army.

3. *Resolved*, That the Committee of Ways and Means do inquire into the expediency of changing the existing law in relation to the time of reporting balances to Congress, as being due from individuals to the United States, so as to require such report within one year after the account ought by law to be closed; and that the said committee do also inquire into the expediency of prescribing by law a more effectual mode of taking sureties from the officers concerned in the collection and disbursement of public moneys, embracing a mode of renewing the obligations of such officers periodically; and that the said committee do also inquire into the expediency of providing by law for the forfeiture of offices in relation to the collection of the revenue, and the disbursement thereof, on account of certain specified omissions and malpractices.

17th CONGRESS.] No. 649. [1st SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 30, 1822.

Mr. SMITH, of Maryland, made the following report:

The Committee of Ways and Means, to whom was referred so much of the President's message, at the commencement of the session, as relates to the finances, respectfully submit the following report:

The total nett receipts into the Treasury, during the year 1821, amounted to the sum of		$19,588,340 01
VIZ:		
From Customs,	$13,004,447 15	
Arrearages of the old direct tax,	3,661 25	
Arrearages of the new direct tax,	25,687 80	
Arrearages of the new internal revenue,	69,027 63	
Public lands,	1,212,966 46	
Miscellaneous,	152,913 43	
Dividend bank stock,	105,000 00	
Repayments,	14,636 29	
Loan of five millions,	5,000,000 00	
The total expenditures paid from the Treasury, during the year 1821, amounted to		19,094,895 85
VIZ:		
For Civil list,	$1,118,483 17	
Miscellaneous,	911,553 91	
Foreign intercourse,	212,450 87	
Military establishment,	5,163,071 22	
Naval establishment,	3,322,243 06	
Public debt,	8,367,093 62	

State of the Treasury, public revenue, appropriations actually made for the service of the year 1822, *and of the public debt.*

I. THE STATE OF THE TREASURY.

Amount of money in the Treasury on the 1st day of January, 1822,	$1,673,575 77
From which deduct debts due by banks, which will not be available during the present year,	800,000 00
Leaving, of available funds, in the Treasury, on the 1st January past,	$873,575 77

II. THE REVENUE FOR 1822.

Customs, as estimated in the annual report of the Secretary of the Treasury,	$14,000,000 00	
Excess over that estimate, agreeably to a letter from the Secretary to the Committee of Ways and Means, dated 10th April,	500,000 00	
		$14,500,000 00
Public lands, per annual report,		1,600,000 00
Bank dividends,		350,000 00
Arrears of direct tax and internal duties,		75,000 00
Money recovered out of advances made in the War Department before 1st July, 1815,		60,000 00
Incidental receipts,		25,000 00
Estimated amount of available funds for the service of 1822,		$16,610,000 00

III. AMOUNT OF THE SEVERAL APPROPRIATIONS FOR THE SERVICE OF THE YEAR 1822.

1. Permanent appropriations, viz:		
Reimbursement of the principal of deferred stock, and interest of the public debt,	$5,722,857	
Gradual increase of the navy,*	200,000	
Arming the militia,	200,000	
Indian annuities,	168,150	
Indian trading houses,	19,000	
Civilization of Indians,	10,000	
		$6,320,007 00
2. Temporary, agreeably to the several appropriation laws, passed for the service of the year 1822, viz:		
For the navy,	$2,284,911	
For the military service,	5,318,770	
Civil department,	1,565,409	
Public buildings,	123,300	
Private claims, estimated at	200,000	
Missions to South America,	100,000	
		9,592,390 00
Total of authorized expenditures for 1822,		$15,912,397 00

IV. THE PUBLIC DEBT.

The total amount of the public debt, on the 1st day of January, 1822, was		$93,423,215 33
viz:		
6 per cent. of 1812,	$8,855,981 83	
7 per cent. of 1812,	8,606,355 27	
Redeemable in 1825,	17,462,337 10	
6 per cent. of 1813, (redeemable in 1826,)	22,357,368 84	
6 per cent. of 1814, (redeemable in 1827,)	13,011,437 63	
6 per cent. of 1815, and funded treasury notes, (redeemable in 1828,)	10,954,994 17	
	63,786,137 74	
6 per cent. deferred stock,	1,783,148 38	
6 per cent. of 1796,	80,000 00	
6 per cent. of 1820,	2,000,000 00	
5 per cent. of 1820,	999,999 13	
5 per cent. of 1821,	4,735,296 30	
5 per cent., subscription to the bank,	7,000,000 00	
3 per cent.	13,295,956 04	
Louisiana stock, not applied for on 30th September last,	5,558 15	
	29,899,958 00	
Amount paid after the 30th September, for Louisiana stock and principal of the deferred stock,	262,880 41	
		$29,637,077 59

In the report of the Committee of Ways and Means, relative to the exchange of 5 per cent. for 6 and 7 per cent. stock, a mistake was made in stating that the whole of the debt would (except the 3 per cent.) be paid off in 1833. It ought to have been stated in 1835. The error is presumed to have arisen from the figure 5 being mistaken for 3. The exchanged stock for the 7 per cent. is, by the bill, payable in 1834, which proves the error.

By the operation of the present sinking fund of ten millions, it has been shown by a former report that, should the exchange of stock be effected, the stock contemplated, amounting to $63,786,137 74, will be extinguished in the year 1834, except the sum of $1,952,000.

The Commissioners of the Sinking Fund will be charged with the payment of that amount in the year 1835,	$1,952,000 00
And with the payment of the following sums:	
Stocks, 5 per cent. of 1820,	999,999 13
5 per cent. of 1821,	4,735,296 30
Total to be paid in 1835,	$7,687,295 43

On the 1st of July, 1824, the deferred debt will be paid off by the operation of the present sinking fund. During the present year the following stocks will be paid off: 6 per cent. of 1796, $80,000, and the small remnant of the Louisiana stock; and during the years 1822, 1823, and 1824, it is expected by the Secretary of the Treasury (if no unforeseen expenditures shall occur) that the 6 per cent. loan of 1820, of two millions, will be paid off. There will then remain (3 per cents. excepted) only the seven millions subscription to the bank, which is balanced by United States Bank stock to a similar amount, and can scarcely be considered as a debt. If, however, Congress should reduce the amount of the sinking fund to eight millions, which your committee recommend, then the extinguishment of the debt will be prolonged four years.

* Of the annual appropriation of $500,000 for the gradual increase of the navy, only $200,000 are required for the service of the present year.

The state of the Finances.

Amount of appropriations for the service of the year 1821, which will be required subsequent to the 1st of January, 1822,*		$1,235,923 71
To meet which, there was in the treasury on that day, of available funds, the sum of		873,575 77
Being an actual deficit, in case all the sums appropriated for the service of 1821 had been demanded, of		362,347 94
Amount of authorized expenditure for the year 1822,		15,912,397 00
		$16,274,744 94
Amount of receipts estimated during the same year,		16,610,000 00
Surplus of receipts over the expenditures of 1822,		335,255 06
Add thereto the sum of		378,293 01
Being the amount of repayments from the Treasurer, as agent for the War and Navy Departments, under the provisions of the act of 1820, and which consequently increases the means of the treasury to that amount.		
Surplus estimated to be in the treasury on the 31st December, 1822,		$713,548 07

The amount of duty bonds taken in 1821, and which will become payable in 1822, may, agreeably to information received from the Secretary of the Treasury, be stated at fifteen millions. The collection from the bonds in suit, and which makes no part of the above sum, will, it is presumed by the Secretary, be equal to the sums not paid of the above when due. The tonnage duties, and the payments made upon duty bonds taken during the first six months of this year, would, in ordinary times, be equal to the expense of collection, and to the payment of the debentures which are chargeable on the revenue. This would give a nett revenue from the customs of fifteen millions; but, as it is probable that the re-exportation for benefit of drawback will be increased during the present year, on account of the almost total cessation of the civil war in Spanish America, the committee have deemed it safer to state the receipts of the present year at $14,500,000, although they think it may amount to $15,000,000.

The committee submit the following estimate for the year 1823:

Receipts bottomed on those of 1822,			$16,610,000 00
Expenditures bottomed on the appropriations actually made for the service of the year 1822, to wit:			
Permanent appropriations,		†$6,620,007	
Temporary,		9,592,390	
		16,212,397	
From which may be deducted the following items, which will not be required for the service of 1823:			
Deficit in revolutionary pensions,	$451,536		
Deficit in Quartermaster's Department,	76,000		
Deficit in Indian Department,	70,000		
Arrearages prior to the 1st July, 1817,	90,000		
Outfit to missions to the South American nations,	32,000		
Difference in the expenditures of the present and succeeding session of the Legislature,	166,812		
		886,348	
			15,326,049 00
			1,283,951 00
To which add the surplus estimated to be in the treasury on the 31st December, 1822,			713,548 07
Amount estimated as a surplus in the treasury on the 31st December, 1823, and applicable to the expenses of 1824,			$1,997,499 07

The committee submit the preceding estimate for the year 1823, and they feel a well-founded confidence that it will be verified by the result. But it is bottomed on no certainty; it is on estimate: and who can estimate with precision a revenue mainly arising on duties on imports, subject to the winds and the waves, to the caprice of commerce, to the merchants making a greater or less re-exportation, to the want of punctuality in payment of bonds when due, and to other events that no human being can foresee? Has any Secretary of the Treasury, since the commencement of the Government, been accurate in his estimates of the revenue? *No one has*, and *no one ever can*. The present Secretary has been nearer to the result than his immediate predecessors, as appears by a document which the committee ask leave to present as part of their report; yet he has not been entirely accurate. At the last session, he estimated the imports for 1821 at fourteen millions. This was esteemed by the best informed members of the House as too low, and the Secretary was *openly* censured for presenting a view of the finances worse than they really were. The Committee of Ways and Means were directed by the House to investigate the subject, and they reported that the imports would give fifteen millions of dollars. They were incorrect, for the customs gave little more than thirteen millions in 1821, yet the committee formed their opinion upon data that they thought were tenable; they took the average receipts for the four preceding years, which gave the sum of seventeen million eight hundred and sixty-eight thousand eight hundred and nine dollars, and they might have, with such a result, been justified in estimating a higher amount than they did. They thought themselves safe in assuming for 1821 the amount actually received from the customs in 1820, to wit, of fifteen millions. It appears, however, from the actual receipts, that their estimate was erroneous. The result being so much less than they had presumed, arose from a variety of causes. A less amount was received from bonds in suit than had been expected; a greater amount of debentures was issued than could have been anticipated, owing to the distress of the merchants compelling them to

* The sum of $1,117,029 22 being a part of the sum stated by the Secretary of the Treasury as the balance of appropriations chargeable upon the revenue of 1821, having been reappropriated, the above balance of $1,235,923 71 only remains of the appropriations of 1821.

† There will be required, on account of the permanent appropriation for the gradual increase of the navy, $300,000 more in 1823 than in the preceding year.

export, to enable them, by the debentures, to meet the payments of their bonds, and to the following circumstance: Debentures amounting to a sum exceeding eight hundred thousand dollars, which were payable in 1820, were not paid until 1821, thus becoming an unexpected charge upon 1821.

If that charge had been paid in 1820, the estimate of the Secretary of $14,000,000 from the customs would have been nearly correct, and the report of the Committee of Ways and Means would have been different from what it was. Other causes operated most powerfully. An inability to pay for the imports on the part of the consumers, and the rapid increase of the manufactures of the country—*an increase that the most sanguine had not anticipated.* The following view will show the great loss of revenue in two years, and particularly in that arising from cottons and woollens: those articles pay an ad valorem duty of 25 per cent.; none others do. In the year 1818, it will be seen that the imports of those articles amounted to $24,804,188, and in 1820 only to $8,980,075, being a loss in two years on those two items of $15,824,113—a loss to an extent that no human being could have foreseen. It, however, carries with it this consolation, that it shows the great and salutary increase of the national manufactures, and gives a well-founded expectation that, in a few years, our own manufactures of cotton and woollen will be equal to our consumption.

Of goods paying an ad valorem duty, the average value, in the years 1818, 1819, and 1820, was,

	Cost.	Duties.
In 1818	$58,661,504	$11,947,260
1819	39,885,467	9,631,738
1820	22,128,487	4,420,959

Amount of imports at several rates of duties.

	15 per cent.	20 per cent.	25 per cent.
In 1818	$19,445,525	$9,524,531	$24,804,188
1819	13,971,593	5,979,736	16,555,399
1820	9,407,288	2,400,789	8,980,075

	Duties on spirits.	*Duties on coffee.*
In 1818	$2,646,186	$959,970
1819	1,959,125	
1820	1,728,665	664,592
Difference between 1818 and 1820	$917,521	$295,378

The committee submit, herewith, three statements obtained from the Treasury Department. From those statements, it appears that after the 30th of September, 1824, the interest on the public debt will be $4,948,898 67
Add interest on $5,000,000 to claimants under the Spanish treaty, at 5 per cent. - 250,000 00

5,198,898 67

Arming the militia,	200,000 00
Civilization of Indians,	10,000 00
Gradual increase of the navy,	500,000 00
Indian annuities,	157,875 00
Amount of permanent appropriations subsequent to September, 1824,	6,066,773 67
Add to the above the amount of appropriations for the service of 1822, after deduction of items not required for subsequent years,	8,706,042 00
Amount of presumed expenditures of the year 1825,	14,772,815 67

The committee pretend not to form any estimate of the revenue that will arise in 1825; but, with a view of presenting the subject, they assume that it may be estimated at $16,000,000 00
And they presume that the proposed revision of the tariff of 1816 may give an addition of - - - - - - 1,500,000 00

17,500,000 00

If the result should be as presumed, there would remain subject to the sinking fund - $2,727,184 33

which amount, with salutary retrenchments on the present public expenditures, would be adequate to meet a sinking fund of eight millions of dollars, and to leave some funds applicable to unforeseen events.

If the exchange of stock proposed by the act which has lately passed should take effect, there will be a saving of interest resulting annually therefrom of $346,063, which may be added to the above result.

All which is respectfully submitted.

No. 1.

Estimate of the interest which will accrue on the public debt from the 1st October, 1824, to the 30th September, 1825, provided that the whole of the deferred stock, the $2,000,000 six per cent. of 1820, and the $80,000 six per cent. of 1796, shall be previously reimbursed.

Interest on $13,295,956 04 of 3 per cent. stock,		$398,878 68
12,735,295 43 of 5 per cent. stock,		636,764 77

A statement showing the annual amount of the total estimated receipts into the treasury, and of the total actual receipts from 1802 *to* 1821, *inclusive, and showing particularly the amount estimated and the amount actually received from customs.*

Year.	Total receipts.		Difference.	Receipts from customs.		Difference.
	Estimated.	Actual.		Estimated.	Actual.	
1802	$10,600,000	$13,668,233 95	Actual receipts .29 more than the estimated receipts, - -	$9,500,000	$12,438,235 74	Actual receipts .31 more than the estimated receipts.
1803	10,000,000	11,064,097 63	Actual receipts .11 more than the estimated receipts, - -	9,600,000	10,479,417 61	Actual receipts .09 more than the estimated receipts.
1804	10,400,000	11,826,307 38	Actual receipts .14 more than the estimated receipts, - -	10,000,000	11,098,565 33	Actual receipts .11 more than the estimated receipts.
1805	11,750,000	13,560,693 20	Actual receipts .15 more than the estimated receipts, - -	11,280,000	12,936,487 04	Actual receipts .15 more than the estimated receipts.
1806	13,500,000	15,559,931 07	Actual receipts .15 more than the estimated receipts, - -	13,000,000	14,667,698 17	Actual receipts .13 more than the estimated receipts.
1807	14,500,000	16,398,019 26	Actual receipts .13 more than the estimated receipts, - -	14,000,000	15,845,521 61	Actual receipts .13 more than the estimated receipts.
1808	15,800,000	17,060,661 93	Actual receipts .08 more than the estimated receipts, - -	15,300,000	16,363,550 58	Actual receipts .07 more than the estimated receipts.
1809	10,500,000	7,773,473 12	Actual receipts .26 less than the estimated receipts, - -	10,000,000	7,296,020 58	Actual receipts .27 less than the estimated receipts.
1810	10,300,000	9,384,214 28	Actual receipts .09 less than the estimated receipts, - -	9,800,000	8,583,309 31	Actual receipts .12 less than the estimated receipts.
1811	12,500,000	14,423,529 09	Actual receipts .15 more than the estimated receipts, - -	11,500,000	13,313,222 73	Actual receipts .16 more than the estimated receipts.
1812	8,200,000	9,801,132 76	Actual receipts .19 more than the estimated receipts, - -	7,500,000	8,958,777 53	Actual receipts .19 more than the estimated receipts.
1813	12,000,000	14,340,409 95	Actual receipts .19 more than the estimated receipts, - -	11,500,000	13,224,623 25	Actual receipts .15 more than the estimated receipts.
1814	10,100,000	11,181,625 16	Actual receipts .11 more than the estimated receipts, - -	6,000,000	5,998,772 08	Actual receipts almost equal to the estimated receipts.
1815	18,200,000	15,696,916 82	Actual receipts .14 less than the estimated receipts, - -	6,500,000	7,282,942 22	Actual receipts .12 more than the estimated receipts.
1816	33,400,000	47,676,985 66	Actual receipts .43 more than the estimated receipts, - -	21,000,000	36,306,874 88	Actual receipts .73 more than the estimated receipts.
1817	30,650,000	32,896,623 44	Actual receipts .07 more than the estimated receipts, - -	24,000,000	26,283,348 49	Actual receipts .10 more than the estimated receipts.
1818	24,525,000	*21,060,171 04	Actual receipts .14 less than the estimated receipts, - -	20,000,000	17,176,385 00	Actual receipts .14 less than the estimated receipts.
1819	24,220,000	24,559,617 16	Actual receipts .01 more than the estimated receipts, - -	21,000,000	20,283,608 76	Actual receipts .03 less than the estimated receipts.
1820	22,500,000	17,840,669 55	Actual receipts .20 less than the estimated receipts, - -	19,000,000	15,005,612 15	Actual receipts .21 less than the estimated receipts.
1821	16,050,000	†14,573,703 72	Actual receipts .09 less than the estimated receipts, - -	14,000,000	13,004,447 15	Actual receipts .07 less than the estimated receipts.

* In consequence of the law repealing the "internal duties," this source of revenue, which was estimated at $2,500,000, produced only $955,270 20.

† In consequence of the law for the relief of the purchasers of "public lands," the proceeds of the sales of public lands, which were estimated at $1,600,000, amounted only to $1,212,966 46.

If these twenty years be divided into four series of five years each, it will appear that the actual receipts have either exceeded or fallen short of the estimated receipts in the following proportions:

In the 1st series, viz: 1802 to 1806, inclusive, 84 parts in 500, or 17 per cent.; and, in the customs, 79 parts in 500, or 16 per cent.

In the 2d series, viz: 1807 to 1811, inclusive, 71 parts in 500, or 14 per cent.; and, in the customs, 75 parts in 500, or 15 per cent.

In the 3d series, viz: 1812 to 1816, inclusive, 106 parts in 500, or 21 per cent.; and, in the customs, 119 parts in 500, or 24 per cent.

In the 4th series, viz: 1817 to 1821, inclusive, 51 parts in 500, or 10 per cent.; and, in the customs, 55 parts in 500, or 11 per cent.

The difference between the estimates and receipts is less during the last five years than during any series of five years embraced in this statemer

From the year 1802 to 1813, inclusive, the estimates were made by Mr. Gallatin.

From the year 1814 to 1816, inclusive, the estimates were made by Mr. Dallas.

From the year 1817 to 1820, inclusive, the estimates were made by Mr. Crawford.

17th Congress.] No. 650. [1st Session.

UNCURRENT BANK NOTES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 30, 1822.

SIR: TREASURY DEPARTMENT, *April* 27, 1822.

In obedience to a resolution of the House of Representatives of the 12th of March last, I have the honor to transmit such additional evidence as is in the possession of the Department tending to show that the uncurrent notes received from the banks of Edwardsville, Tombigbee, and Missouri had been deposited in those banks before the date of the arrangements, by which they became responsible in cash for all bank notes deposited with them by the receivers of public money, together with all the additional returns and correspondence required by the resolution, except two letters from the receiver at St. Louis, which are of a confidential nature.

In the documents appended to the report from this Department of the 14th of February, (page 747,) will be found the terms upon which the Bank of Missouri became the depository of the public money. The bank most clearly was not by that arrangement responsible for the solvency of banks whose notes might be deposited in it to the credit of the Treasurer. This arrangement continued until the 9th of August, 1819, when the president of the bank, by letter, accepted the arrangement proposed in my letter of the 23d of June of the same year. But in that letter the bank expressly refuses to be responsible for the notes of any bank not therein enumerated, (see page 748,) and none of the banks whose notes formed a part of the uncurrent money received from the Bank of Missouri are included in that enumeration. By the same letter, it appears that sums in the notes of those banks to a larger amount than was received in uncurrent money from that bank, were, at the date of the letter, in the possession of the bank. If there is any exception to this declaration, it is in relation to the State Bank of North Carolina. The president in that letter proposes to deposite in the Branch Bank at Fayetteville $50,000 in such paper of that State and of South Carolina and Georgia as was authorized to be received. The whole sum transferred was $42,000. The remainder was understood to have been notes of South Carolina and Georgia. The evidence that the whole of the uncurrent notes received from the Bank of Missouri had been received on deposite by it before the date of that letter, and, consequently, before the commencement of the second arrangement, is believed to be entirely satisfactory.

Before the 20th of August, 1820, the Bank of Tombigbee was not bound to transfer the public funds deposited in it. On that day a new arrangement was tendered to it, and a permanent deposite was offered as an inducement to assume that obligation, (see page 771.) On the 8th of September following the proposition was accepted. By a reference to a statement annexed to a letter of the president of the bank, bearing date the 13th August, 1819, it will be seen that there had been deposited in the bank the sum of $15,000 in notes of the State Bank of North Carolina. About this period the latter bank stopped payment. The amount received from the bank in the uncurrent notes of the State Bank of North Carolina has been stated at $15,311. The sum received after the date of the letter was therefore very inconsiderable. (See page 770.)

By a reference to page 741, the terms on which the public money was originally deposited in the Bank of Edwardsville will be found. The obligation to transfer the public money, and compensation for such service, by means of a permanent deposite, are not among them; nor had the bank the right of selecting the banks, the notes of which were to be received in deposite. In this case, as in the first arrangement with the Bank of Tombigbee, the money deposited was to be entered to the credit of the Treasurer as cash. This term was used in opposition to the term *special deposite*, and was not intended to subject the bank to the payment of specie for notes which were not convertible into specie. It was not understood by either of the parties that the bank was responsible for the credit of the banks whose notes were deposited in it. The letter of the president of the bank, of April 18, 1820, (page 741,) and the letter of the same officer of January 7, 1820, to the Hon. Ninian Edwards, then a director of the bank, by whom it was transmitted to this Department, and herewith communicated, explain most fully the understanding of the directors of the bank that no such responsibility was intended to be incurred by them.

By the statements of the bank, herewith communicated, it appears that on the 30th of November, 1819, there was on deposite to the credit of the Treasurer $45,475 04, and that the bank had then in its possession $31,437 in the notes of banks receivable at the land offices. There is no evidence in the Department showing the amount of Kentucky and Tennessee notes comprehended in that sum. In December of the same year there were deposited by the receiver at Edwardsville $6,063 in Kentucky notes, and $3,000 in notes of the banks of Tennessee; and in January, 1820, the receiver at Kaskaskia deposited $6,250 in Kentucky notes, and $2,760 in notes of the banks of Tennessee. These several sums amount to $17,073. If the same proportion of the notes of the banks of Kentucky and Tennessee were comprehended in the sum of $31,437, as in the deposites made in the months of December, 1819, and January, 1820, there would be of Kentucky notes $4,430, and of Tennessee notes $2,200. These sums, added to the above sum of $17,073, make the aggregate amount of $23,703. But it has been ascertained that in the month of December, 1819, the bank paid, in part satisfaction of a Treasury draft, $4,880 in Kentucky notes. This sum being deducted from the amount last mentioned, leaves of uncurrent money in the possession of the bank, on the 3d of January, 1820, the sum of $18,823. The sum received from the bank in uncurrent notes was $18,562. In my letter of February 2, 1821, to the president of the Bank of Edwardsville, authority was given to place to the credit of the Treasurer notes of the banks of Kentucky and Tennessee to the amount of $20,000, the evidence in the possession of the Department that that amount had been received on account of the Treasury before the failure of those banks being at that time considered satisfactory. I have had no reason since to change that opinion. The evidence, however, is respectfully submitted to the House.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. PHILIP P. BARBOUR, *Speaker of the House of Representatives.*

C.

Bank of Missouri.

Twenty-four statements of the affairs of the bank, from the 3d of February, 1818, to the 1st of February, 1820, inclusive.

A. No. 1.

DEAR SIR: BANK OF EDWARDSVILLE, *February* 16, 1820.

I have the honor, herewith, to transmit to you certain communications which I have recently received from the Bank of Edwardsville, the object of which is fully explained by the communications themselves.

I am, with the highest esteem, your most obedient servant,

N. EDWARDS.

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

A. No. 2.

DEAR SIR: BANK OF EDWARDSVILLE, ILLINOIS, *January* 7, 1820.

Knowing the interest you take in our institution, and the services you have rendered it on former occasions, I am requested by the board to call your attention to a subject which is deemed of vital importance—I mean the arrangement relative to the receipt and payment of the public deposites. Under the present regulation with the Treasury, the receivers of public moneys at Kaskaskia and Edwardsville deposite such funds as they are instructed by the Secretary of the Treasury to receive in payment for public lands; the bank then is drawn on by the Treasurer of the United States, and such drafts, it seems, are required to be paid by the holders in such paper of other banks as may suit their *own views*, or *specie*. The peculiar inequitable operation of this course is apparent when

it is perceived that the bank is required to pay, in all probability, in a description of funds of which she may never have received, on account of the Treasury, one cent, or, at least, in very small sums; and, in case of inability, her specie resources are to be exhausted; and when, as is the fact, a large portion of these very deposites is in paper of banks which have suspended specie payment, and whose paper is wholly useless. It is not, however, supposed that any construction of the conditions upon which the deposites are received can render the bank the guarantee of these banks, because it would be contrary to every principle of reason to suppose that the paper of other banks, who have or may suspend specie payments, shall, by the mere act of deposite in this institution by the receivers, be converted into specie, or its equivalent, and this bank accordingly be held accountable for it as such. We are persuaded that this never was the intention of the Secretary of the Treasury, nor can it be inferred from the conditions upon which the deposites are made; yet such is the practical operation of the present mode adopted for the transfer of the public funds to the Bank of the United States: for instance, we have been called upon to pay a draft drawn by the Treasurer for $30,000 in favor of the Bank of the United States, and remitted to the Louisville branch for collection; their agent presented the instructions of the cashier of the branch, by which it appeared that he was only authorized to take in payment United States and branches, Richmond, Augusta, Savannah, Charleston, New York, Baltimore, Boston, Salem, and Philadelphia, all which paper is scarcely in circulation, and then to deposite it in the Bank of Missouri for safe keeping. Having no more of the description of funds required than $6,000, the balance of $24,000 was paid in silver, because we were unwilling to enter into any altercation on the subject at this time. It is believed that this is the result of an understanding between the cashier of the branch and the Missouri Bank. Not even the Bank of Kentucky, which the branch receives daily, would be received from us. We need not urge to you the injustice and injury resulting to this institution from effects of this nature. Specie, which had been collected at much expense, risk, and trouble, is thus exhausted, when but a very small amount of it has been received on account of the Government. To obviate all difficulty, and to place, as we believe, the future receipts of moneys on account of the Government upon a footing alike equitable to both, we propose that the Secretary of the Treasury shall authorize the bank to instruct the receivers of public money at Kaskaskia and Edwardsville what notes of banks shall be by them received on account of the Government, and that the bank shall be accountable for the same without reservation; that, as a compensation for this risk, they shall be entitled to a permanent deposite of $——, over and above the other deposites of the Government, which shall at no time be withdrawn while the bank shall comply in good faith with the arrangement. If this should not be consistent with the views of the Secretary of the Treasury, we ask, at least, that we shall only be required to pay in such description of funds as shall have been received.

The propriety of the adoption of the first proposition is strengthened when it is apparent that the local situation of the bank enables it to judge with more accuracy of the solvency of those around it, and that, for the simple use of the permanent deposite, the Government is guarantied against loss. With regard to future drafts upon this institution, we will simply urge what you have, no doubt, already perceived—that the situation of the country requires that the funds which the Government may want to expend in this quarter should be, if possible, drawn from the resources of the Government already here, instead of being transported to the Atlantic. It is true that the funds are the Government's, and of right may be sent where they please; yet, with as much justice, the people of the West might expect that all the duties arising from impost should be transmitted to them, if the United States Bank were situated in Illinois instead of Pennsylvania. The impolicy of the measure is certainly apparent; and while this State, in its infancy, is contending with the extraordinary pressure of the times, and in producing which she has been in no way instrumental, we think it but reasonable that her contributions to the public funds should be expended within her limits.

I have the honor to be, with respect, your obedient servant,

BENJ. STEPHENSON, *President.*

Hon. NINIAN EDWARDS.

P. S. In order to show the difficulty of meeting drafts in the funds required by the branch at Louisville, we transmit a copy of deposites; by which you will perceive that, out of a sum of upwards of $52,000, not more than $7,000 was of the description required, a part of which was sent to meet the draft of $15,000 payable at Louisville.

A. No. 3.

SIR: BANK OF EDWARDSVILLE, *January* 7, 1820.

The Honorable Ninian Edwards, one of the directors of this institution, is authorized and requested to suggest to you the propriety of a modification or alteration in relation to the present mode of receiving and paying the deposites made by the receivers of Kaskaskia and Edwardsville in this bank, on account of the Treasury of the United States; and, also, of the description of money to be taken in those offices, which it is supposed will be mutually advantageous to the Government and the bank. He is fully authorized to conclude such arrangements as the Treasury Department may be disposed to accede to, and as shall be deemed by him acceptable to this institution, in relation thereto, which will be considered obligatory.

I have the honor to be, &c.

B. STEPHENSON, *President.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

A. No. 4.

SIR: BANK OF EDWARDSVILLE, *January* 6, 1820.

You have, herewith, a list of the gentlemen composing the board of directors of this institution; also the names of the executive officers.

I have the honor, &c.

B. STEPHENSON, *President.*

List of the directors of the Bank of Edwardsville for the year 1820.

B. Stephenson, president; John Todd, Ninian Edwards, Daniel P. Cook, Theophilus W. Smith, Palemon H. Winchester, Samuel Whiteside, Martin Jones, Jacob Judy; Richard T. McKenney, cashier.

B. STEPHENSON, *President.*

Attest. R. T. MCKENNEY, *Cashier.*

Bank of Missouri.

B. No. 1.

Extract of a letter from the president of the Bank of the United States to the Secretary of the Treasury, dated October 31, 1817.

I have the honor to propose, for your sanction, the employment of the following named banks in the districts which appear by your letter to be more immediately necessary, to wit:

Missouri Territory: the Bank of Missouri, Auguste Chouteau, president; Gilburn W. Boggs, cashier.

B. No. 2.

Sir: Treasury Department, *November* 20, 1818.

The public deposites in the Bank of Missouri should be placed to the credit of the Treasurer of the United States, and not to the credit of the "Treasury." In stating the account to this Department, and in issuing certificates of deposite, you will conform to this intimation.

I am, &c.

WILLIAM H. CRAWFORD.

J. Dales, Esq., *Cashier of the Bank of Missouri, St. Louis.*

B. No. 3.

Sir: Bank of Missouri, *December* 19, 1818.

Agreeably to your instructions of the 20th ultimo, I have, under date of the 17th instant, transferred the amount of the Treasury account to the credit of the Treasurer of the United States. For the future, certificates will be issued conformably to the above transfer.

Enclosed I transmit the weekly report.

I am, with great respect, sir, your obedient servant,

JOHN DALES, *Cashier.*

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

B. No. 4.

Sir: Treasury Department, *March* 23, 1819.

By a statement from the Bank of the United States, it appears that certain deposites, mentioned below, made in the Bank of Missouri, to the credit of the Bank of the United States, for the use of the Treasurer, have been credited by you as "special deposites."

I have to request that you will inform me of the circumstances under which those deposites were received, and of what moneys they consist. I am, &c.

WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

John Dales, Esq.,
Cashier of the Bank of Missouri, St. Louis.

1817, December 31, by S. Bond,	$52,000 00
1818, January 8, by B. Stephenson,	12,477 58
" " 9, by A. Hayes,	136 00
	$64,613 58

B. No. 5.

SIR: BANK OF MISSOURI, *June* 25, 1819.

Your favor of the 23d of March last did not come to hand until the 16th instant, by a private conveyance from the State of Illinois.

The deposites alluded to, say Bond and Stephenson's, were received prior to this institution's being informed of its appointment as an office of deposite, or had received its instructions. The receipts were given payable to the order of the *Secretary of the Treasury*, in such current bank notes as were then received by the receivers of public moneys, and consisted of Cincinnati, Chilicothe, State Bank of Kentucky and branches, Tennessee, North and South Carolina, Vincennes, and Shawneetown notes.

The special deposites of John Hayes, collector, were uncurrent, viz:

One Kentucky Insurance Company note of	$20
One Lebanon, Miami, Banking Company	50
One Bank of Marietta, Ohio	5
One Muskingum Bank, Ohio	5
One Exchange Bank of Indiana	5
One Pittsburg Manufacturing Company	5
Two Union Bank of Pennsylvania, each five dollars	10
One Westmoreland Bank of Pennsylvania	20
One Centre Bank of Pennsylvania	10
One Marietta, Lancaster county	5
One Banque de la Louisiane	1
	$136

I am, with great respect, sir, your obedient servant,

JOHN DALES, *Cashier.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

B. No. 6.

SIR: BANK OF MISSOURI, *April* 22, 1819.

In consequence of a conversation had with Thomas Hempstead, Esq., since his return from Washington City, I take the liberty of trespassing on your time, in order to explain the apparent contradiction between the current reports and my first certificate to S. Hammond, Esq., receiver of public moneys.

On the 8th of August last Colonel S. Hammond made a special deposite of $3,070, and on the 21st a further sum of $12,597 50, *both in his own name*, under the assigned reason *of not having his accounts or returns ready*. On the 6th of October he withdrew those deposites, which, with $9,956 54 then handed, were entered to the credit of the Treasury of the United States, agreeably to my duplicate certificates of that date. A list of the deposites is subjoined.

I am, with great respect, sir, your obedient servant,

JOHN DALES, *Cashier.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

Statement of S. Hammond's deposites, included in certificate dated October 6, 1818.

BANK OF MISSOURI, *April* 22, 1819.

JOHN DALES, *Cashier.*

B. No. 7.

SIR: TREASURY DEPARTMENT, *May* 29, 1819.

The City Bank of Baltimore, and the Franklin Bank of Alexandria, District of Columbia, having discontinued to discharge their bills in specie, on demand, I have instructed the receivers of public moneys no longer to receive the bills of those banks in payment of dues to the United States.

I am, sir, your most obedient servant,

WM. H. CRAWFORD.

To the CASHIERS of the following banks: Planters and Merchants' Bank, Huntsville; Bank of Vincennes; Bank of Missouri; Tombigbee Bank; Bank of Illinois; Bank of Edwardsville; Branch Bank Kentucky, Louisville; Bank of Steubenville; Bank of Chilicothe.

B. No. 8.

SIR: TREASURY DEPARTMENT, *June* 1, 1819.

It appears that, during three days in each week, the cashier of the Bank of Missouri declines to receive deposites of public moneys, and that public moneys offered on those days have been refused by him.

As this regulation is calculated to produce great inconvenience to those public officers who are instructed to make their deposites in that bank, and as it may eventually subject both them and the United States to loss, I trust it will not be persisted in.

I am, &c.

WM. H. CRAWFORD.

AUG. CHOUTEAU, Esq., *President of the Bank of Missouri.*

B. No. 9.

SIR: ST. LOUIS, *July* 8, 1819.

Since my appointment as president of the Bank of Missouri, having, with the most scrupulous attention, and without interruption, inspected the operations of the bank; moreover, knowing that the cashier, to facilitate the public officers, has transacted the business of the Government, when requested, in the morning, in the evening, and at every hour of every day, I have been extremely surprised at the reception of your letter of the 1st June, 1819.

Although fully convinced, by a long experience, of the exactitude of J. Dales, Esq., cashier of the bank, I have immediately applied, by writing to him, to receive all the elucidations in his power on the subject, and I have the honor to transmit to you his answer. I hope that you will be satisfied with his refutation; and that the dates of the receipts mentioned in his letter, and filed in the office of your Department, will convince you that the alleged imputations against the Bank of Missouri are entirely false and erroneous.

I will make no reflections on the base malignity of individuals who have advanced a calumny so easily destroyed.

I am, with the greatest respect, sir, your most obedient servant,

AUG. CHOUTEAU, *President of the Bank of Missouri.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

B. No. 9. [Enclosure.]

DEAR SIR: ST. LOUIS, *June* 30, 1819.

In reply to your favor of the 29th ultimo, relative to public deposites, whether, during three days of each week they are declined, or that public moneys offered on those days have been refused by me, I answer, without hesitation, *that they have not.*

To demand the author of this calumny is useless and a loss of time. I know it originated with Colonel S. Hammond, receiver for this district, and exult in the idea that his malignant enmity to this institution and its officers could get no stronger grounds than the following to found a charge on, viz:

In consequence of having no paying out or receiving teller, that the public deposites might be expedited and correctly assorted and counted, without interruption from the ordinary business of the day, I proposed to Colonel Hammond's clerk, who usually makes the deposites, to call either before or after bank hours; to which he apparently agreed with pleasure, and stated that it would also answer him best, having to attend the sales. I then stated that, if he called in the afternoon after bank hours, I must object to Monday, Thursday, and Saturday, having to attend the sitting of the board on the two first days, at four o'clock P. M., and the afternoon of the latter being appropriated to writing letters.

The clerk of Hammond called once on some of the above days, and, at my request, it was postponed, but with his apparent approbation.

And, as fate will have it, to show the utter fallacy and weakness of his charge, on referring back to the dates of public deposites, I find that they have fortunately been made on every day in the week; and that it has escaped his observation that he (Hammond) even has a duplicate certificate in his possession of a deposite made on one of his restricted days, viz: on Thursday, the 17th of December last.

My certificates to the receivers, now in the Treasury Department, will show that they have occurred as follows, viz: three on Mondays, five on Tuesdays, four on Wednesdays, four on Thursdays, five on Fridays, and five on Saturdays.

I am, with great respect, sir, your most obedient servant,

JOHN DALES.

AUGUSTE CHOUTEAU, Esq., *President of the Bank of Missouri.*

B. No. 10.

SIR: TREASURY DEPARTMENT, *August* 20, 1819.

I had the honor to address you on the 23d June last, proposing a new arrangement in respect to the public deposites in the Bank of Missouri, and requesting that measures might be taken for paying over to the Bank of the United States, or such of its branches as might be convenient, the excess of public moneys remaining in the Bank of Missouri beyond the amount proposed as a permanent deposite.

I presume that by this time such preparatory measures as were deemed necessary for that purpose have been made. The whole of that sum will not be immediately required, however. I shall therefore instruct the Treasurer of the United States to draw on the cashier of the Bank of Missouri, in favor of the Bank of the United States, at the expiration of sixty days for $210,000, and at the expiration of ninety days for $210,000.

As soon as I am informed at what branches of the Bank of the United States it will be desirable to the Bank of Missouri that these drafts shall be made payable, instructions shall be given accordingly.

I am, &c.

WILLIAM H. CRAWFORD.

AUGUSTE CHOUTEAU, Esq., *President of the Bank of Missouri.*

B. No. 11.

SIR: BANK OF MISSOURI, ST. LOUIS, *September* 27, 1819.

On the 9th of August last I had the honor of answering your letter of the 23d June, containing propositions for a new arrangement respecting the public deposites in the Bank of Missouri. I have now to acknowledge the receipt of your communication dated 20th August, in answer to which I beg leave to state that the board will cause the excess of public deposites to be transferred in the manner and to the points indicated by them under date of the 9th August, or to such other points as shall be designated by you as more available to the public service. Owing, however, to the unexpected demise of our late cashier, John Dales, and the inconvenience arising therefrom until a new nomination of a cashier shall have been made, the board would, under such circumstances, prefer to receive your instructions for depositing the amount to be transferred at the Branch Bank of the United States at Louisville.

I am, with great respect, sir, your obedient, humble servant,

AUGUSTE CHOUTEAU, *President.*

The Hon. WM. H. CRAWFORD,
Secretary of the Treasury, Washington City.

B. No. 12.

SIR: TREASURY DEPARTMENT, *September* 9, 1819.

I have the honor to acknowledge the receipt of your letter of the 9th ultimo, accepting the conditions presented in my letter of the 23d June last, and proposing to deposite certain sums of public money at the places therein designated.

Agreeably to your request, I have the honor to state, the notes of all the banks in the District of Columbia are received by the Branch Bank of the United States in this city, except the Merchants' Bank and the Franklin Bank of Alexandria. Considering, however, the precarious state of the State institutions, except in the principal cities, it would be an act of prudence not to retain their notes longer than what is absolutely necessary. The amount which you may receive of the bills of this District will probably not be great, and may either be disposed of to persons having remittances to make, or who may have to travel into the Atlantic States, or transmitted to the office in this city.

I will thank you to inform me if the amount of the notes of the State Bank of North Carolina is comprehended in the sum of $50,000, which you proposed to deposite in the office of discount and deposite at Fayetteville; also the amount of the notes of the State Bank of Tennessee which is comprehended in the sum of $70,000 in Tennessee notes, which you proposed to deposite in Kentucky. The same information is requested as to the other Tennessee banks.

I am, &c.

WILLIAM H. CRAWFORD.

The PRESIDENT *of the Bank of Missouri.*

B. No. 13.

SIR: BANK OF MISSOURI, ST. LOUIS, *October* 11, 1819.

I acknowledge the receipt of your letter dated 9th September; in answer to which I have the honor to state that the amount of $50,000 proposed by this board to be deposited in Fayetteville, embraces $42,000 in the notes of the State Bank of North Carolina; and that the amount of $70,000 in Tennessee notes, proposed to be deposited in Kentucky, consists of $40,156 in notes of the State Bank of Tennessee, and $29,844 in notes of the Nashville Bank. Your compliance with the request of this board has been thankfully noticed by them, and they will, as far as practicable, follow your indications. At present, the amount in this bank for account of the public, of such District paper as is not received by the United States Branch Bank at Washington, is $1,175; namely, $885 of the Merchants' Bank of Alexandria, and $290 of the Franklin Bank at Alexandria.

I am, with great respect, your most obedient servant,

AUGUSTE CHOUTEAU, *President.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

B. No. 14.

SIR: TREASURY DEPARTMENT, *October* 19, 1819.

The Treasurer of the United States will be instructed to draw on you in favor of the Bank of the United States, at the expiration of sixty days, for $60,000.

This draft will be made payable at the office of discount and deposite of the Bank of the United States at Louisville, unless I should, before that time, be informed of your wish to pay it at one of the offices in the Atlantic cities. You may, therefore, proceed at your convenience to place funds at Louisville to meet it on its presentation there.

I am, &c.

WM. H. CRAWFORD.

The CASHIER *of the Bank of Missouri.*

B. No. 15.

SIR: BANK OF MISSOURI, *November* 14, 1819.

By order of the directory, I have sent by the hands of Mr. John Smith of this place, to the cashier of the United States Branch Bank at Washington, twenty-seven thousand nine hundred and eighty-two dollars in notes of the banks

Of Baltimore,	$750
District of Columbia,	4,934
Virginia,	22,298
	$27,982

which sum, together with $22,018, (which at least will be found to our credit at that bank,) will obey your orders to meet a draft from the Treasury on this institution for $50,000.

Respectfully, &c.

A. L. LANGHAM, *Cashier.*

Hon. Wm. H. Crawford.

B. No. 16.

Sir: Bank of Missouri, *November* 22, 1819.

By order of the directory, on the 17th instant I remitted to the Branch Bank of the United States at Louisville one hundred and sixty thousand dollars; of which $67,731 was of Kentucky Bank notes and branches, $87,007 16 of United States Bank notes and branches, $5,000 of drafts on Washington City, and $261 84 of a check on their branch; which funds of $160,000 are sent in obedience to your orders of 22d September.

Respectfully, sir, your obedient servant,

A. L. LANGHAM, *Cashier.*

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

B. No. 17.

Sir: Bank of Missouri, *December* 18, 1819.

I have the honor of reporting to you that, on the 15th instant, funds were transmitted, in obedience to your orders and the engagements of this bank, to Louisville, Kentucky, to Chilicothe, Ohio, and to Raleigh, North Carolina.

To Louisville, to meet the Treasurer's draft for $60,000, directed by your letter of the 19th October.

To Chilicothe, with the deposite of $25,000 in notes of the banks of Ohio, consisting of

The Bank of Cincinnati, - - - - - -	$1,846
Farmers and Mechanics' Bank of Cincinnati, - - - -	11,845
Miami Exporting Company, - - - - - -	10,661
Bank of Muskingum, - - - - - -	291
Farmers and Mechanics' Bank of Chilicothe, - - - -	350
Bank of Steubenville and Marietta, - - - - -	7
	$25,000

To Raleigh, with the deposite of notes of the State Bank of North Carolina, $42,000.

To perform this business, our intelligent director, Colonel Riddick, has given his services. When you compute the labor of his journey, the difficulties to be encountered, the risks to be hazarded, and the expense to be incurred, we believe you will sufficiently appreciate the efforts of this institution to comply with the letter of its obligations and with your wishes, and that you will not again require of it a transmission of its funds. A disposition to aid the public service, and a respect for your indications as a politician and financier, will induce the directory to make any exertion which you may require, provided it does not endanger the property and interests of their stockholders, and the safety of the institution. That danger is too imminent not to be dreaded, and the apprehension of it has effected a determination not to encounter it.

It may be some satisfaction to inform you that all the funds for public service derived through our institution, whether from drafts on, or cashed by us for the civil or military departments, have ever been a specie account, and honored as such.

Respectfully, sir, your obedient servant,

AUG. CHOUTEAU,
President of the Bank of Missouri.

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

B. No. 18.

Sir: Bank of Missouri, *January* 31, 1820.

I send the monthly report. Colonel Riddick, a director, and agent for the bank in making the public deposites, will claim your attention on the subject of the draft for $210,000. I beg that you will yield him that attention, as your interference will be no less an act of justice than of necessary friendship to this institution.

Respectfully, sir, your obedient servant,

A. L. LANGHAM, *Cashier.*

Hon. Wm. H. Crawford, *Secretary of the Treasury.*

B. No. 19.

Sir: Washington City, *February* 18, 1820.

As agent for the Bank of Missouri, in order to close their old account with the Treasury as far as practicable, I respectfully submit the following propositions: "that the draft drawn by the Treasurer for $210,000, payable at Louisville, be withdrawn," and that the following drafts be substituted, to wit, payable at—

Louisville, - - -	$14,000 in such money as is received by the branch bank as cash.
" - - -	2,150 in notes of the Bank of Georgetown, Kentucky.
" - - - -	3,850 in State Bank Kentucky notes.
" - - -	70,000 in Tennessee notes, viz: State Bank Tennessee, and Bank of Nashville and branches.
Chilicothe, - - -	25,000 special deposite, to the credit of the Treasurer.
Washington City, - -	20,000 in cash, or such notes as are received by the branch bank as such.
" - -	1,175 special deposite, to the credit of the Treasurer.
" - -	42,000 in North Carolina State Bank and branches.
	$178,175

which will leave a balance, up to the 8th January last, (over and above the amount allowed as a standing deposite,) of $89,940 84, which shall be held subject to order, payable at St. Louis.

Or, should you think proper to authorize the Bank of Missouri to collect or dispose of the Tennessee and Kentucky paper at St. Louis, for the use of the Treasury, the bank will cause it to be used to the best advantage in any way that may be directed.

I have the honor to be, respectfully, your obedient servant,

THOMAS H. RIDDICK.

Hon. WM. H. CRAWFORD.

B. No. 20.

SIR: TREASURY DEPARTMENT, *January* 18, 1820.

The Secretary of the Department of War has informed me that he has authorized Colonel Richard M. Johnson to draw upon him in favor of the Bank of Missouri for $10,000.

If it is convenient for the bank to make this advance, the amount will be remitted as soon as the bill is paid, in a draft of the Treasurer upon the bank itself.

It is presumed that this will be a convenient mode of remitting a portion of the public money deposited in the bank, and will be acceptable to it.

I am, &c.

WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

A. CHOUTEAU, Esq., *President of the Bank of Missouri.*

B. No. 21.

SIR: BANK OF MISSOURI, *February* 18, 1820.

Your order, conveyed to the president of this bank by your letter of the 18th ultimo, has been obeyed by cashing the draft of Colonel Johnson on the Secretary of War for $10,000.

You have been informed that funds have been transmitted

To Raleigh, North Carolina, - - - - - - -	$42,000	
To Chilicothe, Ohio, - - - - - - - -	25,000	
That the Treasurer's draft is at Louisville, - - - - - -	210,000	
Standing deposite, - - - - - - - -	150,000	
		$427,000
My last report states the Treasurer's credit at - - - - - -		423,690
Making a draw on the standing deposite of - - - - - -		3,310
To which may now be added, - - - - - - -		10,000

The above statement is made under a belief that some mistake exists, as we cannot believe that you intend to draw on the standing deposite at this time, when you have withdrawn every other fund; when the pressure for money in the West is so universally known; and when your covenant, so lately made, assured us of the contrary.

Believing that you did not intend to draw on the standing deposite, the draft of Colonel Johnson was cashed, with the expectation that you would cause the amount to be credited on the draft at Louisville, or place it to our credit in some eastern institution, by which a fund, profitably convertible to any purpose, would be created to this institution.

On the subject of the $210,000 draft at Louisville, I beg you to refer to our letter of the 9th August, the basis of the arrangement between the Treasury and this institution. You will regard the description of notes therein promised to be paid, and compare them with the demand of the Bank of the United States at Louisville, which requires funds of a description which they sell at four per cent. premium. I have answered the demand of that bank by saying that upwards of $70,000, (principally Tennessee notes,) now and at all times heretofore assigned to the treasury, must go towards the payment of the debt called for by that draft.

You must perceive from my reports, that, to meet a demand on the standing deposite, the bills discounted must be called in. I aver to you that I believe this impossible, solely for the want of a representative for property in this country. Under this belief, the opinion is decidedly formed that the standing deposite must not be encroached upon.

Respectfully, sir, your obedient servant,

A. L. LANGHAM, *Cashier.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

B. No. 22.

SIR: TREASURY DEPARTMENT, *April* 5, 1820.

I annex a copy of a letter addressed to me by the Commissary General of Subsistence, requesting that a draft for $712, issued by the Treasurer on the 15th of July last, on the Bank of Missouri, in favor of Lieutenant E. Edmonson, may not be paid; and it is my desire that if the draft, on presentation, should appear to be held by Lieutenant Edmonson, or for his use, the payment thereof may be withheld. Lieutenant Edmonson may be informed that, as the draft cannot be paid, it would be advisable for him to deposite it in the bank, to the credit of the Treasurer, and take a certificate thereof; and if this should be declined, you will endorse on the draft that it will not be paid.

I am, &c.

WM. H. CRAWFORD, *Secretary of the Treasury.*

A. L. LANGHAM, Esq., *Cashier of the Bank of Missouri.*

B. No. 23.

SIR: BANK OF MISSOURI, ST. LOUIS, *July* 28, 1820.

A few days since, Treasury check No. 9,442, for $712, in favor of Lieutenant Edmonson, was presented for payment. Not being fully satisfied that it was not for the use of Lieutenant Edmonson, (who I believe was then in town,) I refused to pay the same, on authority of your letter under date of 5th April last.

I am, sir, respectfully, your obedient servant,

L. S. BOMPART, *Cashier.*

Hon. WM. H. CRAWFORD.

B. No. 24.

SIR: BANK OF MISSOURI, ST. LOUIS, *August* 4, 1820.

Since my last I changed my determination respecting Treasury check No. 9,442, and have paid it, being induced thereto by the enclosed affidavit, and a second examination of your letter and the check. I hope that my having done so may meet your approbation.

Very respectfully, I am, sir, your obedient servant,

L. S. BOMPART, *Cashier.*

Hon. WM. H. CRAWFORD.

B. No. 24. [Enclosure.]

Personally appeared before me, one of the justices of the peace for the county of St. Louis, Missouri, David E. Wilson, of the city of Philadelphia, who, being duly sworn according to law, deposes and says: That he has a draft, drawn by Thomas T. Tucker, Treasurer of the United States, on the Bank of Missouri, St. Louis, dated at Washington, 15th July, 1819, at sight, for seven hundred and twelve dollars, payable to the order of Lieutenant E. Edmonson, acting assistant commissary of subsistence; that the said draft has now become the property of a citizen or citizens of Philadelphia, for whose exclusive use and benefit payment is required, and not either directly or indirectly for the use or benefit of the said Lieutenant E. Edmonson.

D. E. WILSON.

Sworn to and signed before me, a justice of the peace within and for the county of St. Louis, this 1st day of August, 1820.

JOHN R. GUY, *Justice of the Peace.*

B. No. 25.

SIR: TREASURY DEPARTMENT, *November* 14, 1820.

I am informed that the notes of the Bank of the State of Tennessee, amounting to $40,156, for which the Treasurer issued his draft on the Bank of Missouri, in favor of the Bank of Tennessee, and which were to be transferred by your institution to Louisville, have never been received by the Bank of Tennessee. In your letter of the 7th of April last, you state that the transfers designated in mine of the 2d March preceding, of which this was one, will be immediately made. I presume, however, that these notes did not reach Louisville until the person whom the Bank of Tennessee had sent there to receive them had left that place, and that they are still in the hands of your agent there. You will, therefore, be pleased to instruct him to write to the president of the Tennessee Bank on the subject, and to make arrangements with him for the delivery of the notes at Louisville.

WM. H. CRAWFORD, *Secretary of the Treasury.*

AUG. CHOUTEAU, Esq., *President of the Bank of Missouri.*

B. No. 26.

SIR: BANK OF MISSOURI, ST. LOUIS, *December* 12, 1820.

In reply to yours of the 14th ultimo, I have the honor to inform you that as early as the 21st of May last, $40,156, in notes of the Bank of the State of Tennessee and its branches, were deposited in the office of discount and deposite of the Bank of the United States at Louisville, to meet the Treasurer's draft on this institution in favor of the said Bank of the State of Tennessee.

I shall take the earliest opportunity to request Mr. Cochran to inform the president of the Tennessee Bank that the notes are in deposite for him.

I am, very respectfully, sir, your obedient servant,

AUG. CHOUTEAU, *President.*

To the Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

B. No. 27.

SIR: ST. LOUIS, *January* 25, 1821.

Having been induced, by old age and infirmities, to resign the office of president of the Bank of Missouri, all communications of your Department must be, for the future, directed to my successor in office. Although no more concerned in the direction of that association, I am, nevertheless, fully convinced that you will always find in its directors a prudence and an exactitude in business which will answer to your honorable confidence.

I am, with the greatest respect, sir, your most obedient servant,

AUG. CHOUTEAU.

To the Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

B. No. 28.

SIR: TREASURY DEPARTMENT, *January* 19, 1822.

Your letter of the 27th ultimo has been received by this day's mail. That to which it refers was received during my indisposition, and was not then acted upon.

Upon the arrival of the Senators and Representative of the State at this place, I conferred with two of them, who were of opinion that there was no danger to be apprehended of the ultimate recovery of the whole sum. I was induced also to postpone any immediate decision on the case, or to direct any legal measure, on account of the state of the federal judicial department in Missouri. No district or circuit court has been organized in the State; and it appears to me to be unsafe to resort to the State courts, if they would take jurisdiction of the cause. Under such circumstances, I had proposed to delay any arrangement upon the subject until the return of the Senators and Representative, two of whom had promised their aid and influence in bringing about an adjustment which it was supposed would secure the payment of the money.

The view which you have presented in your letter of the 27th ultimo has induced me to change my determination. I therefore request that you will immediately call upon the president and directors to adjust and liquidate this demand, and to receive from them an assignment of bonds, notes, and other securities, sufficient to secure the ultimate payment of the debt. It is, however, to be understood that such assignment is not to release the bank from the payment of any sum which may not be recovered upon the bonds and notes so assigned. It is desirable that securities should be upon persons of known solvency, in order to avoid useless litigation and expenditure of money in costs and expenses incidental to lawsuits.

If you shall not be able to adjust the matter according to these views, obtain from the bank the proposition the most favorable to the United States, which the president and directors may be disposed to transmit to this office, as early as practicable.

Enclosed I send you a copy of the agreement with the bank, and of its returns to this Department, showing the amount which it now owes to the United States, which will remove all difficulty as to the amount for which it is accountable.

A reasonable compensation will be allowed for your services in this case.

I am, &c.

WM. H. CRAWFORD, *Secretary of the Treasury.*

GEORGE F. STROTHER, Esq., *St. Louis, Missouri.*

17th CONGRESS.] **No. 651.** [1st SESSION.

EXPENDITURES IN THE DEPARTMENT OF STATE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 3, 1822.

Mr. WOOD, from the Committee on so much of the Public Accounts and Expenditures as relates to the Department of State, reported:

That the manner in which the moneys appropriated to the Department of State, or made subject to the control of the Secretary, are drawn and expended, will be seen by a communication made to the committee by the Secretary, and which is annexed to this report.

It will be seen, by the estimate of the Secretary of the Treasury, that most of the appropriations made to this Department for the year 1821, which have been drawn and expended, are specific in their nature and amount. The committee, therefore, have directed their attention principally to an examination of the accounts of the expenditures of the contingent appropriations for the year past, as far as they deemed it necessary, and the same was practicable.

None of the appropriations for the contingent expenses of foreign intercourse, intercourse with the Barbary Powers, and for the relief of seamen, made at the last session of Congress, have been drawn or expended. The balances of former appropriations have been more than sufficient for those expenses.

Of the contingent expenses of our ministers abroad, entire returns have only been received from the minister at London. The contingent expenses of that mission, for the year past, amounted to the sum of nine hundred and forty-four dollars and sixty-one cents: the objects of expenditure are such as are incident to the office, and are inconsiderable in number and amount. The accounts are regularly kept, and certified by the secretary of legation; and the committee were informed at the Treasury that the accounts of all the ministers of the United States are required to be kept and certified in the same manner.

The moneys appropriated for the relief of distressed American seamen in foreign countries are expended by the American consuls, and the accounts are regularly entered; receipts are taken and witnessed, and the whole certified by the consul.

The expenditure of the moneys appropriated for the contingent expenses of the Department is confided to one of the clerks of the Department. These contingencies embrace the advertising, printing, and distribution of the laws of the United States; books and maps for the use of the Department; newspapers for our ministers in foreign countries; the translation of foreign languages; stationery, printing, and necessaries for that office and for the Patent Office.

The committee have examined the accounts of these expenditures, with the vouchers for the said accounts, as far as they judged necessary. The objects of expenditure appear to be such as are necessary to the execution of the duties of the Department, and must, therefore, be authorized by law. The expenditure is within the appropriation, and is supported by sufficient vouchers. The accounts are regularly kept; the expenditures appear to be made with fidelity and economy; and the committee are unable to suggest any subject of retrenchment compatible with the public service.

Sir: Department of State, Washington, *April* 18, 1822.

The usual public expenditures under the superintendence of the Department of State are as follows:

1. The expenses *of the Department*, specific and contingent, as particularly set forth in the annual estimates of appropriations presented to Congress.
2. Printing the laws, in newspapers and in pamphlets, from session to session.
3. Intercourse with foreign nations:
   - Diplomatic.
   - Barbary intercourse.
   - Relief of seamen.
   - Contingent expenses of foreign intercourse.

To these expenditures, which are of a permanent character, are to be added *occasional* disbursements, by virtue of particular acts and appropriations.

Of these *occasional* expenditures, two of the heaviest charges of the last year have been:

4. For taking the fourth census, the appropriation for which, by act of the 11th of April, 1820, was $240,000.
5. For carrying into execution the treaty of 22d February, 1819, with Spain, appropriation by act of 3d March, 1821, $100,000.
6. For the boundary commissioners under the treaty of Ghent.
7. Colonel Trumbull's pictures.
8. Printing the Journals of the Convention, and the Secret Journals of the Congress of the Confederation.

The practice of the Department in the direction of these disbursements is as follows:

The moneys are drawn from the treasury by letters of requisition from me to the Secretary of the Treasury, requesting from time to time warrants for specified sums, to be charged upon the several objects of appropriation, for which the amount of each requisition is wanted.

These requisitions, in the cases of the diplomatic and Barbary funds, and a part of those for seamen, and contingent expenses of foreign intercourse, are, that *remittances* of a specified amount should be made to the bankers of the United States at London or Amsterdam, who are debited with the amount, and credited, upon the production of their accounts, with the sums paid by them to the ministers of the United States in Europe, and other public agents who are authorized to draw upon them. These remittances are made by the Treasury Department itself, and no part of the money comes to the disposal of any person in the Department of State.

The requisitions for expenditures within the United States are of two kinds: 1. For warrants in favor of particular individuals, having acknowledged claims to payment, in every part of the Union, and the amount of which is remitted to them, or paid upon their drafts; and, 2. Warrants for gross sums in favor of Fontaine Maury, one of the clerks in the Department, charged with the keeping of the accounts of the Department, and paying the current expenses chargeable upon it.

These payments, many of them small sums, the occasions for which occur from day to day, are made by checks upon the Bank of the Metropolis, with which a bank account is kept by Mr. Maury, upon a moderate deposite of moneys drawn from the treasury from time to time, and at all times liable to be withdrawn from that bank by a single check.

This account with the Bank of the Metropolis was kept before I had the charge of this Department, and before the existence of the present Bank of the United States. I have not thought it necessary to direct that the deposite and the accounts should be transferred to the Branch Bank of the United States, principally because the Bank of the Metropolis affords gratuitously facilities for remitting moneys to various parts of the Union, which the branch bank declines, unless upon the payment of a commission. Some insinuation having, however, appeared in a recent publication, tending to question the credit of the District banks, the whole of the balance which was in deposite there has been withdrawn, and deposited in the branch bank.

It has been observed that the balance of the deposite in the Bank of the Metropolis is always small. In the month of April, 1821, there was, however, deposited there $100,000 by one draft. It was for the payment of the accounts of the marshals for taking the census, which were then coming in almost daily, and the sum was in fact drawn for from the branch bank, not at once, but as the accounts of the marshals were brought in for payment. The whole sum was absorbed in less than two months.

No part of the deposite has ever been to my individual credit, but all to that of the agent for the Department, who regularly settles his accounts at the Treasury at the close of every quarter. Should it suit the convenience of the committee to call at the office of the Department, the books will be submitted to their inspection, and any explanation of them given which they may think desirable. The vouchers, excepting those of the current quarter, are at the Treasury, where they will also be at the inspection of the committee, if desired.

The public expenditures under the direction of this Department are of two kinds: first, those the amount of which is prescribed by law, such as the salaries of officers, the compensation for printing the laws in newspapers, that to the marshals and their assistants for taking the census, &c.; and, secondly, those which are occasional, contingent, and discretionary. With regard to all those of the second description, having made the most rigorous economy the invariable principle of my conduct in relation to them, I am unable to suggest to the committee any measure by which that economy could be rendered more effective.

If the committee will have the goodness to refer to the estimates of appropriations for the present year, they will perceive that, for the items of contingent expenses of foreign intercourse, Barbary intercourse, and relief of seamen, being all the items of permanent appropriation over which this Department has any discretionary control, the balances of former appropriations are more than sufficient for the estimated service of this year, and that no part of the appropriations of the last year to these items has been drawn from the treasury.

The application of the appropriations for the contingent expenses of the Department of State is also, in a considerable degree, at the discretion of the head of the Department. It has by me been made chiefly in the purchase of useful, though somewhat costly, collections of books; among which are the new editions of the Parliamentary History and Debates of Great Britain, the Statutes at Large, and the Statutes of the Realm, now in the process of publication, by the special authority of the British Parliament; the State Trials, the Annual Register, the Transactions of the Royal Society, the Memoirs of the French Academy of Sciences, and the Repertory of Arts and Manufactures; complete sets of which works have been procured. Some expense has also been incurred in procuring collections of the statute laws of the several States of the Union, and of the reports of decisions in their judicial courts. To these have been added duplicates, procured from France and England, of their respective standards of weights and measures, including copies of the platina metre and kilogramme of the French archives. Orders have recently been given for the large editions of the works of Humboldt and Bonpland upon South America, of Cook's and Vancouver's voyages, and some others, the want of which has been occasionally felt in the transaction of the current business of the Department, and may probably be still more sensibly felt hereafter. By comparing the amount of the bills paid for these articles with the amount of the appropriations for contingent expenses under the direction of this Department since the year 1817, the committee will be enabled to judge how far the discretion of the expense has been properly exercised.

I take this occasion to inform the committee that, in the note B annexed to the estimates of the present year, it is erroneously stated that no part of the appropriation for printing the laws, &c. was in the treasury on the 1st of January, 1822. The chairman of the Committee of Ways and Means of the House has been furnished with a certificate from the Register of the Treasury that there was in the treasury on the 1st of January, 1822, the sum of $9,608, being part of that appropriation. It still remains in the treasury at this time.

I am, with great respect, sir, your very humble and obedient servant,

JOHN QUINCY ADAMS.

S. Wood, Esq., *Chairman Com. H. R. on Expenditures of Department of State.*

APPENDIX.

[The following papers, having been omitted in their proper place, are inserted here.]

15th CONGRESS.] No. 1. [1st SESSION.

REMISSION OF FORFEITURE.

COMMUNICATED TO THE SENATE ON THE 20TH JANUARY, 1818.

The Committee of Claims, to whom was referred the petition of John Peters and Sabin Pond, report:

That the petitioners were owners of the brig Romulus, a vessel of the United States, which, in February, 1813, they were induced to put under the Swedish flag, to elude the British cruisers. The said brig was cleared at the custom-house at Boston, in March of the same year, for Lisbon, under the name of Anna, or Anno, Reuben Newcomb, master, in whose charge said vessel sailed. Her neutral character prevented the owners appearing as such on any of her papers, and they were thus unable to give said Newcomb any written instructions, as, in case of search, it might have disclosed her real character. At Lisbon the said Newcomb changed his flag for that of Portugal: she proceeded on her return voyage to Amelia island, with about forty packages of valuable merchandise on board, and made the harbor of Savannah in February, 1814. On the day after her arrival the said Newcomb proceeded to unlade the cargo in a secret and unlawful manner, in violation of the trust the petitioners had reposed in him, and neither advising them of his arrival nor intentions. The said vessel and cargo were seized, decreed forfeited, and distributed according to law. The petitioners allege they had no communication with Newcomb after he sailed from Boston, as aforesaid, until they saw the fate of their vessel and merchandise in a Savannah paper. They were thus precluded from applying for the equitable relief provided by law in such cases. They wrote immediately to Newcomb, desiring an explanation of his conduct, but have never received an answer. Newcomb has since withdrawn his family from Boston, without appearing himself. He appears, on the report of the Secretary of the Treasury, made to the Senate on the 31st December last, as an informer against a part of the merchandise, for which he received $500. The petitioners have subsequently petitioned the Secretary of the Treasury for relief, a copy of which is printed with the before-mentioned report; but the forfeiture having vested, the case was not within his control. Testimony has been produced to the committee that the characters of the petitioners as merchants and as men are unexceptionable. A letter received by the committee from the Secretary, and a certificate of the Swedish vice-consul at Boston, (the latter going to prove the ownership of the petitioners,) are herewith reported. The petitioners pray that the moiety of the forfeiture paid into the treasury may be restored to them, amounting to $17,822 45.

The obscurity in which the facts connected with this transaction are involved, from the want of a summary inquiry according to law before the distribution of the proceeds of the vessel and cargo was had, and the inconvenience that would result from a release, by law, of owners from the responsibilities they lie under for the conduct of their agents, induce the committee to believe that it would be inexpedient to grant relief in this case. They therefore submit the following resolution:

Resolved, That the petitioners have leave to withdraw their petition.

SIR: TREASURY DEPARTMENT, *December* 31, 1817.

In obedience to the resolution of the Senate of the 22d instant, referring to this Department the petition of John Peters and Sabin Pond, I have the honor to enclose a statement of the proceeds of the brig Anno and cargo, exhibiting the amount paid into the treasury, to the custom-house officers, and to the informers.

From this statement, it appears that Reuben Newcomb, the master of the said brig, received of the proceeds of the said sale the sum of $502 25; and that there was paid into the treasury $17,822 45.

There is no other evidence in this Department which has any relation to the case of the petitioners.

I have the honor to be your most obedient and very humble servant,

WM. H. CRAWFORD.

The Hon. the PRESIDENT *of the Senate.*

THE UNITED STATES *vs.* THE BRIG ANNO AND CARGO, *condemned for smuggling.* } *District Court of Georgia.*

		8,911 22
To the United States, their moiety of nett proceeds,		17,822 45
		$35,644 88

SIR: BOSTON, *August* 26, 1817.

Your petitioners beg leave most respectfully to represent to you, for your consideration, the following case, the severity of which has nearly ruined your petitioners. In the month of February, 1814, the brig Anna arrived at Savannah from Lisbon, bound to Amelia, with about forty packages of goods on board. The brig was compelled by bad weather to make a harbor at Savannah. The captain, or agent, went to town; there made an arrangement to smuggle his goods on shore, which he attempted to do. The goods were, many of them, landed. The officers of the customs seized them, also the brig; all of which were condemned and sold by order of the Government. The brig and goods amounted to about $47,000, all of which was a total loss to the owners. Had we ever expected the captain would have attempted to smuggle his cargo, or any part of it, we should never have given him employment. The whole transaction was done without the least knowledge of your petitioners. And your petitioners most earnestly pray that they may be so far indemnified as to have restored to them the moiety paid into the treasury of the United States, which was not less, in our opinion, than $23,000. This sum, divided among the citizens of the United States, is a paltry sum; but, sir, when this amount is taken from one, which is his all, it makes him ever poor and miserable, and benefits the public only in a comparative degree.

We most earnestly request that you would give our case a mature reflection. We submit this case, under a full conviction that we are in the hands of the benevolent, who takes a pride in building up and making happy his fellow-citizens, when founded upon the strictest principles of justice.

We have not seen or scarcely heard from the captain of the brig since the seizure; and we have been waiting for him for a statement of facts and a self-justification of his conduct for three years, and are now without hope of ever seeing him. We are strongly inclined to believe that he was the complainant, and received his share of the amount of property seized and condemned.

We remain, dear sir, your most obedient and very humble servants,

PETERS & POND.

To the Hon. WM. H. CRAWFORD, Esq.

15th CONGRESS.] No. 2. [2d SESSION.

REMISSION OF FORFEITURE.

COMMUNICATED TO THE SENATE, ON THE 17TH DECEMBER, 1818.

Mr. EPPES, from the Committee of Finance, to whom had been referred the petition of Nathaniel Goddard and others, formerly owners of the ship Ariadne and her cargo, reported:

That the Ariadne and her cargo were condemned as prize of war, on the ground of having on board, at the time of her capture, a license which secured her from molestation by British cruisers after the declaration of war, in 1812. The object of the petitioner is to procure a remission of that portion of the forfeiture which accrued to the United States.

In support of his claim the petitioner states that, at the time of the sailing of the Ariadne, no statute of the United States prohibited the use of a license from the enemy; that the taking of such a license was not considered as contrary to law by the first legal characters of the country, whose opinions are filed with his petition; that the Secretary of the Treasury, in a letter to the chairman of the Committee of Ways and Means, declares that, if the penalty had been within the jurisdiction of the Secretary, it would have been remitted "upon the principles on which remission has been ordinarily granted by the Department, upon proof of the facts stated in the petition."

In considering the merits of this claim, the committee have viewed, with great respect, the opinion of the Supreme Court of the United States, which declares "that the mere act of sailing under an enemy's license constituted an act of illegality which subjected the property to confiscation. It was an attempt by one individual of a

belligerant nation to clothe himself with a neutral character by the license of the other belligerant, and thus separate himself from the common character of his countrymen." Viewing this decision of the Supreme Court as the law of the land, a question arises how far ignorance of the law, in time of war, ought to exempt from forfeiture those who violate its provisions. Sound policy would not justify, in ordinary cases, the establishment of such a principle; nor is it believed that a citizen who, in time of war, protects his property by license from the enemy, has any peculiar claim to be exempted from the operation of a rule extending to the whole community.

It may be proper, also, to remark that, under the laws of the United States, all money which has accrued, or may hereafter accrue, to the United States, from the sale of prizes, shall be and remain forever appropriated as a fund for the payment of pensions to such officers and seamen as may be entitled to receive the same; and the public faith is pledged to make up any deficiency in the fund thus constituted. The portion of the forfeiture which accrued to the United States, amounting to $25,000, is already vested in stock, to be applied to the relief of this patriotic and valuable class of our citizens. To divert from its legal object a right thus vested under a decision of the Supreme Court to any other purpose, would not be expedient or just.

Upon a view of the whole case, the committee deem it inexpedient to grant the relief asked, and submit the following resolution:

Resolved, That the prayer of the petition ought not to be granted.

15th CONGRESS.] No. 3. [2d SESSION

REMISSION OF DUTIES.

COMMUNICATED TO THE SENATE, JANUARY 4, 1819.

Mr. SANFORD made the following report:

The Committee of Commerce and Manufactures have considered the memorial of Nicholas Brown and Thomas P. Ives, of Providence, in the State of Rhode Island, which was referred to them by the Senate, and they submit the following report:

The memorialists state that, in March, 1816, they imported into Providence from the coast of Africa, in a ship belonging to them, a cargo of palm oil, ivory, hides, and camwood; that they entered this merchandise at the custom-house in the usual manner, exhibiting an invoice of the cost thereof; that this invoice was received by them from the master of their ship, who had prepared it, and by whom the merchandise had been purchased in Africa; that the duties have been paid upon the cost thus stated in the invoice and entry; that this merchandise was obtained at different places on the coast of Africa, in barter or exchange for other commodities which composed the outward cargo sent thither, and at the barter prices which are usual on that coast; that these barter prices far exceeded the specie value of the merchandise at the places of exportation; and that they have since discovered that similar articles imported by others from the coast of Africa into other ports of the United States in the same year were entered or have paid duties at much lower rates of value. Upon this statement they pray that so much of the duties paid by them upon the ivory and palm oil as exceeds the amount of duties which would have been payable if the specie value of those articles at the places of exportation had been ascertained may be refunded.

The committee have considered all the facts of this case, regarding it not only as a particular case, but also in its relation to other similar cases. They have also deliberated much upon the nature and propriety of the relief sought by the memorialists in this instance. Upon a view of the whole subject, they are of opinion that it is inexpedient to grant that relief. The principal reasons of their opinion are these:

1. The merchandise was entered by the memorialists themselves, upon an invoice, which they exhibited at the time of the importation as the true and only account of the foreign cost; and by the invoice, and their entry made upon oath, they declared the foreign cost to have been that upon which they have paid the duties.

2. So far as the committee have obtained information, it appears that ivory and palm oil purchased upon the coast of Africa, in barter, have been generally entered in our ports upon invoices produced by the importers; and that, in some cases where invoices have not been produced, the articles have been appraised as in other cases of merchandise unaccompanied with an invoice.

3. If the claim of the memorialists be considered as arising from the alleged fact that the prices, called by them barter prices, at which their goods were entered exceeded the specie value of the goods in the parts of Africa where they were purchased, it is then to be observed that there is no proof whatever in support of this allegation; that it is understood that the trade in such articles on the coast of Africa is carried on altogether by barter, without the use of money, and without any computation of values in money between the parties to the exchanges; that the rates or valuations at which the productions of that country are exchanged against merchandise carried thither vary exceedingly at different times and in different places upon that coast; these variations resulting there, as elsewhere, from the proportion between the supply and the demand of the articles to be exchanged, and this proportion being there, moreover, greatly varied by the fact that the whole of this commerce is irregular, casual, and hazardous. The memorialists do not state either the nature, quantity, or value of any article given by them in exchange for any article which they received, nor do they state how, or upon what fact or principle of calculation, the money prices at which their ivory and palm oil were entered were deduced from the exchanges made by the parties in Africa. They state that these money prices greatly exceeded the real specie value in Africa; but they do not state what was the specie value of which they speak, nor do they state the difference between those prices and that value. It is evident that, if an attempt should be now made to ascertain the specie value, as it is denominated, of these articles in Africa, no certain or satisfactory result could be obtained, inasmuch as the foreign values of the articles exchanged, at the times when and the places where they were exchanged against each other in Africa, are unknown. It is, however, certain that the agent of the memorialists did, in some way, convert the foreign value of their ivory and palm oil into pecuniary prices, and that they adopted this act of their agent as just and correct when they entered the goods at those prices.

4. It is represented that the memorialists have paid higher duties in this case than have been paid by others in similar cases. This statement proceeds upon the supposition that ivory and palm oil imported by others were of the same real value with the ivory and palm oil of the memorialists. Such a supposition is without proof; but believing, as the committee do, that ivory and palm oil of the same value here with those of the memorialists have really paid less duties than theirs, the fact is assumed by the committee. Viewing this disparity, the committee apprehend the truth to be, not that the merchandise of the memorialists has paid duties at rates too high, but that the merchandise of other importers has paid duties at rates too low. The inequality felt by the memorialists has resulted, as the committee believe, either from the frauds of other importers, or from the ordinary operation of our method of ascertaining the ad valorem duties. The honest merchant, who makes true entries upon true invoices, may well feel distress and indignation when he sees the fruits of his industry wrested from him by an unprincipled competitor who makes false entries upon false invoices. Yet it is not supposed that the proper remedy for such frauds is to repay from the treasury to the honest merchant the excess of duties paid by him over those paid by the rogue. Placing, however, all cases of fraud out of view, the ad valorem duties are by no means equal in their operation among those who make just entries upon true invoices. The present system of collection having taken the foreign cost of the merchandise as the sum upon which the ad valorem duties are computed, it follows that every circumstance which raises or reduces that cost raises or reduces, in the same proportion, the amount of the duties. It is, undoubtedly, a just and great objection to this method of ascertaining ad valorem duties that it produces very considerable inequalities in the operation of those duties upon different importers; and though other systems may be less subject to this objection than our own, no scheme of human policy has yet been devised for the collection of ad valorem duties which does not, in some degree, involve the difficulty of unequal valuations. Ivory and palm oil were subject to ad valorem duties. In true policy, these articles should be subject to specific duties, both for the security of the revenue, and in order to render the duties equal in effect upon all importers. It should be our care to revise our laws, and to adapt their provisions to the just object of levying equal duties upon all. It would be not a little preposterous to leave the present system in force, and to undertake to correct the inequalities of its operation by payments from the treasury, when those inequalities result from the regular operation of the system itself. Whether, therefore, the lower duties paid by other importers of ivory and palm oil have resulted from their frauds upon the revenue, or from the better fortune of those importers who may have purchased these articles at lower rates, and may have entered them fairly, it is not perceived that either the one or the other of these facts imposes an obligation upon the Government to refund to the memorialists any part of the duties which they have paid.

5. The merchandise in question has passed from the custom-house, and from the hands of the memorialists; it cannot now be inspected or examined in order to ascertain its quality or its real value. Any attempt to re-examine its value must be made, if made at all, after the lapse of nearly three years from the time of the importation, and when those tests which would be most suitable and satisfactory for correcting an erroneous valuation cannot be employed for that purpose.

6. There is no instance, it is believed, in which the Government has reduced the duties received upon goods entered by the owner with an invoice, either upon the ground that the valuation stated in the entry and invoice was too high, or upon the ground that the duties paid by other importers of like goods had been assessed upon lower valuations. The consequences of such a precedent may be easily foreseen. An endless train of demands upon the treasury would follow, and the Legislature would find itself constantly employed in attempts to adjust, by special acts, the inequalities which must always result from the present system for the collection of duties on the value of merchandise.

17th CONGRESS.] No. 4. [1st SESSION.

REMISSION OF DUTIES.

COMMUNICATED TO THE SENATE, MARCH 12, 1822.

Mr. HOLMES, of Maine, from the Committee of Finance, to whom was referred the petition of J. Remsen Holmes & Co., praying relief from the duties on goods consumed by fire, reported:

That, by the petitioners' statement, and the evidence in the case, the petitioners shipped from Liverpool, in the brig *Retrieve*, certain merchandise to New Orleans, consigned to Messrs. Lloyd & Harrison, merchants of that city; that the goods arrived in the month of July, 1816, and the duties were secured and have been paid; that, on the 13th of July, Lloyd & Harrison shipped the goods on board the steamboat *Vesuvius*, directed to the petitioners at Natchez; and that, while lying at the harbor of New Orleans, the steamboat was consumed by fire, and the goods entirely destroyed.

Upon this exhibition of facts, the case is brought within the principle heretofore decided by Congress, and made the basis of the report of this committee in the case of Jacob Babbitt. It is this: In case of the loss of the goods after importation, and the duties secured, the utmost relief to be given is *a delay of payment*. The committee, therefore, recommend the following resolution:

Resolved, That the prayer of the petitioner ought not to be granted.
